A bill making substantial changes in the Social Security Act is now before Congress, a bill in which every man, woman, and child in this country has a personal stake. This means you—as you sit at home tonight listening to this broadcast; as you go about your work tomorrow; as you think and plan for your own future and that of your children.

We have now had a national social-security program for nearly 4 years. Because of this, millions of persons, in every State and county throughout the Nation, know what security means as never was known before.

More than twenty-seven and one-half million persons are covered by State unemployment compensation laws. And because of this protection the gaps between jobs need no longer swallow up the savings of those covered and throw you and your families upon relief, at least during period of payments provided by your State law. Those covered employees who have been temporarily out of work since you had this job insurance protection have shared in the $575,000,000 in out-of-work benefits that have been paid out since a year ago January. You who have benefited do not need to be told what this has added to your security and that of your family.

Benefit payments, as time passes and experience is obtained, will be improved upon. Many States have already liberalized, or are in the process of liberalizing, benefit payments. That is the history of all progressive, humane legislation. As a particular instance, I refer to the Workmen's Compensation Act of the several States which has been improved upon materially from time to time.

Some 44,000,000 persons throughout the United States have accounts under the Federal old-age insurance system. As participants in this great national program of mutual protection such persons have already begun to build toward a retirement income, an income which will be theirs in their old age by right, based on their own thrift and industry, and backed by the United States Government itself. We all know only too well what the tragedy of a destitute old-age means. For millions of Americans the haunting fear of such a future lot will be allayed.

For those who are already old and in need; for those who are blind and cannot work; for children in homes broken by death or another disaster, the Social Security Act has also provided an increased measure of security through a Federal grant to those States which have passed approved legislation. More than 2,500,000 of them are receiving public assistance from the Federal and State funds made available under the act.

In connection with these activities, where need is a condition precedent to payment, there is no Federal investigation of applications, or supervision by the Federal Government. The Federal Government does not determine the amount any person in need among these classes receives. That is determined in accordance with State law. These provisions of the Social Security Act, as well as unemployment compensation, are State administered, benefits being dependent upon the State law. The Federal Government makes its contribution after State or local action has been favorably taken.

It must be remembered that prior to the passage of the Social Security Act there was no national pattern of assistance for the aged, for the dependent children, for the needy blind. A few States made inadequate provisions for the aged, very few for the dependent blind and the children, but the great majority of the States made no provision at all. The Federal Government, through the passage of the Social Security Act, has created a uniform pattern in these fields of relief activities.

And in addition to all this, the act has enabled your State and your community to increase their public health protection, to provide better services for maternal and child health and welfare, and to extend their provisions for the vocational rehabilitation of handicapped workers.

Because the Social Security Act was passed by Congress 4 years ago this coming August all this has been possible. Because Congress is now considering a bill to make the Social Security Act still more effective, you may look forward to increases in immediate protection and benefits and decreases in immediate cost.

This new bill was written by the House Ways and Means Committee, of which I am a member. It has just been reported out of the committee after 4 months of continuous study. Testimony taken at the hearings commenced on February 1 runs to some 2,500 pages. The committee members have labored early and late for 4 solid months day after day. We believe the bill which we are now presenting to the Congress and to the Nation demonstrates our earnest concern for all of you who have a stake in this great humane legislation.

The bill reported will save employers at least $1,500,000,000 in taxes during the next 3 years. It will liberalize the benefit payments to workers, both those made under State job insurance laws and those under the Federal old-age insurance system. It will make more Federal money available for aid to dependent children and to the needy aged. It will simplify administration and materially cut down red tape for the employer, the employee, and the Government.

All of these proposals are important, important not just to something vaguely called the people, but to you as individuals, as wage earners, and as businessmen, as citizens and as taxpayers. I know you will study these amendments in detail as they are reported to you in your newspapers. I want now, however, to highlight some of the points which seem to me of major significance.

First, as to taxes: The old-age insurance tax has been frozen at its present rate for 3 years. This means that the employer and the wage earner will continue to pay 1 percent each on the employee's wages, whereas under the law as it now stands the rate would increase to 1½ percent each January 1, next. I have supported this change because I believe it is sound and because it will benefit both employers and employees. This proposal alone will save them at least $825,000,000 during the next 3 years.

In connection with unemployment compensation, the committee has recommended a plan which I submitted. This would enable the States to reduce their unemployment-insurance contributions, provided they have built up a certain reserve and meet minimum benefit standards. During 1940 alone this provision may save employers from $165,000,000 to $200,000,000. It will result in great savings in later years.

Other changes proposed by the committee with respect to unemployment compensation will save employers an additional $80,000,000 next year.

For example, the committee has recommended that the pay-roll tax on unemployment compensation be confined to the first $3,000 of salary. On present business activity, that alone will result in permanent savings to employers of $65,000,000 each year. In addition, the penalty under the present law of 90 percent for the delay of employers in making returns of the unemployment-compensation tax has been sharply reduced, which will also result in a substantial saving each year.

And now as to the protection offered by the Social Security Act: These have been substantially strengthened. And this is all important; for the whole objective of social security is to provide some income that will be at least fairly adequate for basic needs and that will tide people over when the hazard of want becomes a reality. This protection is necessary not only for the individual but also for his family. After all, a man out of work does not confine his worrying to himself; his worst worries are for his wife and children—how to feed and clothe and shelter them. And no man looks forward to his own old age apart from what the course of life will mean to those who are dear to him and dependent upon him. He wants old-age security for his helpmate as well as for himself. Above all, he wants some assurance that his wife and children will not be left utterly stranded if he himself should die.

My fellow Members and I, of the committee and of Congress, share your concern for family security. We believe that the conservation of family life is the prime purpose behind all our efforts to promote social security. And I think I may say without fear of contradiction that every one of our proposals with respect to insurance benefits and assistance payments represents a genuine step toward this goal—the safeguarding of the American family.

To this end the old-age insurance program has been liberalized and extended. Monthly benefits will begin to be paid in 1940 instead of being postponed until 1942. The "stop date" which now prevents wages earned after age 65 from counting toward benefits will be removed, thus permitting workers to continue increasing their protection until they actually give up working. These two changes will greatly increase the benefits which will be payable particularly to those now approaching retirement age.

Monthly benefits have been increased—first, by basing benefits on "average wages" rather than as at present, on accumulated wages; second, by providing supplementary benefits for the wives of annuitants. Under this new plan beneficiaries, whether married or single, will get more protection than they could buy with their own contributions elsewhere. At the same time the equity and adequacy of the system is increased by recognizing that the need of a married couple is as a general rule greater than that of one person alone.

All of these changes promote family as well as individual security for those who live to reach old age. But death must still be reckoned with and families must still be provided for when the breadwinner dies. And so, in addition to liberalizing benefits for old age, the committee proposes that benefits be provided for the dependents who may survive the worker. The groups most likely to need this protection are aged widows, younger widows with children, orphans, and dependent parents. For widows, the monthly benefit would be three-fourths of the husband's basic benefit, had he lived; for each orphan and dependent parent, it would be one-half of the basic benefit.

Under this proposed plan about $1,750,000,000 in benefits will be paid out in the next 5 years—paid out as a right to those whose working years are over—to their wives, also to widows, and to fatherless children. This represents a very substantial increase in the returns which workers will realize from old-age insurance in the immediate future. By thoughtful long-range planning it has been possible to provide for this change—which I for one regard as most essential—without increasing the future over-all cost of the system.

This is made possible by the elimination of the lump-sum benefits. The present law is operated along the lines of a private insurance company so far as contributory annuities are concerned. The effect of the pending bill in this respect is to change it into a social insurance plan, with the family of the covered employee (instead of an individual employee himself) being the unit of economic security which is sought. A strong and secure family life is an important element in the existence of a permanent form of government.

These logical and liberalized payments should reduce the welfare load of the several States and of their political subdivisions, not only at the present time but also in the future. We must keep in mind that there are two aspects of old-age annuities provided for in the Social Security Act (1) noncontributory, and (2) contributory annuities. The noncontributory pension is based on "need," and is paid out of public funds. The contributory annuity is based on "right," and is paid by employer and employee. Government might have to contribute in future years. The noncontributory provisions are based upon the law of necessity and exigency to prevent as far as possible through payments out of public funds, human distress and suffering from existing among our senior citizens. The several States determine eligibility and payments, and the Federal Government contributes its share, under existing law, one-half of the pension paid up to $15 per person per month; in the bill just reported, up to $20 per month, one-half of the pension paid by a State, up to $20 per month. This does not meet the cause of "need" for old age. The contributory annuity is the method derived to meet the long-range situation, and to provide for an annuity as a matter of "right," instead of receiving public funds based upon "need."

Furthermore, if old-age pensions were to continue wholly to be noncontributory, and paid out of public funds, such a system would ultimately bankrupt Federal, State, and local government.

We must all remember, and particularly our aged folks, that noncontributory payments entirely out of proportion to the ability of all others to bear the expense through taxation will ultimately result in a break-down of such humane legislation and the aged persons themselves will suffer. It is, therefore, essential that common sense be exercised in improving upon the existing law. The success of such legislation is dependent upon the ability of others to bear the expense.

In the amended act, the security of children would be recognized as a most important objective of our social-insurance system. It is also now made an important objective in public assistance. And in proposing changes in the act, I submitted an amendment which would increase the Federal money available to the States for aid to dependent children. Under the present law, the Federal contribution for this program comes to only one-third of the State's expenditures, whereas the Federal Government pays approximately half the cost of aid to the needy aged and the needy blind. The committee now proposes that Federal grants for aid to dependent children also be placed upon this equal, matching basis, and that the age limit should be raised from 16 to 18 when the child is regularly attending school. This would bring the age requirement under both the insurance and assistance programs into uniformity.

There can be no question that these changes would enable the States to take care of more needy children and to care for them more adequately. About 695,000 children are now receiving Federal-State aid. This is two and one-half times as many as were cared for under State-aid laws in 1935. This increase is significant; but so are the known needs which are still unmet. Eight States have yet to provide any aid to dependent children under the act. In addition, through this amendment the State programs already in operation will probably be able to provide for at least 1,000,000 children, who are in need, an increase of more than 300,000 over their present coverage.

Another proposed change in the assistance provisions of the act would increase the amount of Federal money available for old-age assistance. As you probably know, the limit on Federal contributions is now $15 a month to each person aided, provided the State pays a like amount. The amendment would raise this figure to $20 a month and thus allow the States to liberalize their payments to the needy aged if they so desire, and to provide such assistance to other deserving persons who are eligible, but who are not receiving old-age assistance due to lack of State appropriations.

But the committee has proposed no change which would alter the relationship of Federal and State governments in either public assistance or unemployment compensation. These programs, as established under the Social Security Act, constitute the most comprehensive attempt yet made to utilize a system of Federal-State cooperation for the solution of national problems. I believe in the Federal-State cooperative system. Experience has indicated that it preserves local initiative and keeps administration close to the people concerned. I, for one, am opposed to centralization of such activities in Washington. I am opposed to the bureaucracy that would develop. For these reasons I have strongly favored maintaining and strengthening the Federal-State systems embodied in both public assistance and unemployment compensation.

A national old-age pension, based on need, calls for Federal investigation and supervision. Such a system would be intolerable.

In considering unemployment insurance the committee's objective has been to make such changes as would best help to relieve industry of any unnecessary burdens and at the same time to provide those out of work with more adequate benefits. We have sought a way to accomplish this twofold purpose without altering in any fundamental way our present Federal-State system. I think that the plan which the committee has reported out meets all these tests. It preserves the State systems against those who would repeal unemployment insurance and those who want an outright Federal system. My plan will enable those States which are building up substantial reserves to reduce their contribution rates and so to benefit employers. But it also requires such States to maintain at least certain minimum standards so that wage earners will be assured of fair benefits when due, specifically the State must provide for the payment of benefits for at least 16 weeks after not more than a 2-week waiting period and with a minimum of at least $5 a week. It provides for benefits to these partially unemployed. The States may make more liberal benefit payments if they so

desire. The plan thus protects the State and the employer, the employee and his family.

Before I bring this summary to an end there is just one more change that I want to mention. This is the increase of $1,000,000 in the appropriation for vocational rehabilitation. This will bring the total Federal funds available as grants to the States for this purpose to $2,938,000 a year. Small as this sum is, in comparison to some of our other expenditures, it represents a very real contribution to security. Every crippled employee retrained to an occupation represents a definite gain in security, in reducing the cost of caring for him if he remained dependent, in returning him to society and to his family as a useful and self-respecting individual.

The committee's recommendations are substantial steps forward in our march toward social security. There is still much to be done. I would like to see aid to the needy aged and dependent children liberalized still further—to see the old-age and unemployment insurance benefits expanded. I shall continue to work for these additional amendments. In the meantime I shall vote for the amendments which the committee has reported out because I firmly believe they represent another milestone in the struggle for safeguarding human rights.

With this, then, I have covered the main points in the bill to amend the Social Security Act. The changes recommended in all the programs, in old-age insurance, in aid to dependent children, and in unemployment compensation, are part of a common purpose to promote the security of the family and the home.

But though security begins with the family, it does not end there. When families have some basic measure of economic stability—some means of maintaining their status as the purchases of goods and services—then business and industry are also on the way toward increasing stability. And when our families are secure, when they can perform their time-honored functions as the life-giving heart of our social organism, then we need have no fears for our democracy.

I have supported all the changes relative to the conservation of family life throughout the many weeks in which these amendments have been up for discussion. And I have consistently urged increasing protection for children, because I believe our democracy can be kept alive only so long as we assure to children—the citizens of tomorrow—their birthright of wholesome family life today.

This recognition of the relationship between security and democracy is no new discovery. The House Ways and Means Committee did not initiate this point of view when it sat down 4 months ago to consider possible amendments. Nor did Congress and its advisers initiate it when the Social Security Act was originally passed in 1935. No; this relationship is at least as old as our Constitution, wherein "to promote the general welfare" is enumerated as one of the basic functions of our democratic government.

In the Social Security Act—and in these amendments to the act—we are carrying on, for our own time, the precepts and the ideals which were then set forth and which, we believe and trust, will endure for all time to come.

Government is a living organism. Government cannot remain static, particularly when great economic changes are taking place. Government must serve, and to serve it must work in order to perform its essential and necessary functions. Modern economic conditions present many trying and complex problems. One of the foremost problems is unemployment and insecurity. The people of some countries have sacrificed personal liberty—sacrificed the dignity and the personality of the individual in their quest for security, and in the end obtained neither. It is only under democratic processes of government that personal liberty can exist as a right. On the other hand, insecurity resulting from unemployment, dependency in old age, or for any other reason, cannot be permitted to continue without effort to solve the same. The solution of these and other problems is not only the duty of government, but of all persons and of all groups. These problems can be solved without any impairment or loss of our ideals of government—of personal liberty. Tolerance and understanding, with a willingness of proper compromise, are essential to success. Viewing the Social Security Act, and the amendments just reported by the Ways and Means Committee, as a whole, this legislation represents a great step forward in meeting the great problem of insecurity, and in a manner consistent with democratic processes of government.

Gag Rule for Pensions

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. HAVENNER. Mr. Speaker, to Members of Congress who, like myself, have made no promises at any time to support the so-called Townsend bill or any other specific measure dealing with the same subject, but who are profoundly convinced of the importance of establishing without delay an adequate Federal system of old-age pensions, the situation which confronted us in the House of Representatives today was intolerable. Many of us had assured the Townsend plan advocates in our districts that we would vote to give their bill a thorough discussion on the floor of the House, while reserving to ourselves the right to vote as we saw fit after hearing all of the arguments for and against the measure and studying all amendments which might be proposed.

But today we found ourselves circumscribed by an arbitrary, inflexible rule which made a mockery of these promises. Debate on this epochal proposal was restricted to the ridiculously inadequate period of 4 hours. The fundamental right of a democratic legislative body to amend any measure before final action upon it was absolutely prohibited by the rule. The membership of the House faced this arbitrary mandate: Finish debate upon this bill in 4 hours. Do not attempt to amend it. Take it or leave it as it stands.

Against this species of legislative dictatorship many of us rebelled. We knew that we were being deprived of our right to hear the bill discussed fully in all of its aspects, to judge it impartially on its merits, and to consider changes if and when changes appeared advisable. We also realized that it was obvious that no other opportunity would be afforded us during the present session of Congress to vote for or against the establishment of a national old-age pension not based upon indigency.

Having been denied a chance to vote upon the merits of each section of this bill, and knowing that it was marked for slaughter by the opponents of an adequate pension system, I decided to cast my vote for the measure, not solely upon its merits, because, under the circumstances, that was impossible, but partly as a protest against the unfair hearing accorded it and principally as a declaration of my endorsement of the principle of a national old-age pension, which must be the cornerstone of American social security in the future.

H. R. 6450—On Behalf of the Combat Veteran

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

LETTER FROM THE WORLD WAR COMBAT VETERANS' ASSOCIATIONS, INC.

Mr. VOORHIS of California. Mr. Speaker, H. R. 6450 provides that in determining service connection for disabilities of veterans who saw actual combat with the enemy in any war of the United States full consideration shall be given not only to medical records—which are admittedly inadequate in many, many cases—but to service records as well, and that where the conditions under which these men fought "can, in good medical judgment, be considered as causing or aggravating the disability or disabilities on which the claim is based, then and in that event the disability or disabilities shall be considered to have been caused or aggravated by military service."

Perhaps a better argument for this bill than could possibly be made by myself is included in the following letter from the national president of the World War Combat Veterans' Associations, which I have asked permission to include with my remarks:

WORLD WAR COMBAT VETERANS' ASSOCIATIONS, INC.,
Los Angeles, May 29, 1939.

Hon. JERRY VOORHIS,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN VOORHIS: Your bill, H. R. 6450, if enacted by the Congress of the United States will correct a great injustice unintentionally imposed on the combat veterans of our armed forces by Congress.

To a very great extent the service-connected disabilities of war veterans is dependent upon entries made in the individual's medical record during his service.

Those veterans while serving in army camps or aboard vessels of the fleet, had the opportunity of answering "sick call" daily, and whenever a man reported on sick call behind the front his medical record was available and his complaints and treatment was practically always entered in his medical record.

On the other hand every man on the battlefront in France ate some food that had been gassed, breathed some gas, was under shell fire, and was covered with lice—things that did not happen to those serving in the rear. A man had to be very sick to quit on the front, and unless he was so sick that he had to be sent to a hospital, he probably only received some pills, and either because the doctors did not have the individual's medical record, or were too busy with wounded, the records of men being sick on the battlefront were not entered in their medical records.

To cite just one example of thousands, my own outfit, Company A, Third Machine Gun Battalion, First Division, on May 28, 1918, had just helped capture Cantigny from the Germans, and were repulsing repeated counter attacks. There was plenty of high explosive ammunition for our artillery but no gas shells. (First gas shells for our guns received July 4, 1918.) The Germans for days kept firing gas shells. Our food, brought up to the front at night in cans, was repeatedly gassed. We threw it away several times, but became so hungry that we afterward ate it anyway. Only about 400 men of the division were bad enough to be sent to hospitals from being gassed, but most of the others were sick from being gassed, yet none of these others have any entry in their medical record to this effect. The record of the regiments and division would show that on certain dates the outfit had been subject to gas attack and the individual's service record would show that he was present with his outfit at the time. By making the service record an official part of the medical record we hope to be able to establish service connection of certain disabilities when the individual's medical record lacks such entries.

Let me say that the combat veterans do not consider themselves any better type of American soldiers than those not on the battle front. We served wherever we were ordered to serve, at home or on the front. However, those who served on the battle front served under conditions vastly different than those not on the front.

On the front and during continuous days and nights of battle it was practically impossible to make entries in medical records. Slightly wounded men went on for days in battle, rather than quit. Others who were very sick kept going for fear that their buddies might think them "yellow" if they quit.

These men who actually served under enemy fire certainly deserve from the people and the Congress the right to prove by their service record that their ailment was due to their particular type of service, as established by their service record, supported by the War Department records of the unit with which they served.

We do not want a regulation or rule of the Veterans' Administration to consider this, which could be changed at any time. We hope that your bill will be enacted into the Federal statutes.

Hoping that the Committee on World War Veterans' Legislation will give H. R. 6450 their approval and that the Congress will enact this bill.

Very sincerely yours,

ADOLPH N. SUTRO,
National President.

Reorganization of the Railroads

EXTENSION OF REMARKS

OF

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

RESOLUTION OF THE UNITED ELECTRICAL, RADIO, AND MACHINE WORKERS OF AMERICA, LOCAL NO. 610, WILMERDING, PA.

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas two-thirds of our population now live either in dire poverty or in circumstances far below a standard of health and decency; and

Whereas it is essential for the welfare of our community, State, and Nation to avoid the physical and moral deterioration which such living standards inevitably lead to, and, indeed, have led to in many parts of the world; and

Whereas prevailing low living standards in our country are due not to a lack of efficient labor power, machinery, or natural resources, but rather to a tragic failure to make use of these resources; and

Whereas name-calling, buck-passing, and even allowance of presently prevailing meager relief rations, both with and without work, while running into billions of dollars in the aggregate, are yet utterly insufficient to drag us out of the mire of depression; and

Whereas the surest road to prosperity is widespread employment of labor at decent wages, which, of necessity, requires vastly increased production; and

Whereas private industry will not and, under the circumstances, cannot increase production without visible demand for products; and

Whereas our railroads constitute a potential customer for $2,000,000,000 worth of equipment a year to modernize transportation so as to enable the roads to compete effectively with other modes of transportation to serve the Nation as safe and efficient carriers in the event of an upswing in business or national defense emergency, but have not done so because of their absurd overcapitalization which requires the roads to sink all money earned and borrowed into the bottomless pit of interest on bond issues covering equipment long outworn and useless; and

Whereas according to the best informed economists, every dollar put into heavy industry production breeds $2 in purchasing power, thus providing through a potential $2,000,000,000 a year expenditure on railroad equipment a powerful factor for the restoration of prosperity; and

Whereas even the holders of present railroad securities would be better off under a rational reorganization plan than they are now with one-third of the country's mileage in bankruptcy and another one-third on the verge of bankruptcy; and

Whereas such bills as the Wheeler-Truman bill merely places the cart before the horse by providing restrictions upon other modes of transportation without remedying existing evils in the railroad systems; and

Whereas workers of Westinghouse Air Brake Co. depend for their well-being upon the well-being of the railroads and are among the hundreds of thousands of employees who suffer by the present unsound and chaotic railroad situation: Now, therefore, be it

Resolved, That members of Local 610, United Electrical, Radio and Machine Workers Union of America, in Wilmerding, Pa., having exclusive bargaining in the Westinghouse Air Brake Co. plant, which produces three out of every four air brakes used on railroad cars, street-railway cars, etc., recognizing their plight of lack of steady employment and poor earnings, not as an isolated instance but as an example of many other workers similarly affected, go on record as petitioning the President and Congress of the United States—

To promote legislation and regulation to the effect that railroad bondholders submit to reorganization plans whereby they will receive stock in place of their bonds and will share in the earnings of the railroads rather than gobble up all there is or reduce the roads to a state where they are of little good either to them or to the Nation; and

To lend Federal money to the railroads earmarked for the purchase of new and replacement equipment so that they may be able to take advantage of modernized devices, and thereby not only stimulate industrial production but stimulate as well their own earning power, with the net effect that employment will increase, and the Nation as a whole—workers, management, and stockholders—will jointly benefit, and in the long run the Government will not only recover its loans but will benefit through the collection of income taxes besides.

It is recognized that to date these very vital problems were in no way touched by any of the railroad measures considered in the present session of Congress, that they are of so fundamental a character as to require the appointment of a special commission to study them in preparation for proper congressional action at the next session.

Passed unanimously this 25th day of May 1939, at Wilmerding, Pa.

[SEAL] KENNETH JONES,
President, United Electrical, Radio and Machine Workers of America, Local No. 610, Wilmerding, Pa.

General Campbell and His Immortal Four Hundred

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

Mr. FLANNAGAN. Mr. Speaker, down in my district in a little known grave close beside the crystal waters of the beautiful Holston that he loved so well sleeps one who, while slightly known to fame, fashioned his name in letters of steel high upon the honor roll of America's immortals.

You ask his name, and I answer, "Gen. William Campbell, of the Holston." And you reply, "Who was Gen. William

Campbell?" Let me answer: "A Virginian by birth, a Scotch-Irish Presbyterian by ancestry and conviction, an innate lover of freedom and liberty, a sworn enemy of the Tories, a colonel in the Virginia Militia out on the fringe of civilization, a border chieftain, and the hero of the greatest military triumph of the Revolutionary War, the Battle of Kings Mountain."

And down in my district, many resting in unmarked graves, sleep the immortal four hundred, all except those who died for freedom's sake and are sleeping for a little while upon the gentle slopes of Kings Mountain, likewise Virginians by birth, Scotch-Irish Presbyterians by ancestry and conviction, innate lovers of freedom and liberty, sworn enemies of the Tories, the men who, under the leadership of their border chieftain, wrought mightily on that October day back in 1780 and in less than 1 hour's time killed or captured a whole British Army and started blazing the trail that led to Yorktown and freedom.

The attributes that make men are not of rapid growth. They are developed and refined from generation to generation over the years, and in order that you may understand and appreciate the noble virtues of these men—their patience, their fortitude, their innate spirituality, their inborn love for freedom, their matchless valor—I crave your indulgence while I briefly recite their genesis.

General Campbell and his immortal four hundred, practically to a man, were Scotch-Irish Presbyterians who had moved down into the beautiful Valley of the Holston from the counties of Rockbridge and Augusta in the Valley of Virginia. From earliest colonial times the Scotch-Irish Presbyterians, in order to escape civil and prelatic oppressions under the Stuarts, had migrated from northern Ireland to the Colonies. They came not for commercial gain, not to advance their own fortunes, but rather to escape civil wrongs and despotic ecclesiasticisms, for conscience' sake. They abhorred station and rank and civil inequalities and claimed the right to worship God according to the dictates of their own consciences. They brought with them the Shorter Catechism which, excepting the Bible, had a more profound influence in shaping the lives of the generations that followed than any other book. It became the working creed of the men who laid the foundations of this Republic. At the time of the Revolution, of the 3,000,000 inhabitants of the Colonies, at least 2,000,000 of them were of the Calvanistic faith. The consecration and devotion of their members, in particular those of Scotch-Irish extraction, to the cause of freedom was equaled by that of no other denomination. They were a great people schooled, as it were, in the miseries and degradations of civil and religious persecutions; and set apart, as it were, by the Almighty for a great cause, the cause of establishing here in the New World a government based upon the proposition that man, in order to enjoy to its fullness the world God has prepared for him, must have civil and religious freedom.

Trained as they were, no racial or religious group was superior to them in spiritual fervor, in devotion to freedom, in moral stability, in a willingness to sacrifice to obtain their goal, in intelligence, and in the capacity to administer justly and fairly the affairs of church and state. Love of freedom brought them over, and that love found fertile soil in the New World, grew into a revolution, and ripened into the greatest democracy that yet has been conceived by the mind of man.

It was these same Scotch-Irish Presbyterians, intrepid lovers of freedom that they were, that kept on agitating freedom and drafting declarations of independence until final and official action was taken by the Colonies on July 4, 1776, and Jefferson's immortal pronouncement became the cornerstone of our liberties. On May 20, 1775, the Scotch-Irish Presbyterians of North Carolina drafted the Mecklenburg Declaration, and about 1 year later, in May 1776, the Scotch-Irish Presbyterians of western Pennsylvania drafted the West Pennsylvania Declaration; but, listen, the fire had already been kindled prior to these pronouncements by Campbell and his gallant southwest Virginians.

Three months before the first shot at Lexington, 4 months before the Mecklenburg Declaration, 5 months before Bunker Hill, 12 months before the West Pennsylvania Declaration, and 18 months before the Declaration of Independence, namely, on January 20, 1775, Capt. William Campbell, Rev. Charles Cummings, Col. William Preston, Col. William Christian, Capt. Stephen Trigg, Maj. Arthur Campbell, Maj. William Ingles, Capt. Walter Crockett, Capt. John Montgomery, Capt. James McGavock, Capt. Thomas Madison, Capt. Daniel Smith, Capt. William Russell, Capt. Evan Shelby, and Lt. William Edmondston, a committee appointed by the freeholders of Fincastle County, Va., Scotch-Irish Presbyterians all, and leaders in the Holston Settlement, addressed a communication "To the Honorable Peyton Randolph, Esq., Richard Henry Lee, George Washington, Patrick Henry, Jr., Richard Bland, Benjamin Harrison, and Edmond Pendleton, Esqs., the Delegates from this Colony who attended the Continental Congress held in Philadelphia," in which they made this bold, stirring, and patriotic pronouncement:

> If no pacific measure shall be proposed or adopted by Great Britain, and our enemies attempt to dragoon us out of these inestimable privileges which we are entitled to as subjects, and reduce us to slavery, we declare that we are deliberately and resolutely determined never to surrender them to any power upon earth at the expense of our lives. These are our real, though unpolished sentiments of liberty and loyalty, and in them we are resolved to live and die.

Is there any wonder that a country with such a background should have adopted as its form of government practically the form of government of the Presbyterian Church.

Walpole was not far wrong when he declared in the British Parliament, "Cousin America has run off with a Presbyterian parson."

I cannot refrain from quoting the eloquent tribute paid by Dr. Lyman C. Draper, secretary of the State Historical Society of Wisconsin, in his History of the Battle of Kings Mountain to Campbell's men:

> In the confronting ranks was a very different class of men. Those from the Holston, under Campbell, were a peculiar people—somewhat of the character of Cromwell's soldiery. They were, almost to a man, Presbyterians. In their homes, in the Holston Valley, they were settled in pretty compact congregations; quite tenacious of their religious and civil liberties, as handed down from father to son from their Scotch-Irish ancestors. Their preacher, Rev. Charles Cummings, was well fitted for the times; a man of piety and sterling patriotism, who constantly exercised himself to encourage his people to make every needed sacrifice and put forth every possible exertion in defense of the liberties of their country. They were a remarkable body of men, both physically and mentally. Inured to frontier life, raised mostly in Rockbridge and Augusta Counties, Va., a frontier region in the French and Indian War, they early settled on the Holston, and were accustomed from their childhood to border life and hardships; ever ready at the tap of the drum to turn out on military service; if in the busiest crop season their wives, sisters, and daughters could, in their absence, plant and sow and harvest. They were better educated than most of the frontier settlers, and had a more thorough understanding of the questions at issue between the Colonies and the mother country. These men went forth to strike their country's foes, as did the patriarchs of old, feeling assured that the god of battle was with them, and that he would surely crown their efforts with success. They had no doubts nor fears. They trusted in God and kept their powder dry. Such a thing as a coward was not known among them. How fitting it was that such a band of men should have been assigned, by Campbell's own good judgment, the attack on Ferguson's choicest troops—his provincial rangers. It was a happy omen of success—literally the forlorn hope—the right men in the right place.

And so, my colleagues, in their names I come to you today to make a simple request. I only ask that back in my district where these lovers of liberty lived, where they first erected the church and schoolhouse, and then felled the timber for the ever-verdant blue grass to grow, where they beat back the red man that the borders of civilization might be extended, where they set up a provincial government under which the teachings of the Bible, the Confession of Faith, and the Shorter Catechism were the laws of the land, where they rallied, 400 strong, when the Macedonian cry came echoing over the hills from their brothers in distress down in the lowlands, left their wives and children unprotected behind, placed their all upon the altar of freedom, and marched

over the mountain fastness armed with Deckard rifles and long knives to Kings Mountain and there snatched freedom from the brink, and where their descendants, through the ensuing years, working upon the foundations laid by their forebears, have builded the most religious and God-fearing, the most patriotic and liberty-loving, the most cultured and refined, the most stable and enduring civilization yet developed by man, you set up a testimonial of their worth, their character, their valor, their piety, their patriotism, a memorial to their memory, that will perpetuate their sterling attributes and heroic deeds and teach the generations yet to come that no sacrifice is too great for freedom's sake.

Oh, I am persuaded that as I present my case, as I unfold the story, your love for freedom will be strengthened, your patriotism renewed, and that you will do now that which should have been done long ago, direct the appropriation of sufficient funds to erect a suitable and appropriate monument to these molders of liberty, these founders of our glorious Republic; and that when the monument has become a realization we long have cherished, you will come down to the land where the air is yet surcharged with freedom, the Tory unknown, stand with uncovered heads before the shaft, renew your love for freedom and faith in democracy, and breathe a prayer of thankfulness and appreciation for General Campbell and his immortal 400.

Having given you the background of these unsung patriots, let me tell you the story. It needs no embellishment to add to its luster, no word pictures to rekindle your patriotism, no flights of rhetoric to impress upon your hearts and minds the great and important part they played in the establishment of our Republic, and so I shall tell it to you in ungarnished language such as befits their rugged souls.

In the fall of 1780 the War of the Revolution was drawing, from all indications, to a pathetic and tragic close. A panoramic review showed: After the skirmishes at Lexington and Concord the patriots lost at Bunker Hill. In the Battle of Long Island which followed the Americans suffered a decisive defeat, with a loss of 970 killed and 1,077 wounded. This battle, fought August 27, 1776, had a sickening effect upon our cause, coming as it did in such a short while after July 4, 1776, the day on which we bid defiance to the greatest monarch on earth by declaring our freedom and independence. December brought renewed hopes with our victory at Trenton, and these hopes were further augmented by the victory at Princeton in the following January. Dark days, however, were in store for our cause. In September 1777 Washington was driven from the field at Brandywine, and this defeat was followed by another at Germantown on October 4, 1777, in which we suffered a loss of 673 killed and wounded and some 400 taken prisoners. In the same month, however, fresh hope came with our victory at Saratoga. Then came Valley Forge, where during the dark, cold, and dreary days of the winter of 1777–78 Washington went through his Gethsemene, and our cause verged upon reaching its zero hour. Came 1778 without any general campaign or important battles until Clark, the hero of the West, made a march of nearly 250 miles through the wilderness and captured the fort at Vincennes, thus breaking the British hold in the West.

With honors divided in the North, and New York in the hands of the enemy, the British now directed their attention to the South. Florida was invaded and subdued, and in the fall of 1778 General Prevost marched out of Florida and in quick succession captured Savannah, Sunbury, and Augusta. On March 3, 1779, when the American forces lost 1,000 men killed and captured at Briar Creek, Georgia fell under the flag of King George. An attempt in October 1779 to recapture Savannah resulted in a decisive defeat and the Polish-born patriot, Count Pulaski, was killed. The militia of South Carolina and Georgia, becoming discouraged, disbanded. During the latter part of December, Sir Henry Clinton and Cornwallis left New York with the fleet of Admiral Arbuthnot and 7,000 men to attack proud Charleston, the queen of the Atlantic, where 4,000 patriots garrisoned the city. On February 11, 1880, the siege commenced and lasted until May 7 when the city surrendered and was sacked. The fall of Charleston brought consternation to the patriots of the South. Lord Cornwallis, Colonel Tarleton, and Major Ferguson moved on through the Carolinas with a butchery that has few, if any, parallels in war. At Waxhaw, Tarleton's butchers practically wiped out Colonel Buford's regiment, 113 of whom were cut down and killed, 152 too badly hacked to be taken from the field, and only 53 taken prisoners. At Camden, Gates met a decisive defeat at the hands of Cornwallis, losing 800 men, among them being the gallant Bavarian-born, French-trained soldier, DeKalb.

In September Cornwallis took Charlotte, the metropolis of Mecklenburg County, whose citizenry back on May 20, 1775, had bid defiance to King George and his men by their bold declaration of independence, and his lieutenants, Tarleton, Ferguson, Rowdon, Balfour, and Brown again went forth on a spree of carnage and gore, terrifying the people by burning and destroying their property, ravishing the women, and hanging the patriotic leaders wherever found. The Tories and weak-hearted natives came in, took the oath of allegiance, and joined in the carnival of carnage. The outlook for the patriots seemed dark and hopeless. It looked like the beginning of the end. Florida, Georgia, and South Carolina had been subdued, and, from all indications, Cornwallis would succeed in his plan of marching on to Salisbury, there to be joined by Ferguson, and with their combined army subdue North Carolina and Virginia. Sir Henry Clinton had returned to New York, declaring "the inhabitants from every quarter declare their allegiance to the King and offer their services in arms;" Lord Cornwallis was boasting that in a short while all the territory south of the Susquehanna would be in his grasp; the magnetic, brilliant Ferguson when offered additional troops declined to accept them, pompously proclaiming "the country was subdued and everything was quiet;" and even the undaunted, unconquerable Washington was murmuring "I have almost ceased to hope."

Today in our security it is hard for us to realize the depths of despair to which the cause of the patriots had fallen, the forlorn hopelessness that seemed to grip their very souls, due to the deeds of infamy and cruelty to which they had been subjected by the British and Tories under the leadership of Cornwallis, Tarleton, Ferguson, and their lieutenants in order to crush their spirit and bring them under the British rule. That they carried on during those days of terror, when all seemed lost except the memories of their dream for freedom, is a more eloquent tribute to their fidelity to the cause of freedom, their courageous hearts, than can be paid by any words of man, however graphic, however inspired, those words may be.

Bancroft, in describing the reign of Toryism in full swing, says:

> The sorrow of the children and women robbed and wronged, shelterless, stripped of all clothes but those they wore, nestling about fires they kindled on the ground, and mourning for their fathers and husbands, were to be witnessed on every hand.

The eloquent Gen. John S. Preston in his address at Kings Mountain in 1855, thus graphically described the conduct of Cornwallis and his butchers:

> This power he was using with cruelty unparalleled in modern civilized conquest; binding down the conquered people like malefactors, regarding each rebel like a condemned criminal, and checking every murmur, answering every suspicion with the sword and firebrand. If a suspected Whig fled from the house to escape the insult, the scourge or rope myrmidons of Ferguson and Tarleton burned it down and ravished his wife and daughters; if a son refused to betray his parent he was hung like a dog; if a wife refused to tell the hiding place of her husband her belly was ripped open by the butcher knife of the Tory. I draw no fancy picture—the truth is far wilder than the fabulist's imagination can feign.

And then came the dawn. Colonel Ferguson, in that spirit of pride that always goes before a fall, sent a fateful message to the patriots beyond the mountains advising them that "if they did not desist from their opposition to the Brit-

ish arms he would march his army over the mountains, hang their leaders, and lay their country waste with fire and sword." Saturated with his own powers, fresh from his revelry of murder, rape, and pillage, little did Ferguson realize that in sending the message he was sealing his own doom and the doom of the British cause in America. Yes, my colleagues, Ferguson's fate and the fate of our Republic was wrapped up in that message because the answer it brought forth was death to the sender, Kings Mountain, Yorktown, and freedom.

The Holston men sensing the seriousness of the situation purposed in their hearts that the reign of terror, of cruelty, of ignomy, and shame should not be extended to the land of the Holston where the British soldier was unknown and the Tory had been driven out, in order to bring their people into submission to the British Crown. Knowing the danger, they waited not for it to come but with all the fury of the panther in the protection of her young, they rushed forth to stamp it out before it became a menace to their homes, their people, and the cause of freedom that was so dear to their hearts. Ferguson's message was delivered to Colonel Shelby, who at once got in touch with Colonel Sevier, and a little later with Colonel Campbell. Campbell, Shelby, and Sevier, the flower and pride of the Holston, Watauga, and Nolichucky settlements. Magic names borne by enchanted men. Campbell, the lover of freedom, the enemy of the Tory, the hero of countless battles, who died ere the morning was yet young, still engaged in freedom's fight, on his way to Yorktown; Shelby, the hero of three wars, the first Governor of Kentucky, and who was appointed Secretary of War under President Monroe, but declined the appointment on account of age; Sevier, Virginia born, affectionately known as "Chucky Jack," the first Governor of the ill-fated State of Franklin, the first Governor of Tennessee, and who died in the service of his Government as Congressman from his adopted State; a triumvirate of ability, talent, courage, and patriotism, not equalled by Caesar, Pompey, and Crassus when they ruled over the destinies of the Roman Empire. It was agreed that each would assemble his mountain clan at Sycamore Shoals on the Watauga, on September 25. Pursuant to agreement, Campbell appeared with his 400 Virginians, and Colonels Shelby and Sevier with about 250 men each.

Early the next morning before the little army fell in line of march, Samuel Doak, the pioneer Presbyterian clergyman of the Watauga settlement, invoked divine blessings upon the patriots, praying for their success and that the God of battle might be with them, and closing with the stirring Biblical words, "The sword of the Lord and of Gideon," and the sturdy Scotch-Irish Presbyterians chanted in religious, patriotic fervor, "The sword of the Lord and of Gideon," and these fighting words resounded down the Watauga, reverberated from hill to hill, in sacred, clarion tones rang in the ears of the patriots during their arduous march, giving them the assurance that they were engaged in a holy warfare for God and country, and became the battle cry during the short, fierce, and bloody struggles at Kings Mountain.

Search the annals of war, turn the pages of history, my colleagues, and I do not believe you will find an army similar to the one that marched from Sycamore Shoals early in the morning of September 26, back in the year 1780. It was really not an army at all, but rather an uprising among the lovers of liberty. There was not a single regular soldier of the American Army enlisted under Campbell's banner. Instead of shining uniforms, bedecked with brass buttons and epaulets, they wore coonskin caps, hunting shirts, home-made shoes, and homespun breeches; instead of a band to play martial music, they carried a song of freedom in their hearts; instead of rifles with glittering bayonets, they carried their trusty Deckards, which they had used alike on the Tory, the Indian, and wild game, and their long knives; instead of tents to shelter them from the weather they carried a blanket; and instead of a commissary, each man carried a wallet of provisions consisting of parched corn meal mixed with maple sugar and a tin cup dangling to his side. Oh, the mountain men were in action! They had taken things in their own hands and were doing them in their own way. They had a purpose in their hearts—the destruction of Ferguson—and the execution of that purpose and not military pomp and display, not "squads right" and "squads left," was uppermost in their minds.

Most of them mounted, the quest in search of Ferguson started early in the morning of the 26th, and the 300-mile search that none but the stout of heart would have undertaken, none but the hardiest could have endured, over the mightiest mountains in the East, some of them covered with snow, all of them covered with primeval forest unfrequented by the foot of the white man, through which no roads had been constructed, continued until the quarry was located on Kings Mountain on the evening of October 7. A difficult march? Yes, an impossible march had not the patriots been men of iron with a purpose of mind that, for the cause of freedom, Ferguson must be destroyed as fixed and resolute as that which animated liberty-loving Cato of old when he stood in the Roman Senate and proclaimed from day to day that, in order to save Rome, Carthage must be destroyed. Knowing the hardships of the march, realizing the danger that awaited them, the patriots were, on more than one occasion, given the right to withdraw from the undertaking and return home. Ah, my colleagues, the love of freedom that sent them forth was too deeply embedded in their very souls to be abated by hardships and dangers and every patriot scorned the offer. On the march they were joined by other patriots from the Carolinas and a few from Georgia. And, after the coming together of the patriots—Ferguson having been located—the hour of selecting those who would actually make the attack arrived. Gideon, in selecting the 300 men of Israel to subdue the Midianites, was no more exacting than Campbell and his fellow officers in selecting the men to subdue Ferguson.

From the 400 men under Campbell, 200 were selected; from the 240 men under Shelby, 120 were selected; from the 240 men under Sevier, 120 were selected; from the 180 men under McDowell, 90 were selected; from the 350 men under Cleveland and Winston, 170 were selected; from the 270 men under Lacy, 100 were selected; from the 70 men under Williams, 60 were selected; and from the 60 men under Hambright, 50 were selected. Every man selected was not only well mounted, well equipped with rifle and knife, mentally and physically fit for the ordeal, but above all every man was a patriot animated by a love for freedom, who put liberty above life, and firmly believed deep down in his heart that God would control the battle and give freedom the victory.

Ferguson, knowing that the backwoodsmen were on his trail, picked the arena for the oncoming conflict with great caution. Stationing his troops, composed of 1,000 Tories and 125 British regulars, on the crown of a spur of Kings Mountain, from 60 to 120 yards wide, the base of which is some 250 yards, and the elevation about 60 feet, for the moment thinking that he was monarch of all he surveyed from the eminence, declared "that he was on Kings Mountain, that he was king of the mountain, and God Almighty could not drive him from it." Such an utterance, no doubt, was caused by the success with which he met in subduing the patriots in the Carolinas. He was beginning to feel secure in his own right, and in such moments proud, boastful man oftimes, failing to appreciate his own limitations, uses extravagant language, forgetting entirely that he knows very little about his own fate, less about the mysteries of God. Had he known a little more about God and the men of the Holston, I believe his boast would have been less extravagant. God had real tools to work with when he used the men of the Holston.

The selection having been made, so eager were the patriots to engage Ferguson that they marched through the rain all night before the engagement, wrapping the locks of their guns in their hunting shirts and blankets to keep them dry. Arriving at Kings Mountain in the evening around 3 o'clock, the order was given to "dismount and tie horses." The plan of battle, which had been mapped out, being to surround the ridge and attack from both sides, the men were so stationed, and before the final orders of battle were given, General

Campbell visited each corps and said to the men that if any of them, men or officers, were afraid, to quit and go home; that he wished no man to engage in the action who could not fight; that, as for himself, he was determined to fight the enemy for a week, if need be, to gain the victory. Standing at the base of that soon-to-be inferno, looking up at death that only awaited their coming, with the cares of their loved ones left behind weighing heavily upon their very souls, the passion for freedom burned so intensely in their breasts that not a single line was broken.

The watchword was "Buford," a word pregnant with meaning, signifying the acme of cruelty, atrociousness, and savagery in war, vividly recalling the vengeance visited upon Buford's brave men and filling the patriots with a determination to avenge the butchery of Waxhaw. And then the final order. Ah, my colleagues, give me your attention while I read it. It was a solemn call to every man to lay his life upon the altar of freedom. Under it there was but "to do or to die." Well that they had been carefully selected, because no faint hearts could have received that order and had the courage to march up hill to meet British and Tory bayonets and bullets. "Fresh prime your guns, and every man go into battle resolved to fight until he dies!"

And so, my colleagues, the battle between freedom and tyranny commenced. On top of the mountain, mounted on his white charger, Ferguson, trained in the science of war, a veteran of the wars of Flanders and Germany, a participant in the Battles of Brandywine and Monmouth and the Tory outrages throughout the Carolinas, magnetic and dashing, intrepid and courageous, full of vain glory and vanity, but withal cool of head, considered by many the flower of the British Army, led the British regulars and Tories, numbering some eleven hundred and twenty-five fighting men armed with rifles upon which glistened the deadly bayonet. Down below, "the red-haired Campbell, the Claymore of the Argyle gleaming in his hands, and his blue eyes glittering with a livid flame," impulsive at times, yet shrewd and calculating in judgment, every inch a warrior, a God-made leader of men, coat off, collar open, baring his breast to the enemy, out in front afoot leading his brave Virginians with the cry upon his lips, "Here they are my brave boys; shout like hell and fight like devils." Waiting not the attack, but pressing the fight, up the mountain he led his brave men right into Ferguson's leaden bullets and death-taking bayonets. Thrice repulsed, thrice he rallied his men at the foot of the mountain, ever out in front leading the way back, his clarion voice sounding the return—"Boys remember your liberty! Come on! Come on! my brave fellows; another gun—another gun will do it! D—n them, we must have them out of this!"

What a conflict! What a battle! In less than 50 minutes Ferguson, the pride of the British Army, lay dead, pierced by 11 bullets; the patriots suffered a loss of 28 killed and 62 wounded, and the whole British Army surrendered, having lost in the engagement 456 killed and wounded. And as freedom and tyranny contended for the mastery, no doubt old Mars enjoyed 50 minutes of supreme bliss as he sat with a smile of sardonic satisfaction upon his face and watched his warriors battle as never men battled before, sparing neither limb nor life, the one to gain freedom, the other to withhold freedom from the sons of men. Ah, my colleagues, during those 50 minutes those battling for freedom wrote glory upon the sides and summit of Kings Mountain in letters of blood that will grow in brilliance during the years as long as there remains upon earth a single freeman!

And thus ended the battle. "The sword of the Lord and of Gideon" had prevailed!

The news of the battle was carried on "the wings of the morning" to the farthest reaches of the Colonies, dispelling the gloom and despair that had been hanging like a pall over the patriots, and renewing their faith and hope and courage. It was like the rainbow heralding the passing of the storm. The clouds had disappeared and the sun was once again in the heavens. Somehow, by that mysterious something that ofttimes brings understanding, there was planted in the hearts and minds of the patriots the conscious knowledge that "The sword of the Lord and of Gideon" would continue to prevail. Armed with this knowledge they were invincible.

Sickening unto death was the effect of the battle upon the British and Tories. From that day on the Tories were crushed and no longer dared rise up against the patriots, and Cornwallis was a defeated man. His plans to join Ferguson at Salisbury and march on in triumph to Virginia being frustrated, there was nothing left for him to do but evacuate Charlotte, a hotbed of patriotism, and fall back into South Carolina. From then on it was only a question of time. The defeat of the British by the gallant Morgan at Cowpens, the draw battle at Guilford, where the undaunted Campbell was still firing when Green sounded retreat, and Cornwallis retired from the field, leaving his wounded behind; his retreat to his base of supplies at Wilmington, and thence his march into Virginia, staking his all upon forming a junction with Sir Henry Clinton on the Chesapeake—marching up and down the Old Dominion with Lafayette, like a bloodhound, ever on his trail; and the end—Yorktown.

For fear you may think I am prejudiced in favor of my people and have told the tale in such a way as to be in keeping with their greatness, let me recall a few substantiating facts gleaned from history.

The Continental Congress, the Senate of Virginia, and the House of Delegates of Virginia all passed resolutions proclaiming the great victory and paying tribute to General Campbell and his men.

General Washington issued a general order declaring the results to be "an important advantage gained," and Generals Gates, Green, and Lee all recognized the importance of the battle and paid the highest compliments to General Campbell and his men.

Washington Irving declares:

The Battle of Kings Mountain, inconsiderable though it was in numbers engaged, turned the tide of southern warfare.

Senator Lodge, in his Story of the Revolution, says:

It proved one of the decisive battles of the Revolution. It turned the tide of war in the Southern States. From that time the British fortunes declined, while the spirit of the southern people rose at a bound.

Of the battle, Thomas Jefferson said:

That memorable victory was the joyful annunciation of the turning of the tide of success which terminated the War of the Revolution with the seal of our independence.

John H. Wheeler, the historian, says:

This was the turning point for the fortunes of America. The decisive blow prostrated the British power for the time, vanquished the Tory influence, and encouraged the hopes of the patriots.

John Fiske, in his War of Independence, says:

In the series of events which led to the surrender of Cornwallis, the Battle of Kings Mountain played a part similar to the Battle of Bennington in the series of events which led to the surrender of Burgoyne. It was the enemy's first serious disaster, and its immediate result was to check his progress until the Americans could muster strength enough to overthrow him.

The historian Bancroft says:

The victory at Kings Mountain, which in the spirit of the American soldiers was like the rising at Concord, in its effect like the success at Bennington, changed the aspects of the war. The loyalist of North Carolina no longer dared rise. It fired the patriots of the two Carolinas with fresh zeal. It encouraged the fragments of the defeated and scattered American Army to seek each other and organize themselves anew. It quickened the North Carolina Legislature to earnest effort. It encouraged Virginia to devote her resources to the country south of her border. The appearance on the frontiers of a numerous enemy from the settlements beyond the mountains, whose very names had been unknown to the British, took Cornwallis by surprise, and their success was fatal to his intended expedition. He had hoped to step with ease from one Carolina to the other, and from those to the conquest of Virginia, and he had now no choice but to retreat.

Listen to what Dr. Lyman C. Draper, who spent years collecting material for his great book on Kings Mountain and Its Heroes, and who, perhaps, had a broader, deeper knowledge not only of the battle but its effect upon our struggle for freedom than any other man, has to say. Dr. Draper spent years accumulating the material for his great book, and this

material is now in the possession of the State Historical Society of Wisconsin. Many original papers, I understand, were turned over to Dr. Draper with the understanding that they would be returned. May I express the hope, in passing, that an effort be made to secure the return of these papers; and if this can be effected, that a suitable repository be erected in Abingdon in which they may be preserved along with other documents and relics relating to the great battle and the men who participated therein.

Says Dr. Draper:

And richly did the heroes who marched under Campbell's banner deserve all the praise so generously bestowed upon them. Kings Mountain paved the way for the successive advantages gained by the American armies at, first, Dam Ford, Blackstocks, Cowpens, Guilford, and Eutaw, and ultimately for the crowning victory of Yorktown, with the glorious fruition of independence forever.

Yes, my colleagues, while the shots fired by the New England patriots at Lexington and Concord were heard around the world, the force of the bullets shot by the mountain patriots from their Deckard rifles at Kings Mountain was not spent until they reached Yorktown. They were fired in the name of freedom and they carried on, growing in velocity and fury day by day, until they accomplished their glorious objects of Yorktown and independence!

The Honorable Lewis P. Summers, himself a descendant of the Kings Mountain immortals and who has contributed so much of his time and talent to the preservation of the history of southwest Virginia, after years of patient work, finally succeeded in assembling a complete roster of the officers and men who marched with General Campbell to Kings Mountain. The descendants of those men now people a large area of my district, and I pause to pay tribute to their sterling worth, their innate religious zeal, their patriotic fervor, and to state to you, my colleagues, that they are in all respects worthy descendants of illustrious sires, and ever stand ready in defense of freedom to reenact Kings Mountain. Moreover, their descendants today are found scattered over our great Republic from one end to the other, and wherever they have located you will find that they have acted as leaven upon their adopted sections, taking the lead not only in business affairs but in affairs of State and church as well. Blessed is the section that can boast the blood of General Campbell and his immortal four hundred!

May I be permitted to incorporate at this point in my address this honor roll of fame?

ROSTER OF MEN WHO ACCOMPANIED COL. WILLIAM CAMPBELL TO THE BATTLE OF KINGS MOUNTAIN, OCTOBER 7, 1780

[Gov. David Campbell's manuscript, State University of Wisconsin]

County Lieutenant of Washington County, Va., Col. Arthur Campbell
Colonel of Militia of Washington County, Va., Col. William Campbell
Major of Militia, Major William Edmondson

CAPTAINS

James Dysart (wounded)
Robert Craig
Andrew Colvill
David Beattie
William Neil
William Edmondson (killed)

LIEUTENANTS

Reece Bowen (killed)
William Russell
Robert Edmondson, Sr. (killed)
Thomas McCulloch (killed)
Samuel Newell (wounded)
William Willoughby
William Crabtree
Robert Edmondson, 2d (wounded)
Andrew Goff

ENSIGNS

Robert Campbell (wounded)
James Corry (killed)
Nathaniel Dryden (killed)
Humberson Lyon (killed)
James Laird (killed)
Nathaniel Guist (killed)

—

A pay roll for Capt. James Dysart's Company of light horse in actual service on a tour to North Carolina under the command of Col. William Campbell.

ROSTER OF DYSART'S COMPANY

[Virginia State Library, Richmond, Va.]

James Dysart (captain)
Joseph Black (lieutenant)
David Ward
William Willoughby (ensign)
Alexander McMullen
James Vance
William McElwee
Mathew Kincannon
John Scott
Solomon Whiteley
Moses Dorton
John Montgomery
Thomas Loveletty
Samuel Oxer
Andrew Boyd
John Boyd (wounded)
Robert Grier
John Vance
James Getwood
Alias Sample
Thomas Grier
William Craig
James McElwee
Andrew Evans
Samuel Stuart
John Stern (or Fern)
John Maxwell
Benjamin Sample
John Sample
Robert Trimble
Magnus McDonald
John Fifher
William Wilkerson
James Skeen
James Hickenbotam
George Puckett
William Neel
John Johnston
Aaron Treadway
John Wallace
John McQuiston
Robert Hickenbottom
John Cusick
Liles Dolberry
William Dorton

DAVID BEATTIE'S COMPANY

A true list of the men which served under me at Kings Mountain:

David Beattie (captain)
Robert Edmondson (lieutenant)
Nathaniel Dryden (2d lieutenant)
William Kilabay
Huch Dalton
James Keys
James Alexander
David Robinson
Andw. Henderson
Wm. Alexander
Jos. Alexander
Jeremiah Alexander
Francis McClung
Samuel Montgomery
Pat Savage
Sam Duff
David Duff (wounded)
John Alley

Read the roster. It should fill every Viriginian with venial pride. Gen. William Campbell, a Virginian, was the commanding officer; Phillip Griever, a Virginian, fired the opening shot of the battle; Robert Young, a Virginian, shot Ferguson; Samuel Talbot, a Virginian, got Ferguson's sword; of the seven Edmondsons engaged in the battle, all Virginians, four paid the supreme sacrifice and one was wounded; and of the 28 killed and 62 wounded American patriots, 18 of the killed and 21 of the wounded were Virginians, which shows that although the Virginians composed only 22 percent of the officers and men in the engagement they sustained a loss of 64 percent of the killed and 34 percent of the wounded.

Read the roster again. It tells a wonderful tale of valor and heroism among the officers. It shows that none of them "sniffed the battle from afar" but were in the thickest of the fighting, leading their men on to victory and glory. Search your histories, review the unrecorded legends of the past, and find if you can, in history or legend, a record that will equal the record made by the Virginia officers on that fateful day. Listen. Including General Campbell, there were 22 officers among the Virginians. Of this number nine were killed and four wounded. It shows that the officers, those set apart as leaders, not only commanded by word of mouth, but by personal action as well, never asking their men to go where they were unwilling to lead, and were resolute, God-fearing men bent upon protecting, even at the price of life itself, their firesides and establishing here in the New World a democracy resting upon the cornerstones of freedom and liberty.

Being interested, as I know you are, my colleagues, in the preservation of liberty and freedom, I know you have asked yourselves the question, "What made these backwoods Scotch-Irish Presbyterians such lovers of liberty, such zealots for freedom?" If the answer has not already come to you, let me give it to you in one word, "Religion."

Religion is the mother of many things. It is not only the mother of spiritual liberty, it is the mother of civil liberty, and without liberty there can be no democracy. It has made more men free and kept more men free than all other forces combined. And remember the fires of democracy blaze forth or die down as the spirituality of our people rises and falls. Yes, the thermometer that registers the strength or weakness of our democracy is the religious pulse of our people. We are only deceiving ourselves when we assume that any force, save the force of religion, can keep the fires of democracy burning in America. If America ever falls, it will not be from outside forces. It will be because we let our religious fires burn out. Their dying embers will extinguish the spark of liberty that burns in the breast of every American. If you demand proof, then I refer you to the recorded history of the rise and fall of the nations of the past, and in this age of madness and skepticism, particularly to the recent history of Germany and Russia whose present sad and sickening plight only confirms what history has been recording since the children of Israel went off after false gods. When these nations crucified religion, on the same altar they crucified the freedom and liberties of their people.

What the nations of the world need today, more than all else, is a rebirth of religion. Oh, if we would only rekindle the religious fires here in America, fascism, communism, and every other autocratic, destructive, and degrading "ism" would disappear like the frost before the morning sun, and the air of America would become so pure, so wholesome, so free and

democratic that it would stifle those who breed and live down in the quagmires of autocracy, intolerance, and bigotry.

And their religious zeal made them the avowed enemies of all those who stood in the way of freedom and democracy; and so it is not strange we find them the sworn enemies of the Tories. The Tories have ever been the enemies of freedom and democracy. They put nothing into the government of the Colonies but took out a heavy toll. They reaped where they sowed not. In their blood has ever run the extended palm eagerly beseeching governmental favors but giving nothing in return. A favored class in that day that enjoyed privileges and concessions denied the lovers of freedom and country they betrayed the colonial patriots for a mess of pottage dished out by a tyrannical king through his subservient governors.

Though deeply religious, Campbell and his men, like some of the patriarchs of old, did not consider it inconsistent with their innate religious instincts to rid the country of its enemies, the Tories, and so we find that long before Kings Mountain they had run the Tories out of the Holston Settlement and extended their Tory activities over into the New River settlement in Virginia and the headwaters of the Yadkin River over in North Carolina. To impress upon your mind the intense feeling the Scotch-Irish Presbyterians bore against the Tories, may I not relate this interesting incident of the disposal of a famous Tory by the name of Hopkins? Returning from church one Sabbath day, General Campbell and some of his fellow churchmen spied Hopkins as he dashed into the forest. Giving chase, they captured the Tory, quickly disposed of him by hanging him to a sycamore tree, then quietly returning to the women who accompanied them—General Campbell, in answer to a question from his wife, who was the sister of Patrick Henry, "What did you do with him, Mr. Campbell?" laconically replied, "Oh, we hung him, Betty; that's all."

That they were active in their warfare against the Tories, going so far as to hang them now and then, seems to be borne out by the fact that the General Assembly of Virginia in 1779 passed an act reciting "that William Campbell, Walter Crockett, and other liege subjects" in suppressing "divers evil disposed persons" who were "engaged in insurrection and conspiracy" had taken measures which "may not be strictly warranted by law, although justifiable from immediately urgency and imminence of the danger," and relieving the said "William Campbell, Walter Crockett, and all other persons whoever concerned" from "all pains, penalties, prosecutions, actions, suits, and damages on account thereof."

By some they have been criticized for hanging a few Tories. I commend them for it. They were traitors, and why shouldn't they have been treated as traitors? Washington hung them. If other colonial settlements had been as vigorous in stamping out Toryism as the Holston Settlement, many lives and much property would have been saved, countless deeds of cruelty and infamy spared the patriots, and the Revolutionary War shortened several years.

Yes, my colleagues, the Holston Settlement, known today as southwest Virginia, dominated in that day by Campbell and his Scotch-Irish Presbyterians, was no man's land for the Tories, for which fact we apologize to no living man. Rather, we glory in the fact. The Scotch-Irish Presbyterians and the Tories never have and never will be able to live in peace and harmony. Their concepts of government are too far apart. Blood will tell, and I am persuaded that the progeny of those patriots of old still share a kindred feeling for the Tories of today, who still attempt to reap where they sow not, and who would deny the blessings of government to the poor, the humble, the unfortunate, and the underprivileged. Some times I think that what this country needs is not, as Tom Marshall said, "A good 5-cent cigar," but a few more Campbells to look after the Tories.

The past is prologue—an introduction to the present; the present but the reflection of the past. Without knowing the past it is impossible for us to understand the present and build wisely for the future. In retrospection, we should ever search well the pages of the past for the mistakes that retarded our progress, for the virtues that carried us on to higher levels. We should ever remember the struggles and tribulations through which our ancestors have passed, the sacrifices they made, their deeds of heroism and valor—the things upon which the greatness of the present rests—in order to intelligently face the future, dreaming, hoping, and praying, struggling, planning, and working for a greater and more glorious democracy. This is the only way to keep alive the urge for higher attainments. The nation that, while building for the future, heeds and honors not the virtues of the past is destined, sooner or later, to have an inglorious past and a hopeless future.

May we never become so forgetful of the past, so dead and senseless to the achievements of the days that have gone, as not to perpetuate them by monuments and memorials, thus declaring to the world and to the generations yet to come some of the things in which we take pride, some of the things upon which our greatness rests.

That the monument will cost money, may I be the first to admit. But let me admonish you that it will accomplish that which money cannot buy. It will give our people and those who come after, a truer insight into the things worth while, a finer appreciation of the real and lasting virtues. It will teach patriotism, love of country, and love of God, and these things are above and beyond the sign of the dollar. It will teach sacrifice, and patience, and piety, and courage, and these things cannot be purchased in the open market. It will keep the fires of freedom and liberty burning, and the cost sign never hung from the sacred garments that have ever enshrouded the Goddessses of Liberty and Freedom. Any investment that teaches and perpetuates the virtues, no matter what the cost, is not only a prudent but a wise investment.

In leaving my case with you, confidently believing that you will grant my simple request, I pray that as those of tomorrow look upon the memorial and begin to meditate upon the cause back of the greatness of these patriots of old that there may be imparted to them by the Ruler of Men the true answer—Religion.

Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

Amendment of the Social Security Act

EXTENSION OF REMARKS
OF
HON. PHIL FERGUSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1939

AMENDMENTS INTENDED TO BE PROPOSED BY HON. PHIL FERGUSON, OF OKLAHOMA

Mr. FERGUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following amendments intended to be proposed by me to the bill (H. R. 6635) to amend the Social Security Act, and for other purposes, as follows:

On page 3, strike out lines 3 to 18 and insert in lieu thereof the following:

"PAYMENT TO STATES

"SEC. 3. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for old-age assistance for each quarter, beginning with the quarter commencing January 1, 1940 (1) an amount which shall be used exclusively as old-age assistance equal to the sum of the following proportions of the total amounts expended during such quarter as old-age assistance under the State plan with respect to each needy individual who at the time of such expenditure is 65 years of age or older and is not an inmate of a public institution:

"(A) Two-thirds of such expenditures, not counting so much of any expenditure with respect to any individual for any month as exceeds $15, plus.

"(B) One-half of so much of such expenditures with respect to any individual for any month as exceeds $15, not counting so much of any expenditure with respect to any individual for any month as

exceeds $40; and (2) 5 percent of the amount of the payment under clause (1) of this subsection, which shall be used for paying the costs of administering the State plan or for old-age assistance, or both, and for no other purpose."

On page 4, line 6, strike out "one-half" and insert in lieu thereof "the State's proportionate share."

States with plans approved by the Social Security Board	Old-age assistance

Experimental Air-Mail Service Opens the Way for the Further Progress of American Aviation

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

Mr. RANDOLPH. Mr. Speaker, it was my privilege on May 12 to participate in appropriate exercises at Morgantown, W. Va., incident to the inauguration of the experimental air-mail service which will soon include approximately 60 communities in 4 States. Speaking at the Morgantown Airport, which, when completed, will be one of the finest in the Nation, I said:

I consider this pick-up air-mail system one of the most forward-looking developments in the history of American transportation.

At that time I stated that I fully believed and felt the 1-year test period would prove the practicability and usefulness of the device, invented by Dr. L. S. Adams, and that the work would be broadened later to cover most sections of the United States.

MANY AVIATION LEADERS PRESENT

Present for the exercises were Dr. Adams; Richard C. Du Pont, president of the All American Aviation, Inc.; Senator James M. Mead, of New York; Clinton Hester, Administrator of the Civil Aeronautics Authority; Charles P. Graddick, superintendent of the air-mail division, United States Post Office Department; Col. Edgar S. Gorrell, president of the Air Transport Association of America, and many others who made the trip by plane from Washington.

At Morgantown we were greeted by the splendid citizenry of that community, who have worked for the development of the program. The editors of the local newspapers, the city manager, civic leaders, and, in fact, all public-spirited men and women have in that section contributed much to the cooperative spirit which has been manifested.

Mr. Graddick, in his remarks at the exercises, said he believed the experimental period would be successful, and from it would develop "the world's greatest air-mail feeder-service system." In that connection I have inserted at this point an editorial from the Washington Star, which was carried in that newspaper just prior to the beginning of the service:

AIR-MAIL PICK-UP

A new chapter in air-mail history is to begin Friday, when the Post Office Department will inaugurate the first regular air-mail pick-up service in history.

For years the railroads have deposited and picked up mail from moving trains as a means of saving time. The air-mail pick-up service, though operating in the same way, is even more important. It will permit direct air-mail service to communities which, because they cannot afford to construct airports, have not had ready access to air-mail facilities.

Following the inaugural Friday, on a limited scale in West Virginia and Ohio, the service will be extended a little at a time until, by July 4, 2 routes will be in operation serving 59 communities, most of which never have had the service, in Pennsylvania, Delaware, West Virginia, and Ohio. When it is considered that all of the existing air-mail routes in the United States provide direct service to only 180 cities, the scope of the new service may be appreciated.

The pick-up device to be used has been in process of development over a period of 12 years, part of the work having been done here at Washington Airport. It now is regarded as perfected, and its use has been approved by the Civil Aeronautics Authority.

MORGANTOWN EDITOR'S COMMENT

The morning following the exercises the editor of the Morgantown Dominion-News carried the following appropriate comment:

Yesterday marked another step in the progress of the development of aviation in the Morgantown trading territory, but there remains much to be done if we are to not only continue our progress upon that which has been accomplished.

The celebration yesterday marked the beginning of another phase of our airport and air-mail development, just as it marked the close of that period not so far behind us in which there were many who believed it folly to attempt such an ambitious program for the city of Morgantown.

There is still much to be done, but, we believe, we have made a start, and a start from whence we may be able to even exceed the dreams and plans of some who not so many years ago were looked upon as a little "cracked" over the possibilities of aviation as a business proposition for the city of Morgantown and the Morgantown trading territory.

All that is needed now is a continuation of the effort that has blasted away three mountaintops in the determination of many to carve out a place in the newest form of proven transportation we have today.

That same afternoon the Morgantown Post carried the following interesting editorial:

USING THE NEW SERVICE

As an example of what the new air-mail service may mean in a business way to Morgantown, we quote from the following letter which we received this morning from Acme Newspictures, of Cleveland:

"We are placing you on our list to receive a week's trial of Acme telephoto and regional mat service free of charge effective with the inauguration of the air-mail pick-up service in your territory on May 12. Mats mailed from Cleveland or New York as late as 8 a. m. will reach you in time for use in that day's issue of the Post, as the pick-up plane will drop Morgantown's mail off at 10:30 a. m. each day.

"We believe you will be amazed at the high-speed coverage which this service will provide. No matter where or when a big story breaks, you will have telephotos of the incident within a few hours after it occurs. Pictures can be transmitted to Cleveland or New York from any section of the country in 7 minutes, matted, and rushed to you by air mail for use on your front page along with your first wire dispatches."

This is an example of how outside business concerns are seeking to develop new business in West Virginia by taking advantage of the new air-mail service.

We can't see any reason why those towns on this new air-mail route should not similarly seek to develop business outside West Virginia.

After all, these air-mail planes do not travel a one-way street. They carry mail out of West Virginia as well as into the State, and if we are as alert as this Cleveland picture service is, perhaps we can find equally promising opportunities to develop our own business.

SERVICE IS JUSTIFIED

Feeling that Members of Congress might desire to be better informed in connection with this new development, I am including the following article, in part, carried in the Sunday Star, May 21, under the signature of Joseph S. Edgerton:

The United States domestic air-mail service, now limited by lack of an adequate national airport system to only 180 cities, is becoming a local service to an unlimited number of communities through the adoption by the Post Office Department of an air-mail pick-up device which makes it possible for a mail plane to deliver and collect mail without landing.

The first pick-up air-mail service, inaugurated May 12 at Morgantown, W. Va., is being extended, a few stops at a time, over two contract air-mail routes authorized by the Post Office Department in Pennsylvania, Delaware, West Virginia, and Ohio. By July 4 both routes will be in full operation, serving 59 communities, most of which never have enjoyed direct air-mail service.

Through the establishment of these routes, involving the use of only 6 single-engined airplanes, the number of air-mail points receiving direct service is to be increased within a period of 2 months from 180 to nearly 240, a highly significant event in view of the fact that more than 20 years had been required to build up the Nation's system to 180 direct points of service.

There seems to be justification for the belief that inauguration of air-mail pick-up service marks a turning point of vital importance in air-transportation history. For years the airport problem has complicated air transportation. Lack of sufficient airports created a bottle neck which threatened to stifle future growth of air commerce.

Only the largest, wealthiest communities can afford to construct and maintain air transport terminals of the type required for the operation of large, high-speed, modern air liners. Few, if any, air terminals pay their way. Most of them are operated at heavy loss. Yet there has been a constantly increasing demand for larger, better-equipped airports to keep pace with aircraft developments. Under this situation it obviously was futile for smaller communities to hope for direct air-mail service.

Perfection of the air-mail pick-up method, however, immediately changes the whole picture. Use of the device adopted by the Post Office Department and approved by the Civil Aeronautics Authority makes it possible for an airplane to deliver or pick up pouches of mail from a roof, a hilltop, or the corner of a field. The ground equipment is foolproof; it can be operated by anyone without training. The cost is negligible. Its use makes it possible for any community or hamlet to become a direct service point on the air-mail map.

The implications are obvious. Air-mail and air-express feeder lines can be established without any limitations other than those of practical economics. Every county and every town with enough business to justify service can be added directly to the air-transport network.

It is easy to envision webs of such local feeder lines radiating from every one of the 180 stops on the existing major air-line routes, tapping sources of business which otherwise never could be developed.

The new routes will be operated by a new aviation organization, All-American Aviation, Inc., of Wilmington, Del., headed by Richard C. du Pont, president of the Soaring Society of America, and former holder of the American soaring record.

The inventor of the pick-up device is Dr. Lytle S. Adams, of Irwin, Pa., who gave up a successful career in dental surgery 12 years ago for aviation. Dr. Adams is well known in Washington. He has made repeated demonstrations and tests of his device, during various stages of its development, at Washington Airport. At one time he employed a device which catapulted the pick-up sack into the air by means of powerful springs to impart initial motion in the direction of flight and ease the pick-up shock. The device, as now installed on the new air-mail routes, is simpler.

The ground equipment consists of two steel masts 40 feet high, topped by 10-foot markers or targets to increase their visibility from the air. The bag to be picked up is suspended by ropes between the masts and is picked up by a special form of grapple lowered from the airplane. It is essentially the method employed by Army observation airplanes for picking up messages in the field from ground units with which they are cooperating, with refinements to make it more suitable for regular air-mail use. The incoming mail is delivered simultaneously with the pick-up, both actions being automatic.

Civil Aeronautics Authority To Designate One or More Schools for the Training of Negro Air Pilots

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

LETTER FROM EDGAR G. BROWN

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to me by Mr. Edgar G. Brown, president of the United Government Employees, Inc., on the Negro's right to an equal opportunity to serve his country in time of war and to receive proper training for such service in times of peace:

UNITED GOVERNMENT EMPLOYEES, INC.,
Washington, D. C., June 1, 1939.

Congressman ALBERT J. ENGEL,
Appropriations Committee,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN ENGEL: May we again assure you of our great appreciation and gratitude for your most commendable statesmanship and equally encouraging leadership in the national-defense program for our homes and country, particularly as it relates to the Air Corps and the provision in Public, No. 18, Seventy-sixth Congress, section 4, which makes it mandatory on the part of the Secretary of War and the "Civil Aeronautics Authority to designate one or more schools for the training of any Negro air pilots" for service in the United States Army.

The United Government Employees, Inc.; the Improved Benevolent and Protective Order of Elks of the World, Dr. J. Finley Wilson, grand exalted ruler; Dr. Emmet J. Scott, chairman of the Pittsburgh Courier's National Commission for Equality in the Army, Navy, and Air Corps, and former secretary and treasurer of Howard University; the National Airmen's Association, of which I am the Washington representative; and several hundred Negro newspapers and veterans' organizations are likewise profoundly concerned with the just administration of this law passed by Congress and signed by the President to afford the fullest opportunity possible at the very outset of this program on July 1, 1939, to the representative youth of 15,000,000 patriotic and loyal American citizens of the colored race.

We are quite desirous, further, as the testimony presented by the above-mentioned persons and Senator H. H. SCHWARTZ, original sponsor of this legislation, before the chairman on Friday will reveal, to have your subcommittee on the supplemental appropriations for the War Department to earmark $10,000,000 in order to provide adequate funds and to expedite the carrying out of this program, building, if necessary, a second complete air training center at Tuskegee Institute, Tuskegee, Ala., where there is located a special Negro veterans' hospital maintained by the United States Government, and where there is at the present time on active duty the most recent Negro graduate of West Point, Lieutenant Davis, who is in charge of the Reserve Officers' Training Corps for the United States Army. Another site which could be utilized because of the admirable all-year-round flying weather is the Florida Agricultural and Mechanical College, Tallahassee, Fla., where the legislature could, we are informed, grant the necessary land adjacent and available, which is ideally located at the site of this State institution for Negro education. The North Suburban Flying Field, located at Glenview, Ill., is one of the nine civil aeronautics schools designated under the National Defense Act by the Secretary of War a few weeks ago for primary training courses. This school in the past has graduated Negro air pilots who are now licensed flyers, and have met all requirements of the Civil Aeronautics Authority and Department of Commerce.

There does not seem to be anything which could hold up the successful consummation of this program if Congress makes clear its intention in the matter.

It is for that reason these leaders of the Negro race, who believe in our democracy 100 percent, and the national organizations they represent have appealed to your committee with all the earnestness at their command to earmark $10,000,000 of the $100,000,000 Air Corps fund as already authorized by the Congress on the basis the Negro is one-tenth the total manpower of the United States. In the supplemental request of the President for the War Department, before the item $87,700,655 for the Air Corps should either be increased to $97,700,655 or necessary language inserted in this paragraph making available the funds for this purpose.

I am enclosing a copy of the law and supplemental request for your convenience.

We are indeed most grateful to you for your gracious aid and support on behalf of those interested in this important matter.

Very sincerely yours,

EDGAR G. BROWN, *President.*

Clarence Wyly Turner

MEMORIAL ADDRESS
OF
HON. HERRON PEARSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CLARENCE WYLY TURNER, late a Representative from the State of Tennessee

Mr. PEARSON. Mr. Speaker, I desire to pay tribute to the life and memory of my friend and colleague, Hon. CLARENCE WYLY TURNER.

It has been my pleasure to know Mr. TURNER for many years, but most intimately during the 5 years of our service together in the House of Representatives as members of the delegation from the State of Tennessee. This intimate acquaintance and association gave me an insight into his nature and character which all of his colleagues did not have.

I admired him for his sincerity, his unassuming manner, and rugged honesty. He was kind, courteous, and considerate, and he is one of the few men of my acquaintance whom I never heard utter an unkind thing of any friend or acquaintance. He was of the type that made no effort to promote selfish ambition or desires, but seemed to enjoy seeing his friends and associates achieve the successes that came their way without envy or jealousy.

Any man who spends his entire life in a community and at the close of his earthly endeavors enjoys the respect, confidence, and esteem of those who have known him throughout the years has made a genuine success of his own life, and such was the accomplishment of CLARENCE WYLY TURNER.

During his service in Congress he was faithful to every trust, conscientious in the performance of every duty, and at all times did what his best judgment told him was beneficial to those whom he sought to serve.

The day before his death I walked with him from the Capitol to his office. It was early spring and we were discussing our desire to be back in the sunny State of Tennessee, and his last words to me, as we separated at the entrance to the office building, were, "It is very nice to be here for awhile, but for permanency I prefer to be in Tennessee." A few days afterward he returned to his native State to rest permanently in the soil of the county and State which he loved so devotedly and served so well.

I revere and respect his memory.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT L. BACON, late a Representative from the State of New York

Mr. COLE of New York. Mr. Speaker, long before I became a Member of the House of Representatives I had known of the reputation of ROBERT LOW BACON and his high standing both in the Congress and the Republican Party, which he served with distinction for many years. It was, therefore, with no small amount of eagerness that I anticipated meeting him when I first came to Congress in 1935. It did not take long after knowing him and seeing his work as a Member for me to realize the firm foundation upon which his reputation had been built.

Strong in stature, strong in mind, and strong in personality, BOB BACON was a leader of men and, when I came to know him, of a small but determined group of minority Members of the House. That was at a time when it was tempting to temporize with one's convictions of the ideals of government and the public weal. Of them all, let it be remembered, there was none who was more unswerving from the course which he had always followed during his long and distinguished public career, none who was more unyielding in his devotion to the fundamentals of our form of government and none who was more unwilling to compromise those convictions with the exigencies of the times.

Mr. Speaker, it is a sad realization that the services of this devoted public servant have been terminated and yet the ideals for which he stood and which he championed live on, his spirit is still with us. Great is the loss that has come to us through the sudden and untimely death of our beloved colleague and yet great has been our gain and the enrichment of the Nation through his having been here. ROBERT LOW BACON has left his "footprints in the sands of time."

> Gone are the slumbering, moonlit nights of May
> Gone, gone are they;
> Yet not gone, for I have them in my soul.

Great Lakes Regional Conference of Democratic Women

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 7 (legislative day of Monday, June 5), 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 11, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James A. Farley before the Great Lakes Regional Conference of Democratic Women at Columbus, Ohio, on May 11, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my purpose in this address to the Great Lakes Regional Conference of Women Democrats to talk a little practical politics. To begin with, your job and my job is to insure a clean-cut Democratic victory next year. I am mindful of the splendid part your organization played in the campaigns from 1932 onward. An analysis of the vote of any of these elections will show that it was the women of America who gave us those victories. I have nothing but praise for the work you did then, and I anticipate that your efforts will be just as devoted and just as successful as they were in former tests of strength between the liberalism of our party and the conservatism that the minority party seeks to substitute for it.

Let there be no misunderstanding of the purpose of the opposition. Let there be no underestimate of the resources of our political opponents. They have with them the vast force of those tremendously wealthy individuals and organizations that so long fattened by grace of our Government. They seek a return to the good old times, for them, when the Federal policies were devoted to their interests, to the negligence of the welfare and the prosperity of the rest of the country.

Let your minds go back to the summer of 1929, when Mr. Hoover was in the White House and the stock market was pyramided to dizzying heights. They called that era of dazzling speculation prosperity. Millionaires were multiplying their fortunes and new millionaires were created every day. The money was being made for these favored ones, not by real industry, not by excess of ability or enterprise, but simply by opportunity. We know now, though we did not realize then, that the fortunate ones were not risking their own money but the savings of all of us in the banks and trust companies. When the bubble burst, when the natural laws of economy had demonstrated that wealth for the few and poverty for the mass of our people did not constitute prosperity but was merely the forerunner of disaster, we found ourselves with perhaps 15,000,000 unemployed and breadlines in every city.

The spokesmen for the administration which had suffered this calamity to occur told you that it was the result of natural causes. It actually was simple ineptness, cowardice, and indifference to the public welfare that brought us to such a pass. Had the then incumbent in the White House shown anything approaching the wisdom that the Democratic administration dis-

played when it took on the terrific burden of restoring prostrate industry and agriculture, we would not have gone through those bitter years from '29 to '33. The hundreds of banks that closed their doors to the bewilderment and dismay of their depositors should never have been permitted to reach the depths into which our financial institutions were plunged.

It took a long bank holiday to separate the solvent banks from the insolvent, and it was only the people's confidence in Franklin D. Roosevelt that made them take the hardships of that bank holiday with a smile and with faith that the new regime would pull them out of a ghastly predicament. There was no reason in the world that a similar step should not have been taken before the crash; no reason except that those who were profiting most by the speculative spree would not permit the Government, which they controlled, to put on the brakes.

You all remember how these same kings of finance came begging to the new President who took office in 1933 for him to do something, anything, to save them. There were no Liberty Leagues then seeking to hamstring the Government's efforts at restoration. There was no criticism either of the measures the new administration took or the processes by which the new agencies were put to work.

It was only after the efforts of President Roosevelt and a cooperating Congress had set them on their feet again that the old-time backers of the ancient regime turned on the administration that saved them and accused it of communism, sabotage, and planned destruction of American institutions.

Now these same forces are at work doing everything in their power to supplant the regime of intelligent liberalism with the system that brought us disaster 9 years ago.

There is only one method of combating these forces, and that is by keeping people informed, not only as to the purposes of the enemy, but likewise as to the truth and validity of the Democratic program. The women's organization has done an amazing job in this direction in the past. It must continue that good work.

I have seen recently, among other samples of Republican propaganda, an assault on the taxation policies of the administration, which, of course, they couple with the large relief expenditures. I saw a pamphlet the other day graphically presenting that the Government was taking one apple out of four in the form of taxation. This is silly, on a variety of accounts. The price of apples goes up and down as the apple production varies. If a crop failure makes them scarce, the price rises. If, on the contrary, there is a bumper crop, they are cheap. And, incidentally, the Federal taxes, instead of being 25 percent, are practically negligible in the accounts of the ordinary apple grower.

This sort of thing is comparable to the flooding of the country with postal cards and circulars intended to prove that the reciprocal-trade agreements have injured American agriculture. They use figures that seem appalling, because they omit significant facts. I do not mean to bore you with a lot of statistics, but I'll give you a sample. In an effort to influence the farmers, they cite that under the Democratic low tariff, 1,876,000 bushels of wheat were imported in the first 2 months of this year. True, but what they neglect to tell is that practically all of this did not enter our markets at all but came in bond to be ground and exported. Actually, only 11,000 bushels came in for human consumption in the United States. During the same 2 months we sold abroad 19,000,000 bushels of our wheat.

Vermont and other Northern States are invited to get excited because there was a large increase in the importation of maple sugar. Our people like maple sugar and sirup, and the hurricane destroyed a vast number of New England maples. The importations across the Canadian border filled this gap.

So on down the whole list. You will have all the facts to answer this faking propaganda.

Another big element in the Republican campaign concerns our relief program, particularly W. P. A. The answer to this consists of the fine new schoolhouses, and other public buildings; the bridges, dams, sewage plants, street paving, and hundreds of other projects. Is there any community in all this broad land that thinks the money spent on that community's needed improvements has been wasted?

I do not suppose that all of the emergency program has been carried on perfectly. In fact, I do not know of any large enterprise, public or private, that ever was or could be perfect. It has been good enough, however, to bring the country back from a condition of absolute prostration to one in which dividends are no longer a rare phenomenon and bank failures, on the other hand, are so infrequent that they do not cause even a ripple in the tide of industry. The Roosevelt policies have been good enough to save us from such shattering disasters as riot and revolution. In a world trembling at the peril of war, this country has kept the even tenor of its ways, with no more symptoms of that fear than a prudent preparation of our defense agencies. In some quarters, our President is blamed for not taking more definite steps toward curbing the greed of dictators, whose continued progress ultimately threatens our own safety. In other quarters, he is accused of increasing our peril of involvement by speaking man-fashion of the gangster nations which tear up treaties and are seeking to dominate the world by terror and blackmail. Actually, our President has pursued, and is pursuing, an intelligent course which not only has insured respect of our institutions but has made it certain, or at least as certain as anything can be in a world infected by totalitarian views and plagued with Napoleonic ambitions, that the American Continent, or any part of it, will not become the spoil of any foreign war lord.

Of course, those who are anxious to displace our brand of democracy with an old-time plutocracy give Franklin D. Roosevelt credit for none of this. According to the tenets of their political warfare, our President is always wrong.

This, then, briefly pictures the political situation today. Just as it has been deemed necessary to strengthen our Army and Navy to protect us from foreign aggression, so it is necessary that the Democratic forces should mobilize and organize to meet the equally dangerous threat of reactionism. If we do not want to see the work of our great President undone; if we do not want to see the measures repealed which, under his patriotic and courageous leadership, have lifted us from the very depths of depression to an approach to prosperity, we must be prepared to repulse decisively next year the assault of the enemy.

So I bid you to exceed even your great efforts in the past. In preparation for the coming battle you must put forth all your strength, to the end that Democrats will continue to guard the destinies of our country, for in no other way can the Roosevelt principles be maintained.

Confederate Memorial Day Address

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, JUNE 4, 1939

Mr. HILL. Mr. President, on last Sunday, at the Confederate Memorial Day exercises at Arlington National Cemetery, the Senator from Florida [Mr. PEPPER] delivered a very beautiful and inspiring address. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The sad song of death is ringing in our ears, the muffled cries of pain and the choking sobs of sorrow beat upon our hearts. The associations of this solemn moment draw back the curtain of years and reveal the anguishing picture of suffering death, and the grave; of fair-haired boys with the light of youth and love glowing in their last glances as they dash into the jaws of death; of dying men with muttered prayers for loved ones left behind upon their pallid lips; of mothers, wives, sweethearts, sobbing for those who never came back; of little children orphaned; of beautiful cities, a mass of twisted ruins; of fertile fields desolated by the scourge of war; of a nation torn asunder in fraticidal strike and all that patriots dreamed of here dashed upon the rocks of dissention.

How strange are these thoughts as we stand today in this shrine of a Nation's dead—a shrine which knows no section—where lie side by side in honored sleep the sons of the Blue and the Gray—where only a few days ago the sons of the North gathered to pay their tribute to their own honored dead in blue. When they tell us that the hand of the Master of that noble home over there on the brow of the bill, looking like a sentinel upon the Nation's Capital, could ever have been raised against this Nation's heart, or that this country would turn its sword against the offspring of Light Horse Harry Lee, it seems but a legendary war of some earlier race of which we hear, and not the history of this great and united people.

Yet it is well that we shall not forget this sad epoch in our Nation's life, this tragic interlude in our brotherhood. Human history records no more eloquent testimonial of valor, devotion to duty, and self-sacrifice than that which is written upon the indelible scrolls of memory in the blood of those who died in the war between the North and the South. We of the South, for the ideals and the faith of which the men in gray fought, come here to pay our annual homage to their beloved memories.

In the beautiful traditions of Memorial Day conceived in the loving hearts of the women of the South, we come here to lay our bouquets upon their graves and their honored deeds. The sweet spirit of the faithful women who showered their affectionate devotion, the beauty of their loving kindness, their ever-constant and tender touch upon the warriors of the South, has been preserved all these years by yet other noble women who have kept the ancient faith with a chaste fidelity. No soldier's devotion is more pure than that of the devoted woman who waits the long hours through for her loved one's return and when she finds him only in the cold embrace of the grave kneels and leaves her kiss upon his slab and the sweetest of nature's flowers upon his earthen shroud to drive away the dark shadows of death. No epitaph of

southern heroism can be complete without the highest praise tongue can form or pen devise for the women of the South who gladly would have joined their loved ones in the battle front, but whom Nature assigned the harder task of keeping their lonely vigil behind, praying alone and against hope, keeping alive the flickering flame of home and family and by their courage and intrepid faith, firing with inspiration the heavy spirits of those who fought with guns.

Could they who fought for the lost cause see today the legacy of their sacrifice; could they see this great Nation which they have bound together in inseparable ties; could they behold the South they loved—the glorious States for which they gave their last full measure of devotion; we know that they would feel that they had not died in vain.

Theirs was a holy and patriotic war for liberty—for liberty as they conceived it, in their zeal. It was a struggle for a way of living which so bore upon their hearts and was so essentially a part of all that they held dear that they were willing to die for it. Like a true knight in an age of chivalry, they did die for it without a murmur of protest upon their set lips and with no regrets in their still hearts. No just man will withhold respect from a cause for which another will lay down his life. Nor will a deserving heir squander an inheritance of honor by being less faithful to his ideals than a sacrificial ancestor who dies that his faith might live.

The way of life the men of the South knew and loved was mellowed with age and refinement. It drew upon the rich inheritance of the past for its tempo, its sense of values, its fashion, and its plan. It grew under the inspiration of beauty, of courage, of chivalry, of devotion to duty, of a code of life in which honor was the first precept. It emphasized the nobility of being more than the mere acquisition of things. The warp and the woof of it was a conception of the good life which rested upon the best things of the body, mind, and spirit which civilization has been able to produce. All those who fought upon the battlefield did not share that good life, but they moved in the warmth of its orbit and in their unuttered dreams it lived.

This manner of life appropriate to a time and a section came into inevitable conflict with another which in the flux of time was moving into its place in the habitations of thought. Sponsored by a people equal in courage and conviction, as determined to fidelity to their own sense of the rightness of things, this newer way of life of the North and the old of the South clashed in the crucible of a nation's will in the ghastly amphitheater of war.

The war god smiled upon the new way of life and the old crumbled into honorable ashes.

Upon the ruins of the old is arising a new edifice. It is the architecture of the current day. It is in the spirit of the times. About it is no halo but the sturdy confidence of knowledge and strength.

This new structure will not be completed for a long time yet to come. It must in a manner grow, and no magic builder can in a day fashion it into its ultimate form. But those who loved this old South will help build the new one. They will not let selfish interests prostitute its character, exploit its resources, drain away the reservoirs of its capital and earnings, prostrate its commerce, and blight the lives of its children with enforced ignorance. They will not allow callous indifference to suffering and disease to condemn it to unspeakable misery. They will not countenance a leadership without vision to sink it in a quagmire of isolation and nonconformity. If the times are new and the course of the new South different from the old, we cannot depend alone upon those who know no way but the old way. The pilot must keep abreast of the changes which the current brings about; else he will wreck his ship upon new shoals in the old channel.

Only a brave and an indomitable people could have reversed their way of living, adjusted themselves to a new economic order and a changed social system as the noble South has done to the astonishment of the world. Yet glorious as has ever been our accomplishment, our work has only begun. All of our people must reflect the wholesomeness and healthiness of body and spirit which our God-given climate makes possible. A real war upon disease and upon the cause of disease must be waged with all the fervor of the men in gray under Lee and Jackson. In this land of plenty there must be no undernourishment of children or adults due either to inadequacy of food or ignorance of diet. Hospitals and medical care must be open to all the sick, and those whose ills demand the touch of sympathy and the nurture of science. All of the South's sons and daughters must have as good opportunities for education and vocational guidance as is given anywhere in the Nation, or those who love their children will see them lose their birthright to the better trained whose natural qualities entitle them to no such superiority. From the Nation's wealth the South must, therefore, have a fair share of help for her public schools and for endowments for her colleges and universities. Those loyal sons of forefathers who made the choice of duty to the South must remember their own obligation to the South and their genius and skill they must devote to the South's rehabilitation. Our own peculiar culture we much continue to nourish and build through our own sons and daughters who are taking first rank in the Nation.

There can be no hope of economic stability in the South if it is to cling to an agricultural system which has not given it an adequate standard of living in a century of trial. While much can be done by diversification, intelligent guidance, and Government cooperation for southern agriculture, yet many now on poor land must be moved to good land, new crops and new markets must be developed, and there must be new jobs provided for the excess of people now on the farm. The facilities of electric power with the attendant comforts which it brings to the rural home, substantial and comfortable dwellings, opportunities stimulating and pleasurable, for community life, must be made available to those who till the soil.

The South must reestablish its sovereignty over its own soil and its own resources. A system of absentee landlordship which has drained its wealth is no more appropriate to these times than Negro slavery. Hence capital and credit for the able and responsible businessmen of the South to use in the real development of the South's enormous resources must be made available by the Federal Government, and the shackles of financial dependence which have bound her to an out-of-date banking system or an inappropriate capital market in other sections of the country must be stricken off.

When we are conserving our resources of people and soil, when we are adding to the strength of our citizens' increased knowledge and skill, when we are striking down all manner of discrimination and all forms of unjust restraint and oppression upon our economic system, when we sons of the South serve its larger interests with the passionate devotion of the men in gray, then we are worthy to wear the mantle of those immortal heroes who followed Lee and Jackson and wrote their fame upon the scrolls of history.

There are yet among the living a few who bore arms in this conflict. Like a withered leaf trembling before the fierce blasts of winter, they have clung on to the tree of life. Ere we know it the fragile threads which sustain them will part, and they shall drop into a hero's bed in the sacred earth. While they can still hear our words of honor and praise, while they can yet feel the warm embrace of our love, let us take them to our hearts and hold them so tightly in our affection that even the messenger of death shall pause before it may call their names. And let us turn our memories to these flower-covered graves all over the South, and where they are in the North, and see again those who are there; see them as when they went forth to their country's call, ready, calm, and unafraid; as they bivouacked beside the campfire; as they passed a cup of water to a dying comrade; as at long last the gentle hand of death touched their brow and bade them come to their Father's house. Let us remember what faith they had when they went, what fine eyes they turned upon those behind to see that they carried on, how brave they were when they said good-bye.

They are not ours now; they belong to all mankind; but we are theirs, and in another way we have their opportunity and their obligations.

Our Country, Our Citizens First

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a radio address which I delivered several nights ago over the Nation-wide red network of the National Broadcasting Co. The title of the address is "Our Country, Our Citizens First."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening ladies and gentlemen, I have just returned from Asheville, N. C., my home. While there for several days I was approached by more than 100 different people. They were all out of employment and sought employment. Of these 100 who talked with me at least two-thirds of them were youngsters, men and women, under the age of 25 years. They were embarrassed, most of them. They didn't like to ask favors. But on account of the fact that they had been out of employment for some time, they had to overcome their backwardness in some instances and ask aid. They asked me to help them secure positions, any kind of work. These young men and women wanted work that they hadn't been able to get. I wanted to help them, and I was glad to listen to what they had to say. I sympathized with them, and I only wish I could provide each and every one of them with a job. But finding so many people in my home town looking for work was not a new experience for me. Here in Washington a day never passes but that I am approached personally by no less than 15 or 20 people who are looking for jobs, and a day rarely passes that a hundred or more do not call at my office, both men and women, seeking Government employment—any kind of employment. The situation, to my mind, is a pathetic one and a deplorable one. The situation presents a problem which must be solved.

Again I say that I wish that I could provide every one of these unfortunate people with positions. Those people who talked with me at Asheville, my home town, and those people who talk with me daily here at Washington, the Capital of our country, are merely a few of those constituting the population of the United States.

Since January 1, I have been in quite a number of States of this Union, speaking here and there, principally in regard to the subject of immigration and deportation, and tonight I am going to talk briefly about the same thing.

There are today more than 11,000,000 men and women out of employment in the United States. By that I mean 11,000,000 men and women who are without any sort of employment whatsoever. Of this number, remember that millions are young men and young women, under 25 years of age. In addition to that, we are told that there are 26,000,000 people in the United States who are only working part time. That is to say, they only have part-time jobs or jobs that consume only a few hours of their time each day. In addition to that, there are approximately 3,000,000 people, both men and women, on W. P. A. rolls; and then, of course, you will recall that we have about 300,000 able-bodied young men in the C. C. C. camps. They are provided with so much money a month, shelter, food, and clothing, and a finer bunch of young men cannot be found anywhere. In addition, there are about 4,000,000 people working for the Federal Government, the 48 State governments, the more than, 3,100 counties, the thousands upon thousands of incorporated villages, towns, and cities; and, by the way, in speaking of this tremendous amount of unemployment, statistics reveal that 80 percent of all the unemployed of the world is to be found within the confines of the United States of America. That really is an appalling situation.

Our American friends, 3,000,000 in number, who are on W. P. A. rolls really don't want to be there. They would rather have work elsewhere, but they have unfortunately been forced to accept this aid of the Government. Not all the young men in the C. C. C. camps really prefer to be there, but in those camps they are at least provided for, and they can earn at least some money for their parents—and so it goes.

Despite this distressful situation in which our friends and neighbors, millions of them, are out of employment and are daily walking the streets in search of employment, there are some people in the United States who are advocating and proposing that we admit more immigrants from foreign shores. I think it the duty of the American people to look after their friends and neighbors first, and I am very happy to be able to state that millions of Americans believe with me that we should provide our American citizens with employment before we provide any aliens with employment

I think that we should put to work every unemployed man and woman in the United States before we admit another single foreigner to this country. Our own people are out of employment, and they need shelter and food and clothing. Let's look after them before we permit our sentiments to run away with our better judgment. Those of you who are listening in tonight have neighbors who are out of employment and who want work and who cannot find it. Well, let's put those neighbors of yours and those neighbors of mine to work before we admit strangers from across the seas, and before we put those strangers to work in this country. Why not tonight make up our minds that from now on we are going to look after the interests of the American citizens and let the other countries of the world look after the interests of their respective citizens? That is one thing we have too long delayed.

I am very happy to be able to tell you that the American people are waking up to this situation and they are demanding that our Government look after the American people before assuming the responsibility to care for the unfortunates of the world outside of the United States.

In conformity with my ideas which have heretofore been generally outlined I have introduced a bill in Congress which would prohibit the immigration of anyone to the United States for the next 10 years, or until such time as our unemployed have been provided with employment. The bill ought to pass. It is in the interest of the American laboring man. It is in the interest of the unfortunate men and women who tonight are out of employment and who tomorrow again will be looking for employment. It is in the interest of the youth of America who tomorrow will be seeking employment. Why admit thousands upon thousands annually to this country who come to usurp the jobs of American citizens? Why not take care of our own first?

My colleague Senator ROBERT WAGNER has introduced in the Senate, and Mrs. EDITH NOURSE ROGERS, Congresswoman, has introduced in the House, a resolution which provides for the admission of 20,000 refugee children, boys and girls, from Germany into the United States within the next 2 years. The bill further provides that these children must each be under 14 years of age and that provision must be made to the effect that they will never become public charges. I am against the passage of this bill. I am against the passage of any bill that will provide more competition and more hardships for the sons and daughters of American mothers. I am against this bill because if 20,000 14-year-old boys and girls from Germany are permitted to enter the United States, it will simply mean that there will be 20,000 more boys and girls in the United States looking for jobs. In other words, if these 20,000 refugee children from Germany are now permitted to come here, it will simply mean that they will be looking for jobs in competition with your sons and daughters.

Well, now, in regard to these refugee children from Germany ever becoming public charges. The proponents of the resolution say that bonds will be made to guarantee their not becoming public charges, but what about these bonds? Who knows what will happen to the bondsmen—and by the way, if you are going to permit the unfortunate children of the world to enter the United States, why not admit an equal number from China who have been orphaned as a result of the war over there? Then, why not permit the fatherless and motherless children of Ethiopia to come to our country for the same reason, and, again, why not permit the admission of at least 20,000 orphaned children from Spain? In other words, if we are going to admit 20,000 children from Germany, why not admit an equal number from other countries of the world where there are to be found orphaned children in destitute circumstances?

If we have in this country people who are financially able to take care of children other than their own, then why don't they make financial contributions to orphans here in the United States? Our orphanages are filled with children. Let's look after our own orphans here, our own unfortunate children, before we assume the responsibility of caring for others.

In conclusion, I want to say that I am thoroughly of the opinion that the time has come when we should think firstly of the people of America. Charity ought to begin at home. We ought to look after our own unfortunates whether they are orphans or whether they are just plain men and women of America, unemployed, before we attempt to take care of the refugee children of the world, or before we attempt to provide employment for the immigrants of the earth who seek residence in America.

Now, I'm going to ask you to do your part toward preserving America for our own men and women—boys and girls. If you believe that America should be preserved for Americans then tonight write your Congressman and your two United States Senators and request them to vote against the Wagner-Rogers resolution which, if passed, will admit 20,000 refugee children from Germany. And in closing may I say that a letter from you to me, personally—ROBERT R. REYNOLDS, United States Senator, Washington, D. C.—will bring to you not only a copy of the Wagner-Rogers resolution but also copies of five bills introduced by me in the United States Senate designed to cure the evils growing out of lax immigration and deportation laws.

Let's keep America for our boys and girls.

Let's give American jobs to American citizens.

Let's empty our prisons of alien criminals and send them back to their native lands.

Let's deport those alien agitators who are eternally advocating a change in our form of government.

Let's do our best to save our country from destruction by alien-enemy forces which are boring from within.

Let's save America for Americans.

Our country, our citizens, first.

The Johnstown Flood

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

ADDRESS BY HON. J. HAMPTON MOORE, MAY 31, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an authentic and picturesque description of the Johnstown flood, given by Hon. J. Hampton Moore, former Representative, and mayor of Philadelphia, president of the Johnstown Flood Correspondents' Association, at the fiftieth anniversary of the great flood at Johnstown, Pa., May 31, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Mayor, citizens of Johnstown and vicinity, it is appropriate as it is gracious and kind that the mayor and citizens of Johnstown should include the survivors of the Johnstown Flood Correspondents' Association in these fiftieth anniversary exercises. The correspondents are now few in number, but not less than 100 of them were in active service here, as speedily as they could reach the scene of the unprecedented and unforgettable disaster of May 31, 1889. They did not come together, because they could not. There were no automobiles in those days; no airplanes to hover over the scene; no radio to broadcast the news across the continent; even the telephone was in its infancy. Railroad transportation had broken down; telegraph wires were torn away; navigation was impossible; small streams had turned into raging torrents. Death, wreckage, and ruin were everywhere to be reported, if and when the newspaper correspondents and the telegraphers of Pennsylvania and surrounding States could break through, but this they could not do until extraordinary obstacles had been overcome. Washed-out railroad tracks must be restored, bridges over swollen streams rebuilt,

telegraph poles and wires readjusted, and this took time. There were alternatives, such as horses, wagons, and boats, and venturesome men resorted to them.

THEY FINALLY ARRIVED

But finally the newspapermen arrived. They came by ones and twos, but not for several days were they able to satisfactorily establish themselves in what was Johnstown. Meanwhile, there was much speculation in newspaper circles, and many lurid and sensational reports dealing with deaths and property losses, tragedies, brutality, and heroism spread over the country.

The first intimation that anything unusual had happened found its way into eastern newspaper offices late on the evening of Friday, May 31, the day following Memorial Day. As an active reporter on the Public Ledger of Philadelphia, I first learned of the disaster about midnight when the night city editor and I were leaving the office for home. We were told that there had been a flood—something serious to be sure, but not of great magnitude—at Johnstown, a thriving industrial city in western Pennsylvania on the line of the old Pennsylvania Canal leading to Pittsburgh. It was not until Saturday morning, June 1, that we all realized how catastrophic was the disaster, and how suddenly and with irresistible force, it had broken over an unsuspecting and peaceful community of 30,000 people. Saturday was my "day off" at the Ledger but a personal matter took me to the office. Here I learned that I had been sent for and that Roger Walsh, another "day off" man, likewise had been summoned. We were led to the office of the editor in chief and shown a number of telegrams depicting the plight of Philadelphia correspondents attempting to reach the inundated city. As rumors grew more disturbing the night before it seems two of our staff, Peter Bolger, now deceased, and Arthur R. H. Morrow, who happily is with us on this occasion, had been sent west by way of the Pennsylvania Railroad, but found at Harrisburg that all train service from the east of Johnstown had broken down. They were now pressing forward by horse and wagon. The same fate we learned had befallen New York and other correspondents who had taken the Baltimore & Ohio road. They too were being forced to try the mountain roads which involved the fording of streams. Our instant information was that there might be a chance to get through by way of New York, Buffalo, and the Allegheny Railroad.

A LONG WAY 'ROUND

Walsh and I were impressed into the service and responded cheerfully, even enthusiastically, although we had no time to return to our homes for clothing or traveling equipment. Walsh found a pair of boots in the office which he thought would be helpful in the rain and the mud, and I accepted the loan of an overcoat twice my size, thinking it, too, would be of service. We boarded a night train for New York, and proceeded thence to Buffalo, attempting to sleep in an upper berth which was all the ticket office could sell us. Reaching Buffalo we found the situation too dubious to attempt a short cut to Pittsburgh, and proceeded to Cleveland, Ohio, hoping thus to reach Pittsburgh and then Johnstown ahead of our compatriots, who were now crossing streams and cutting their way through the mountains. In Cleveland we held over sufficiently long to pick up some news at the telegraph offices, but the more we got of it the worse the situation became. Estimates of the dead reached as high a total as 12,000 persons. Property losses were a mere guess, although they ran heavily into the millions, and centered around the great Cambria Iron Works. Monday morning, as our train pursued its way along the Ohio River west of Pittsburgh, we obtained through the haze and fog, a glimpse of the flood effects as the waters, flotsam laden, rushed their heavy burdens down stream. Ghouls (of whom we had read) at work, even in the Ohio? Possibly. We observed men watching the drift, drawing some of it ashore and apparently stowing it away. We surmised there were human bodies in that great mass of wreckage.

TWO NIGHTS TO PITTSBURGH

Arrived at Pittsburgh early Monday morning, we sought instructions from home, but the wires did not connect. Pittsburgh, around the railroad stations and telegraph offices, therefore, was the news center. Local newspaper men had reached Johnstown we were told, and were beginning to pour in their dispatches. Workmen's trains were to leave shortly, and our problem was to get on board and cover the 79 miles between Pittsburgh and Johnstown. I dare not now describe the throngs of anxious and excited people, including relatives of the Johnstown dead, nor can I go into the thoughts and purposes of those who hovered around Pittsburgh seeking trains to Johnstown, evidently for no honest purpose. Walsh was to do that, for he remained in Pittsburgh to find telegraph wires and protect the news situation there, while I was to attempt the train with no assurance that it would proceed further than Sang Hollow, about 10 miles west of Johnstown. Crute, of the Philadelphia Press, carrying a grip, joined me before we boarded the train. We decided to increase our luggage by two packages of sandwiches and some apples, being warned that food would not be obtainable on the train or elsewhere. There was a mixed and motley crowd upon that train—sad, sorrowing, profane. They knew not their destiny; neither did we, but there was news, big news, in all they said and did. Finally we passed Sang Hollow, and because of track repairs, were enabled to proceed slowly to a point 4 miles west of our destination. There was excitement—and news—in that motley crew on that rainy, smoky morning, and Crute found some of both, when picking up a torn and sloppy paper which one of the more recent passengers had thrown aside, he exclaimed, "My God, look here." I not only looked, but prepared to take notes. For here were the headlines:

"Sixteen Men Lynched. Summary Punishment of the Robbers of the Dead. Strangers Not Wanted in Johnstown."

A long story (probably written in Pittsburgh) followed. It described the "vigilante" government that had assumed control in the stricken area—men with rifles, some of them wearing tin stars. It was a story of unrestrained regulation set-up by alleged local authorities and intended as a warning to thieves or ghouls in Johnstown—one of the reasons possibly, why railroad men and others were cautioning people to keep away from the flooded district until government had been restored.

NOTES ON THE WAY

Now, for some notes jotted down on the train: "At last," I wrote, as the train lumbered along, "we entered the valley of the Conemaugh, east of Blairsville intersection, which is about 25 miles west of Johnstown. Here the passengers caught their first glimpse of the river wherein so much damage had been done. And such a river! Ordinarily, a harmless mountain stream sufficient to delight a practiced angler * * * but, oh, what wreckage * * * lined its banks and the steep bluffs that overshadowed it. And Johnstown 20 miles away."

Other notes, and then we reached—

"New Florence—People on platform, say 60 or 70 dead bodies picked up here. John Lloyd, a boy brought into car, rescued after floating 16 miles down the river; parents lost; contributions.

"Nineveh—Nine miles from Johnstown—large number of rough pine coffins on the platform—about 100 piled up on the wagon road leading to river * * * logs and household articles piled up in stacks. B. & O. freight truck torn to pieces—dead horses in the mud.

"Sang Hollow—only a signal tower—train was to stop here, but track repairs enabled it to continue—going very slow—like riding on stilts—big stone building at Coopersdale demolished—house lifted on railroad track by water. Railroad track, opposite side, slipped into river. Havoc and destruction.

"At Cambria City train stopped and we all got off * * *. It was after 6 o'clock, still daylight; but raining. (It was now Monday afternoon, and flood occurred last Friday afternoon.) Large number of people, apparently strangers, stumbling along slippery embankment which held up the railroad tracks and ties—some wading through mud. * * * Others were carrying bedding and blankets. * * * A few were intoxicated and boisterous. Crute and I with his grip, my overcoat, and our lunch bundles, proceeding under difficulties, but Johnstown ahead! Our shoes coated with an inch of mud and clay, and our thin summer clothes smoking damp. At what was a street intersection in heart of Cambria City, we stopped to join small group of sorrow-stricken survivors clustered about six rude coffins containing mud-besmeared, lacerated bodies heaped on a pile of wet straw and rags. Another dozen bodies under a wet sheet—all awaiting identification."

JOHNSTOWN IN SIGHT, AT LAST

At last we reached Johnstown, crossing the railroad bridge that withstood the flood, and inhaling the horrible odor and smoke that arose from the smoldering fire in the great drift piled up against the bridge. I again quote from original notes:

"It required but a glance to persuade one, no matter what his errand—that God and humanity now required of him whatever service he could render in a cause, the extent and scope of which he could not comprehend."

Our first move, now that we had at last come within sight of the goal we had been striving to reach, was to visit the telegraph office. A few hurriedly adjusted poles, bearing the weight of a number of wires, served as guide posts, and, following the line of these, we soon came to "headquarters." Headquarters, indeed. They harmonized fully with the scenes of misery we had just witnessed. The great Western Union Telegraph Co.—like the mighty Pennsylvania Railroad—had been reduced to beggary in Johnstown and was no more of a chooser than the meekest inhabitant. The most available place it could find to run in its wires and put up its instruments was this "headquarters"—on the side of the mountain, just above the eastern end of the railroad bridge. The "headquarters" consisted of a frame shanty, the roof and sides of which were boarded in. Its dimensions were about 10 by 12 feet. The floodwaters had not quite reached up to it, or it would have been swept away. But it did not shelter its occupants against the rain which dropped through the roof on the instruments, the writing paper, the oil lamps and candles, and the worn-out telegraphers and correspondents who inhabited it and sent out their news messages to the world, day and night, for days and weeks. Evidently the shanty had been an oil-barrel repository, for there were barrels soaked and greasy inside and outside, but these were serviceable, for the weary correspondents used them as desks and tables. When Crute and I entered this forlorn structure and asked for wires, the operator in charge, Mr. Munson, a polite but careworn fellow, informed us there was a very, very slim chance of getting even a short telegram through to Philadelphia before morning. That meant Tuesday morning, mind you, and the flood had occurred last Friday. The early Associated Press and Pittsburgh boys were holding every wire, and we would have to wait until somebody dropped out, or more wires, instruments, and operators were available. Munson suggested we might be able to get back to Pittsburgh in time to get our dispatches off if we must do so tonight. Knowing our competitors and seeing how poor our chances were, and remembering that Walsh was holding the fort in the Smoky City, I thought

of joining Crute, who was not well and who favored the return to Pittsburgh. I accompanied him back through Cambria City to the train. We arrived when it was making up to go. But the start was delayed because of a scrimmage between the angry train crew and a tramp-like fellow who had no ticket and insisted on throwing himself under the wheels. Then, utterly despairing of the Pittsburgh plan, I said good-bye to Crute and returned alone to Johnstown, arriving long after dark. It had been a heartbreaking experience, but the long and tedious journey was strangely rewarded. I reached "headquarters," found Munson still there, and with "a message for the Ledger."

"One of our telegraphers," said he, "will be free in a few minutes, and you can have his wire."

A WIRE AND A COUP

Glory be! Here was a coup, for even the "over the mountain" boys had not yet arrived. Elated, and writing away on the top of a well-soaked oil barrel, I was feverishly turning out copy, when Bolger and Morrow, who left Philadelphia by rail on Friday night, wound up their "ride of 105 miles over the mountains." Streaked with rain water and sweat, they rushed breathlessly into the shanty. Such a thrill as I experienced at that moment has lingered with me in memory down to this day. General Pershing may have had a thrill when, at the French tomb of America's revolutionary friend, he said, "Lafayette, we are here!" But it was no more of a thrill than I experienced when, for instance, like Mayor Shields greeting the President of the United States in reconstructed Johnstown, I arose and proudly exclaimed, "Welcome to our city!"

Well, we now had the wire not only for our arrival at Johnstown, but for the story of the "ride over the mountains." We were getting our news back to the home office.

That night headquarters remained open until midnight awaiting the arrival of Gen. Daniel H. Hastings, Adjutant General of Pennsylvania, representing Governor Beaver, who had come from his home in Bellefonte to assume military control. We knew the general, and were greatly relieved when after sending off some important dispatches, he consented to confer with us. We needed shelter and food, and the general, who had established himself and his staff in tents on the hillside, promised to do what he could. The night, as we left headquarters together, was not filled with music, but with unwholesome miasmatic odors, gunshots, and occasional shrieks. There were numerous wanderers—most of them grief-stricken men and women, some of them on mischief bent. Few of them knew each other and none knew where they were going. General Hastings said the only place he could think of that we might use for the night was the damaged Pennsylvania Railroad tower. He accompanied us through the dark and the mist, his bodyguard trailing along. John J. Curley, representing the Philadelphia Record, was with us. Unfortunately he fell through a trestle bridge we were obliged to cross, and it took time and effort to find him and bring him back to the party. He was not seriously injured, but that night a number of stragglers were injured at that same bridge. We were informed that one or two had fallen into the turbulent water. At the wet and muddy railroad tower we said good-bye to General Hastings, thanked him for promising to help us to supplies in the morning, and endeavored to sleep on the floor of our noisome abiding place. We had our work to do in the morning and we did it. My assignment was to encircle the town and the valley so far as it could be done on foot. Then, late in the day, hungry, tired, and groggy, we sent off our dispatches and began the search for a new sleeping place.

A PLACE TO SLEEP

I quote:

"Tuesday arrangements were made with a warm-hearted Irish family named O'Connell, on the hill overlooking Millville and Johnstown, by which the Ledger men secured sleeping space in the parlor and the privilege of having such eatables as they should bring, cooked. Daniel O'Connell, the head of the house, was thrown out of work by the damage to the Cambria Iron Works, and his daughter, Bridget, was saved merely by accident. She had left her employment in town, where she had stopped with her uncle, Captain O'Connell, and his two sisters, to return to the hillside home. Then the flood tore down the valley. Captain O'Connell and his two sisters were swept away. Bridget escaped because of her trip up hill. Captain O'Connell, we were told, was worth about $10,000, which Daniel was to inherit, but all this was lost. In Daniel's house he accommodated not only the correspondents but several friends who came to inquire for relatives who were lost."

After the Ledger men made their arrangements with the O'Connells, each of them took his turn at the commissary department to obtain bread, flour, hams, pork, butter, and other provisions necessary for the day's meal. That was their way of paying the bill. There was no other charge. Thus the O'Connells, as well as the correspondents, obtained cooked food. No stores were available for supplies. After the relief committees, especially from Philadelphia, began to arrive, we did a little better.

But details like these would take hours to unfold. For a week we tramped the hills and valley and desolate places around Johnstown, covering headquarters of one kind or another, particularly the morgues, in quest of news. There was plenty of it, and before the week expired and some of us were called back home, there had trooped into Johnstown for the news and experience of it men who afterward attained prominence in literature, law, diplomacy, and statecraft. It would be difficult and maybe unfair to pick out a few of them now, but I may be excused for saying that amongst them was Charles Edward Russell, then of the New York Herald, one of the boys who came "over the mountains," and who is with us tonight.

HARROWING SCENES DESCRIBED

Let me quote a few paragraphs from a "descriptive reading" which I prepared for lantern slides exhibited shortly after the flood. There were 12 scenes which told the story generally, but I shall recall only a few of them:

"Scene 1—P. R. R. bridge—Hunting for bodies. In about 10 minutes the mighty wave which had rushed down the valley carrying everything before it with irresistible force, enveloped Johnstown completely in water, mud, sand, and floating objects. So swiftly and suddenly did it come that all the people in the houses on the low ground were practically doomed. Frame, brick, and stone structures were picked up like chips of wood and hurled against each other with a power that quickly reduced them to fragments. Iron and stone were moved through the waters like so much wood; and the foundations of the town were shifted like sand in the wind. But here the great wave divided and spent its force.

The waters tearing across Johnstown, and rushing against the mountains scattered over the city, one half turning up the valley of the Stony Creek against the grade which eventually checked it, and the other pursuing its way down the valley of the Conemaugh through which all the water had to pass. In the pathway of these streams and of all the freight borne upon their angry waters, at the lower end of Johnstown, stood the new stone bridge of the Pennsylvania Railroad Co. This structure which helped to back the water over Johnstown, caught all the drifting objects that did not force their way over or around it, and when the waters subsided, fully 15 acres of houses, cars, lumber, iron and other material and human bodies rested compactly against it in the bed of the rivers. This picture was taken several days after the flood, at which time workmen had just begun to get the work of removing the drift fairly under way. It was estimated that 500 human beings were caught in this drift, and were there drowned, crushed, or burned.

Passing over the picture, entitled "At Main Street from Franklin Street showing wreckage 40 feet high," the picture of "The west end of Main Street, showing Merchants' Hotel," and coming to the view marked "West end of Johnstown, showing the morgue," we read:

"Johnstown is hemmed in by hills, and for a time while the flood was at its height, those hills held the water over it as in a mammoth bowl. A fair sectional illustration of this is shown by the hills rising in the background in this picture. The water-covered land, houses, and people in the bowl, and the hills, held the water until the damage was done. The objects here shown, settled where they are, after violent pitching and tossing on terrific currents. The schoolhouse in the distance was submerged, but held to its foundations. At the time this view was taken the schoolhouse was being used as a morgue. In the mud, in the foreground, what is left of a square piano is observed, and behind it, bedsteads and bedding are noticed, mixed up indiscriminately with logs, wagon wheels, chairs, and barrels. Thus the home and the workshop were brought to a common level."

A SCHOOLHOUSE MORGUE

Next, a picture of what was called the "Schoolhouse, Morgue, and Wreckage." Here is a closer view of the schoolhouse just referred to. The wreckage consists of almost everything in the way of household goods. Many bodies are still under these ruins, wet and bleeding. As bodies were taken out, they were carried around to the morgue, stripped, washed, and held for identification. Many of them were not recognizable because of their injuries, and they were buried as speedily as possible, to prevent the spread of disease and to make room in the morgue for more bodies. (Note: 777 of such unidentified bodies now lie buried in Grandview Cemetery.)

Skip others of the morbid descriptions and we come to a more cheerful note when "The Relief Station, Johnstown Station, Pennsylvania Railroad" is presented. We read:

"The promptness with which relief poured into Johnstown, as soon as the distress of the people became known, has caused widespread comment. Clothing and food were sent in great quantities, and distributed to the sufferers at convenient stations. This station happens to be the Pennsylvania Railroad station and the main supply station, used partly by the commissary department and partly as a morgue. Here General Hastings, who so endeared himself to the people that he has become known as the hero of Johnstown, has his headquarters. These men and women are now waiting for the distribution to begin. All classes before the flood come as one class now—to obtain food. There is no partiality, no favoritism, and rich and poor are poor alike. All the people, even as they came from neighboring towns, had to depend upon these supplies. Money was useless for weeks, because there were no stores at which to buy."

HUMANE AGENCIES AT WORK

And now, a few words of praise for the relief agencies that were prompt to organize and assemble supplies. States and cities throughout the land organized committees to raise funds and to gather together and ship food supplies and clothing. The weather was hot, but clothing was badly needed for men, women, and children. Food supplies, of course, were essential. Pennsylvania was the greatest contributor. Carloads of material came trooping into the stricken district as soon as transportation facilities by rail and earthen road were sufficiently restored. Philadelphia and Pittsburgh, New York, and the big cities of Ohio contributed large sums of money. Altogether, more than $3,000,000 was raised

and forwarded for relief purposes. When the civic forces were organized under James B. Scott, of Pittsburgh, the food and clothing distribution was systematized, and all classes of people were dealt with generously and without favor. It was a question of reaching the needy, those who, no matter what their previous condition, were now in actual want and going hungry. Those who had been rich and who lived in fine homes had been deprived of everything, even as were those who lived in the poorer sections.

No reference to this humane and charitable work should omit the coming of the Red Cross, headed by the late Clara Barton. The work of the Red Cross in this instance gave it a prominence that led on to its world fame.

The arrival of the newspaper correspondents, and their ability to tell the story of the great disaster, accentuated all these humane and sympathetic activities. Even foreign nations were induced to help. It was an extraordinary outpouring of the heartthrobs of the people. There were no Federal appropriations. The Federal Government was not uncharitable; it simply had not gone into the business in 1889 of using money of the people raised by taxation for relief purposes. Let this be said to the credit of Johnstown and the Conemaugh Valley which lost approximately 3,000 lives and vast property holdings in the great flood of May 31, 1889.

To be sure the policy of the Federal Government has changed since 1889, and the people of the Conemaugh Valley as the people of Pittsburgh, shocked by floods, the latest of which in 1936 was more destructive in a property sense than any other, have joined the country-wide demand that the Congress of the United States give heed here, as in other parts where floods prevail, to the necessity of man-made works, reservoirs, locks, dams, and the like, to regulate or stay the floods that in recent years have had so devastating an effect upon life, property, and national progress. Of such appropriations for preventive and sustaining work the Conemaugh Valley, including Johnstown and the rivers leading on to Pittsburgh, the Ohio and the Mississippi Rivers, should have their share. The Government knows the problem in this valley and will, we hope, pursue it until a people hitherto afflicted and sometimes fearing a recurrence of disaster, are protected so far as human agencies, governmental or otherwise, may be able to do. Such protection is justified—not only because of the "supreme sacrifice" of the great flood period—but in fairness to all the people hereabouts, now numbering 100,000 or more, whose courage and patience in adversity enabled them to surmount the difficulties that confronted them, and proceed successfully with the work of reconstruction. They envisioned a "Greater Johnstown" and over the ruins they have built it.

ORGANIZE FOR THE FUTURE

We, the survivors of the Johnstown Flood Correspondents' Association, came 50 years ago as our departed comrades did, to render service. We came to investigate and to report to the world at large, but we also came to draw attention to the necessities of the people who were stricken, to point out the urgency of remedial works, and to safeguard the future. That is the lesson we present to the younger generation today—these younger newspapermen, for instance, who had their experience during the floods of 3 years ago. We, the original Johnstown flood correspondents, were greatly impressed by our unique experiences 50 years ago. Immediately after the flood we began to fraternize, and before the first anniversary, in 1890, laid the ground work for the organization that has bound us together during the last half century.

Year by year we have met and reviewed our experiences, but we have also joined in the demand for safeguard. We realize that floods will come and floods will go, and that waste and distress will follow them; but we believe they can be regulated; that they can be held in check; that they can be subordinated to the works of man. The community of interest which has prevailed amongst the correspondents since 1889 should not die out. As the spirit of the Grand Army of the Republic was carried on by the sons of the veterans, so should the work of the flood correspondents be perpetuated to meet new conditions, if necessary, by the flood correspondents of subsequent periods, including that of 1936. The object of our organization, as set down in the constitution adopted in 1890, was "to perpetuate in a fraternal spirit the journalistic friendships formed on that occasion" (meaning the occasion of the great flood). We "old-timers" have lived up to this ideal. New flood correspondents may carry on and may extend their influence over wider territory, but they would do well in organizing for fraternal reasons, to hold together for service in whatever emergency may arise.

Loans to Small Enterprise

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. LEE. Mr. President, I wish to have printed in the Appendix of the RECORD a radio address delivered by the junior Senator from New York [Mr. MEAD] in Washington on May 31 last on the subject Loans to Small Enterprise. Today the banks are bursting with money, and small business enterprises are going to the wall for the want of money. This splendid address deals with that subject.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This morning I appeared at the current hearings before the Senate Banking and Currency Committee and discussed what I consider to be the merits of S. 2343 which I have introduced to meet the credit and capital requirements of smaller enterprise. Tonight I am pleased to have this opportunity to speak to you on this matter. I would like to make it plain from the beginning that I am not advocating the creation of another bureau of the Federal Government, that I am not advocating a measure which will call for large expenditure of public funds, and that I am not advocating the imposition of any added regulatory burdens on private financial institutions. Frankly, I should like to see the end of the necessity for the private citizen to run to Washington in supplication of loans and special favors. I should like to see the end, also, of the public financing of private enterprise and to see that activity undertaken by private agencies specifically designed to carry on that type of endeavor. However, in the latter instance, we must regretfully confess that the promise and hope of attainment is not especially bright at this moment. Federal loans, whether they are for home, farm, or industrial financing, are not extended unless such loan applications have been previously rejected by several private banks. Such applications, rejected by the banks, are considered by the Government under conservative, strict rules and regulations. In many instances, the Government learns that the banks were well justified in declining the loans. In other instances, the Government finds, on a long-term, low-interest-rate-bearing basis, that the loans are not only possible but perfectly sound.

The proof of this contention rests in the fact that the Reconstruction Finance Corporation, although it has granted thousands of loans in large amounts on applications theretofore rejected by banks, has suffered almost negligible losses. The Federal Housing Administration, in insuring private housing loans of the most liberal character, points to an enviable record on the part of its borrowers. The Farm Credit Administration, in refinancing farm mortgages under too liberal terms to be considered by private banks, has proven the wisdom of its policies. Even the Home Owners' Loan Corporation, an agency especially and temporarily set up to extend emergency loans to home owners, in most sections of the country encountered surprisingly few defaults on loans and its foreclosure and repossession of properties has not been in alarming proportions—except, as I stated, in some sections of the country.

The above examples of successful Government financing have been in the "no man's land" of private credit. The small private citizen who has been aided by these agencies had found himself stranded in the fields of private credit with none to extend him a rescuing hand. He had a sentimental attachment to his home or his farm but he found that sentiment played a very small part in his scramble for financial help. The depression had reversed his fortune and he discovered that "character loans" had ceased to exist. A long-term, low-interest loan which he probably would have been able to handle was simply not available. In the meantime, foreclosure, eviction, and bankruptcy were imminent. In some States, moratoriums on foreclosures postponed his catastrophe, but in the end it was the effective aid and intervention of Federal loaning agencies that alleviated his distress and guaranteed him an opportunity for an economic comeback and the possession of his property.

I have recited this bit of history because, in many respects, it is applicable to the plight of small business today. The small-business man, no less than the home or farm owner, has a sentimental as well as an economic stake in his enterprise. He is close to his business—perhaps conceived it, probably built it, and grew up with it. It represents the sum total of his efforts and investment. From the personal viewpoint then, it is vastly important that he be afforded ample opportunity to prosper. Going further than that, from the viewpoints of national employment and community stability, his successful operation is of vital and far-reaching significance.

In cities and villages throughout the United States, over 400,000 small businesses are now in operation. In thousands of instances, one or two of these companies provide the bulk of employment and prosperity for an entire community. When one of these companies unexpectedly fails and closes its doors, the devastating effects of unemployment, uncertainty, and insecurity are immediately evidenced. It is felling blows of this nature that we would like to avoid, whenever it is possible and practicable to do so.

The growing conviction is that far too many small concerns are suffering and failing as a result of the unavailability of private credit and capital. Evidence is piling up to confirm the contention that smaller enterprise is being throttled by an inadequate flow of credit—the most vital and essential element to its progress and success.

Credit and capital are absolute requirements of business because they provide the means for the equipment, modernization, and expansion of business and because they provide means for the meeting of pay rolls, the making of deliveries and the solicitation

of business. When you have choked credit from industry you have signed its death warrant.

Today there is good reason to believe that small business is struggling in a "twilight zone" where neither commercial nor investment banks will help him and where the Government, under its existing law, cannot help him so far as his credit needs are concerned.

We are justified, I believe, in taking some steps to protect the inviolability of thousands of small communities scattered throughout the Nation who are directly dependent upon the economic welfare of these small enterprises. It is in the interest of a sounder national economy that we must now seriously consider providing better and easier credit for small business.

The present plight of the small community and city private enterprise is, in several ways, analogous with the predicament faced by property owners and home builders a few years ago. His local commercial banker does not consider it his business to furnish small business with capital funds or to make loans which are not subject to fairly rapid liquidation. Character loans are no longer extended and even loans on equipment, real estate, and inventories are becoming more and more scarce.

If he cannot obtain his credit requirements through the local commercial banker and if he is too small to consider the issuance of stocks or securities (which might not be easily salable if they were floated), he is left without a single source of long-term credit. The result is, he is without means to modernize his plant, purchase equipment, expand his operations, or solicit greater business. In other words, the credit opportunities which were open to small business only a decade or two ago, are now closing. Our tasks are to learn how widespread these discouraging conditions really are; what has caused them to exist at a time when our banks are glutted with money; and to devise legislation to remedy the evils that exist.

I feel that this legislative task is not impossible of accomplishment. I feel, likewise, that in the solution to this problem we should remain mindful of the important role the banks should properly play in the extension of credit and that we should be cautious of governmental intervention which would involve large expenditures of public funds or which would call for added severe regulatory Government supervision. With this in mind, therefore, let me outline the reasoning behind the legislation I am now sponsoring. My bill devises a system of insurance which I believe could accomplish the following results:

(1) By spreading the risk of loss it will limit the banker's risk of loss.

(2) By limiting the banker's risk of loss it will make possible more liberal lending for business purposes at reasonable interest rates.

(3) By limiting the banker's risk it will make possible the rediscount or sale of insured business loans to the Federal Reserve and private investors and thereby insure the banker a high degree of liquidity to meet his deposit obligations.

Such is the general purpose and operation which I would hope for under the provisions of my bill. Under the bill the R. F. C. is authorized to insure business loans of the banks to the full extent of losses incurred in excess of 10 percent of the principal amount of the loan. Premiums charged for such insurance may be at the rate of not less than one-fourth of 1 percent and not more than 1 percent per annum, depending upon the nature of the loan and the character of the risk involved. To be eligible for insurance a loan to any one firm must not exceed $1,000,000, must not bear interest, exclusive of premium and a moderate service charge, in excess of 4 percent per annum. Insured loans are made eligible for rediscount with the Federal Reserve banks for the full amount of the insurance—that is, 90 percent of the face value of the loan. The Reserve banks are also authorized to buy and sell the notes and other obligations evidencing these insured loans. Government insured notes and other obligations should find a ready market among private investors.

Putting the first risk of loans—the risk of all losses up to 10 percent of the principal amount of the loan on the lending bank—has a number of advantages. It is a safeguard against improvident lending and serves as an automatic check on the abuse of the insurance privilege. It eliminates the expense and annoyance involved in the adjustment of relatively small losses. While deterring a bank from assuming other than a fair business risk, it operates so as to relieve the bank from the fear that even a fair business risk may be a greater risk than a commercial bank can afford to assume.

Experience indicates that in normal times the loss on bank loans is something around one-half of 1 percent per annum. Although the loans that will be insured under the proposed bill may be somewhat different in respect to their maturity from the ordinary and preponderantly short-term bank loans of today, the proper safeguards to prevent a bank from using the insurance privileges only for its more doubtful loans, and with prudent administrative supervision, the rate of loss on insured bank loans ought not to be much greater than on today's uninsured bank loans. High interest rates and stringent loan conditions have not always attracted to the banks the best business risks. The most prudent businessmen have been unwilling to borrow for sound capital expansion on short-term notes bearing a high rate of interest. The low interest rates which the insurance provision of my bill requires and the generous maturities which is made possible should attract many prudent borrowers.

Legislation along the lines which I am proposing would, in my judgment, go far in enabling banks to serve the legitimate needs of legitimate smaller enterprise. It would provide a new avenue of credit and capital for a large industrial group now cramped for such assistance. It would employ a system of Government loan insurance which has already been tried and proved by another agency of Government—the Federal Housing Administration. It would take advantage of the facilities of the Reconstruction Finance Corporation, an active functioning adjunct of the Government, experienced in the credit needs of business. It would be a healthy stimulant to a stagnated credit system and a sensible approach to the solution of small-business ills.

Seventieth Birthday Anniversary of Rt. Rev. Msgr. John A. Ryan, D. D.

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

ADDRESS BY RT. REV. MSGR. JOHN A. RYAN

Mr. GUFFEY. Mr. President, on May 25, 1939, there was tendered to the Right Reverend Monsignor John A. Ryan, D. D., of the Catholic University, a testimonial dinner at Washington, D. C., in honor of the seventieth anniversary of his birth. A notable list of persons were present at the dinner and paid tribute to the splendid services rendered by Dr. Ryan in the field of human welfare.

I ask unanimous consent that Dr. Ryan's address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I like to regard this splendid celebration as fundamentally a tribute to the causes with which I have been associated: Social reform, social justice, the uplifting of labor, the defense of civil liberties, the fight against religious and racial intolerance, and the application of moral principles to social and economic life. These causes and activities are infinitely greater in importance than the years or the achievements of any man or any number of men.

How did I come to enter this field? Significant answers are to be found in my time, my early environment and my inheritance. The year of my birth was within the decade which included the Civil War. Minnesota was still a part of the frontier, and the historian Turner has made us all acquainted with the unique role which the frontier has played in the economic history of America. The neighborhood was rural, and here I wish to cite the man whose writings exercised a greater influence upon my formative years than those of any other author. Archbishop John Lancaster Spalding, in one of his earliest books, refers with approval to the saying of a certain philosopher: "There are 10,000 chances to one that genius, talent, and virtue shall issue from a farmhouse rather than from a palace." My parents were Catholics who had to leave their native land on account of the infamous system of Irish landlordism. My father and mother were heirs, therefore, to all the glorious traditions associated with both their race and their religion. This environment and this inheritance made it easy for me to become interested in the social question.

Subsequent developments nourished, stimulated, and increased that initial interest. About 57 years ago I read, in part at least, Henry George's Progress and Poverty. In 1887 I rejoiced over the success which attended the efforts of Cardinal Gibbons and the other archbishops of the United States to prevent the threatened condemnation in Rome of the Knights of Labor.

Naturally, the most important factor in my early social education was the encyclical of Pope Leo XIII, On the Condition of Labor. This great pronouncement appeared in 1891, about 1 year before my graduation from college. Some 3 or 4 years later I came upon Dr. Richard T. Ely's book Socialism and Social Reform. This was, I am confident, the first work by an American economist which made any systematic or vital contribution to the discussion of modern economic evils and maladjustments.

At this time I was within 4 years of ordination to the priesthood. I had already determined to devote as much as possible of my time and energy to the study of economic conditions, institutions, and problems. I wanted to examine economic life in the light of Christian principles, with a view to making these principles operative in the realm of industry. It seemed to me that the salvation of millions of souls depended largely upon the economic opportunity to live decently, to live as human beings made in the image and likeness of God. That this is proper work for a priest seemed clear to me from the teachings of ethics and moral theology; the moral law governs economic transactions, as well as every other sphere of conduct. In addition to this general truth, I had before

me the specific exhortation and command of Pope Leo XIII. Near the close of his encyclical On the Condition of Labor, he declares: "At this moment the condition of the working population is the question of the hour; and nothing can be of higher interest to all classes of the state than that it should be rightly and reasonably decided." Having pointed out the parts to be taken in this task by the wage earners, by the employers, and by the state, he outlines the contribution to be made by the church. "Every minister of holy religion," he says, "must throw into the conflict all the energy of his mind and all the strength of his endurance. * * *" Clearer or more authoritative encouragement than this no man could have desired.

Almost half a century has gone by since the publication of this great papal pronouncement. How have its doctrines and injunctions been treated in the United States? In attempting briefly to answer this question, I shall divide this period of 48 years into two unequal parts—the 40 years between Leo's encyclical and that of Pius XI and the 8 years that have since elapsed. This division has significance for our economic as well as for our religious history.

Speaking summarily, I observe that the encyclical On the Condition of Labor did not receive adequate consideration until almost 28 years after it had appeared. Then its teaching and influence found expression and recognition in two notable publications. These were the Program of Social Reconstruction, published February 12, 1919, by the bishops who constituted the administrative committee of the National Catholic War Council, and the Pastoral Letter of the Entire American Hierarchy, issued September 26 of the same year. The Social Reconstruction Program was very widely read and approved by both Catholics and non-Catholics. In fact, it obtained more attention and acclaim than all the other 60 plans of reconstruction which appeared in various countries between February 1918 and June 1919.

The year 1921 saw the establishment of the department of social action as an integral part of the National Catholic Welfare Conference. In the first 10 years of its existence this department did more to make known Pope Leo's encyclical than all other agencies combined. Particularly noteworthy among its acts was the holding of anniversary observances of the encyclical for several years before the publication of Quadragesimo Anno on the fortieth anniversary.

During those 40 years, economic reform made little progress in the halls of legislation. The right of labor to organize received some protection, but not nearly so much as the union leaders had expected, in the Federal law known as the Clayton Act. A majority of the States enacted measures restricting night work, requiring the maintenance of safety and sanitation in factories, and providing compensation for injured workmen. A considerable number of our Commonwealths passed laws reducing the hours of the working day for women. About a dozen adopted minimum-wage legislation for women and children.

One reason why more labor legislation was not passed during these 40 years is suggested by that historic interlude sometimes known as the delirious twenties. In that decade, our country became submerged in sodden materialism and pseudoprosperity. These were not favorable conditions for the enactment of laws on behalf of the economically weak. Another obstacle was set up by the Supreme Court. Through declarations of unconstitutionality, it rendered inoperative legislation which restricted the hours of labor for men, which forbade the discharge of an employee for membership in a labor union, and all our compulsory minimum-wage laws. These decisions not only nullified the statutes upon which they passed sentence but discouraged legislators who might have made efforts to enact similar legislation.

The second division of the period that we are considering begins with the publication of the encyclical of Pope Pius XI on Reconstructing the Social Order. This was on May 15, 1931. As most of us are aware, this great papal pronouncement reaffirmed all the main propositions in Leo's encyclical, explained and expanded some of them, and added an entirely new program for the reconstruction of the social order by means of vocational groups. Quadragesimo Anno repeated in even stronger language and in greater detail Leo's exhortations to bishops, priests, and laity to concern themselves with the reform of social and economic conditions. It has received most discussion, study, and approval, not only from Catholics but from non-Catholics, in the 8 years that have elapsed since it appeared than Rerum Novarum had obtained in the preceding 40 years. Moreover, it has greatly increased the interest in and appreciation of Leo's encyclical.

In some respects the encyclical of Pope Pius XI goes beyond the proposals and the language that in years past caused some of us to be stigmatized as "radicals." Since the appearance of Quadragesimo Anno we feel quite safe and respectable. We even think that we have a right to call ourselves "conservatives."

Turning briefly to the subject of social and labor legislation during the years since 1931, I note immense progress. There was the Norris-LaGuardia Act which greatly lessened the abuses of the injunction in labor disputes. This was enacted early in 1932, consequently before the advent of the present national administration. Since 1933, however, more important Federal legislation has been passed for the reform of social and labor conditions than in all our previous history. Out of a very large number of these measures I select only four for brief mention.

Perhaps the most important of them as regards the number of persons affected is the insurance of bank deposits, which has practically abolished bank failures. No one now fears to put his money into a bank. Recalling the 4 years immediately preceding April 1933 we realize that this law produced a veritable revolution. Already we have become so accustomed to its beneficent effects that we scarcely ever mention deposit insurance; we take it for granted. The second of the four reform measures to be noticed here is the Social Security Act, which provides insurance against old age and unemployment. Then there is the National Labor Relations Act, which effectively protects the right of labor to organize. Finally I call attention to the Fair Labor Standards Act, which fixes minimum wages and maximum hours. All four of these laws are in complete accord with the two great papal encyclicals.

The Social Security Act and the Labor Relations Act have already been upheld by the Supreme Court, and the best indications are that the Fair Labor Standards Act will likewise be sustained if and when it comes up for judicial action. In all probability the act providing for insurance of bank deposits will never be attacked in the courts.

In his introduction to the twentieth anniversary edition of the Bishops' Program of Social Reconstruction, Archbishop Mooney enumerates 11 major recommendations in that document and notes that 10 of them have become wholly or partially realized. That much success was probably more than any of us dared to hope for 20 years ago. At the risk of being thought lacking in modesty, I observe that, so far as I know, I was the first person publicly to advocate a family living wage ordained and enforced by law. That was in 1906. Today we have such legislation on the statute books of the Federal Government. While it is not adequate either in its terms or in its scope, it probably goes as far as is practicable at this time.

Yes, there has been progress toward social justice in my lifetime. Those of us who have been active in the movement know that the struggle has been well worth while. It has been interesting, zestful, stimulating, soothing to the conscience, and sufficiently fruitful to assure us that our labors and efforts have not been in vain.

Nevertheless, we are well aware that much remains to be done. We see two economic problems before us which are more perplexing than any of those that have been solved. One of these present problems is immediate and very urgent; the other is less urgent but more fundamental. The first arises out of our enormous and persistent volume of unemployment. In its magnitude and setting it is a new problem. Concerning it, I wish to make one negative and one positive statement. And I know that I am right in both. Our immense unemployment cannot be abolished, nor even notably diminished, by a vast increase in capital investment. Well-meaning persons who advocate this course have failed to realize two developments in our social life which are absolutely new. The first is that our economy has come to maturity; the second is that within a few years we shall have a declining population. What we need now is not more capital instruments but a better distribution of purchasing power, so that those who wish to consume more will have the means to do so and thus to bring about full use of our productive plants, and full employment for our workingmen. More of the national income must go to the farmers and wage earners, and less to the owners of capital. Interest rates must be reduced everywhere, by every effective device. We must have more spending and less saving. In passing, I would observe that if the recommendations of Pope Leo XIII and Pope Pius XI for higher wages, better balanced prices, and a more equitable distribution, had been accepted and put into operation the solution of the problem of unemployment would now be in sight. In the long run, good ethics is good economics.

The more fundamental problem confronting us is that for which the outline of a solution was set forth by Pope Pius XI in Quadragesimo Anno. It is the reconstruction of the social order, the reorganization of our industrial system. As realists we must assume the continuation of the profit motive. As lovers of justice we must realize that historical capitalism cannot and ought not to survive. Private ownership of the great bulk of the means of production should be enabled to continue and flourish, but historical capitalism went far beyond this simple management. Speaking of the economic individualism which became the basis of modern capitalism at the end of the eighteenth century, J. L. and Barbara Hammond declare: "It involved the right to take what interest and profit you could get; to buy and sell as you pleased; * * * (it substituted) for the divine right of kings the divine right of capitalists" (The Rise of Modern Industry, pp. 216, 217). In all the decades since the industrial revolution the spirit of capitalism has sanctioned the lowest practicable rates of wages, the highest possible rates of profit and interest, unlimited economic domination, and unlimited accumulation. To be sure, a large proportion of capitalists and entrepreneurs adopted higher standards than these, but in so doing they were disregarding the spirit of the system.

To change all this, and to change it integrally and fundamentally, is the long-range program before the American people. But this change, the rational reorganization of our industrial system, does not imply communism, nor fascism, nor nazi-ism, nor any other form of totalitarian state. We want an economic reorganization which will be democratic and self-governing from top to bottom, from center to circumference. This means the adoption and adaptation of the guild system, as outlined by Pope Pius XI, in his recommendations concerning occupational groups. This program offers the only escape from the twin extremes of fascism and communism.

In all probability the full actualization of this program will take a long time. It will keep you younger men and women busy for many years. But it holds out the secure hope of larger and wider benefits to labor and the common good than minimum

wages or unionism or any of the other causes that have achieved substantial victory.

To all who are assembled here this evening I am under a very great obligation of gratitude. To the speakers I am particularly and profoundly indebted; to the Honorable Felix Frankfurter, Associate Justice of the Supreme Court, whom I have known for upward of a quarter of a century, and beside whom, in his crusading days, I was privileged to stand in more than one contest for human rights; to the Honorable Frances Perkins, Secretary of Labor, who has never missed an opportunity to show me kindness, and who has always been a devoted, intelligent, and effective champion of social justice; to the Honorable JAMES M. MEAD, Member of the United States Senate from the State of New York, whose long and successful defense of the rights of labor, both without and within legislative halls, has won for him a seat in the greatest deliberative body in the world, and to my academic superior, the Right Reverend Joseph M. Corrigan, rector of the Catholic University, honoring us with his presence and for his very kind observations concerning myself.

I wish to stress in a particular manner my gratitude to the group of more than 100 ladies and gentlemen who have conferred dignity and distinction upon this event by acting as its sponsors. They comprise captains of industry as well as leaders of labor, statesmen, lawyers, journalists, financiers, social workers, clergymen, and bishops. I am thankful to the Right Reverend Michael J. Ready, general secretary of the National Catholic Welfare Conference, for his gracious and efficient performance as presiding officer and toastmaster; and, finally, to my university colleague Rev. Dr. Maurice S. Sheehy and his efficient staff for their exacting labors in making all the arrangements for a delicious dinner, served in a beautiful and spacious hall, under the direction of a kindly and genial host.

The shock of realizing that I am now definitely among those who have been overtaken by old age is considerably cushioned by your touching manifestations of esteem and affection. "My way of life" may be, like that of Macbeth, "fallen into the sere, the yellow leaf"; but, unlike Macbeth, I have "that which should accompany old age, as, honor, love, obedience, troops of friends."

Cotton—Domestic-Allotment Plan

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

RESOLUTION OF REPRESENTATIVE COTTON ORGANIZATIONS AND DEALERS AT MEETING IN DALLAS, TEX.

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by representative cotton organizations and cotton dealers of the South at a meeting held in Dallas, Tex., May 21, 1939.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A meeting of the following leading cotton producers and farm-organization officials was held Sunday, May 22, 1939, at which Dr. M. F. Dickinson, of Arkansas, presided: Tom W. Cheek, president Oklahoma Farmers' Union, Oklahoma City, Okla.; Dr. M. F. Dickinson, president of Farmers' Union, Little Rock, Ark.; Col. E. C. Metcalfe, chairman of legislative committee, Arkansas State Grange, Jacksonville, Ark.; Ralph W. Moore, master, Texas State Grange, Granger, Tex.; Peter Loran, president, Texas Farmers' Union, Munday, Tex.; Harold Gaullrapp, representative of Texas Grange, Dallas, Tex.; E. Greene, president, Farmers' Cooperative Gins of Oklahoma, Sayre, Okla.; M. L. Sigman, manufacturer and planter, Monticello, Ark.; J. E. McDonald, commissioner of agriculture, Austin, Tex.; J. E. Edwards, secretary, State Farmers' Union of Texas, Munday, Tex.; E. M. Cook, member executive committee, Texas Cooperative Cotton Growers' Association, Georgetown, Tex.

After considerable deliberation and discussion of the situation from all angles, it was moved by Mr. Moore, seconded by Colonel Metcalfe, that the following resolution be adopted, which motion was put and unanimously carried:

"Whereas the American farmer buys in a protected market and sells his products in an unprotected market; and

"Whereas under this system there exists a great disparity between tariff-protected goods and agricultural commodities, resulting in a minimum exchange of products of the farms and factories; and

"Whereas the minimum exchange of goods results in maximum unemployment on the farm and in industry; and

"Whereas because of the above-stated facts, we realize the importance of immediate action to place farm products on a parity with other goods; and

"Whereas Senator LEE has recently introduced in Congress Senate bill No. 2434, to provide parity or cost of production, whichever may be the higher, and that same was drawn by him after consultation with a large group of farm leaders: Therefore, be it

"*Resolved*, That we go on record as approving the principles of the said Lee bill, providing at least the cost of production on the domestic-allotment plan, but that we would prefer that said bill provide as follows:

"1. Establish a production basis on cotton on every farm for which the owner makes application for cotton basis establishment;

"2. The Secretary of Agriculture to determine and announce the percentage of the total production base of cotton which has been established on all farms that will be needed for domestic consumption, which percentage will be entitled to a subsidy or price-adjustment payment;

"3. Limit the number of bales or pounds of cotton upon which one farm family may receive subsidy or adjustment payment;

"4. Determine the cost of production or parity price for that portion of cotton declared needed for domestic consumption: *Provided, however*, That the cost of production or parity price for ⅞-inch Middling cotton shall be fixed at not less than 20 cents a pound for that portion domestically consumed;

"5. Provide that the landowner may participate in adjustment payments of subsidies as his interest in the tenant's crop may appear."

Draft of Capital in Case of War

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

RADIO ADDRESS BY HON. JOSH LEE, OF OKLAHOMA

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address, delivered by the junior Senator from Oklahoma [Mr. LEE], on the subject of the draft of capital in case of war.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, for 20 years the soldiers of the World War have been asking Congress for legislation that would draft the use of capital in case of war just as the Government drafted the services of men for the World War. This bill (S. 1650) was written in answer to that request.

The purpose of this bill is to keep the United States out of war, if possible, and if not possible, then to make the United States more effective in war.

This plan would have a strong influence for peace by removing the profits from financing war, but if war were forced upon us, this measure provides for a systematic mobilization of the financial resources of the Nation, and thereby would strengthen our national defense.

When we think of the wealth of America, we must think in terms of land, buildings, factories, and goods. Therefore, any proposal to draft the wealth of the United States must provide the means of translating that wealth into credit, and borrowing that credit; and then provide the means of translating that credit into cash.

The proposal we are debating tonight does just that.

In the first place, bear in mind that this proposal does not provide for the seizure of property. It provides for raising money by a series of bond issues. Money would be raised only as it would be needed. In this respect it does not change our present plan of financing war by the sale of bonds. It does, however, apply the principle of borrowing according to the ability to lend, just as we tax according to ability to pay.

How did we finance the last war? It was by the sale of Government bonds. This bill proposes the same system with three improvements. First, instead of the purchase being voluntary, it would be compulsory; second, instead of the amount purchased being determined by patriotism or pressure, it would be determined by the amount of wealth owned by the individual; third, instead of paying high interest rates and promising tax exemption, the bonds would bear only 1-percent interest and would not be tax exempt.

In other words, this plan for financing war is just like the plan we used in the World War, with three major exceptions. First, the purchase of bonds is mandatory; second, each individual must buy according to his ability to buy; and, third, there can be no profits.

Most of the objections to this proposal boil down to arguments of inconvenience. But whoever claimed that war was convenient?

However, under this bill the inconveniences of war are much more equitably distributed than they were in the last war.

For example, during the last war many farmers went to the bank and borrowed money in order to buy Liberty Bonds much in excess of the amount they would be required to buy under this proposal. Soldiers with no property at all bought Liberty Bonds and paid for them out of their soldier's pay. In most of these cases, as soon as the bonds were paid for, the farmers and the soldiers and others needed the money so badly that they sold those bonds at a big discount and at a considerable loss to themselves. The bonds, of course, wound up in the hands of the big bankers who profited on the patriotism of others.

Let us see how this plan would work. Suppose a man worth $100,000 has a factory. Suppose he has no cash, or what little he has he needs for operating his business. Now, because he has no available cash would anyone argue that he should not buy any war bonds at all although he is worth $100,000? I believe all will agree that he should buy some war bonds. Then should we leave the amount that he is to buy to his patriotism, or to a high-pressure committee, or to his desire for profits on the bonds? You will agree with me that none of these are fair criteria for the amount of credit that he should lend to the Government.

But under the proposed plan, we establish a definite schedule very similar to the graduated income-tax schedule which would determine exactly the amount that he should lend as his proportionate share of the money to be raised. For example, a bond issue that required a man worth $10,000 to lend $90 would require a man worth $100,000 to lend $1,890.

In case the individual has difficulty in raising the ready cash, the bill provides that the Government may accept his note, bearing a commercial rate of interest and secured by his property, in return for the bonds. The Government may then convert this note into cash, either by selling it or by issuing money against it. Since the note would be amply secured, the money would be sound.

In this manner the Government could make liquid the nonliquid wealth of America without placing undue strain upon any individual and without issuing one single dollar that was not backed by a dollar's worth of property.

The spokesmen of Wall Street have launched a vicious attack of ridicule and name-calling against this bill. But calling it bad names is only an admission that they have no arguments.

Let me suggest that in order to test every objection that is advanced against this proposal, you ask yourself this question, "Would not that same objection apply with equal or greater force against drafting men?"

The same people who are now objecting to drafting the millionaire's wealth in case of war were perfectly willing to draft the boys and send thousands of them to their death, but now that we are considering a measure that would draft dollars as well as men, we are running into opposition because their precious dollars are too sacred to be drafted.

They argue that a law to draft money in case of war would be unconstitutional. But the Constitution says, "Congress shall have power to raise and support an Army." Here are two grants of authority connected by a conjunction. One says Congress has power to raise an Army. The other says Congress has power to support an Army. The one cannot exist without the other. Of what effect is an Army without ammunition, without guns, without food? The power to equip, feed, and clothe an Army and the power to raise an Army are inseparable ingredients of any war.

But in the last war we had the inconsistent situation of a government that raised an army by compulsory draft laws and supported that army by voluntary appeals for money. We commanded men and begged for money. Yet the Constitution grants us authority to raise funds by methods as equally mandatory as those used to call men to the colors. If the selective-draft law was constitutional, and it was upheld in all of the selective-draft cases, then it is constitutional to draft capital.

If you can draft men, you can draft money. If you can take one man's services, you can take another man's credit. If you can take one man's blood, you can take another man's gold.

REMOVES PROFIT INCENTIVE

This measure will help keep the United States out of war because it will take the profits out of financing war. Normally interest rates run about 2 percent on Government bonds, but during the war it was necessary to pay as high as 4¾ percent in order to coax enough money out of hiding to finance the war.

The men who financed the war in most cases faced no physical danger and received twice as much for the use of their money as they could get in times of peace. This creates a tremendous profit incentive in favor of war.

Mr. Pearson, of the Treasury Department, informed me that up to 1934 we had paid over $12,000,000,000 in interest alone on the war bonds. But we cannot reach this war profit by taxation, because the bonds are tax-exempt.

But under the proposed plan there would be no such profit. Why should any person profit from war? It does not increase wealth; it destroys wealth. Therefore when some make profits out of war others suffer double loss.

It was a shock to our patriotism to come home and learn that 22,000 millionaires were made out of the war that cost the soldiers in blood and money.

The passage of this bill would remove any possibility of profits resulting from financing war. Instead of holding out the tempting incentive of high interest rates for the use of money, it would say to the Wall Street bankers, "If the United States goes to war, you will be compelled to finance it, and that not at a profit." This would exert a tremendous influence against war.

STRENGTHEN OUR NATIONAL DEFENSE

Therefore the passage of this bill would help to keep the United States out of war if humanly possible. But if war were forced upon us, this measure would strengthen our national defense by mobilizing our financial resources.

Under this law our Government would never be delayed, hindered, or embarrassed for the want of finances to carry on the war, but by the passage of this law it would mean that $350,000,000,000 of wealth would be available, if needed, to coin into long, black cannons, war planes, machine guns, and battleships.

When this was known, the psychology would be in our favor. Any foreign nation would think twice before declaring war upon the United States, because this bill would make the financial resources available to the Government on the same basis as manpower.

When the voluntary system of financing war breaks down, as it always does when the war lasts long enough, governments turn to the printing presses for money, with the disastrous results that always follow the issuance of fiat money.

This has been done in nations where the financial resources had not been exhausted but had simply hidden out as they always do in time of war, and because those governments had no legislative machinery for reaching the financial resources in a systematic and equitable manner, the governments broke down within before the armies gave way on the front.

Germany completely destroyed her monetary system by issuing unsecured paper money. The worthless Confederate currency of the South and the depreciated "greenbacks" of the North remind us of the desperate efforts of those two governments to continue fighting after the voluntary system of financing had broken down.

This measure offers a plan for utilizing the full amount of the wealth of the Nation, including all of the nonliquid assets, without issuing one dollar of money that is not secured by more than a dollar's worth of property.

Financial resources have been referred to as the "sinews of war." At least, we know that two things are essential to successfully prosecute war. They are men and money. If we are able to supply the one but not the other, we are still defenseless. In case of war, the United States should be able to supply these two essentials of war in a constant stream. Therefore, the Government should have equal power to raise money as that granted to raise men.

During the World War, it became increasingly more difficult to raise money as the committees who put on the Liberty bond drives will testify. It was also necessary to increase the interest rates on each succeeding bond issue in order to coax enough money out of hiding to support the soldiers who were then facing death in the trenches. This tells the story, the first bond issue bore 3½ percent interest, the next 4 percent, the next 4¼ percent, and then 4¾ percent, and if the war had continued, we would have reached the point where the Government could not have borrowed money at any rate of interest.

In other words, the voluntary method of raising money was breaking down not for the lack of wealth but for the lack of a plan for reaching that wealth.

During the darkest days of the Civil War Abraham Lincoln went to New York to raise more money to feed and clothe and arm the soldiers. He saw that the bankers were holding out for better terms. He stood up with fire flashing from his eyes. He said, "I can draft a widow's only son. I can take her only means of support from between the plow handles and place him at the front of the battle where his life will not last 6 minutes, but I cannot lay my hands on enough money to pay for the food he eats before he is shot."

It was true in the Civil War; it was true in the World War; and unless we do something about it now, it would be true in case of another war.

I thank you.

Convention of Young Democrats of the State of Washington

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON, JUNE 2, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered on June 2 to the convention of Young Democrats of

the State of Washington at Walla Walla, Wash., by the junior Senator from that State [Mr. SCHWELLENBACH].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On March 4, 1933, President Roosevelt said: "The only thing we need to fear is fear itself." We all remember the fear that filled the hearts and minds of the American people during the frightful 2 months preceding that date. It was a fear which flowed naturally and logically from the events which were occurring. It was the fear of the bank depositor that his savings would be destroyed. It was the fear of the home owner that his home would be lost. It was the fear of the farmer that his farm might be taken from him. It was the fear of the unemployed that his wife and children might starve. It was the fear of the youth that the years ahead would afford no opportunities for advancement. It was the fear of those approaching old age that their last ways were to be spent in the almshouse.

Under the brilliant leadership of Franklin Roosevelt, that fear was dispelled. To the American people there came the faith, hope, and confidence that their Government, which during the preceding 4 years had turned its back upon them, was again recognizing its responsibility to them. Their Government was treating and considering their problems with sympathy and understanding. Employment was given to millions because of the President's determination that the Federal Government would insist upon a program of work relief rather than to submit them to the stigma of the old poor-relief program of the dole. Several million of our youth were rehabilitated physically, mentally, and morally through the constructive efforts of the Civilian Conservation Corps. The bank deposits of our savers were guaranteed by a Federal deposit-insurance law. The Home Owners' Loan Corporation saved millions of homes from foreclosure. The Farm Credit Administration kept millions of farms in the hands of their owners. The specter of dying in the poorhouse was removed from those who were approaching old age by a Social Security Act which, while even yet imperfect and uncertain, does constitute the first substantial step this Nation has seen in the solution of that problem.

For 4½ years we saw a steady improvement in every line of American endeavor. Business of every kind improved. Unemployment gradually but steadily decreased. Farm prices on every commodity increased up to nearly the parity to which the farmer is entitled. Enormous strides were made in the recapturing of our foreign trade. The building industry was rapidly revived as a result of the operations of the Federal Housing Administration. From one end of the country to the other we saw necessary improvements made, improvements that had been neglected through so many nonunderstanding years. Necessary school facilities were provided. Public buildings were restored or rebuilt. Public roads by the thousands of miles were constructed. Great power and reclamation developments, such as our own Grand Coulee and Bonneville came as a result solely and exclusively of the understanding of the needs of the people by the President of the United States. By July 1, 1937, national income had so increased, unemployment had so decreased, the trend in the affairs of business, industry, and agriculture had become so stabilized that appropriations for the ensuing year were made upon a basis so as to provide a completely balanced Budget.

Between July 1, 1937, and November 1, 1937, these gains which had been achieved were largely wiped out and we plunged into what the opposition is pleased to call the Roosevelt depression of 1937 and 1938. From that date until this the people of the country have witnessed the tremendous efforts upon the part of the President to win back for the American people the objectives that we already had conquered.

Fair-minded, thinking people are attempting to analyze the causes behind this sudden reversal in American progress. To anyone who really knows what went on in the country during those years, it need be no unexplainable mystery.

I started out by quoting the President's statement that all we needed to fear was fear itself. Indisputable proof is available that those opposed to the President and his policies took a leaf out of his own book. They determined that the way to defeat the President and his purpose was to reinstate a fear among the people of this Nation. The evidence discloses that this campaign commenced in October and November of 1934. With the coming of the realization that the 1934 election would see the unqualified approval of the administration's policies, the campaign of fear commenced. Organizations by the dozens sprang up over this country. The American Liberty League, the Committee to Uphold Constitutional Government, the Crusaders, the Sentinels of the Republic, Women Investors of America, Inc., American Federation of Utility Investors are typical of the type of organization that flourished in this work. No one has yet ascertained the total amount of money expended in this propaganda program. We do know that the newspapers and magazines were effective instruments in the campaign. The programs of radio commentators were subsidized. From that day until this, a hymn of hate and fear against the Federal Government has been dinned into the ears of the American people. Our people were told that national bankruptcy confronted us, that the debt burden would stifle opportunities for ourselves and our children even unto the second and third generation. They were told that our Constitution was being destroyed. They were told that our President wanted to be a dictator. They were told that our Government was being made either Communist or Fascist depending upon the prejudices of the listeners. Last, but not least, they were told that the President was attempting to lead the American people into a foreign war. It took 3 years to succeed in this campaign. At length, in the fall of 1937, by constant pounding and constant misrepresentation, once again the fear complex was inspired in the American people.

We now ask why anyone in this country should desire to destroy the effective accomplishments of their own government. President Roosevelt realized that as a complement to the program of recovery there must also come a program of reform. He knew that if the vicious and pernicious practices of the 1920's were not stamped out, a repetition of 1929 was only a matter of time. Therefore, he insisted that while we were recovering from the effects of those practices we also provide insurance against and some measure of permanence in our prosperity by preventing their repetition. Legislation restricting and preventing speculation with funds entrusted to the bankers was provided in the Banking Acts of 1933 and 1935. Curbs were placed upon the excesses in stock speculation by the Securities and Exchange Act. Some measure of protection for the right of labor to organize was provided in the Wagner Labor Relations Act. Frauds perpetrated both upon the consuming and investing public by the public utilities and their holding companies were prevented by the Wheeler-Rayburn Act. These are but a few of the necessary, fundamental reforms instituted by this administration. The motive behind the efforts to reinstate the fear complex is their desire to wipe out every reform introduced upon the part of this administration. Those who financed this campaign talk so much about freedom of individual action of the average American citizen. They are not interested in any freedom of individual action except their own freedom to trick and defraud and to stifle and throttle the great mass of the American people.

They say now and they are going to say during this next year that they approve of the principles of the Roosevelt objectives, but they simply want to modify them so as to make them workable. The opposition is going to say, "Just give us our chance and we will really make these policies work. We are efficient. We are practical. We are the ones to whom the task of administration should be entrusted. My first answer to that is that you read the reply given by Chiang Kai-shek and the other Chinese leaders when the Japanese made their charitable offer to go into China and institute Japanese efficiency in the development of China for the benefit of the Chinese people. My second answer is that I don't believe it. If you have any doubt about it, I recommend that you read the policies adopted by the Chamber of Commerce of the United States at their annual meeting on May 4, 1939. There the mask is removed. They just simply advocate the repeal or emasculation of every reform of the Roosevelt administration.

I have no time here to answer in detail all of the charges against this administration. Let me briefly answer three:

First. Is this heavy burden of debt and taxes destroying opportunities for profit so as to prevent opportunities for investment? We hear that statement made on all sides. The fact is that during the last 3 years, including the depression period of 1937 and the depression year of 1938, the net return, after taxes, depreciation, and all charges of industrial corporations of the United States, was 8.3 percent. Under the grand and glorious prosperity years of 1927–29, inclusive, industrial corporations received an average return of 6.5 percent. My authority for that statement is the financial editor of the Chicago American, which certainly cannot be qualified as a proadministration paper. These facts show conclusively that when the American people are told that they must be afraid to invest because the chances for profit will be taken away from American industry that they are being deceived by the campaign of misrepresentation.

Let us become more specific and get down to one corporation. I choose it because it is largely owned by a family which has done more squealing than any other 10 families in the United States. I refer to the du Ponts. Mr. Lammot du Pont a few days ago attacked the administration, saying that it created paralysis of fear in business by levying a heavy burden of taxes. What are the facts so far as the du Ponts are concerned?

During the 4 years of the Hoover administration, including the boom year of 1929, the du Pont Corporation earned an average net of $53,000,000. Under Mr. Roosevelt's 6-year period of no confidence and paralysis, it earned an average of $62,000,000. Du Pont complains that in 1932 his corporation only needed to pay slightly under a million dollars in taxes while in 1937 it had to pay $11,000,000. He forgets to say that while its tax bill went up $10,000,000, the corporation's net income went up to $62,000,000.

We have nothing to fear but fear itself. What these interests fear is not debt nor taxes but the fear that they won't be able again to gain control of the Federal Government and wipe out the necessary reforms enacted by this administration. Last year, when the reorganization bill was up, it was called a dictatorial bill. The country was flooded with propaganda creating fear of the President on the grounds that he wanted to be a dictator. One of the organizations I have mentioned alone sent out over 16,000,000 pieces of literature condemning him as a dictator. They beat the bill last year, but this year we passed it. The President has sent his first two reorganization plans to the Congress. The first one was approved by the House of Representatives by a vote of 265 to 128. The second one was approved by the Senate unanimously. That shows how much substance there was to the charge of dictatorial ambition.

The latest fear-creating bugaboo presented is that the President wants to drag us into a European war. On this issue even the Republicans dared to emerge from their shell of silence, but the evidence of the last few weeks has demonstrated even to them that it was a potato too hot for them to handle. It looks now as if the chances are about even that a European war will be averted. If it is, recognition is being given here in Washington by even the opposition press that President Roosevelt, and he alone, will be entitled to the largest amount of credit in the averting of that conflict. Everyone here recognizes that had it not been for his message to Hitler and Mussolini, delivered on a Saturday morning, a European war would have ensued the next week.

Do you wonder that men even like Senator TAFT, of Ohio, decided that discretion was the better part of valor, and that that is one issue upon which they shouldn't talk for the present at least.

Next year we face a political campaign with a Presidential election. Let there be no mistake about one thing. There will be just one issue in that campaign. Postmaster General Farley was right when he said that that issue would be the record of the Roosevelt administration. The Democratic Party cannot about face now. It came into power promising a liberal administration. We have given a liberal administration. We are not going to get any place after 8 years by saying that we changed our minds, that we have been wrong all along, and that now we want to be conservative. Personally, I have no desire to make an about face. I look forward with pleasure to the time to come next year when, as a candidate for the only office to which I aspire—reelection to the United States Senate—I will have the chance not to defend but to proclaim the accomplishments of our administration.

During the course of these remarks, I have mentioned the word "fear" many times. It is because I consider the presence or absence of fear of such importance that I have been so much interested in and appreciative of the efforts of the organization known as the Young Democrats. The members of your organization to a greater extent than the members of any other group connected with the Democratic Party have had the courage to stand up without fear and fight for the principles upon which we were elected. I believe that the future of the Democratic Party and the future of the Nation as a whole depends upon the strength and the energy and the enthusiasm of the Young Democrats of America. I only wish that I could have been present at your convention. I take this means, however, of expressing my appreciation to you of the work you have done in the cause of liberal democracy in the State of Washington. I not only wish you success in this meeting but success in your future efforts of organization. I conclude by saying that it is upon you very largely that the cause of liberal democracy must depend in the years to come.

Luncheon of People's Lobby

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7 (legislative day of Monday, June 5), 1939

ADDRESSES BY HON. EDWIN C. JOHNSON, OF COLORADO, AND HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two addresses delivered at the luncheon of the People's Lobby on June 3, 1939, one by the junior Senator from Colorado [Mr. JOHNSON] entitled "A War on Poverty or a Foreign War," and one delivered by the junior Senator from North Dakota [Mr. NYE] entitled "Do British and European Imperialisms Differ?" These addresses were broadcast over the network of the National Broadcasting Co.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO

America must soon choose what war she shall wage—whether it will be a war dealing with real-estate boundaries, bitter industrial rivalries, vicious dog-eat-dog commercial ventures, and selfish imperialism of long standing in contentious Europe, or a war to end poverty in her own land. She cannot win both a foreign war across the Atlantic and a domestic war against poverty, because a foreign war would drastically increase domestic poverty to hopeless proportions. If she loses the war to end domestic poverty, all of her precious democratic institutions will likely crumble about her in the tragedy of that defeat, so the decision is a most serious one.

SHOEMAKERS' CHILDREN GO BAREFOOTED

"First cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye" is a timely Biblical admonition for America to heed in determining her future course. She is neither competent nor obligated to move into broader fields until she has put her own house in good order. Unfortunately, we seem deeply concerned over the fate of imperialistic democracies abroad and tantalizingly complacent over the fate of our own glorious democracy at home. Perhaps this is a natural tendency, for have not shoemakers' children gone barefooted and are not the reformers' offspring a serious social problem? Persons who would run the affairs of the whole neighborhood usually live in poorly managed homes themselves.

"HAVE NOTS" AND "HAVES"

The "have not" nations of Europe are in a death struggle against the "have" nations for the right to live, but American "have not" citizens also love life. Should we devote our treasure, indulge our already strained credit, and sacrifice our precious manpower in an effort to save the "haves" from the murderous wrath of the "have nots" in Europe, or shall we direct our energy instead toward bringing about a fair, honest, just, equitable, and realistic reconciliation between American "haves" and American "have nots"?

TROUBLE THE MOTHER OF PROGRESS

"Necessity is the mother of invention" and trouble is the mother of progress. It is well that mankind has problems, for when problems cease, progress will cease. We need have no fears of running out of problems, for there are serious troubles in the Old World and there are serious troubles right here in America. Most of our domestic difficulties grow out of prevailing and persistently low prices for farm produce and widespread unemployment of American labor. These unfortunate conditions in turn curtail buying power until the output of industry does not move, and that results in further unemployment and still less buying power.

HANDICAPPED PERSONS

An inquiring analysis of destitution will reveal that there are two kinds of poverty. Each requires a different treatment. The Bible points out that the "poor ye have always with you." The aged, the sick, the halt, the blind, the physically and mentally handicapped, left upon their own resources in fierce competition with the young, the vigorous, and the able-bodied, sometimes fail. Ancient pagans "liquidated" such unfortunates from a high cliff, but modern humane instincts urge other methods; and individual philanthropists, or society itself, may always have to look after a certain percentage of handicapped persons.

MECHANICAL POVERTY

Modern technology has created another kind of poverty, however, and it is this new poverty which is threatening our whole economy. Its cause may be traced to the maladjustments of the modern application of power machinery and mass production in industry and the striking changes which have been adopted in modes of living. In the old days strong men took care of themselves on the frontiers, but today a strong man is as helpless as an invalid if he be law abiding and without a job. He may be thrifty, industrious, and anxious to work, yet if industry does not need his services, he is condemned to poverty and his poverty begets other poverty when his buying power is no more. If everyone in the world had all the comforts and necessities—to say nothing of the luxuries of life—the case against statesmanship would not be so bad, but the need for goods in our own country and throughout the world is without limitation. If this earth were a barren pile of rocks upon which little could be produced, we might gladly accept short rations, but that is not the situation at all. God has been most generous and even lavish in bestowing upon us the use of an earth capable of supplying every need of every living human being. He has left production and distribution to us, however, and while our scientists have solved the problems of production in a big way we have been almost conquered and defeated by the problem of use.

SOLD INTO BONDAGE

Serious unemployment due to technological causes in this transition era from hand to power machinery became apparent in 1925, and it has increased from year to year until the present hour. Constantly diminishing income, followed by curtailed consumption, as men were replaced by machines, progressively aggravated the whole situation. A downward spiral developed with ever-increasing velocity until 1932, when it reached the stage of a frightful crisis. Out of that terrible experience was born the New Deal, which courageously met the emergency with borrowed money from the Federal Treasury, which it used to artificially bolster the lagging buying power of the Nation. As a stop-gap no one can question the wisdom or the necessity of so drastic a remedy, but to think of the use of borrowed money as a permanent solution to bolster buying power is both fantastic and dishonest. Debts are sometimes justified in an emergency as a last resort, but never must they be considered a permanent solution to any problem. No intelligent man can honestly expect to reap where he does not sow. Financing the buying power of this country through the sale of interest-bearing, non-tax-paying Government bonds is a wicked business that must end in disaster. Bonds and bondage are Siamese twins which can never be separated, for he who issues bonds is to that extent in bondage. Day by day as we live on borrowed money

we place the heavy yoke of bondage upon the neck of posterity. Bonds and debts promote poverty upon the one hand and concentrate riches upon the other.

DEMOCRACY MUST WORK

A vigorous war to end poverty should be waged at once to make the United States of America safe for democracy because our democracy is not safe with widespread poverty rampant on the farms and in the cities of our glorious land. Democracy must be more than a gesture; it must work. We need a modern St. Patrick to drive into the sea the serpent of poverty. The net results of another world war to save world democracy would likely not only place the whole world under dictatorships, regardless of who won, but it would doubtless condemn a large percentage of the world's population to a condition of hopeless poverty. The reactions coming out of the last war spread poverty and developed totalitarian governments in all parts of the world, including the western hemisphere and shook our own democratic country to the depth of its economic and political foundation. The poverty and misery we would reap from another such experience added to the domestic difficulties already at hand would develop a greater problem than our country could bear. Heartbreaking as it would be, patriotic mothers would doubtless bravely bear up under the loss of a million sons, more precious than life itself, and the Federal Treasury might be able to float an additional deficit of 20 to 50 billion dollars to carry on such a war, but when the war was ended the United States of America, the strongest nation in all the world, could not withstand the economic shocks, reactions, and repercussions which would follow. Some of our political leaders now almost brag and gloat about one-third of our people being ill-fed, ill-housed, and ill-nourished. Many students are convinced that this one-third estimate is approximately correct. I am satisfied that if we should engage in another world war without setting our own house in order, this one-third of impoverished souls would become two-thirds of our population. No democracy can hope to govern with so many citizens on public charity. Public charity could not then be financed out of borrowed money from the sale of bonds, for the costs of war would have completely exhausted our credit. It would require a stronger and more severe government than a democracy to cope with such a contingency. The bloody sword would have to rule in the place of the peaceful ballot.

CHANGE STATESMEN IF NECESSARY

It is quite generally agreed that America has a form of government second to none, and if we would encourage a wider adoption of democracy as a good system, we must prove its superiority by solving unemployment and the stubborn problem of use. If policies of government are not being directed by our present-day statesmen in such a way as to cope with the challenge of use in the midst of plenty, then other statesmen with more practical plans must be found who do measure up to that problem. For unless a permanent solution to end mechanical poverty can be discovered, our capitalistic democracy will have to give way to something else. It makes one shudder when he contemplates the evils which would follow such a change, but destitute men will not be patient forever. Lincoln pointed out the futility of mixing freedom and slavery. He wisely observed that our country could not continue half slave and half free. Neither can it continue half prosperous and half impoverished. Today, in spite of our vast natural resources and our intelligent, enlightened population, we are gradually moving away from a widespread prosperity toward a widespread poverty.

END WAR PHOBIA

The time is at hand when an intelligent America should stop flirting with the possibilities of engaging in or financing other people's wars under any pretext whatever and set herself resolutely about the holy task of eliminating poverty from the United States of America. Economic justice, like charity, should begin at home, and war phobia should be destroyed as America would destroy a mad dog.

ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA

It was not any stretch of imagination that prompted the saying not so long ago that American participation in the war that seemed to be in the making in Europe would find us helping so-called democracies to save their imperialism.

Dress up as one will the causes at stake in Europe, talk about the need of a united front against alleged aggressors in defense of democracies if you will, the fact remains that the cause remains one of defense of imperialism against those who want a larger share of the advantages which imperialism denies them, advantages taken from them by other imperialists.

The real cause involved in Europe's uncertainties is the cause that has prevailed through many generations of drifting border lines there. It is definitely the kind of cause that should invite a rather complete disinterest on the part of America. We should have quite satisfied ourselves during the past 22 years that however successful we may be in helping one band of imperialists whip another band of imperialists, we don't help to win solution of the European problem, nor do we stop the drifting of border lines or the desire for change in those borders.

Some of us speak so glibly of the dependence of European democracies upon our American helping hand. Others of us pick up the call and go on echoing the theory that the cause of democracy may be destroyed unless we exercise our influence and lend our strength in ironing out hates, fears, jealousies, and suspicions which never yet have submitted to a successful ironing out. Of course, invariably that dreaming finds us rallying to Britain and France as the only remaining bulwark of democracy in Europe. To them must we give our aid if causes we Americans love and defend are going to be saved.

Now, I am sure that as things stand in Europe today as among those nations counted parties in the next European war, there would be no use in my denying that my sympathies are with Britain and France as against Italy and Germany. The truth is that we can entertain little or no sympathy for such internal and external exploits, such racial prejudices, as the dictator countries have demonstrated. We compare our own freedom with its absence in those particular lands and come up quickly with the conclusion that our advantages as a democracy are preferable. At once we let ourselves be convinced that all governments that count themselves threatened by the dictatorships are governments of form like our own. Consequently the mind quickly is trained to see that we have a common cause with certain European nations, the cause of saving our democracy.

But for the most part we don't know what we are talking about when we accept the European cause as one involving democracy in any serious degree. Definitely England and France do have much at stake in this hour, but neither nation considers the cause of democracy to be the stake. Each entertains as cause No. 1 the saving of its own imperialism.

British imperialism in no degree differs from what is accepted as being the general brand of European imperialism and dreams of imperialism. Oh, Britain may and does in hours like this parade a love for democracy, but the parade is utterly lacking of sincerity and is intended only to win allies to the saving of her imperialism.

Let us have pointed out a single instance when Britain gave response to the cause of democracy in this world. How beautifully she responded, for example, to the defense of democracy in Czechoslovakia, where no part of her own imperialism was involved. Willingly she gave of the possession of a democracy there so long as it called for no giving of that which was Britain's. And what a grand sample of love for democracy was that nonintervention policy which let the arms and men of the dictatorships reorganize Spain and perhaps helped create one more dictatorship to sell to the United States as another threat to democracy.

We say that of all the nations involved in Europe we like best England and France. Are we sure? Don't we, way down in our hearts, have largest respect for the kind of government and attitude expressed by Norway, Sweden, Holland, Denmark, and Switzerland perhaps? These nations are neighbors to those large nations which seem to be drawing up sides these days. Neighbors best know their own neighbors. Why is it that none of these moved in to aid one side or the other in the last war? Why is it made so evident that they intend to stay out of the next war? Don't they love the cause of democracy? They stay out because they see naught but the cause of imperialism the first consideration involved.

I am not prepared to say that there could not be challenges in Europe that might invite American participation in their wars. But we must never permit ourselves to be drawn in so long as the imperialism of nations involved may be the primary cause of combat. British imperialism may be preferable to a German or Italian imperialism under their present leadership. But the conflict between them still is not inviting our participation so long as the cause remains what it is.

What gave Hitler his chance in Germany if it wasn't the Treaty of Versailles? Except for that instrument by those we helped to victory there wouldn't be a breath of chance for him. Why must we feel that another victory in war will certainly not bring another instrument like that written at Versailles, only to make room for more Hitlers and more wars?

Are you feeling sorry for France and England because of their alleged lack of adequate defense against Germany and Italy? If this lack of defense actually exists, then why is Hitler giving them all this time to get ready? The truth is that Britain and France materially helped Hitler build up his strength in armament through these years, profited by it and watched Germany arm. If they didn't keep up with what they were watching and helping why should we get all hot and worried about it?

Of course, we should all want to see Europe cooled off and settled down. Our own stability would be served if that end were accomplished. But the job of cooling it isn't ours. That settling down, to my mind, is wholly dependent upon that day when England is ready to pull her chair up to the table and offer the world a chance, an outlet, a sufficiency. And this is not going to be done by British insistence upon holding everything she has, all that she has gained through generations of aggressions. Saving British imperialism isn't going to save the world. And until imperialism is removed as cause No. 1 abroad there is every reason why the United States should refrain from making the job of halting the drifting border sands of Europe a W. P. A. project for the "relief" of the unemployed and millions of our American sons. There is plenty of work to be done right here within our own borders if we are really eager to save democracy, the kind of democracy we know something about.

Censorship of International Broadcasts

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

LETTER FROM NEVILLE MILLER TO HON. FRANK R. McNINCH

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Neville Miller, president of the National Association of Broadcasters, to the Honorable Frank R. McNinch, Chairman of the Federal Communications Commission:

The Honorable FRANK McNINCH,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR MR. McNINCH: On May 23, 1939, the Commission promulgated new rules and regulations for the operation of international broadcast stations. These rules included new and unprecedented restrictions and requirements as to program content and were issued without prior public hearing. Of the 9 licensees operating 14 international broadcast stations, the majority are members of the National Association of Broadcasters. This organization has a committee for the study and coordination of international broadcasting and is now accumulating more comprehensive information in this field than has been available. Meanwhile, however, these new rules and regulations precipitate certain fundamental questions which are a matter of vital concern to broadcasting generally and to the entire American public. It is to these more fundamental matters than we address ourselves.

Paragraph (a) of section 42.03 of the new regulations provides that "A licensee of an international broadcast station shall render only an international broadcast service which will reflect the culture of this country and which will promote international good will, understanding, and cooperation." It is submitted that the question as to whether a specific program reflects the culture of this country or promotes, at any given moment, international good will, understanding, and cooperation, is a matter upon which there may be sharp differences of opinion. A literal interpretation of this regulation would, for example, require a licensee to suppress spokesmen for minority groups if either the licensee or the Commission thought their views would not promote "international good will, understanding, and cooperation." Freedom of speech as an integral part of the culture of this country not only is a cherished tradition, but a living reality. Any requirement that international broadcast stations suppress a speaker because his remarks might not promote "international good will, understanding, and cooperation," would, therefore, seem to be in conflict with the requirement that the service rendered by an international broadcast station "reflect the culture of this country."

We are advised by several licensees of international broadcast stations that foreign listeners rely upon stations in the United States as a source of unbiased and uncensored news of the world. This reliance is based upon the fact that these listeners know that in the United States there is no governmental supervision or control over the matter to be broadcast. In many other countries, broadcasting is an instrument of the government and listeners to their stations are aware of the fact that their programs, including news reports and information on current events, are colored to fit the philosophy and views of the government. The consequent distortion of news into self-serving propaganda has evoked a growing resentment toward the countries from which it emanates, and such resentment has reacted to enhance foreign respect for the present impartial dissemination of programs from the United States. We, therefore, feel that the confidence that has been developed in the independent operations of American short-wave stations will be destroyed when it becomes known that an agency of the Government of the United States has laid down requirements to control the program content of these stations.

Moreover, it is respectfully submitted that the existence of this regulation (42.03–a) needlessly places this Government in a position which we believe to be contrary to our traditional policy in the field of foreign relations. There are abundant examples of instances in which some citizen of the United States has made certain utterances by radio or through the press which have aroused the antagonism of the representatives of foreign powers. It has been the customary reply of our State Department to the protests by offended powers that this country is one in which freedom of speech is an actuality and the Government has no power to abridge this fundamental right. The regulation which we are discussing definitely implies official responsibility for all matter broadcast over international stations. This we believe is unsound policy and incompatible with the operation of broadcast stations by private enterprise in a democracy. It would seem equally appropriate to require government supervision and censorship of all matter contained in American newspapers circulated abroad which use the facilities of the American Merchant Marine or the second class mail for delivery. This analogy, we believe, clearly demonstrates the errors and the immediate dangers of the policy which this new regulation embodies.

We likewise desire to invite your attention to paragraph (b) of section 42.03 which places further restrictions upon program content to the extent that it limits and prescribes the type of commercial advertisement which can be made, the type of commodity which can be advertised and then excludes all commercial or sponsored programs that "are not consistent with the purpose or intent of this section." Such regulations are neither desirable nor necessary nor susceptible to sufficient clarity of interpretation or agreement as to meaning to permit them to be practically applied. If international broadcasting is to be continued as an instrument of private enterprise, we feel that the regulatory authority should confine its functions to questions of technical efficiency, allocation and general performance in the public interest.

It seems appropriate to emphasize that the record of licensees in the international broadcast field has been one of greatly increasing service to foreign listeners. During the past 2 years there has been a marked development of facilities and personnel by the various private licensees. Their programs are being exclusively designed for international audiences. The responses that have been received indicate that foreign listeners appreciate the fact that these programs, reflecting as they do, a living pattern of our democracy, have not undertaken to propagandize any political ideology. This should be continued, because the most effective way to develop and foster international good will by the United States is to avoid copying the tactics of totalitarian governments who supervise and direct all broadcasting.

Finally, we have been unable to find a legal basis for the regulations which we have discussed. It need only be pointed out that the authority for all powers exercised by the Commission must be found in the act itself and that such authority must be expressly conferred or follow by necessary implication from powers expressly conferred. In this case, we can find neither. While the Communications Act of 1934 clothes the Commission with extremely broad powers on matters of allocation and the technical and physical operations of broadcast stations, we can find nothing in the act or in the several decisions of the court which have been based upon this act to support this character of regulation. We have been unable to find any provision of the act or decision of the court which would authorize the Commission to pass upon the content of programs broadcast either directly by prior examination of the program material or indirectly by imposing requirements which will have the same effect.

The Federal Communications Act of 1934 is silent on the subject of program content. Not only does this absence of language support our conclusions that the Commission is without authority to regulate program content as such, whether in the international or domestic broadcasting field, but it should be particularly noted that the statutes expressly prohibit censorship in any form. We desire to emphasize the language in section 326, which states:

"Nothing in this act shall be understood or construed to give the Commission the power of censorship over the radio communications or signals transmitted by any radio station, and no regulation or condition shall be promulgated or fixed by the Commission which shall interfere with the right of free speech by means of radio communication."

If the Commission has the authority to promulgate this character or regulation in the international field, it must have equal authority with respect to domestic broadcasting, as the same provisions of the law govern both classifications. If licensees of international broadcast stations can be required to restrict their programs to any regulatory authority's concept of American culture, it would seem clear that the licensees of domestic broadcasting stations could be required to limit their programs to some "official" definition of culture, education, and entertainment. That this would constitute a violent transgression of the basic principles of American democracy is self-evident. We further submit that the proposed regulations would establish the precedent for such transgression and surely no such dangerous prerogative is contemplated by the Communications Act of 1934 and is in direct conflict with section 326 of the act which expressly prohibits any type or character of censorship or any condition or regulation "which shall interfere with the right of free speech by means of radio communication."

In view of the importance of the subject itself and in further view of the necessary implications to which the adoption of such regulations give rise, we request that the Commission follow the same course selected by it in the adoption and promulgation of rules and regulations governing the domestic operation of broadcast stations and that it conduct hearings on these regulations. We further request that the Commission reconsider its action of May 23, 1939, and postpone final action until such time as an opportunity may be given for the conduct of a hearing upon the questions above referred to and others which are necessarily involved in the consideration of this subject.

Very respectfully yours,

NEVILLE MILLER.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

ARTICLE BY RAYMOND CLAPPER

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Clapper, from the Daily News of today:

[From the Washington Daily News of June 7, 1939]

EXPERIMENTS

(By Raymond Clapper)

We still have a great deal to learn about handling governmental experiments so that they won't defeat their own purposes, as is shown by the unfortunate situation with regard to the Wages and Hours Act.

Here was an act, highly desirable in purpose, namely to protect the sweatshop worker. As was inevitable in drafting such general legislation, defects appeared after the measure went into effect.

It was found, for instance, that the little country telephone exchanges, often operated by housewives as a sideline, clearing only a few calls each 24 hours, are presented with an overtime pay requirement that makes their operation almost impossible unless dial systems are installed to eliminate the operators. An amendment has been proposed by the Wage and Hour Administration to exempt such workers.

High-paid specialized employes, professional brain workers who are judged by results, not by the number of hours worked, were being required to turn in overtime schedules. Employers are required to pay such workers time and a half for overtime. A highly paid advertising writer, for instance, or a writer like myself, has to work without much regard for the clock. Some produce their best copy at night. Some are stale one day and hot the next, when they can produce a prodigious amount of copy.

The employer doesn't care how little or how much such an employee works. He wants results. It is much the same with the employee. Sometimes he sits at his paper for hours or stares through the window. Again he grinds out his work almost offhand. There is no way for these men to measure their working time because their work is pretty much their life. Anyway, they are paid far above the scales which the Wage and Hour Act was intended to protect.

So the Wage and Hour Administration sought to wipe off this layer of impossible administration by proposing an amendment to eliminate from the scope of the act employees receiving $200 or more a month.

But when these and several other desirable corrective amendments were proposed in the House, farm lobbyists, fronting for fruit and vegetable packers, put their hooks in for amendments which would remove the protection of the act from the miserably paid employees of canneries and other food-processing establishments. Friends of the Wage and Hour Act were fearful of exposing it to the whipsawing of farm and packer lobbyists and have refused, for the time being at least, to go ahead with the program of amendments to eliminate the sour spots in the act. Thus highly desirable perfecting amendments are blocked by the pressure of interests desiring to nullify the act in a considerable area where the need of it is great.

This kind of trouble is encountered wherever an attempt is made to tighten and improve legislation. At the first sign of revision, enemies of the legislation gather around to harpoon it with sabotaging amendments. The result is that the administration stiffens and abandons desirable amendments. Unquestionably that is the reason the administration is not active in revising the Wagner Labor Relations Act.

Thus New Deal measures are frozen when they should be considered still in the experimental stage subject to correction. Social-security amendments are being put through at considerable risk of having undesirable amendments hitched on in the process.

Much more desirable is the method used in trying out the food stamp plan in a few selected cities, employing variations of the basic idea so that the mechanics may be tested. This is the sampling technique used by a business in placing a new article on the market. Various methods of advertising are tried out and the article may be given a trial in a few localities before the national marketing campaign is undertaken.

It is not always possible for Government measures to be thus introduced through restricted testing. But where this technique is possible it helps eliminate prolonged headaches and permits of experiments which could not be risked if they had to be introduced on a national scale.

Insurance Agents

EXTENSION OF REMARKS

OF

HON. ROSS A. COLLINS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

LETTER FROM W. D. OWENS

Mr. COLLINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from an insurance man in my State:

JACKSON, MISS., *June 3, 1939.*

Hon. ROSS COLLINS,
House of Representatives, Washington, D. C.

DEAR MR. COLLINS: It is my understanding that the Ways and Means Committee of the House of Representatives has reported general amendments to the Federal Social Security Act, section 606 (d) being of particular interest to us in that it broadens the definition of the term "employees" in such a fashion as seemingly to include insurance agents and others generally considered in the category of independent contractors.

If this amendment is adopted, it will mean that this company will be required to pay taxes on the commissions paid to our agents, who have already been classified by the United States Internal Revenue Department as independent contractors. We are so hopeful that the amendment will not be adopted and that commissioned life-insurance agents will continue to be classified as independent contractors.

It is practically impossible for a life-insurance company to know what net profits result to an insurance agent out of the commissions paid him for business submitted to the company. The commission is gross income, out of which the agent must pay his business expenses, such as rental, clerical hire, advertising, traveling expenses, and commissions to other agents who assist him in writing the business. You will readily appreciate, therefore, that as a practical thing it would be impossible for the life-insurance company to ascertain the net income to an agent upon which any such tax, if imposed, should be based.

Commissions paid to life-insurance agents may be sold, assigned, or pledged by the agent, while as a general rule wages may not be. The question would arise whether or not commissions sold or assigned would create the relationship of employer-employee between the life-insurance company and the assignee of commissions. It would require a considerable stretch of imagination to see any such relationship between the life-insurance company and the assignee of commissions.

The most difficult thing to determine would be the question, "When is a life-insurance agent unemployed?" A life-insurance agent who is honest and properly qualified and licensed may always obtain a contract from a company to write life insurance, so that he never would be unemployed within the meaning of the statute, although he might work for a long period of time and not write any applications. Would he be considered to be unemployed during the period of time when no business was being written, and employed during the period of time in which he did write business? In other words, the company pays him not for the work he does but for the results he obtains.

The entire history of the Social Security Act, as I understand it, from the President's message recommending the legislation down to the present time, indicates that the act was intended solely to apply to the relationship of employer-employee, an excise tax on the privilege of employment. A tax upon commissions paid to an insurance agent, who is not an employee, would not be a tax on the privilege of employment, but a naked tax on the right to contract with an insurance agent, or an independent contractor.

It seems to me that unless it is the intention of the Social Security Board to extend the act to cover self-employed persons there is no logical reason for the inclusion of insurance agents, who are not employees but rather self-employed persons or independent contractors, and it is my belief that you will agree with the general proposition that if insurance agents are singled out to be brought under the act (and the amendment indicates this to be the case), there is no reason why all other self-employed persons and independent contractors should not also be placed under the act.

I hope that we may depend upon you to resist vigorously this broad amendment, and make an effort to see that the tax is not imposed upon individuals who will receive no benefit from the act.

Yours very truly,

W. D. OWENS.

American Retail Federation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

EDITORIAL FROM THE BOSTON POST OF MAY 26, 1939

Mr. McCORMACK. Mr. Speaker, it appears to be the custom and the practice among certain organizations when they meet to condemn anything and everything. That is a course that they have a perfect right to take, if they so desire. However, there is grave doubt, in the minds of many, as to the wisdom of an outright course or policy of condemnation instead of constructive criticism or praise. Such organizations seem to feel that it is also necessary to oppose everything and anything, not only objectives but methods of obtaining objectives, particularly along legislative lines.

Judging from results, such a course has not aroused public opinion generally in support of this policy. As a matter of fact, the reaction of public opinion, generally speaking, has been the opposite to that sought and desired by such organizations.

Recently, in the city of Washington, the American Retail Federation held a retailers' forum, attended by its members, other retailers, numerous Senators and Congressmen, and Government officials. In fact, 44 States and 7 foreign countries were represented by those attending the forum. The Federation, whose membership includes 25 State retail associations and 7 national retail associations, is first and foremost a research organization, devoting most of its energies toward the solution of the common problems of all retailers. Even after a careful study of all the facts it takes no position before congressional committees, either of blame or praise, without submitting a referendum to its members and obtaining their unanimous agreement—a most democratic and commendable policy. And so instead of permitting its forum to be used "as a sounding board for political propaganda" the American Retail Federation devoted its sessions to a serious and constructive discussion of the problems of retailers, and of questions of concern to the American people. Instead of passing a number of condemnatory resolutions, opposing anything and everything that has happened from a legislative angle during the past 6 years, the federation adopted a new, unique, and extremely refreshing policy of "no resolutions." The views of the members were expressed briefly through Louis E. Kirstein, of Boston, Mass., the chairman of the board of trustees, an outstanding businessman, and one of the most progessive thinking citizens of the United States.

By this action, the American Retail Federation set an example that other organizations or associations might well follow.

The refreshing and constructive course taken by the American Retail Federation has received favorable editorial comment in the independent thinking press of the country. As evidence of this favorable reaction, I herewith include in my extension of remarks an editorial which appeared in the Boston Post of May 26, 1939, entitled "A Fine Example":

[From the Boston Post of May 26, 1939]

A FINE EXAMPLE

The national forum of the American Retail Federation, which met in Washington with Louis E. Kirstein, of Boston, as chairman, afforded an excellent example which other national trade associations might follow.

Instead of long-winded resolutions and bitter speeches, antagonistic to the administration, and reciting a long list of grievances, the forum, through Chairman Kirstein, emphasized the need for "close, earnest, and intelligent cooperation with Federal, State, and local Governments in striving for a solution of the major social and economic problems of the present day."

That is sincere and helpful language.

Mr. Kirstein's further suggestions were likewise admirable. "Retailers," he said, "should increase the income of the people by reducing costs of distribution. They should recognize the right of consumers to know exactly what they are buying and of employees to bargain collectively with employers. They should oppose monopolistic practices which retard the flow of goods and for the same reason should oppose all forms of trade barriers between the States."

Nor was the consumer cooperative movement opposed. On the contrary, Mr. Kirstein said they should be recognized as a legitimate form of retail distribution, asking only that the Government refrain from subsidies which would give the cooperatives an unfair advantage.

How much better is this helpful, cooperative attitude than one of stubborn refusal to face the facts of the present situation. And how much more likely it is to lead to impressing the administration with the fact that business is willing to be helpful. Also it may lead to a more sympathetic attitude toward business.

While the President in his speech laid great stress on the fact that more than 50 percent of every dollar spent by the Federal Government to provide jobs passes over the counters of the retail merchants, Mr. Kirstein made it plain that he is no advocate of reckless Federal spending.

On the contrary he called upon the Government to formulate a carefully planned and explicit fiscal policy. While he advocated no specific taxation changes he emphasized the need for a corelation of Federal, State, and local taxation that will encourage private investment and increase purchasing power.

This is indeed a helpful attitude.

National Old-Age Pensions

EXTENSION OF REMARKS
OF
HON. PEHR G. HOLMES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

Mr. HOLMES. Mr. Speaker, having been denied by the limitation of a closed rule an opportunity to discuss on the floor of the House of Representatives my reasons for voting for the so-called Townsend old-age pension bill, officially designated as H. R. 6466, I want now to do so and to point out the principles involved in the proposed legislation which was defeated.

Let me note in the beginning that 97 Members of the House voted for this bill. Under the gag rule imposed upon the House the proponents of this bill were allowed 2 hours in which to express their reasons for supporting this legislation.

With 120 minutes at our disposal, each one of us would have had approximately a minute and a fraction, considering interruptions, in which to express our views on this fundamental economic legislation.

This bill was submitted to the House by the Ways and Means Committee without any recommendation or report whatsoever.

It was brought to the floor under this gag rule for the plain and explicit purpose of preventing an adequate discussion of the measure, because the administration feared that if the bill had a chance for adequate debate on this floor it might pass.

The tactics pursued in presenting this legislation to the House represented a new low in unfair, dangerous political chicanery and trickery. The bill was brought up for consideration under these circumstances for the plain and declared purpose of trying to put individual members of this Congress on a political hot spot; to embarrass them in the discharge of their sworn duty to legislate for the welfare of all the citizens of this Nation.

This exhibition of political trickery is shameful to the last degree and reflects no credit upon the Democratic leadership which aided and abetted its employment.

Mr. Speaker, for 20 years and more Members of the Congress, some of whom are still here, many of whom have come and gone, have given lip service to the cause of old-age pensions in one form or another, and yet for the first time, in H. R. 6466, have we had any chance to vote on the principle of straightforward old-age maintenance.

I, for one—and I believe I speak the sentiments of all those who voted "aye" on this bill—am tired of seeing the poignant and ever-pressing question of old-age security made a political football. I, for one, am not willing longer to let the aged citizens of this country suffer fear, want, and privation, because, in many cases, their savings of a lifetime were swept away in a financial debacle for which they were not responsible, while politicians play a game of hide-and-seek with their misery.

We have involved here, Mr. Speaker, not only a fundamental economic problem; we have here involved a problem of man's humanity for man; it is to the shame of this Nation that this problem has been handled all these years on the basis of political trickery instead of being met frankly, openly, and honestly, as it should long ago have been met, and settled on a sound and equitable basis.

Fundamentally—whether we like it or not—we are faced with this problem: Are we going to provide for the elderly citizens of this country in their declining years, under an orderly, national system, or are we not? Are we willing to let the aged suffer mental agony and physical privation, just so long as they are willing to stay in their hovels, out of sight, and drag out their lives where the spectacle of their suffering will not break our hearts?

I want to say to you, Mr. Speaker, that I did not cast my vote for this specific bill, H. R. 6466. I cast my vote for a principle and an issue. I do not pretend to say whether this bill was workable or unworkable. What I do say is that I was given only a choice to vote for this bill, in order to vote for old-age security on a pay-as-you-go plan, or to vote against it and against the principle involved, because the gag was placed upon my lips by the New Deal administration.

The only opportunity that has been afforded the Members of this House to vote for the principle of old-age security on a pay-as-you-go plan was presented in this bill under these conditions, where the administration and the leaders of this House believed they had so maneuvered that there was not a possibility of the legislation passing.

Mr. Speaker, the very essence of constitutional government, the very essence of the American tradition, the very essence of the American way of settling disagreements, is that of discussion and compromise. There was not in this instance one scintilla of the constitutional way of American Government exhibited. This proposed legislation was not left open to amendment or the American way of discussion and compromise in this forum, where at least the 10,000,000 aged citizens of this country have every right to expect that their welfare, their comfort, their very lives, would be debated openly and frankly and honestly.

I have no criticism, Mr. Speaker, for those who voted against this bill. I attribute to them no inhumanity for their fellow men. What I say is that we have again played politics with a fundamental economic question, and with a question fundamental in Christian philosophy, and I want to say to this House that this question cannot be disposed of by those tactics. Those who voted against the bill believed it was unsound and unworkable. Perhaps it was. Nevertheless it remains a fact that it was the only measure involving the principle of old-age assistance on a pay-as-you-go plan that has ever been brought to the floor of this House. Every member of this body knows, every member of the administration knows, every thinking man and woman in this Nation knows that if this measure had passed the House it would have gone to the Senate, where it would have been adequately discussed and debated, where it would have been amended and perfected, and where time for the reaction from the country at large would have been afforded, after the country had had an opportunity to weigh the debates and discussions and to know exactly what mode of approach, what method of financing, and what means of administration would be the best and soundest to effectuate old-age annuities.

Why was that not done? For exactly the same reason, Mr. Speaker, that we were denied an opportunity to debate this measure adequately on the floor of this House. It was not done because the administration was afraid to meet this issue in fair and open discussion. It was not done because the administration is opposed to the principle of old-age pensions on a pay-as-you-go basis. It was not done because the principle of old-age pensions on a pay-as-you-go basis, financed by direct taxation, would leave no opportunity for political tricksters and bureaucrats to utilize old-age pensions to perpetuate themselves in power at the expense of the people.

The inequities under the present social-security law were clearly and precisely set out by my colleague, the Honorable RALPH O. BREWSTER, of Maine, in a statement before the Ways and Means Committee on Friday, February 10, 1939. At that time he pointed out that:

> Under the present law—the Social Security Act—the average payment is between $19 and $20 per person assisted. But that varies from $6 to $6.50 in Mississippi up to $27 in some States. That is a tremendous spread. It would not seem that that could reflect the needs of the individual concerned—a disproportion of such great amount.
>
> Second, in some States 500 out of every 1,000 persons above the age of 65 are getting aid; in Oklahoma, conspicuously. In other States it is as low as 100 or 150. On the average it is 200 per 1,000 of the eligible population. Such tremendous disparities certainly indicate a great difference in administration.
>
> In addition, local abuses are almost inevitable in administration of the needs test. In the first place, you must have a very large group of social-service inquisitors going about to determine the needs of all these people. It is a tremendous job.
>
> If you had it administered by investigators with all the wisdom of Solomon and all the sincerity of a saint, it would be a tremendous problem. And it must be kept constantly up to date, as the recipients change and as the conditions of the individuals change.
>
> In addition, if any sectional or partisan or personal considerations enter, immediately the whole thing is thrown out of gear and tremendous social inequities and political abuses result.
>
> It is for these reasons: First, the problem of the tremendous amount of bureaucracy, investigators, and continued investigation that have led me to question the wisdom of the needs test; and, second, the abuses which it seems to me must inevitably result.
>
> Discriminations on the line of race, or color, or creed, or of a variety of other considerations in the administration of any human responsibility also must be considered.
>
> The contrast is a universal system that gives assistance to everyone over a certain age, so that they have to establish that they were American citizens and show that they were born at a certain date, and they automatically become eligible to participation in this fund.

We know that these inequities and abuses pointed out by my colleague [Mr. BREWSTER] do exist and are inescapable in every department of the Government that has control over the dispensing of funds. They enter into the W. P. A.; they have entered into the P. W. A.; they have entered into the administration of agricultural subsidies and payments; they have entered into every department and bureau of the Government that is administered by a political bureaucracy; and such abuses are inevitable because they are the way of a political bureaucracy. Therefore whatever difficulties may lie in the method of a direct pay-as-you-go old-age annuity plan, based upon the simple formula of citizenship and age, it could not be manipulated by the political bureaucrats, and favoritism or sectional or racial discrimination would be eliminated.

Mr. Speaker, the aged, like the poor, are always with us. Are they being starved to death now? If they are, then shame be upon a nation and a people as rich and as resourceful as this for permitting such a condition to exist. If the old people in this country are not starving to death, then somebody is keeping them. Who is it? Who is it but the taxpayers of this country?

Much was said in opposition to this bill and to the so-called Townsend plan to the effect that it takes from all to give to a special class. What is a subsidy to the farmers, what is a subsidy to the shipbuilders, what is a subsidy to shipowners, what is a subsidy to the cotton growers, what are the pensions we now pay in this country, but the act of taking from the whole to pay to special classes? What is the basis of our present relief program? It is taking from the whole to pay to special classes—those who are unemployed.

Now let me make this point clear. I am finding no fault with subsidies or pensions or relief, as such; I am simply pointing out the fallacy of opposing the principle of old-age

annuities on the ground that it would tax all the people to provide for a special class.

There is another fallacy that I want to nail here and now. It is argued by many that the old-age provisions of the Social Security Act provide an adequate method of caring for our aged citizens. What Member of this House would stand up in his place and say that he would expect his father or his mother to live on a paltry $15 or $20 a month?

Now as to the mode of taxation. It is claimed that the method of financing the old-age-pension plan under the so-called Townsend doctrine is a tax upon the consumer. Let us bring that into the open here and now. Who but the consumers ever pay any tax in the finality? Who pays the employers' tax today under the Social Security Act? The consumers. Who pays that portion of the social-security tax levied upon wages and salaries? The consumers. Who pays for every subsidy and every pension of every character that is being paid in this country today? The consumers, of course. They pay for it in the prices of the things they buy; they pay for it in the nuisance taxes that meet them on every hand; there is no escape for the consumer from the ultimate payment of all of the taxes that are levied, either for the cost of governmental operations, extravagant and otherwise, or for the payment of subsidies and pensions and grants, extravagant or otherwise.

I am a little suspicious, if you please, of this sudden concern for the consumer on the part of the administration. Under the N. R. A. what consideration did the consumer get? Was he effectively represented at the council tables? In all of this wasteful spending by this New Deal political bureaucracy which has grown up in the last 6 years, sitting in air-cooled offices, spending the taxpayers' money, sending up "must" bills to be passed by the Congress without the dotting of an "i" or the crossing of a "t," as has been the practice for 6 years under the New Deal, who, among the new dealers, I say during all those years, wept with bleeding hearts for the consumers?

Now, Mr. Speaker, I want to devote a word or two to Dr. Townsend. It is the fond hope of a good many that the ghost of Dr. Townsend has been laid for all time. It has not been so long since this administration was going to put Dr. Townsend in jail here in the District of Columbia.

Whatever may be the faults and the flaws, the fallacies or the visions that cloud Dr. Townsend's concept of economics, it remains a fact which no Member of this House can deny that Dr. Townsend and his movement were responsible for forcing upon this administration the Social Security Act, with its old-age provisions. Had it not been for the Townsend movement, so-called, this administration, in my opinion, would not have rushed in almost overnight with a Social Security Act at all.

This very week we are going to consider the question of increasing old-age benefits under the social-security set-up. Why? I will tell you why. Because there are several million aged citizens in this country who have been organized under the Townsend banner of whom the administration is fearful. If the administration believes that it has laid the ghost of the persistent Dr. Townsend, let it muse a moment upon the situation in California. Last November the so-called ham-and-egg $30-every-Thursday proposition was referred to a popular referendum. It was defeated by a majority of 240,000 votes. That was last November, mark you. Today California is facing another special election on the ham-and-egg $30-every-Thursday proposal because more than a million citizens of that State signed a petition demanding another election.

The old-age pension issue is going to remain with us not because it is a racket, as some have charged, but because a fundamental economic and philosophical principle is involved, which will never be disposed of until it is disposed of on a sound and honest basis.

There may be racketeers who have imposed upon the aged citizens of this country. Such racketeers ought to go behind the bars if there is any way to put them there, but I would remind this House that the old-age pension movement is not the only movement of a public character involving the economic and philosophical fundamentals into which racketeers have "muscled." Look at your labor situation, for one. Look at your prohibition conditions for another. Look at your relief situation for a third. Are we going to try to evade this economic problem of maintaining our aged citizens because some racketeers have been imposing upon them?

I now want to call your attention to the Republican platform of 1936. Under the title of "Security" the Republican Party said in that platform:

> We propose a system of old-age security, based upon the following principles:
>
> First, we approve a pay-as-you-go policy which requires of each generation the support of the aged and the determination of what is just and adequate.

I voted for that principle when I voted for H. R. 6466.

Let me quote further:

> Second, every American citizen over 65 should receive the supplementary payment necessary to provide a minimum income sufficient to protect him or her from want.

I voted for that principle when I voted for H. R. 6466.

I quote further:

> Third, each State and Territory, upon complying with simple and general minimum standards, should receive from the Federal Government a graduated contribution in proportion to its own up to a fixed maximum.

I voted for that principle when I voted for H. R. 6466, although the bill itself did not contain that provision.

I quote further:

> Fourth, to make this program consistent with sound fiscal policy, the Federal revenues for this purpose must be provided from the proceeds of a direct tax widely distributed. All will be benefited and all should contribute.

I voted for that principle when I voted for H. R. 6466.

Now as to the bill itself. The actual measure which was voted upon was not the real consideration in this House. The real issue was old-age annuities upon a basis such as was set forth explicitly in the Republican platform of 1936, which I have just quoted.

H. R. 6466 may have been unworkable. I do not concede that the principle of old-age pensions is unworkable.

H. R. 6466 may have contained the flaws of a multiple taxation which would have pyramided to a disastrous point by the time they reached the consumer. I do not concede that it is impossible to provide adequate old-age pensions without involving multiple taxation that would wreck the Nation, ruin the taxpayers, or starve the consumers to death.

It may be that H. R. 6466 has difficulties of administration that would have made it impossible to administer. I do not concede that it is impossible to devise an adequate old-age pension system that could be administered soundly and equitably and economically.

The name of Townsend is tacked onto every old-age security measure in order to discredit it because Dr. Townsend may have made extravagant statements opposed to a sound economy. I do not concede that the elderly citizens of this Nation have to continue to suffer the mental and physical agonies of fear, uncertainty, and privation, because any one man or any group of men in this country choose, sincerely or otherwise, to make extravagant, unsound claims or assertions.

The proposed legislation had one virtue that none of its opponents can deny. Under the plan proposed in H. R. 6466, no more money would have been paid out in old-age annuities than could be collected through taxes. Whether that sum, divided among all of the eligible old people, would have amounted to $25 a month, or $50 a month, or $75 a month, or $100 a month, I do not pretend to say; and I do not believe anybody else could give an accurate estimate until the plan was in operation long enough to prove itself one way or the other.

H. R. 6466 and the whole principle of old-age pensions embody some other virtues that cannot be denied by the most bitter antagonists.

Under the principle of old-age annuities, as embodied in H. R. 6466, several million elderly persons would have been removed from active work in competition with younger persons. We are, and very properly, spending a great deal of

money keeping young men in the C. C. C. camps, where we pay them $30 a month, food, and clothing. We are spending a great deal more money for the National Youth Administration under Mr. Aubrey Williams, of "elect your friends" fame. The youth of this country do not want to be recipients of a Government dole in any form. What they want is a chance to work at jobs in private industry and to earn their own way.

Another virtue inherent in the principle of old-age pensions is that it would reduce the relief rolls in many ways. It is unnecessary to go into details on this question. because the very fact that several million elderly people would be retired from active work, making way for younger men, would mean the reemployment of that many people of the younger generation who are now receiving Federal or State assistance in one form or another.

One of the chief arguments against the old-age pension plan is that increased velocity of the medium of exchange does not create new purchasing power. I am ready to concede that there has been much loose thinking concerning the velocity of money on the part of the elderly people and those who were leading them in the campaign for old-age pensions. It is true, I think, that increased velocity of money does not create new purchasing power; but an overlooked fact is that the purchasing power now existent in this country is stagnant. It is not moving, and certainly the old-age pension plan would force into circulation a great deal of the purchasing power that is now stagnant in bank vaults. It was, I believe, the late Senator Thomas J. Walsh, of Montana, who once said that there is "no surplus beyond human needs in the United States, but there is a surplus beyond market demands." As one of my colleagues across the aisle pointed out, something is wrong with distribution in this country, somebody has thrown away the key to distribution. Our markets are glutted with the necessities of life, and at the same time many of our people are hungry, ill-clothed, and ill-housed.

This question of the benefits of increased velocity of medium of exchange under the old-age pension plan was clearly pointed out by the Honorable RALPH O. BREWSTER in his statement before the Ways and Means Committee, which I quoted a while ago, when he stated:

> I rest my opposition primarily upon the effect on our business and economic structure as a whole. It has to be borne in mind that a great deal of our present trouble is at least associated with or indicated in the very low velocity of our money, which rose as high in 1929 in New York as 132 times. That is, each dollar turned over that many times. In 1934 it was down to 22½. In the country as a whole it has normally been around 25 or 30. In 1929 it was up to 45. In 1933 it was down to 16, and is nearly back at that point now. I believe last year—if I remember the figures—the velocity of the dollar reached its all-time low as a result of the almost complete paralysis of business confidence. Any time anybody could get hold of a dollar they hung onto it like grim death.
>
> Certainly the assurance given in a program such as this would lead not only the old people to spend what money they had received, or would receive, but would enable the great mass of our people under the age provided to spend much more freely if they felt assured that their old age was to be provided for.
>
> Business, meanwhile, would go ahead with great confidence if it could feel legislative experiments were at an end and the taxation program was stabilized.

However, the elderly people of this country may have been led into delusions of living in grandeur with an income of $200 or $300 a month, which, of course, was not embodied in H. R. 6466, and which is not the fundamental principle under consideration, it still remains a fact that increased consumption on the part of the elderly people of this country, whether their annuity be $50 a month or whatever a sound plan would provide, would stimulate business and at the same time increase employment.

I for one did not vote for H. R. 6466 with an idea that by some magic of economics we were going to restore prosperity by providing the elderly people with $200 or $300 a month apiece in the hope that the forced turn-over of that amount 12 times a year would take the place of an increased production of wealth as a means of returning to prosperity. It cannot be controverted, however, that the New Deal's celebrated "pump priming" principle is exactly that of Dr. Townsend's doctrine—namely, taking from those who have and are not spending to give to those who have not but who would spend if they had, and thus by division of existing purchasing power and a forced increase of velocity making this an $80,000,000,000 Nation.

In all fairness, we have got to admit that Dr. Townsend is not the only individual in this country whose visions of economic magic have led people astray.

The surest way of keeping this old-age-pension question under agitation, the surest way of keeping alive class hatred and class friction, is to keep this whole issue in the realm of political manipulation, where the shysters and the racketeers and the demagogues and the political opportunists can use it for their own ends and can continue to make illusory promises to the old people of this country. Let me say to those of you whose hearts bleed, so you say, over the way the old people have been mulcted of their dimes and their quarters and their dollars, that the surest way to save them from being preyed upon by racketeers is not to shed crocodile tears in the CONGRESSIONAL RECORD over it but to meet this issue squarely and fairly and settle it and provide an adequate security for the old people of this country; and the day that is done that happy hunting ground of the racketeer and the shyster and the political opportunist and the social chiseler will have been obliterated from the American scene.

Nothing is to be accomplished by wringing our hands in despair and shedding tears of futility over the plight of the old folks. The way to accomplish something is to meet this issue honestly, in fair and open debate, and make such sound provisions for old-age security in this country as will at least give our aged citizens a decent existence and a reasonable degree of comfort.

I want to repeat that those of us who are ready to meet this issue fairly and squarely and frankly and honestly had no other course left us under the conditions under which this legislation came to this floor except to vote for H. R. 6466 in the hope that it would go over to the Senate, where proper debate, discussion, and analysis could be had and the bill could be properly amended or rewritten into a workable measure embodying the principles laid down in the Republican platform—the principles, if you please, Mr. Speaker, to which so many Members of the Congress and so many spokesmen for the administration give ardent lip service while yet moving heaven and earth to prevent those principles from being enacted into the law.

Of all the shameful spectacles of playing politics with human misery, the most shameful is the spectacle of the politics that have been played with the old-age pension plan.

The slimy hand of corrupt politics lost not an instant in reaching into the sacred precincts of unemployment relief in order to clutch and drag out whatever fruits might be used to nourish a political bureaucracy more concerned with perpetuating itself in power, and with drawing princely salaries, than ever it has been with human suffering, good will, brotherly love, or man's humanity to man. That condition is bad enough, God knows, albeit those on relief do have some vestige of hope that sometime, somehow, they will again get a decent job at decent wages, so they can maintain themselves by their own efforts. But in this old-age security issue we have millions of aged citizens who have reached that time in life when they can no longer have a vestige of hope that they can find a decent job at decent wages by which to maintain themselves. Their day is gone.

I would have preferred, Mr. Speaker, that this issue had been brought up in the form of a constitutional amendment in order that the whole Nation, including the old folks, might have had a chance to pass on it and say whether or not we are going to pursue the course of an enlightened Christian nation or whether we prefer to follow the present practice of leaving the aged to their fate. The administration and the powers that control this Congress so far have refused to approach this issue that way. Such a constitutional amendment would either end for all time the Townsend movement, if the amendment were not ratified, or, if it were ratified, would remove from the issue any question of constitutionality.

I would like, however, to remind this House that the question of constitutionality with regard to other measures has

not bothered the administration very much. I recall one instance at least when the President of the United States advised a committee of this House to let no doubts, however reasonable, of the constitutionality of a measure, stand in the way of its enactment.

Since we were denied any chance to vote upon the submission of a constitutional amendment, and since we have been denied any opportunity to vote on any plan whatsoever involving the principle of old-age assistance, there was nothing left for us but to vote for this measure as an opening wedge—a step in the direction, if you please—of an open, fair, and practical consideration of the whole issue of old-age security.

Mr. Speaker, I offer these remarks not as an apology for my vote for H. R. 6466. I submit them for the purpose of clarifying, if possible, for the country the issues which are at stake and of showing the country, if I may, how those issues were obscured and defeated by tactics and methods as unfair and disgraceful as any that ever were adopted in either branch of the Congress.

It may be that a sales tax, or a transactions tax, or a processors' or a manufacturers' tax, is not the best way in which to provide the funds for old-age pensions. But one thing is certain—however old-age pensions are provided, they will be paid by taxation, and in no other way.

The support of the aged, as I said a while ago, is now based upon taxation. The people of this country are now supporting our aged and indigent citizens—after a fashion—and that support is a method of self-taxation. There is no valid argument against a system of taxation to pay for the support of our aged citizens. The question is whether we honestly want to find that proper method and provide that support for the aged citizens, or whether we want to spend another 20 or 30 years quibbling and splitting hairs over questions of constitutionality or methods of taxation or means of administration.

I do not believe those among my constituents who may think that H. R. 6466 was an unsound way of achieving old-age security can or will disagree with the principles for which we voted when we voted in favor of H. R. 6466. I cannot conceive it possible that any citizen in this country would be willing to abandon the aged to their fate.

Therefore I want to say to you and to this House that, so far as I am concerned, I shall continue to favor a system of adequate old-age pensions based upon the soundest economic foundation it is possible to build.

Finally, as to the amount, I have no conclusion to offer at this time. I believe there is a possible and sound level of old-age pensions that will keep the aged in comparative comfort and will not wreck or even damage the economic structure of this country. I believe we ought to move to determine what that level is and then find the proper method of taxation and the soundest means of administration and enact the legislation necessary to effectuate it.

Let my last word be that I criticize no Member who voted against H. R. 6466. I say that for myself I voted not for the bill but for the principle. I voted not for the narrow provisions of the proposed act but for the broad human issue of providing adequate security for our aged citizens in this country.

A Contractor Speaks On W. P. A.

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

LETTER FROM J. GEORGE COSTELLO

Mr. MARTIN J. KENNEDY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter addressed to me by J. George Costello, 25 Vanderbilt Avenue, New York City, under date of June 5, 1939, together with his suggestions concerning employment on W. P. A. I have asked permission to insert this material in the RECORD so that it may be available to the Committee on Appropriations, who are now holding hearings on W. P. A. activities. Mr. Costello is one of the outstanding contractors in New York City, in whom I have confidence, and his constructive suggestions concerning the W. P. A. are worthy of study and serious consideration.

The letter is as follows:

NEW YORK CITY, *June 5, 1939.*

Hon. MARTIN J. KENNEDY,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Although I appreciate that you are exceedingly busy these days, I feel that the purport of this letter is so important that you will forgive me for imposing on your good nature.

I recently read that a committee had been named by the House to investigate and recommend changes tending to improve the operation of the W. P. A. set-up. With this in mind, I submit to you my idea of how one of the worst abuses under W. P. A. operation could be eliminated. This idea is pertinent to the mechanics and common labor used by W. P. A. in their building and construction operations.

If you think that my plan as described in the enclosed pages is feasible, I would appreciate your forwarding same to the committee having this matter in charge.

Trusting that I am not presuming too much, and with my kindest personal regards, I am

Sincerely,

J. GEORGE COSTELLO.

W. P. A. now employs men for about 7 days a month, at a monthly wage of $60 to $85. When this started it was hoped that W. P. A. would be a temporary expedient, and that private industry would recover sufficiently to eliminate same when that recovery took place.

It now seems evident that W. P. A. is more or less permanent, because there will always be a number of men whom private industry cannot absorb.

Suppose, then, that W. P. A. was operated with these frank objectives:

1. To provide a sustenance wage for those not able to find private employment.

2. To provide an incentive for workers to leave W. P. A. at the earliest opportunity for private employment. This incentive would be established by having a distinct differential, as regards wages and hours, between W. P. A. workers and those in private industry. Let the monthly wage to W. P. A. workers remain the same as it now is, but require these workers to put in their full time each month instead of only 7 days.

This would mean that a worker eligible for W. P. A. who could not find private employment could work for W. P. A. at wages of between $15 and $22 per week at full time. Let the higher wages offered by private industry be the factor in keeping W. P. A. restricted to unemployables. Let that higher wage be the incentive for W. P. A. workers to seek an early return to private employment. (The theory is that the W. P. A. worker seeks that return under the present conditions, but it doesn't work out that way; it is only natural for him to want to retain the security of the fixed $60 to $85 per month paid by W. P. A. and to augment this sum by whatever private work he can get on his free time each month.)

It should be recognized that an excessive amount of delay and red tape in securing a return to W. P. A. is a deterrent toward men leaving same. When such a return is unavoidable on the worker's part, and where the worker is eligible for such reemployment by W. P. A., there should be some method of facilitating his return without subjecting him to undue delay or other hardships.

If W. P. A. workers were employed for their full time at wages of $15 to $22 per week it would probably result in the following:

1. An elimination of the practice of quitting private employment each month to return for their 7 days with W. P. A.

2. A gradual sifting of the men, with the more efficient leaving W. P. A. completely and working only for private industry, and the less efficient remaining in W. P. A. at the lower wages. In good times more and more would leave W. P. A for the higher wages obtainable in private industry, leaving always the less efficient in the W P. A.

3. Better maintenance of wages. The W. P. A. worker who now has 10 or 15 free days each month is a disturbing influence on wages. He is free on those days to compete with workers in private industry, and being sure of his fixed W. P. A. wage is willing in many cases to work for whatever wage is obtainable. This invites chiseling and tends to break down and upset the prevailing union wage scale.

4. The incentive to return to private employment because of that better maintenance of wages. A mechanic getting $20 or $22 per week on W. P. A. would only be interested in returning to private employment if he could better himself by doing so. At present the wage-cutting employer can hire these men for $6, $7, and $8 per day, on their free time. If they had no free time, but had to leave W. P. A. completely in order to work for such an employer, they would be disinclined to do so for such low wages because they would not be much better off financially than they would be on W. P. A., and in the bargain would have to work much harder. On W. P. A. they are sure of their $20 or $22 per week; in private employment they would have a certain amount of lost time, etc., so

that, in order to attract them from W. P. A., wages at or near the union wage scale would have to be offered them. With a great number of men able to make their choice between W. P. A. at sustenance wages and private employment at high wages, the wage-cutting employer would be less able to induce men to work for him.

5. In summing up, it seems reasonable to assume that the above plan would produce the following results:

(a) Workers would be unable to remain on W. P. A. and at the same time to compete unfairly with private industry employees.

(b) The elimination of this unfair competition by W. P. A. workers on their free time would effectively block the wage-cutting employer.

(c) There would be less hesitancy on the part of workers leaving W. P. A. for even temporary reemployment in private industry if they knew there would be no unreasonable restrictions against their returning to W. P. A. when necessary.

(d) Private industry would recognize the fact that they could only make private employment more attractive than W. P. A. employment by offering wages considerably above the W. P. A. sustenance wage.

(e) There would be a firming of wages and they would be easier to maintain.

Grand Coulee Project

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

ARTICLE FROM THE PORTLAND OREGONIAN

Mr. LEAVY. Mr. Speaker, during my 3 years in Congress I have been the champion of the Grand Coulee Dam, and it has been a proud privilege to support that marvelous undertaking, initiated by President Franklin D. Roosevelt, and so effectively championed and carried forward by him.

I doubt if any great Government undertaking has ever been more misunderstood by Members of this House on both sides of the aisle than has this mighty, potential, national asset as it has gone forward toward completion and realization.

Mr. Speaker, every conceivable objection—some that might be real and many more that were fancied—have been advanced from time to time in opposition to this undertaking Among some of the objections that really had merit was the one that this would greatly enhance the value of one and one-quarter million acres of arid land that would be made productive by the bringing of water to it, because these lands were largely in county or private ownership. This objection was met and overcome when there was put through the Senate an antispeculation bill by Senators BONE and SCHWELLENBACH, and the same measure, after being passed in the Senate, was put through the House by my able colleague, KNUTE HILL, and myself. This was done in the first session of the Seventy-fifth Congress, and it insures forever that this new frontier, when occupied by settlers, such settlers will be the actual farmers residing on the land. No individual can own more than 40 acres and no family can own more than 80 acres.

While my colleague, Congressman HILL, and I have taken the lead in this fight in this body, due to the fact that the dam itself is partly in his congressional district and partly in mine, and the great storage reservoir, 150 miles in length, is entirely in my district, and land to be reclaimed is almost entirely in Congressman HILL's district, still there is every reason from a broad, patriotic, national viewpoint why every Member of Congress should be fully familiar with this, the world's mightiest undertaking of its kind, because it opens up our last great western frontier to make homes for the hundreds of thousands of homeless.

A few weeks ago in the Portland Oregonian there appeared an article concerning the Grand Coulee project, written by Richard L. Neuberger, the author of a recent book entitled "Our Promised Land." Mr. Neuberger possesses an ability to paint pen pictures and graphically state facts that is outstanding among current writers today. In his own fine style and based upon actual facts he has detailed the story of the Grand Coulee project in his article of March 19, 1939, in the Portland Oregonian, and I take pleasure in making it a part of my remarks:

[From the Portland Oregonian of March 19, 1939]

COULEE WATER DUE IN 1942—IRRIGATION DISTRICTS ANTICIPATE BOUNTIFUL FLOOD AT EARLY DATE

(By Richard L. Neuberger)

Along the Columbia River, where it twists across southeastern Washington, is a great Africa-shaped chunk of land. It is nearly 1,500,000 acres in extent. This is larger than the whole State of Delaware and almost as large as the combined area of all the farms in the State of New Jersey.

Now, this land is barren and arid. Sagebrush dots it like a vast, somber mantle. Crumbling farmhouses and gaunt, silent barns reveal the story of settlers whose hopes were broken in a region of the dead. Rattlesnakes survive here, but not sheep and cattle and the men who own them. This is the sort of ugly waste land Daniel Webster referred to when he said he would not give a silver dollar for all of the Oregon country.

PROGRESS—DAM MORE THAN HALF COMPLETED

But this segment of the Pacific Northwest, shaped like Africa, need not always be desolate. The late Dr. Elwood Mead, United States Commissioner of Reclamation, once described it as "the largest compact body of undeveloped land remaining in the United States and the most fertile." All it needed to live and flourish and support 100,000 farm families, said Dr. Mead, was water.

The water is coming. At Grand Coulee rises the dam that will simultaneously be the biggest power, reclamation, and river-control project ever built. Already the enterprise is more than half completed. It stretches across the Columbia in fortress-like magnificence. And high on the granite cliffs a series of round tunnels look like giant portholes. Through those tunnels will rush the water to make the northwestern desert bloom. The land Daniel Webster said was useless will grow food to feed a million people.

Today Grand Coulee Dam is more than a dream of a structure to dwarf the Pyramids. It is a tangible reality. After 5 years of work it is within easy distance of completion. By 1941 it surely will be finished. The hardest part of the difficult task—the building of the massive foundation—was done more than a year ago. The dam may be completed in 1940. This is the wish of President Roosevelt. Grand Coulee is his favorite project and he wants to dedicate it before he leaves the White House.

"Baron Munchausen, thou wert a piker!" exclaimed a Spokane newspaper when a Wenatchee journalist named Rufus Woods first proposed the Coulee undertaking 20 years ago. But Woods has lived to see his idea come true. He was present a few weeks ago when meetings were held at Quincy and Ephrata and other Washington towns to form the biggest irrigation districts in the world. Columbia River water to drench the wastelands is that near.

The actual preparations to get the Grand Coulee project under way have begun. Workmen at the dam itself have started the enormous tunnels which will send the water to the dry acres. Other workmen are surveying the land to be irrigated. They are classifying the region, noting its contours and undulations and planning exactly where the vast riverlike canals will flow. Congress has passed a law regulating the sale, ownership, and development of the land. As these words are written the State legislature of Washington is adopting supplementary statutes to dovetail with the congressional requirements.

FAILURE—WAS FATE OF EARLY SETTLERS

The President himself has caught the fever. A press association dispatch on his recent birthday commented: "At the moment Mr. Roosevelt is engrossed in the population problem presented by Grand Coulee Dam. When this tremendous project is completed it will irrigate a section of Washington sufficiently large to support 100,000 families—approximately 500,000 persons. The President is interested in what kind of persons would do best in this section, and how to get them there."

Much of the land to be watered by Grand Coulee was homesteaded 30 and 40 years ago. The railroads owned alternate sections of the area as land grants to encourage westward extension. New settlers were traveling toward the Pacific. The migrants knew nothing about the soil. Some of them borrowed money and mortgaged their homesteads. Mainly they failed. The moisture matted in the ground sustained dry farming for a few years. Then the fertility gave out. The desert had been penetrated too far. The settlers moved on.

Now, after almost half a century, the settlers are coming back. Here is old Jack McGrath, from Seattle. "We are going to get the water we couldn't get when we settled 40 years ago," says he. The year Washington became a State, 1889, he trekked into the basin. Bill Wilkins is up from Hiawatha Valley. He settled along the Columbia in 1909. He thinks the time will come when he will have to pay an annual electric bill of $600 for pumping water. But the land will be so fertile, claims he, the paying of that bill will be a pleasure.

RIVER—WAS SO CLOSE BUT UNATTAINABLE

The mechanical operation of the Grand Coulee project must be explained. Long ago, when the settlers knew the land was too arid, they could not get water to save their frontier farms. The Columbia River was 500 feet below in its granite canyon. No windmill could pump water one-tenth that far. The river might as well have been in Afghanistan. The ranchers could pitch stones

into the Columbia, but they could not get water out of it to irrigate their farms.

Now Grand Coulee Dam rises in the wilderness. It will raise the level of the river nearly 500 feet. Tremendous pumps, powerful enough to provide all New York City, will force the water the rest of the way. The water will flow out of its tunnels into the Grand Coulee of the Columbia River. This is a long gorgelike declivity cut by the river during the glacial epochs. From this prehistoric cleft, sharp and gaunt with its smooth cliffs, the water will be coasted via canals and ditches to the 1,500,000 acres which need irrigation.

Congress insists that Coulee water be sold to irrigation districts rather than private individuals. So irrigation districts have been formed. A few weeks ago in the little town of Quincy, returning settlers and homesteaders and landowners voted by a margin of 709 to 34 to form the biggest irrigation district in the world. It will be 500,000 acres in extent. At Ephrata the vote was 191 to 0. In Soap Lake at the lower end of the Grand Coulee, the vote was 141 to 7. The colonists of years ago are ready to develop what the Spokane Spokesman-Review calls "the last great agricultural project of the world."

Special trains on the Great Northern brought back the homesteaders. "It's a great day," said John O'Meara. He settled in 1906, but his farm dried up and he became a school teacher. Axel Jonson staked out a farm in 1903. He dug wells, built barns, and ran out fences. Then the arid desert reclaimed its own. Axel went to Seattle and became a lawyer. He returned to his abandoned homestead to vote enthusiastically for the irrigation district.

Not all the land, however, is owned by people like John O'Meara and Axel Jonson. A peek at the ownership records of typical tracts shows that the Northern Pacific Railroad still has possession of many of the alternate sections it obtained in the land grants of many years ago. Also a lot of the groups which held mortgages on the homesteads got the ranches after the settlers had failed. For example, scattered through the region, are big holdings owned by the Vermont Loan & Trust Co., the Central Bank of Toppenish, the American Mortgage Co., the Union Central Life Insurance Co., and similar organizations.

How can land speculation and profiteering be prevented? The whole country is paying taxes to finance the Grand Coulee undertaking, with the cost divided as follows:

Dam and power plant	$181,101,000
Interest charges	15,000,000
Irrigation canals	208,512,000
Total	404,613,000

Congress believes it has the answer to the question. The antispeculation bill, sponsored by Senators SCHWELLENBACH and BONE, provides (1) that privately owned lands within the area to be served be appraised without reference to the irrigation; (2) that no man can own more than 40 acres in the area and that a married couple be limited to 80 acres; and (3) that any land sold at speculative prices be refused water from the Grand Coulee irrigation system.

POLICY—EXPECTED TO BRING LITIGATION

This may result in considerable litigation, but the Government thinks it can win in court. Similar, although less sweeping, regulations were upheld on the Kittitas and Vale-Owyhee irrigation projects. The Grand Coulee lands will be restricted to comparatively small farms, because the Government believes the region should be a haven for as many families from the Dust Bowl as possible. President Roosevelt emphasized this policy in speeches at the dam both in 1934 and in 1937. It is one of his favorite theories.

The legal problem of dividing up the land is not a simple one. One bank owns 27,880 of the acres to be reclaimed. The average holding is 2,240 acres. Two or three Washington counties own large parcels acquired when tax payments could not be met. A few people are still dry-farming, with fair success, in various scattered parts of the project. Three brothers are cultivating 32,500 acres. The splitting up and purchasing of all these farms will require much courtroom activity. The judicial process in regard to this may eventually reach the Supreme Court of the United States. Never before in American history has a single construction enterprise involved so vast an area of land.

For the past 5 years the people of the country in general and the Pacific Northwest in particular have become accustomed to regarding Grand Coulee as a project of the distant future. Perhaps the present developments will adjust that perspective. The irrigation districts formed at Quincy and Ephrata and other places are functioning already. The landowners are applying for water and the Government is surveying just where the canals will flow.

The irrigation districts are private organizations, so the Government cannot finance them. The railroads have contributed some of the money toward setting up the groups. The land to be watered by Grand Coulee is touched by four railways—the Great Northern, the Northern Pacific, the Union Pacific, and the Chicago, Milwaukee & St. Paul. All these lines expect the project to be a tremendous stimulus to transportation. Department of Interior officials estimate that at least 150,000 people in small towns will be necessary to provide essential services for the men and women on the new farms.

The Washington State Planning Commission has announced: "The Columbia Basin area when fully developed may be expected to produce in agricultural and related products annual wealth to the extent of $150,000,000 or more—wealth that means purchasing power." This sum represents nearly half the total income of the whole State of Oregon for the year 1935. Some economists believe the Coulee development will be the greatest population and income boon ever to take place within a relatively short time in this part of the Nation.

The survey of the lands and other factors in the region have gone sufficiently far to make reasonably accurate the knowledge of conditions under which the great area will be settled. Ranchers taking up 80-acre farms should have about $3,000 in cash. Landowners now are asking an average of $86 an acre. The United States Bureau of Reclamation calculates that the operation of the congressional and State antispeculation laws will drive this down to about $15 an acre on the average. Now, what will the water rights cost? Without water these potentially valuable lands will be as dry as talcum powder and as useless as the sagebrush which covers them. Water here is the difference between life and desolation.

For each acre permanent water rights will amount to between $85 and $90. This will be paid over 40 years without interest. Payments will be staggered out in this fashion. For the first 4 years there will be no charge, thus giving the settler a chance to become established and rehabilitated. For the next 4 years the payment will be $2 an acre. During the next 32 years the rancher will pay approximately $2.50 an acre. This totals about $88 an acre. After these payments have been completed the hinterland settler will own a permanent water right to irrigation from the Grand Coulee Dam.

CROPS—EXPECTED IN GREAT ABUNDANCE

Of course, the water must be pumped. What will this cost? After a careful and exhaustive survey, Government experts announce that the annual charge for pumping and maintaining the canals will be $2.60 an acre. This will be an annual cost, taking place year after year. Bureau of Reclamation officials contend the settlers can meet these costs and still farm successfully. They anticipate that the soil will be bountifully fertile. After 5 years class 1 land at Grand Coulee is expected to support, under intensive cultivation, such a variety of crops as corn, potatoes, barley, alfalfa, oats, peas, and beets. "In fact," pointed out the late Dr. Mead, "the Columbia basin project has an acreage almost one-half as large as that which furnishes the Nation with its present supply of the 19 principal truck crops."

Power, as well as irrigation, will be a function of Grand Coulee. To be specific, it will be by far the biggest power plant in the world. The twin hydroelectric powerhouses will have to be operated by remote control, lest the men doing so be electrocuted. Just as irrigation districts are now getting ready for the surge of Coulee water, power districts are preparing for the flow of Coulee electricity.

Public utility districts to distribute Grand Coulee energy over publicly owned lines have been formed in the Washington counties of Okanogan, Douglas, Lincoln, Ferry, Stevens, Pend Oreille, Chelan, and Franklin. All these counties are near the dam. Ben H. Kizer, of the Washington State planning commission, believes the Coulee power, the greatest chunk of hydroelectricity ever generated at one place, will be almost as important to the Northwest as the irrigation facilities.

Now, construction is under way to connect Grand Coulee with Bonneville Dam. A 230,000-volt transmission line of steel-latticed towers has been begun from Bonneville. Before he leaves the White House President Roosevelt is expected to request congressional approval of legislation which will tie the two big projects into a Columbia River authority similar to the T. V. A. in the South. Senator NORRIS and other White House counselors have long advocated that this be done. Whether Congress will ratify the request is a moot point.

As these words are written the United States House of Representatives has just appropriated the following sums to put Grand Coulee Dam in actual operation: $3,340,000 for the canals and irrigation reservoir; $2,200,000 for the hydroelectric power plant; $800,000 for protection of the salmon runs; and $500,000 for the pumps to force the water into the irrigation tunnels.

Explanation of Bill to Separate Commercial and Savings Banking

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1939

Mr. PATMAN. Mr. Speaker, the commercial banks of the Nation should go back into the banking business, and my bill, H. R. 6665, which was introduced Monday, June 5, would restrict them to that field.

EXEMPTION

The bill will exempt all banks with assets under $5,000,000, in view of the fact that the smaller banks cannot quickly

adjust themselves to the proposed change and many of them, doubtless, would not have sufficient earnings to justify their continuance, and I certainly do not want to do anything that will deprive any town of a needed banking institution.

Size of banks included and excluded

	Percent of all banks	Total assets	Percent total amount all banks
Number banks over $5,000,000 in assets, 1,126	8.24	$44,754,590,000	78.79
Number banks under $5,000,000 in assets, 12,533	91.76	12,045,664,000	21.21

COMMERCIAL BANK SHOULD BE LIQUID

The prime requisite of a good bank is that it shall be liquid—that depositors may get their money on call. No bank is liquid when its funds, supposedly withdrawable on notice, are tied up in long-term investments. Yet such investments are being made daily throughout the country and now have reached a staggering volume.

Long-term financing belongs to other institutions than commercial banks. Money is deposited in those institutions specifically for long-term investments. Yet commercial banks for several years have been abandoning their own function—depriving business of legitimate financing—to enter the long-term investment field, where they do not belong and where, for the safety of their depositors' funds, they cannot be allowed to remain.

CREDIT WITHHELD BY BANKS

Business needs the credit which can be furnished by commercial banks. Business is stagnant because that credit is withheld. Let it be released into the proper channels and business will have a chance to prosper, and the commercial banks will be back in their proper sphere, supplying funds for enterprises with a rapid turn-over that will mean a new prosperity.

BANKS GREATLY HELPED BY PRESENT ADMINISTRATION

"Calamity howlers" from banking circles have come here time and again with their stories of a paralyzed banking world, of regulatory laws that crippled them, of investment opportunities strangled by fear. What is the truth? The truth is that the Government consistently has subsidized them. The truth is that the Government disbursed billions of dollars to commercial banks through the Reconstruction Finance Corporation, the Home Owners' Loan Corporation, the Farm Credit Administration, and the Federal Deposit Insurance Corporation. Legislative favor reduced the interest they pay on savings deposits. Interest payments on demand deposits were eliminated. Their lending powers were liberalized, adding to the effectiveness of their Government subsidies.

In return, the commercial banks have added charges on checking accounts, assessing customers for accounts on which the banks pay no interest, have increased their disbursements in salaries and wages, and have decreased their traditional services to business and the general public.

GOVERNMENT FORCED TO MAKE LOANS BANKS REFUSED TO MAKE

Because of the failure of commercial banks to meet the credit needs of industry and commerce, the R. F. C. has been forced to grant 7,371 loans, totaling more than $447,000,000, to small business enterprises. Banks participated in only 1,661 of these loans, totaling $61,000,000.

Because of the inactivity of commercial banks, Congress was forced to authorize the Federal Reserve banks to extend direct credit to business for working capital, which they did to the extent of $175,000,000.

Because of the failure of commercial banks to meet the short-term credit needs of farmers, production credit associations were established under the Farm Credit Act of 1933 and made loans aggregating $166,000,000. In addition, the R. F. C. authorized agricultural loans totaling $1,840,000,000 through the Commodity Credit Corporation and supplemented them with nearly $200,000,000 for livestock and similar credit corporations.

Because of the failure of commercial banks to provide credit facilities for foreign commerce, the Export-Import Bank was created by Congress. From its inception in 1933 up to the end of 1937, it had made commitments aggregating $134,000,000 and had disbursed nearly $43,000,000.

INSTALLMENT CREDIT ENCOURAGED BY FAILURE OF COMMERCIAL BANKS TO EXTEND CREDIT

The failure of commercial banks to properly serve their purpose nowhere is better illustrated than in the installment credit field. Thousands of specialized installment finance companies now finance half the purchases in this field, with a total annual business volume of $3,000,000,000; most of the rest is done by dealers, personal loan departments of commercial banks, and personal loan agencies. The importance of strictly commercial banks in this field now is negligible.

PERSONAL LOAN AGENCIES ENCOURAGED BY BANKS NOT MAKING LOANS

For a last indictment of commercial bank policies, we can turn to the personal loan agencies. There were more than 4,000 as far back as 1935, doing a business of $500,000,000—at rates of interest the public ill could afford to pay and which, if commercial banks were extending the proper credit, it would not have had to pay. The expansion of personal loan companies has been paralleled by the growth of credit unions under State and Federal charter; at the end of 1938 there were 7,500 such unions, with assets of more than $120,000,000.

BANKS DRIFTING AWAY FROM BUSINESS THEY WERE ESTABLISHED TO DO

Thus we see that, despite the encouragement and aid of the R. F. C. and other governmental agencies, commercial banks steadily have drifted away from their traditional and proper function of making commercial loans. Figures bear out the general statements made above. In 1928 commercial banks held about 70 percent of the total loans and investments in this country. The ratio now has declined to about 40 percent. "Other loans" representing traditional commercial bank transactions have declined from 30 percent to 20 percent. Total loans of all Federal Reserve member banks dropped from $25,000,000,000 in 1928 to less than $13,000,000,000 in 1938.

COMMERCIAL BANKING ABANDONED

In other words, the commercial banks of this Nation have abandoned commercial banking and deprived business of the credit with which it could expand. But they have entered another field—that of long-term investments—which has been the function of other institutions for more than 100 years.

That invasion rightfully could be resented—the abandonment of one necessary function in our economic life to infringe on organizations performing another—but it is not the most serious phase of the situation.

The truth is that the commercial banks are tying up what should be liquid funds—funds which depositors have been guaranteed are on call—in long-term commitments extending over periods as high as 25 years.

It is useless to say that the Government is insuring such loans as are made on housing. That does not make the process right, nor does it make the loans liquid.

MANY BANKERS APPROVE PROPOSAL

Many bankers share my views. Appearing before the Temporary National Economic Committee, Ralph W. Manuel, president of the Marquette National Bank, of Minneapolis, was asked, "You would prohibit commercial banks from loaning money on a fine house or building?" His answer was, "That is right * * *." "You would restrict commercial banks to legitimate commercial transactions?" he was asked. His answer was, "I would."

Not only Mr. Manuel, but thousands of other bankers know that in making a long-term investment of bank funds, a banker is risking liquidity in times of stress. Such security as homes cannot be transferred readily any time; in troublous financial periods, they are frozen as solid as a North Atlantic iceberg. Just as they represent the safest kind of long-term investment, so are they the most dangerous kind of investment for short-term funds.

It is very obvious that commercial banks have been attracted by the newly popularized amortized or direct-reduction loan, whereby a home builder or buyer reduces his principal with each monthly payment. Certainly this type of loan is the safest kind of home loan. If bankers like the principle, why do they not apply it to their own kind of transactions? Certainly if long-term, direct-reduction loans are safe for them to make, say in the housing field, they can safely be made in business transactions.

NO SAVINGS DEPOSITS IN COMMERCIAL BANKS

My bill provides that savings deposits shall not be made in a commercial bank. This is not a radical proposal. No banks or trust companies in the State of New York have been permitted to advertise for savings since 1934 or to use the word "saving" or "savings" in connection with its name. This law was passed to prevent such banks from deceiving the people.

Had all banks stuck to their business and performed their proper functions in these past few years, they would be better off today. Jesse Jones, of the R. F. C., reports that, after charging off 1 percent for management and all overhead costs, the R. F. C. has made a profit of $200,000,000 thus far—money that well might have gone to the commercial banks.

To come down to cases, commercial banks should be forced to do one of two things.

First. Stay in the commercial banking field, making short-term business loans with short-term money.

Second. Get out of the commercial banking field, accept money only for long-term investments and use it in such enterprises as offer such investments.

They should not be permitted by this Government to operate in a dual field, just because of their size and influence, when the Government knows that they do not belong there and that their present activities well might be regarded as a betrayal of their depositors' trust.

There is a vast commercial banking field in this country, the largest in the world. I propose to restrict the commercial banks to it, in the hope that they will carry out the functions for which they were intended and supply a service the lack of which has crippled business for the past several years.

A FEW MEN CONTROL CORPORATE WEALTH

A few men controlling a few banks control the corporate wealth of the Nation. The present banking set-up gives a few bankers entirely too much power, in fact, a power equal to a dictatorship over business. A New York banker on the board of directors of a concern that owns thousands of busses in a certain city, and also on the board of directors of a large tire company, recently compelled the bus company to remove tires of a certain make from the busses and equip them with tires made by the concern that he was a director in.

An independent paint dealer in my home town was told by the manager of a large concern operating there that he could not patronize him because a New York banker, who was a director of his concern, was also a director of a large paint company which had a retail outlet in this town; therefore he was compelled to patronize this absentee-owned, retail paint store.

The directors of one banking concern in New York City interlock with all the principal national chain stores in America. These chain stores, with the power and influence of these New York bankers, who own and control so many corporate institutions, have a tremendous advantage in their efforts to destroy local business. Will a good banker advance money to anyone to go into the grocery business or into the drug business or variety-store business or shoe business or tire business or any other line of business that chain stores that are Wall Street backed engage in? The answer is "emphatically no," and there is a good reason for it. The local banker knows that as soon as his customer builds up a good business in any locality, the absentee-owned national corporate chain will go into competition with him in that area and having the profits from thousands of other retail stores owned by this concern to support it will sell goods and commodities at a loss until the local merchant is put out of business.

TIME TO CHOOSE

We have reached the time when we must choose between Wall Street owned and controlled concerns or whether we want the kind of business that has built this country to continue.

Senate Bill 1305

EXTENSION OF REMARKS

OF

HON. GEORGE P. DARROW

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

ADDRESS BY WILL H. GIBSON, FORMER SECRETARY OF STATE OF IDAHO

Mr. DARROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Will H. Gibson, former secretary of state of Idaho, before a Boise service club, April 1939, on Senate bill 1305, now before the Congress of the United States:

Gentlemen, we have a matter before us as citizens which appears to be one of the most far-reaching proposals affecting changes in our present school programs throughout the United States that has ever been presented before the Congress.

Some 70 years ago an act of Congress provided for the appointment by the President of a Commissioner of Education. His duties were very briefly defined in an act comprising some 300 words. His activities were those of gathering statistics concerning the progress of education in the several States, and his duties extended only to the matter of suggestion of betterment of the programs of the public schools of our States, which as we all know are based upon the laws, rules, and regulations of the several States—not interstate.

If there is an institution in America which is entitled to our undivided loyalty in no uncertain terms it is the public tax-supported school systems of the several States of the Union. Our schools are the very foundation of the perpetuity of American institutions. There is no contribution we make in the way of taxation that is more liberally given than to our schools, their maintenance, and the facilities by which our young people are educated in this great Republic of ours.

We have continued for 150 years with this program, expanding our facilities as far as possible for the taxpayers to meet the growing requirements. If you will note your tax receipt in Idaho from the local community on up through to the university requirements, you will note that by far the largest item in that receipt is for public-school purposes.

In the face of the tremendous Federal indebtedness which we have in this country today, bordering on 40 billions of dollars, when we are using every effort possible in the State of Idaho, along with other States, to maintain our educational facilities, it is proposed in Senate bill No. 1305 now before the Congress of the United States, upon which hearings are now being held by the Educational Committee of the Senate, to further burden the taxpayers of the States with a billion dollars of Federal money to be distributed among the States over a term of years, in addition to that which the States are now paying for the support of education.

Who is calling for this legislation? Has the legislature of this State, has our Governor, the board of education or the State superintendent of public instruction, for generations past, asked Congress for the enactment of this legislation? Idaho has never petitioned the Congress for such legislation.

We do not know of a single State in the Union which, through its official authorities, has asked for the enactment of a piece of legislation by the Congress of the United States empowering one man as the so-called Commissioner of Education, sitting in Washington, to have the say in the distribution of a billion dollars of the taxpayers' money among the several States of the Union in the matter of education.

Whence comes this demand? In reading from literature put out by several organizations opposing this legislation, including one known as the Friends of the Public Schools, which is officered by some of the most outstanding educational leaders of the country, we find that this bill is being fostered by a number of educators in this country who seem to be impregnated with the ideas of the totali-

tarian states. The dictator countries of Germany, Russia, and Italy—ideas un-American to the core, taking away from the States their duties and their privileges as to the carrying on of education in our several States and placing an enormous amount of authority in the hands of a Commissioner of Education in Washington, who, by the way, will have during the 6 years beginning in 1940 over $10,000,000 at his individual disposal for the purpose of hiring employees who will swarm over this country and tell us what to do and how to do it in the matter of education.

This billion-dollar appropriation is proposed when millions of our people are out of employment, when hunger and starvation stalk the land. We are to be saddled with this additional billion dollars if this legislation is passed.

Let us examine some of the provisions of this bill introduced by Senator THOMAS of Utah and Senator HARRISON, of Mississippi. The very first clause in the first section of this bill reads, "It is the primary purpose of this act to assist in equalizing educational opportunities, among and within the States." The very first clause under title I reads, "For the purpose of assisting effectively in equalizing opportunities for elementary and secondary education, among the States and within States."

In those clauses not one word is said concerning the type of school that is to be assisted—not even the words "public schools." There was a demand made some years ago that if a bill of this type were to be passed by the Congress of the United States, it should apply to public tax-supported schools and no other. That clause has been eliminated. There is nothing said about tax-supported free public schools in this bill, nor any restriction of the use of this billion dollars exclusively to such schools.

Already a number of our denominational schools in this country are opposing this bill. They do not want such appropriations for their institutions. The Seventh Day Adventists, the Lutherans, having hundreds of thousands in their private schools, have denounced the provisions of this bill. They do not want to see private schools participating in public funds nor their educational programs nationalized.

Does it not appear that any school of a private nature would only need to say, "We will open our doors and do open our doors to any boy or girl in the United States whose parents will provide the means to educate them," and thereby qualify to come under this act? There is no provision of this act that would deny them that privilege.

The amounts appropriated under title I, after payment, shall be made available for disbursement by the States that have complied with all the provisions of the title. In other words, before Idaho could participate in the provisions for the distribution of these funds, we would have to adopt the provisions of this title in toto. Not only that, but this proposed legislation would empower the Commissioner of Education in Washington to define and promulgate such rules and regulations as he may see fit in reference to the use of these funds. Should a State fail, or neglect, to use properly every dollar that may be appropriated to it, the Secretary of the Treasury shall, upon certification by the Commissioner, stop payment. What does this mean? Under rules and regulations promulgated by the Commissioner the State may readily be denied participation in Federal funds.

The bill before Congress is divided into six titles. In brief, the first title has to do with our common schools; the second title provides for adult education; the third title to the extension of library facilities among the several States; the remaining titles pertain to other details.

Under each of these different titles the State Legislature of Idaho would be required to adopt all the provisions of the title and be governed to a large extent by the rules and regulations promulgated by the Commissioner of Education in Washington.

I want to read to you just a few excerpts from the provisions of the bill:

"From the sums made available under this part (sec. 13, title I), the United States Commissioner of Education shall apportion to each State" a certain amount. The Commissioner shall determine for each State. Idaho has no voice in the determination. The Commissioner shall further determine for Idaho the "index of financial need." The index of financial need of Idaho is to be determined annually, and the Commissioner shall promptly notify the Idaho educational authority of the index of financial need determined for Idaho.

Is there any authority conferred in these provisions except upon the Commissioner?

Let us suppose that the Commissioner finds that Idaho is not providing the moneys per person provided by other States. The appropriations in the various States vary from $1 as a basis, up to three or four dollars in some States. Idaho may be 10 or 15 percent below the average of the States of the Union. With a billion-dollar appropriation to parcel out among the several States as the Commissioner sees fit, and with $10,000,000 to spend in sending emissaries to the States to investigate, make surveys, and contact our educational authority, what will be the tendency of the Commissioner as to Idaho being 15 percent below the average? Will it not be his tendency to persuade Idaho to come up to the average before treating with her?

Are there not great powers conferred upon the Commissioner in that connection? The next provision is that of the educational load. The index of the educational load of each State shall also be determined by the Commissioner. The load of Idaho depends upon the number of pupils in the State of Idaho of school age, compared with the total number in all the States.

Next is the index of financial ability of each State to support education. We are to be investigated most thoroughly as to our financial ability to run the affairs of our schools in Idaho. Who is going to determine our financial ability? The State of Idaho? If we adopt the provisions of this bill through our legislature, Idaho will have no voice whatever in determining her financial ability to operate our schools. It is determined in toto by the Secretary of the Treasury and the Commissioner of Education.

I read from the bill: "The index of financial ability of each State is defined as the percentage that the financial ability of that State is of the total financial ability of all the States with respect to the support of public education. The Secretary of the Treasury shall estimate annually the financial ability of the respective States to support education and certify such estimate to the Commissioner." "'In making such estimation the Secretary shall develop an index of the revenue that can be raised in the respective States from a uniform tax plan applied to all the States.'"

What a fine platform upon which to stand to bring Idaho into line, if she should be below the average in school support. Would you need more authority to be a dictator?

The Commissioner, as provided in the next section, "shall annually include in his report to Congress an analysis and summary of the legislative and administrative provisions adopted by each State for the expenditure of funds, and also statistical information showing the degree to which" each State has accomplished equalization of educational opportunity in comparison with previous years, especially as measured for the various local school jurisdictions by length of school term, availability of elementary and secondary education, the proportion of children of school age in average daily attendance, provision for reading and other instructional materials, provisions for pupil transportation, and average expenditures per pupil."

Do not these provisions confer undue authority upon the Commissioner of Education? Why this information? Is it not for the purpose of telling Idaho the standard to which she shall bring her schools before the Commissioner will give us the consideration which in his judgment he may desire to give? Nationalization of education! Totalitarian state! We are making rapid strides in that direction in this proposal.

This bill doesn't have to do only with our children. It embodies the teaching and training of our own teachers now employed. "For the purpose of improving the preparation of teachers and other educational personnel there is hereby appropriated the sum of $30,000,000." In case Idaho wants to accept these provisions, she must do so through her legislature, and having accepted the provisions, and by complying with all the rules and regulations of the Commissioner, we may be privileged to participate in these funds

Again reading from the text, "Separate teacher preparation institutions of more than junior college grade; teacher preparation divisions operated as parts of colleges and universities; and other schools, colleges, and departments operated as parts of colleges and universities," all may participate in the privileges of these funds.

Again, "The Commissioner shall annually include in his report * * * an analysis and summary of the legislative and administrative provisions adopted by each State for the expenditure of funds received through this part and also statistical and analytical information showing the probable need for teachers and other educational personnel in each of the States in subsequent years and the extent to which the needs are being met." Do we have a voice in determining those facts? The Commissioner of Education determines them for us.

There are similar provisions in this proposed legislation in reference to education of adults. The provisions of this bill commence with nursery schools and kindergartens. They go one step further down toward babyhood than kindergartens, and propose to regulate nursery schools.

As I read in a publication of the Friends of the Public Schools, "This bill covers mankind from the cradle to the grave."

There are many other activities to which these funds may be applied, under the direction and rules and regulations of the Commissioner of Education.

During this period of 6 years the Commissioner has $10,000,000 to carry on a program, which would provide hundreds of emissaries, their expenses and subsistence, together with transportation paid, to swarm over this country and tell us what shall be done with reference to our educational institutions.

In conclusion, I want to say to you that the further I make study of this bill the more I find it to be not in support of tax-supported public education, not in support of the schools which we nurture and to which we contribute so liberally, and of which we are so jealous in their undertakings; but this bill is for the purpose of nationalizing, if you please, the public-school systems of the several States. It is the very idea embodied in the totalitarian state's program with reference to the school system. What are Mussolini and Hitler doing today with reference to the schools? Dictating what is to be taught, texts to be used, and literature to be provided. This bill provides for those very things to be handed down from a bureau in Washington.

I want to say further that I think it is imperative that we who are standing by our tax-supported public schools, doing our utmost to support them as citizens and taxpayers, enter our protest against

the passage of any legislation tending to nationalize the public schools of this country.

There are many objections to this bill. It opens the door to a contest between our so-called private schools and tax-supported public schools. The moment that is done we undermine the school system of this country and depart upon the road leading to union of church and state. Its provisions limit the freedom of the States and reposes control and supervision in the Federal Government. It nationalizes and regiments. Section 51 of the bill purports to reserve to the States local administration and control but "not inconsistent with the provisions herein."

Educational load, educational needs, and ability to support education are to be determined by the Secretary of the Treasury and the Commissioner, the States having no voice therein. The money side of the bill is important, but fades to relative insignificance compared with the question of the educational policy of the entire Nation. Every citizen interested in the perpetuity of our institutions should oppose this measure.

This is not the first bill of such nature to be proposed in Congress. The Harrison-Fletcher bill was introduced by Senators HARRISON and Fletcher in two previous Congresses, but failed to pass. Senate bill No. 1305 is a substitute bill, with one new author, and it is introduced in the House and Senate in similar form. We are informed proponents of the Senate bill are urging enactment during this session of Congress.

It is imperative that we protest the passage of this bill by writing our delegation in Congress without delay. Let every friend of our public schools act promptly.

I thank you, gentlemen, for your marked attention in the consideration of this proposal.

The Townsend Bill

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

EDITORIAL FROM THE GREEN BAY (WIS.) PRESS GAZETTE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Green Bay Press Gazette, of Green Bay, Wis.:

[From the Green Bay (Wis.) Press Gazette]

CLUBBING THE TOWNSEND BILL

"Therefore, prepare thee to cut off the flesh.
Shed thou no blood; nor cut thou less, nor more,
But just a pound of flesh: if thou tak'st more,
Or less, than a just pound, be it but so much
As makes it light, or heavy, in the substance,
Or the division of the twentieth part
Of one poor scruple; nay, if the scale do turn
But in the estimation of a hair,
Thou diest, and all thy goods are confiscate."

The oldsters received the most bewildering and bellowing razzle-dazzle at Washington since Portia talked to Shylock at Venice in the cloudy and forgotten past.

The Townsend bill ran the gamut, straight down the aisle with clubbers on both sides. Alleged proponents and hostile opponents agreed upon one merry feature—there would be nary an amendment.

Those who voted against the measure, therefore, may explain very reasonably that it was the $200 a month to which they objected and that if it had only been $190 or $197.50 it would have been all right with them. And those wily gentlemen who have been nursing this meal ticket of theirs along are greatly relieved for if any sort of bill were passed where would come this stream of dimes and quarters, this veritable river of gurgling gold that bears upon its bosom so many craft forever "coming round the bend" and loaded with jolly crews?

No sawdusted joint on Clark street in the Chicago of 40 years ago ever turned its burly bouncer upon the poor yap who had spent his last nickel and threw him out in the gutter at 30 below zero the way the high-flown politicians and the equally high-flown schemers joined up to put the half nelson, the gag, and the hammer lock on the boys and girls past 60.

Some may call it a classy and delicious piece of work, but it was as raw as the beefstake while the critter still cavorts on the Texas plains.

Why Further Cripple the South by Turning Water Transportation Over to the Interstate Commerce Commission?

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

STATEMENT OF W. C. McCLURE BEFORE THE INTERSTATE COMMERCE COMMITTEE OF THE SENATE

Mr. ELLIS. Mr. Speaker, one of the saddest gestures of this session of Congress has been the attempt to place the transportation of our inland waterways under the jurisdiction of the Interstate Commerce Commission, the same Commission that has sanctioned, fostered, and harbored the abominable freight rate structure which we of the South and West today endure.

Inch by inch for the past 50 years the Congress has enacted laws, the net result of which has been to enslave and colonize the South for the benefit of the industrial East. Shall we now be forced to yield this last bit of freedom, the freedom of plying our own waterways without being forced to levy prohibitive rates?

Mr. W. C. McClure, of Camden, Ark., secretary of the Southwest Valleys Association and of our State flood control commission, is recognized as one of the outstanding authorities of the South on waterways development. Under leave granted me by unanimous consent of the House, I am happy to quote here in full the appeal of Mr. McClure before the Interstate Commerce Committee of the Senate on April 11, 1939:

Without the free and unregulated transportation along our inland waterways it is the fear of many that commerce would become too much the slave of transportation while commerce should be the master of the two.

Our water-carrier lines are not in financial trouble. Water transportation is good for commerce for only one reason—its lower cost. Regulation will not bring lower water rates. Why regulate water carriers under such manifestly plain existence of facts—notably: They are apparently making money and they are saving the public money in their lower rates.

The people I represent have the opinion that a powerful lobby is supporting this proposed legislation, which would put our water carriers under the jurisdiction of the Interstate Commerce Commission. It is further believed that this lobby is a partnership between the money interest of the railroads who seek monopoly and higher rates and the employee interest of the rail lines who are after higher wages. Any sponsor of low-cost modes of transportation via water, in particular, does not necessarily oppose the principle of high wages for labor. It is our opinion that free and unrestricted competition is more conducive to advancing wages than a complete monopoly would be.

The people of this country, the rank and file, the man who is looking down on the hot furrow, and the man who is looking down on the hot forge, are looking up and looking about for a better order of things, and rightly so. But with it all, we cannot escape the idea that "Jones pays the freight."

We wish to cite here the theory of government and the acts of Congress our antitrust laws that would punish the man, organization, or agency that functions in restraint of trade. Such laws manifestly call for the whetting of swords on the doorsteps of any and all advocates of monopoly. Here we find in this measure what appears to be an attempt to form a gigantic monopoly of transportation units and place an agency of the Federal Government at the head of it as "Chairman of the Board."

No sound and forward-looking man would attempt to contradict the argument for regulation of any agency, firm, business, or corporation where the monopoly held was working a hardship on the public. But the question protrudes itself and presses for answer. That is to say, if the public is reaping economic benefits by reason of low-cost, competitive water transportation, how can this service be rendered cheaper to the public if forced into a monopoly with the railroads, one executive of which (when the monopoly was well nigh complete insofar as water competition was then concerned) said not many years ago, "The public

be damned"? But, today, well may we recall the profound words of Lincoln, "With malice toward none and charity for all." And yet, gentlemen of the committee, I need not recall to you the meaning of Jefferson when he said, "The whole art of good government consists in being honest."

All human existence calls for suffering; but we submit that the idea of the American people is that each of us should be willing to suffer for his own sins rather than be so un-American as to expect the innocent to suffer for the sins of the guilty. We further submit that there is a rather general viewpoint at large in this country, that one outstanding trouble with our transportation problem is that we have not as yet enough water under our inland waterways' boats and barges and there is, or has been, too much water in the stocks and securities of some of our transportation companies.

If competition must be destroyed to save our rail lines we face the wise or unwise decision of penalizing our inland waters for their God-given advantage to float cargoes weighing less than the water displaced.

Lachlan Macleay, president, Mississippi Valley Association, expressed the viewpoint of the average layman of this country when he said before the meeting of the National Rivers and Harbors Congress in March last. I quote:

"What is needed is a complete revision of our transportation laws and methods of control with a view to greater freedom for all forms of transportation in the interest of building business and prosperity for the producers and traders of the United States. Make the rules simple and understandable in place of complex, ambiguous, burdensome, and expensive. Let us have a rate system that businessmen can understand and perhaps then we will have one that the Interstate Commerce Commission can explain and administer."

To be free and unregulated we engender private initiative and private enterprise. To be regulated we cannot avoid that human instinct to await results and take things as they come, originate nothing and do more than is necessary to get such pay and rewards as "the law allows."

May the day never come when the laws of supply and demand shall cease to be a factor in things economic, and the solvent of competition be denied its wholesome place in the orderly processes of commerce and business.

It is very doubtful if the American people would long stand for a monopoly of all our modes and avenues of transportation or any centralization of management.

In conclusion, if I should attempt to draw a picture of the mind and heart of the American people, their hopes and aspirations, their strong desire that demoralization of the average citizen shall be held down to the lowest minimum possible, I would find myself completely halted at the foothills of that major development known as water and soil conservation under the principle of upstream control of floods by reservoir construction and for all the incidental benefits to be had from impounded water—not the least of which is the promotion of navigation by streamflow regulation. Such a byproduct will reduce the cost of canalizing our streams. Any move to circumvent such a vision of our people is fraught with the earmarks of unpopular legislation, while the achievement of such objectives calls for our best element of constructive statesmanship

We should make of the water of our inland streams great assets rather than liabilities. We should put to work for us tomorrow the water that destroys us today. It is entirely possible, indeed, most inviting to direct the activities of the United States Government into such a development program as will lower our flood heights, lower our power rates, and lower our cost of transportation. It can be done and no wiser investment of Federal funds could be made.

Hull's Neutrality Policy

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

EDITORIAL FROM THE ST. LOUIS GLOBE-DEMOCRAT OF JUNE 5, 1939

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the St. Louis Globe-Democrat, which, to my mind, as a member of the Foreign Affairs Committee, which has for over 2 months been considering neutrality legislation, is a remarkably succinct and comprehensive analysis of our foreign policy. It might also be of interest to note that the Globe-Democrat has, in general, opposed editorially the policies of the Roosevelt administration over the past two administrations. The editorial follows:

[From the St. Louis Globe-Democrat, June 5, 1939]

HULL'S NEUTRALITY PROGRAM

Secretary of State Cordell Hull has submitted to the chairman of the Senate Committee on Foreign Relations, and the chairman of the House Committee on Foreign Affairs, the outline of a suggested program of neutrality legislation which is entitled to careful and respectful consideration. Secretary Hull is the officer of the Government who is specifically charged with the conduct of the relations of this country with foreign governments. He is perhaps more than any other man thoroughly informed on such relations, and on the laws and rules which pertain to them. His judgment is usually sound, and the integrity of his patriotism is beyond question. Moreover, while he resolutely upholds the rights of this Nation in international intercourse, he is ardently devoted to peace.

Therefore, his recommendations not only have the weight of estimable authority, but the values derived from long experience and highly intelligent study. In the event of war between other nations, he says, "The first concern of the United States is its own safety as well as the desire and intent, which all of us resolutely follow, to remain at peace." We would be faced in that event with the problem of maintaining our neutrality. What we should try to do "for the purpose of keeping this country out of war is to enact measures adapted to the safeguarding of our interests in all situations of which we can conceive, and at the same time imposing a minimum of abnormal and unnecessary burdens upon our nationals and a minimum of disruption of our peaceful economic life." He points out that international law requires that the domestic measures applied by a neutral must be impartially applied to the contending nations, but "it does not require that a neutral nation shall embargo any articles destined for belligerents."

Modern warfare is not war between armies, but war between nations, and, therefore, a nation at war needs everything essential to the life of the nation. It may require cotton and petroleum and food just as much as it requires arms or ammunition. If we are going to be logical, Mr. Hull says, in the matter of embargoes on exports to such nations then we should make the embargo all-inclusive; prohibit the sale or shipment to them of anything. But that policy would be ruinous to our economic life. The present neutrality law places a mandatory embargo upon our sale of arms or ammunition to belligerents and gives the President authority to embargo other products. That, we have repeatedly said, is an unwise provision that might drag us into war instead of keeping us out.

What is it then that Secretary Hull suggests? It is that the embargo provisions of the present law be eliminated, leaving the American people free to sell products of any kind, whether of arms or of wheat to nations at war. But he would provide "that the export of goods destined for belligerents should be preceded by transfer of title to the foreign purchaser." That is to say, the goods would have to be bought and paid for before shipment. He would prohibit American ships or American citizens from entering combat areas. Presumably he would give the President authority to designate such combat areas, but he does not say so in his statement. Certainly such provisions would require a definite statement of the boundaries of combat areas, and only the President would be qualified to define them. Apart from this there would be no restrictions upon American ships or American travel. These are the only changes he would make in the existing neutrality law. The present provisions against loans and credits to nations at war and prohibiting solicitation and collection of funds for belligerents he would continue.

To keep American ships and citizens out of the dangerous areas of combat is the essential purpose of his plan. "Our involvement in controversies is more likely to arise from destruction of American lives," he says. That is undoubtedly true, as our experience from 1914 to 1917 abundantly proved. His proposal differs from that of Senator PITTMAN in that it involves no abandonment of neutral rights, but simply restricts the exercise of those rights in zones of danger. And finally it is designed to impose "a minimum of disruption of our peaceful economic life," which is of the utmost importance.

We repeat again, what Secretary Hull proposes is entitled to serious consideration, and not only because of his office and his character, but because it seems to be a program of common sense.

On the Liberties of Americans

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

Mr. VOORHIS of California. Mr. Speaker, America has always been proud of the fact that the fundamental bases of her national life were strong enough to enable her to allow broad liberties to her people. Liberty is threatened today only to the extent that those fundamental bases of

our national life may be weakened. And liberty will be preserved not so much by denying it to enemies of our institutions as by failing to keep in a good state of repair the foundations upon which our whole free society is built.

One of those foundations is respect for the common man; another is equal justice before the law for all; another is opportunity to work; another is a prosperous and independent farm population; another is a robust faith in democracy; and another is a willingness to be truly patriotic; by which I mean a willingness to make sacrifices in peacetime for the sake of the national welfare.

We have wandered somewhat away from these things. We have gotten tired—some of us—of trying to preserve the opportunity of our people to work. We have become weary of the burden on our consciences which is placed there if we admit that every American is entitled to respect as a man and then remember the poverty and insecurity under which some of them are compelled to live. We find people who apparently are quite willing to say, "If I have to pay taxes higher than I like to pay in order to save the country, then I still am not willing to pay those taxes."

Our adjustment to this age of machines, of vast productive power, has been slow. It has been slow because we have a lot more difficult adjustments to make than we ever had before. It has been slow because the only solution to it is greater consuming buying power and that is an extension of democracy and human rights which some very powerful people just cannot bear to contemplate—even though it is the only salvation of their own profits.

Most serious of all, I think, is the fact that in typical American fashion we are demanding an immediate solution, on the basis of eating our cake and having it too, for our problems. What we need is a robust faith that we can solve this unemployment problem, that we are going to solve it, and that while we are doing so we are going to see to it that the burden of our failure to do it speedily does not fall with crushing weight on any one group of people—the unemployed or the aged or the youth, for example.

I said we were trying to solve our problem on a basis of eating our cake and having it too. What I mean is this: We try to solve the problem of getting an adequate supply of money into circulation without interfering with the monopoly of the creation of the Nation's money by the private banking system. It cannot be done. We have to interfere with that monopoly, and the sooner the better. We try to find a painless way to finance a decent old-age pension. There is not any. It will cost money and be worth it. We try to restore competition without treading on the toes of any monopolies. That, obviously, is ridiculous.

We try to put our unemployed people to work without either letting them produce wealth or unbalancing the Budget. I think it has been amply demonstrated that that cannot be done. The American Government has been giving a very great deal of service, help, subsidy, and so on, not only to the unemployed, the farmers and similar groups, but also to banks, shipping companies, merchants—through W. P. A. wages—and many other groups and classes of our people without requiring so very much—relative to what we all get from our country—in return. We have to learn that no great thing is ever accomplished without paying some price for it. And we have not learned that yet. Until we do liberty will not be safe.

Now liberty is threatened today, first, by a very dangerous tendency on the part of responsible and influential people—Congressmen, for example—to salve their consciences by assuming that poor people, particularly unemployed people, have something inferior about them. From this we proceed to get careless about protecting the liberties of people whose position in our society is a weak one. It has almost come to the place where it is regarded as unpatriotic or radical or something for the poor and unemployed to ask for work or a better chance. The threat to civil liberties in such an attitude is evident.

In the second place liberty is threatened by any and every group of people who are not themselves free. By this I mean that when one group of people get their ideas and have their course of action dictated from Nazi Germany and follow Hitler's line here in America they are bound to be a menace to American liberties. In like manner when another group of people is not free to follow the dictates of their own consciences but must follow the line of the Communist International here in America they are bound to undermine American liberties. Some people who lean to the left or to the right have the idea that we need one or the other of these groups to counteract the influence of the opposite extreme. I cannot subscribe to that. I think what we need is a growing group of really free people who will unite to defend freedom instead of merely using it for the purpose of establishing a system wherein there will be small freedom indeed. Any informed person knows that we have today only one ultimate defense against the various threats to our liberties. That defense is to establish security for the American people in their everyday economic lives. We cannot root out any so-called subversive influences unless we change the soil in which those influences are able to grow. That soil is the soil of unnecessary poverty, insecurity, and unemployment.

My only real concern for American liberties, therefore, is the possibility of inaction by those who are or ought to be devoted to their preservation. Liberty and democracy are not going to be saved by war. They are not going to be saved by suppression. They are only going to be saved by showing up dictatorship and demonstrating that it is possible to have both freedom and security in the same nation at the same time. I know this can be done. I know it because all the pages of human history show me that man has sought freedom and security in the same nation at the same time. I know this can be done. I know it because all the pages of human history show me that man has sought freedom and security continuously. There is no reason to think that we have derived our life from a cynical God who put these basic urges in us only to have them at last frustrated. There is on the other hand every reason to believe that the things that lie closest to the human heart are attainable just because they do lie there.

I have not spoken in detail of a program which I believe would put our people back to work and set our feet definitely on a road out of depression. I have not done so because I know that—given the will to go that way with courage—the program can be worked out. Indeed, a large part of it is, I believe, even now being urged upon us by various popular movements throughout the country. Those movements, if they persist long enough are the surest weather vane of democracy. For democracy holds, if it holds anything, that you can trust the people to be right at least a comfortable majority of the time.

The Gallup Poll

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

ARTICLE BY DR. GEORGE GALLUP

Mr. ANGELL. Mr. Speaker, I ask unanimous consent to extend in the RECORD a poll released June 6, 1939, prepared by Dr. George Gallup, of the American Institute of Public Opinion, on the question "Do you think business would be more prosperous or less prosperous if we had a Republican President in the White House?" The poll is as follows:

[From the Washington Post of June 7, 1939]

THE GALLUP POLL—MANY VOTERS THINK BUSINESS WOULD BE BETTER UNDER G. O. P., SURVEY FINDS

(By Dr. George Gallup, of the American Institute of Public Opinion)

NEW YORK, June 6.—Important indications that American voters are beginning to link the symbol of prosperity more with the Re-

publican Party than with the Democratic Party are revealed in a survey of national sentiment just completed by the American Institute of Public Opinion.

As the Roosevelt administration casts about for ways to stimulate business recovery in advance of the 1940 campaign, the Institute put the following issue to a cross section of voters throughout the country:

"Do you think business would be more prosperous or less prosperous if we had a Republican President in the White House?"

The largest single group said they thought conditions would be more prosperous—about twice as many as said business would either be worse or about the the same.

The actual vote follows:

	Percent
More prosperous	50
Less prosperous	26
About the same	24

The fact that the largest group voted "more prosperous" has considerable political significance. It meant that the Democrats will have to combat the feeling that prosperity would be made more certain by following the ideas of the Republican Party. Whether this feeling persists will depend a good deal on the success of the new pump-priming program which administration leaders are said to be developing. If, a year in advance of the campaign, half the voters already think business would be better under a Republican, a downswing in the business cycle through 1940 would seriously aggravate the problems of the Democratic Party.

An overwhelming proportion of Republican voters think business would be better under a Republican, while a substantial number of Democrats think it would be worse. However, approximately one Democrat in every four thinks it would be better.

The sharp partisan division on the question is shown in the following table:

	Republicans (percent)	Democrats (percent)
More prosperous	85	29
Less prosperous	3	42
About the same	12	29

DIVISION OF OPINION NOTED BY INCOME GROUPS

The survey reveals that the Republicans would probably have considerable difficulty convincing voters in the lower income level that business would be any better under a Republican. These voters, earning $20 a week or less and including persons on relief, are much more skeptical of a return to prosperity under the G. O. P. than are voters in the upper income levels.

	More prosperous	Less prosperous	About the same
	Percent	*Percent*	*Percent*
Upper-income voters	62	20	18
Middle-income voters	54	22	24
Lower-income voters	40	34	26
Reliefers	37	38	25

Those voters who argue that conditions would be more prosperous under a Republican declare that "businessmen would cooperate more with the Government," that business has "always been better under the Republicans," and that businessmen are "holding back until a Republican gets into the White House."

Those who think conditions would be worse say that a Republican would "undo all the good that Roosevelt has done" or that the Republicans would "cut down on spending so that people would either starve or have less money to spend."

Our American Heritage

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

ADDRESS BY H. W. PRENTIS, JR.

Mr. DAVIS. Mr. President, I ask unanious consent to have printed in the Appendix of the RECORD an address dealing with the issues of Moral Rearmament, by H. W. Prentis, Jr., president of the Armstrong Cork Co. of Lancaster, Pa., delivered on May 4, 1939, before the Twenty-seventh Annual Meeting of the Chamber of Commerce of the United States. The address is entitled, "Our American Heritage."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Some years ago while on a business trip to the Pacific coast, I had an experience which left an indelible impression on my memory. One afternoon friends of mine in San Diego took me down across the Mexican border to Tia Juana for the races. Before we returned, we strolled for half an hour through the streets of the village itself. It was a so-called wide open town. The social and living conditions were all and more than that term implies. A few minutes in the car, and again we passed the customshouse and were back in the United States. There was no change in the character of the country; natural resources were similar; climatic conditions were the same; the sun shed its rays equally on both sides of the line; but the conditions under which the population were living on one side and on the other seemed as far apart as the poles. Neat homes, orderly towns, well-clothed people, a general air of prosperity and well-being contrasted vividly with the poverty, squalor, and disorderliness that we had just left. "Why," I said to myself, "this tremendous difference?" The answer was obvious. We to the north of that boundary line were the fortunate beneficiaries of a priceless legacy created through the ceaseless sacrifice of brain and brawn and treasure by generation after generation of our English-speaking ancestors. Ever since that day those words of the Psalmist have had new significance for me: "The lines are fallen unto me in pleasant places; yea, I have a goodly heritage."

It is about that heritage that I want to speak to you this afternoon—that incomparable inheritance that your forebears and mine bequeathed to us in sacred trust a century and a half ago. What steps are we taking to preserve that legacy intact? How are we discharging the trust committed to our care? What are we doing to hand it on in sound condition to the generations that will follow us—you and I and a hundred million other Americans? Little indeed, I fear, so far as fearless personal effort and self-sacrifice are concerned. For if we are honest with ourselves we must admit that, with few exceptions, we American business and professional men have taken the ineffable blessings of freedom for granted for so long, have so completely washed our hands of public affairs, have so neglected the study of politics—in the broad sense of the word—that today we are practically powerless to defend our American heritage against its traducers. In fact, few of us have even the vaguest knowledge of the underlying philosophy on which our system of government was founded.

As a businessman I plead guilty to this indictment. Despite the fact that I was exposed to the opportunities afforded by a university education, I assumed so smugly, until 5 or 6 years ago, that liberty was mine by inalienable right, that I gave little attention to what was going on at our State capital or in Washington. Government, except when I had to make out a tax return, was something remote and apart from my daily life. And so, while I devoted a certain segment of my time to personal and family affairs, some to recreation, a smaller bit to community interests, a still smaller portion to the church, all of the rest was applied to business. There was virtually no place in my life—apart from voting—that was set aside specifically for the duties of citizenship.

In that respect I do not believe that I was any different from the average American. I took government for granted; assumed that free enterprise and civil liberty were sacrosanct; and that there was no need for me to worry my head about any of them. Some 6 years ago, however, I had a rude awakening. Since then I have realized what I should have recognized many years ago, namely, that no system of government—particularly representative democracy—can rise higher than the intelligent interest of its citizens. Meanwhile, as I have observed the spread of doctrines that are utterly subversive of the fundamental principles on which our Government was built; have listened to teachers, preachers, writers, students, and businessmen espouse theories that strike at the very root of the Anglo-American concept of personal freedom, I have wondered, in common with thousands of others, why such things should be; why we should suddenly find ourselves adrift on a storm-tossed sea of political and economic uncertainty; puzzled, afraid, apologetic, and sometimes ashamed of our previous adherence to what we thought were time-tested American principles; ready to snatch at alien political panaceas and eager to follow any economic will-o'-the-wisp that seemed to promise a short cut to prosperity.

This Republic, after all, was not founded by men who sat in their seats and waited for somebody else to do the job; by men who were so engrossed in their private affairs that they had no time to give to public questions. Furthermore, the system of representative democracy, free enterprise, and religious liberty, which they established, is not going to be maintained if our intelligent businessmen continue to work at their private businesses five-sixths of the time and spent the rest of their waking hours playing golf. When I read of the crushing sacrifices made by our Revolutionary forebears, I stand frankly abashed and ashamed.

In the words of a poem that I ran across a few weeks ago by Winona Montgomery Gilliland:

"Our vision is dimmed; we are tired
And long for ease.
We neglect our vital spark—
That burning love for freedom which once lit
Our blackest nights—and now we fumble,
Confused and fearful, hearing our
Foundations crumble.

"Craven, we seek a leader, who will raise
A torch and make our pathway smooth again,
Forgetting that within us sleeps a fire
Sufficient, in itself, to make us men."

Please do not misunderstand me. I am not fatuous enough to think that anything I can do individually will amount to anything, but I do know that if a million American business and professional men resolve to devote a definite amount of their time to the study and discussion of public affairs, there will soon be a profound change in the attitude of the people of the United States toward the critical problems that confront us. Attending meetings like this and passing resolutions is not enough. The time for personal action is upon us. As Dean Inge says: "It is useless for the sheep to pass resolutions in favor of vegetarianism as long as the wolf is not of the same opinion."

We are not altogether to blame for what has happened. Our lack of awareness has been due largely to the sort of education we received. And here I am not criticizing our schools and colleges. Under democracy they have to reflect the current temper of the people. We have simply had our hearts so set on material success that we have virtually forced our educational institutions to teach concrete realities instead of directing our attention to the basic principles which underlie and determine all the facts of human existence. For the last two generations we have practically abandoned the study of classical history, from which our forefathers gleaned the principles which constitute the foundation of our American heritage. Obviously a man who lacks knowledge of what has happened in past ages is simply a creature of the moment, governed by opportunistic considerations. We have, moreover, virtually given up the study of political philosophy. How many of us have read Thomas Hobbes' Leviathan, in which the author portrays government as a huge monster that inevitably devours personal freedom if it be not carefully checked and curbed at every point? How many of us have ever digested John Locke on government? Or John Stuart Mill or Adam Smith? Yet when you examine the history of the Revolutionary period in this country you will find that the vital influences which determined the form of our Government stemmed from two main sources: First, from the philosophy of Socrates, Aristotle, and Cicero as reflected in the thinking of these English political philosophers of the seventeenth and eighteenth centuries; and second, from the British Reformation of the fourteenth century inspired by John Wycliffe. From the merging of these two currents of thought came our concept of personal freedom. That concept is supported by a tripod. One leg of this tripod is representative democracy; the second, private free enterprise; the third, civil—particularly religious—liberty. The history of ancient Greece and Rome, the age-long experience of our British ancestors, and the events of the past 6 months in Europe prove incontrovertibly that if any one of the legs of this tripod be undermined the whole structure of personal freedom soon crashes to earth.

The English-speaking peoples may not have done much for the fine arts—painting, sculpture, and music—but they have made one great contribution to the human race: They conceived and set up this tripod of freedom and made it work in the modern world. That is the reason that Nietzsche, the German philosopher, who hated republican governments, said that he could never forgive the Jews for inventing Christianity or the British for inventing democracy.

The principles on which our Government was based were summarized with exceptional clarity by John Locke. His conclusions directly guided the Founding Fathers of this Republic. The Lockian philosophy of government simmers down to three simple theses: First, that all just powers of government are derived from the consent of the governed; second, that the function of government is to make possible the greatest degree of individual responsibility and initiative; and, third, that the state may properly function only for the protection of life, property, peace, and freedom.

Opposed to this, the Anglo-American concept of government is the collectivistic philosophy of Rousseau, developed and popularized in its more radical form by Marx, Engels, and Lenin. In America its basic ideas are fostered by many estimable but misguided persons under the banner of the "New Liberalism." Such people want planned economy but do not wish to go the whole distance on the road to Moscow. Their philosophy is the antithesis of the philosophy under which our governmental and economic system was established. They hold that it is the responsibility of the state to remove every obstacle that inhibits any individual's development and opportunity for living an abundant life. The collective social will of the people acting as a mass is sovereign at all times under the collectivistic philosophy. Hence the individual is the servant of the state—not the state the servant of the individual as maintained under the Anglo-American concept of government.

To put this in other terms: The philosophy of the English-speaking peoples affirms the sacredness of the individual. It asserts that man is a divine creature made in God's own image and therefore is possessed of certain God-given inalienable rights. On the other hand the philosophy of all the collectivists—whether they term themselves Communists, Socialists, Fascists, Nazis, or American new liberals—either actually denies or tends to deny that there is anything sacred about individual personality. Prof. John Dewey, for example, maintains in one of his books that there is nothing exclusive about the individual; that that idea is simply a hang-over prejudice from the days of aristocracy; that one cannot be really democratic and believe in the spiritual sanctity of human beings. One can agree with that conclusion quite logically if one is also prepared to accept Dewey's thesis that man is simply a physico-chemical combination of conditioned reflexes organized by environment.

Thus, when we get down to the root of our present-day problems, we find these two philosophies in head-on collision with each other. They are irreconcilable. One asserts that the individual is sacred; that every human soul is endowed with a divine, God-given personality. The other maintains that we are all mere cells in the great body politic and that we possess no unique inalienable individual rights whatever. This latter concept leads logically to authoritarianism, despotism, and tyranny. Men who are too weak to govern themselves, who put their economic welfare above spiritual freedom, who are willing to trade their divine heritage of individual liberty for a message of pottage deserve no better fate.

We cannot successfully counter the dynamic drive of collectivistic ideas with a phalanx of fulsome facts, no matter how outwardly impressive those facts may be. The average American is little interested in how many telephones or automobiles we have per capita compared with the people of Russia or Italy. He takes his material blessings for granted, while the authoritarian idea lures his imagination with mirages of untold plenty and security that are to be his, if he will only forget the lessons of history and follow the Pied Piper of collectivism. Such dreams frequently develop into a sort of pseudo-religious frenzy, making men oblivious of their own ultimate welfare in blind allegiance to their cherished cause. In fact, it was just such untiring devotion to the Anglo-American ideal of personal freedom that inspired our forefathers to set up their momentous experiment in representative democracy. But, as the decades have passed, our obsession with business and personal affairs has dimmed the crusading spirit of liberty, while the proponents of the alien and reactionary philosophy of collectivism have become increasingly vocal and active. Today many otherwise intelligent Americans find themselves so puzzled that they even question the soundness of our American heritage. It is your function and mine to help restore the faith of our forefathers, to kindle anew that pride in our American heritage which characterized the early decades of this Nation's history. We must fight ideas with ideas; pie-charts will not suffice. Economic facts are important, but they will never check the virus of collectivism; the only antidote is a revival of American patriotism and religious faith.

We are told today by those who would knowingly or unwittingly destroy our tripod of freedom that one of its legs—our system of private enterprise—is all wrong; that it is not geared to the requirements of our modern industrial age. Any fair-minded man will admit that free private enterprise has its faults. What human institution does not? Representative democracy, organized religion, free enterprise—nothing that relies on human beings can rise to any higher ethical level than the individuals who compose those institutions. The road to real and lasting accomplishment, of course, lies in the slow and tedious process of developing a higher sense of personal responsibility, the individual acceptance of social stewardship. The ethics of free enterprise, however, have shown vast improvement during the past hundred years, notably in the last quarter century. Despite all the criticism aimed at it business generally is conducted in America today on a higher plane than has ever existed in any country in the world's history. Unethical practices that were common a generation ago are today taboo. Further enduring progress will come as individual businessmen apply the precepts of the Golden Rule, the Sermon on the Mount, and the Good Samaritan to the problems that daily confront them. Of course the millennium is still a long way off, but private free enterprise, which is essential if representative democracy and religious liberty are to continue in this country, is infinitely preferable with all its faults to its only alternative—state socialism or what amounts to the same thing under the innocuous designation of "national economic planning" or "social control."

As a great industrial Nation, we have long been accustomed to plan ahead; hence the phrase, national economic planning, has something about it that appeals to almost everyone at first blush. However, national economic planning really rests on a series of delusions. Our national economic planners, in fact, are the modern prototypes of the medicine men of our barbaric ancestors. They actually believe that modern science, if only placed at the behest of all-powerful government, can make the springs of plenty flow for everyone with little work and sacrifice on anybody's part. Economic planners believe that somewhere there actually exist individuals who have the capacity to plan the economic affairs of the whole Nation. As a matter of fact, there is not enough information and ability available today to correlate the activities of any single industry, let alone the infinitely complex interests of the entire country. The stagnation and loss of impetus due to the dilution of personal responsibility and initiative under such a system would be appalling. Furthermore, if the Government once starts planning the economic affairs of our basic industries, the process will inevitably have to be extended to every phase of

our economic life. Our economic processes are so closely interrelated that sooner or later government would have to tell each one of us what we could buy, when and where we could buy it, and at what price; what we could produce, how much we could produce; where we could work and for what wages. There would be no stopping short of the bitter end. As Stalin said in 1934: "Without getting rid of capitalism and abandoning the system of private ownership in the means of production, you cannot create planned economy."

The road to planned economy is the road to state socialism—state ownership of the means of production. Once state socialism is a reality, what becomes of the other two legs of the tripod of freedom—representative democracy and religious liberty? Obviously if a group of men calling themselves government were planning ostensibly for the greatest good for the greatest number, they could not brook interference from any individual citizen, no matter how well intentioned that citizen might be. In other words, the state could not tolerate the throwing of a monkey wrench into any of its well-laid plans. Consequently, government would simply have to control every opinion-forming agency, the radio, the press, the movies, the schools, and the church. In Germany, Russia, and Italy you can see that program at work today. And once you start controlling the press, the radio, the school, and the church, what becomes of religious liberty? Walter Lippmann says in his book, The Good Society, "Dictators are not stupid men. They know that religion and totalitarianism do not mix." The glory of religion is that it emphasizes the importance of the individual and encourages independent thinking. As Christ said, "Know ye the truth and the truth shall make you free." So it does not take any soothsayer or seer to predict what will happen to civil and religious liberty once national economic planning goes into effect.

In contemplating the rosy predictions made by its eloquent advocates, I have often wondered where we would be today as a Nation if a national planning board had been in existence for the past two or three generations. No doubt you recall the remark of the first President to whom the telephone was shown: "This is truly a remarkable thing, but who would ever want to use it?" With the President himself making such an appraisal of a scientific invention, can you imagine any national planning board authorizing the expenditure of the billions of dollars that private enterprise has spent in the past 60 years to give us the marvelous system of telephonic communication that we now enjoy throughout the length and breadth of this country?

Napoleon Bonaparte certainly had unusual vision and autocratic power. In fact, he did a great deal of economic planning for France. However, when Robert Fulton built a submarine and suggested to the Emperor that he authorize the construction of a fleet of such vessels to destroy the British Navy—the only real obstacle that stood in the way of Napoleon's ambition to conquer Britain—the great Emperor said "No." It was finally private individuals and private enterprise that developed the submarine and placed it at the disposal of government.

The Constitutional Convention held its sessions in Philadelphia in 1787. One afternoon a group of distinguished statesmen, including George Washington, were invited by Fitch to come down to the Delaware River and see the steamboat that he had built. With all the vision that Washington possessed, with all his interest in the development of the natural resources of this country, he was so skeptical about Fitch's invention that he concluded that the steamboat was not worth investigating and went to a dinner instead. Suppose that the development of steam navigation had depended on the vision and initiative of a national economic planning board, would it be likely that a *Queen Mary* or a *Normandie* would be crossing the Atlantic today in less than 4 days?

Coming down to modern times, there were 8,000 automobiles in the United States in 1900, which required 80,000 barrels of gasoline annually to operate them. That quantity of gasoline would run the cars now on the roads of this country about an hour and a half. Suppose Mr. Henry Ford had gone to a national economic planning board back in 1900 and said, "I want you to provide gasoline to run 26,000,000 automobiles in 1939." Do you imagine that any governmental body would have followed his suggestion and set about to do what the privately controlled petroleum industry has actually accomplished at the risk of billions of dollars of private capital?

Similar examples could be cited ad infinitum, but perhaps the crowning illustration of governmental lack of vision is that of Commissioner of Patents Ellsworth, who in 1850 counseled a congressional committee against the construction of a new building for the Patent Office on the ground that there were not many more inventions in sight. The total number of patents that had been granted in the United States up to that time were 3,327; since then more than 2,000,000 have been issued.

The fact is that national economic planning means less planning rather than more planning. Today national planning is being done by millions of individuals every day. Our well-being depends directly on the wisdom of these decisions. Fortunately, however, every private decision is relatively limited in its scope; hence those that are wrong are counterbalanced by those that are right. The decision of any single individual or of any small group is not so far-reaching in its effect as to endanger the welfare of the entire Nation. On the other hand, the decisions of a national economic planning board, if wrong, would have devastating effects on the people as a whole, since no countervailing influence would be available, all economic power being lodged in the Central Government.

With suave argument that stresses claims regarding the elimination of waste, the national economic planners have taken us up on a high mountain and shown us the alleged economic security that we can enjoy if we will only follow their fatuous leadership. To millions of our fellow citizens—more interested at the movement in bread than in freedom—this illusory vision makes a tremendous appeal. What can you and I do as patriotic citizens to counter such false propaganda which is undermining free private enterprise and, if eventually successful, will destroy the tripod of freedom?

For one thing, we must publicize the foundations that underlie our American heritage. It has indeed a long and honorable history behind it. In the early fourteenth century—200 years before the German Reformation—John Wycliffe, whose bones were later burned as those of the first British heretic, rendered three outstanding services to the English-speaking people: First, he organized the great middle class, the farmers, laborers, peasants, and yeomen, into conventicles or congregations to discuss religious questions. Out of these conventicles came the Englishman's passion for the right of free assemblage. The town meeting of New England, which played such an important part in the establishment of representative democracy in America, was one of the ultimate fruits of Wycliffe's work. And even you and I, as we assemble here today, owe that privilege largely to what he did among the humble people of Great Britain 600 years ago.

Wycliffe's second great service was to translate portions of the New Testament and to circulate those translations throughout the length and breadth of England. In this day and age you and I can have no idea of the thrill that the English peasant experienced as he pored over the word of God in his own tongue and felt for the first time that he could hear the voice of the Lord Himself speaking. From this religious experience there came the conviction to the ordinary Englishman that no intermediary, no human being, no government, can stand between a man and his spiritual responsibility; that there are some things that every human soul must think out for itself. Thus Englishmen came to believe that the Bible was really their charter of liberty. They grasped and asserted the right of free interpretation of the Scriptures. Transferred later to the political arena, the consciousness of that right led directly to the great doctrine of the right of private judgment which, in turn, abolished persecution and censorship, set the human mind free and made the individual citizen with his consent to be governed, the foundation stone of modern representative democracy.

In the third place, Wycliffe asserted that the sacraments of the church mean nothing unless the individual who accepts them knows what he is doing and what they signify. In other words, man is a free individual with personal moral responsibility in matters of faith. This was one of the outstanding characteristics of the early settlers in America. They came to the shores of a new continent impregnated with the principles of personal moral responsibility, the right of private judgment, and the right of free assembly, which together filled them with a fervent passion and unshakable belief in the inward spirituality of the individual. They based their political philosophy and their economic system on the concept that there is something about the human spirit that is sacred; that there is a place in the human soul that no government and no man may justly enter, where reside those inalienable rights that the Declaration of Independence later asserted in such soul-stirring periods. As John Adams put it: "You have rights antecedent to all earthly government; rights that cannot be repealed or restrained by human laws; rights derived from the great Legislator of the Universe."

The currents of thought generated by John Wycliffe in Great Britain were merged in the minds of the great English political philosophers of the seventeenth and eighteenth centuries with certain concepts of personal freedom that had their origin twenty-four hundred years ago in ancient Greece. The Greeks seem to have had a love of liberty very similar to that which characterized the English-speaking peoples. In Socrates' day they began to ask themselves how man could be most happy, and free to attain a full measure of intellectual and spiritual maturity. Socrates and Aristotle asserted that to attain that objective a man must have a free mind; a mind that can think independently, that can set itself free, that knows not only what it believes but knows how and why. A free man has, as Aristotle pointed out, mastered his passions, tempered his judgment; doubts or believes on the basis of evidence only; neither seeks nor shuns danger and in all relationships exhibits temperance and poise. Wherever that conception of the free man has held sway, human life has found dignity and freedom; mutual responsibility and common council have been substituted for coercion; and democracy has developed.

Cicero, the last great liberal of antiquity, was a great disciple of Aristotle. As consul of the Republic of Rome he crushed the Catiline rebellion. Not long ago I read some of the harangues made to the populace by the leaders of this rebellion, as reported by Sallust. They sounded most familiar. In fact, in their denunciation of capitalists, their description of the plight of the farmer, and their demand for the redistribution of wealth, they might have been delivered in Union Square yesterday. Huey Long with his "Every man a king," or Stuart Chase with his "Economy of abundance" could scarcely have done a better job.

Although Cicero was voted the title of "Father of his Country," he was unable to save the republic from the proletarian party, directed by one of the shrewdest politicians that has ever appeared in human history, Julius Caesar. Caesar's adage, "With money we

will get men and with men we will get money," has its counterpart in a certain alleged remark about taxes, spending and elections in this year of our Lord 1939. To use the striking words of Everett Dean Martin, Cicero was liquidated in a purge fomented by Mark Antony and, after that, no man's life or property was safe. Dictatorship succeeded dictatorship, destroying not only the constitution of the republic but eventually all sense of political responsibility among its citizens. Interest in the ordinary duties of citizenship vanished. So when Marcus Aurelius died in the year 180, Gibbon states that Roman civilization was already in eclipse. More and more planned economy followed, which led to more and more economic confusion. The currency was inflated; there was great unemployment in all the principal cities; no less than 20 percent of the population were on the public pay roll; taxes were so high that the farmers were compelled to turn their lands over to the government. Collective farming was attempted but the government could not get people to work because the proletariat no longer had the desire or habit of labor. The people lost political interest. Few cared to hold office. They would not even fight to save themselves. Finally the border was opened and the barbarians were brought in to raise crops and man the defenses.

It was not until 1,500 years after Cicero that a group of Italians in Florence were able to set up a new republic. There men began again to think and discuss questions as did the free men of ancient Greece and Rome. Interest in Cicero was renewed; they read and reread his inspiring words about liberty. From this center came a new group of scholars—men like Erasmus of Rotterdam—who brought this old but ever new source of intellectual inspiration to the peoples of northern Europe and thus laid the foundations for the revival of learning in the modern world. Erasmus, who came to Oxford University to teach, Thomas More and John Milton carried the philosophy of Socrates and Cicero to Great Britain. Cicero became the great exemplar of patrician virtue in minds of the free-thinking liberals of the seventeenth and eighteenth centuries in England and America. Roger Williams, of Rhode Island, and Thomas Hooker, of Connecticut, were the two men most responsible for bringing the Ciceronian tradition of classical liberalism to America.

It is a significant fact that practically all the prominent New England patriots were educated in the Boston Latin School in Boston; that the Virginia group, Washington, Randolph, Wythe, Henry, Marshall, Jefferson, and Madison, all came directly or indirectly under the influence of Dr. Small of Edinburgh University, who taught logic and literature at William and Mary College in Williamsburg for a decade or two preceding the Revolution. In these schools our forefathers became acquainted with Socrates and Aristotle and Cicero and the great political thinkers of the seventeenth and eighteenth centuries. Nowhere is Ciceronian influence more evident than in the Federalist papers of Hamilton, Madison, and Jay. Jefferson states frankly that the Declaration of Independence contains no new ideas but rests on "the elementary books of public right, as Aristotle, Cicero, Locke, Sidney, etc."

With our lack of education in classical history and political philosophy, we twentieth century Americans have not prepared ourselves to support the American system against those who would destroy it. We are the first generation—perhaps the second—that has ever tried to live without a political philosophy. It cannot be done successfully. Our founding fathers had a political philosophy. They understood it, believed in it, fought for it. They nad a common background against which to measure political ideas and theories. They knew how to defend their philosophy of government. We have grown lazy, complacent and smug in our enjoyment of the heritage of freedom. If we want to pass that heritage down to our children, it is high time that we arouse ourselves from our lethargy, acquire a thorough understanding of the concepts that underlie our American system, and proceed to interpret those principles to our fellow citizens. Old Samuel Adams' warning is particularly timely today: "Remember democracy never lasts long. It soon wastes, exhausts, and murders itself. There never was a democracy that did not commit suicide."

Representative democracy is not merely a piece of paper that we call a constitution. It is something far more profound than that. It is a pattern of thought, a habit of conduct, a way of life, the substitution of ballots for bullets, the willingness to play cricket with the other fellow even when his ideas hold sway at the polls instead of yours. It has taken the English-speaking peoples 700 years to develop the type of spirit that makes representative democracy work. Here is the reason that representative democracy has not been a success in many European and South American countries. Such peoples have attempted to set up republican government without going through the long process of self-discipline and education in national unity, essential to the success of the democratic system which, as Tocqueville said, is the most difficult form of government to work, but which yields far more to its citizens than any form of despotism.

From its very nature, representative democracy obviously cannot be maintained in the face of acute class cleavage. Hence the rapid growth of class consciousness in this country in recent years must be a matter of profound concern to every thoughtful American. If we continue to substitute class interest and sectional interest for national interest, history will repeat itself. National unity will disappear; pressure groups will increase in number and power; the raids on the Federal Treasury will grow steadily more devastating; deficits will continue; the Federal debt will go on skyrocketing. It was $12 per capita in 1916; it is $300 per capita today. Relief, that cost an average of $87,000,000 per month in 1933, $194,000,000 per month in 1937, and $247,000,000 per month in 1938, will continue to mount as the self-reliance and moral fiber of the people disintegrate. Obviously, if such conditions continue long enough, destructive inflation, financial chaos, social disorder, and the destruction of our representative democracy will follow inevitably. I still believe that we can avert such an ultimate catastrophe, but only if you and I and a million like us are willing to do our part in the public service.

Let us keep ever in mind that the real fight is not between representative democracy and fascism or communism. The fundamental issue is between representative democracy and collectivism—whether it be called communism, socialism, fascism, nazi-ism, or new liberalism. All of these "isms" are part and parcel of the same basic concept that the individual exists for the state, not the state for the individual. Remember that Mussolini was a Socialist before he became a Fascist; Hitler was a Socialist before he became the apostle of nazi-ism. Without exception collectivism, regardless of its form, results finally in the overturning of the tripod of freedom—the destruction of representative democracy, free private enterprise and religious liberty.

For many years those who would bring about state socialism by peaceful means have advocated this formula: Select a time of great political and social unrest; then discredit in every possible way those in power during the preceding era of prosperity; blame the ensuing depression on those leaders; then under guise of emergency, enact legislation that prevents confidence from returning. Finally, having destroyed the only basis on which private free enterprise can flourish, say to the unthinking public: "We are extremely sorry to do it, but inasmuch as private individuals will not create prosperity, the state, greatly to its regret, must step in and do so through active intervention in agriculture, industry, banking, and commerce."

Now, just go over the history of events of the past 6 years and see how closely that pattern has been followed. I am not in any sense inferring that those in charge of the administration of public affairs in this country are Socialists or Communists or Fascists or anything of the sort. But I do believe firmly that the pattern that is being followed, if continued much longer, will lead inexorably to highly centralized government amounting to state socialism. The strategy of those who would "make America over" is so clear today that he who runs may read. Their objective is to supplant the voluntary agencies of our free-enterprise system with political boards armed with compulsory powers. Legislation undreamed of 7 years ago—most of which is now validated by high-court decisions—has already centralized in the Federal Government sweeping control of labor relations, wages and hours, the sale of agricultural products, the issuance of securities, public relief and various social-security measures. There are bills now pending in Congress to federalize public education, and the far-flung socialistic implications of Federal control of credit and of the T. V. A. are too obvious for comment. The epoch-making decision of the Supreme Court 3 weeks ago, upholding the power of the Central Government to set quotas and control the marketing—and thereby the production—of tobacco, apparently paves the way for similar control of all other commodities, and strikes at the very roots of our free-enterprise system. So we are confronted not with a theoretical situation but with a whole series of accomplished facts and, as Machiavelli said: "Let no man who begins an innovation in a state think that he can stop it at his pleasure or control it at his will."

Now the question arises, what are we, as patriotic citizens, going to do about our American heritage? Do we still subscribe to the political philosophy of our English-speaking ancestors? Do we still believe in representative democracy? Despite its shortcomings, do we or do we not consider it superior to collectivism? Are we willing to trade our liberty for security, our spiritual freedom for bread? If not, what can we do to stem the tide of this alien philosophy which tends to engulf us—"the coming slavery of socialism" as an English philosopher puts it? Shall we let things drift as they have for many years gone by? Or shall we realize and accept our personal responsibility as American citizens? No one of us can do much, but we need to remember what Spencer said: "How infinitesimal is the importance of anything I can do, but how infinitely important it is that I should do it."

"What can I do?" you ask. Well, here is my answer:

You can take time enough from your business and recreation to study and understand the political philosophy underlying our American heritage of representative democracy, free enterprise, and religious liberty. You can interpret this philosophy to your fellow citizens. You can test every proposed governmental policy against this philosophy—thinking independently and not blindly following herd opinion.

You can take an active part in politics by helping to form policies and by assisting to select and elect the right men to office. Thus you can build respect for political life as a career. You can vote yourself and see that others do so. You can advise and counsel regarding pending public questions with your elected representatives in city, county, State, and Nation. You can seek ways of rendering public service by serving on committees, governmental commissions and, if possible, by holding public office.

You can support personally and financially those civic and industrial organizations that are fighting to preserve our American heritage.

You can interest yourself in education, public and private, in three effective ways: First, by insisting that the curriculum stress

the importance of mental discipline; second, by insisting on the study of classical history where one sees time after time the recurrence of reactionary movements similar to those we are now witnessing in this country; third, by insisting on the study of political philosophy so that the rising generation may understand what the roots of liberty in America are and thereby acquire a sense of pride in our American heritage.

You can practice what you preach by conducting your daily business affairs on a strictly ethical basis. In so doing you will be confounding the critics of free private enterprise and thereby giving your personal support to the tripod of freedom.

You can interest yourself in the church, remembering that our Anglo-American political philosophy is founded on the religious concept of the sacredness of the individual, which collectivism denies. In fact, the more I ponder the problem, the more deeply I am convinced that our American heritage cannot exist indefinitely without a firmly grounded religious faith; for the very same qualities that religion stresses—self-sacrifice, self-abnegation, willingness to give of one's time and effort without hope of material reward, scrupulous regard for the rights of others—are every one essential for the maintenance of representative democracy. As Dorothy Thompson said recently: "The conception of man as the child of God—a soul capable of reason, capable of developing and perfecting himself in the image of the ideal—this * * * is the only philosophical justification of democracy."

Edmund Burke asserted that society is "a solemn compact between the dead, the living, and the unborn." How do you and I propose to discharge our duties under that compact so far as our American heritage is concerned? Are we willing to take up the cudgels and fight for it? Are we willing to show the same indomitable spirit as Thomas Jefferson who, as he lay on his deathbed at Monticello on the 4th of July, 1826, startled those about him with the words, "The Committee of Safety—it ought to be warned." If so, let us sound that warning vigorously. Let us arouse ourselves from our lethargy. From this day forward let us devote a definite portion of our time to public affairs. Let us kindle a new fire of patriotism and religion in the mind and heart of every true American. If we do not, in Lincoln's words, "We shall * * * meanly lose the last great hope on earth."

Author's note: In the preparation of this address, the author has drawn from many sources; but he wishes particularly to acknowledge with gratitude the material assistance he has secured from a series of lectures delivered by Dr. Everett Dean Martin, of Claremont College, before the Graduate School of Banking of the American Bankers' Association in 1938, and from a recent address of Mr. J. Howard Pew, president of the Sun Oil Co.

An Invitation to Bid on a "Treadmill for Dogs" and to Promote the Welfare of the Democratic Party

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

AN INVITATION BY THE PROCUREMENT DIVISION OF THE TREASURY DEPARTMENT

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[G-3—Natl. Inst. of Health—N-984. 19139-SP-6-12-39. U. S. Standard Form 33 (Revised), approved by the Secretary of the Treasury, March 30, 1936]

INVITATION, BID, AND ACCEPTANCE

(SHORT FORM CONTRACT)

TREASURY DEPARTMENT, PROCUREMENT DIVISION,
BRANCH OF SUPPLY,
PROCUREMENT DIVISION BUILDING, SEVENTH AND D STREETS SW.,
Washington, D. C., May 29, 1939.

INVITATION

Sealed bids, in duplicate, subject to the conditions on the reverse hereof, will be received at this office until 10 o'clock a. m., June 12, 1939, and then publicly opened, for furnishing the following supplies, and/or services, for delivery at Director, National Institute of Health, Twenty-fifth and E Streets NW., Washington, D. C.

H. C. MAULL, Jr.,
Chief, Purchase Division.

Item No.	Articles or services	Quantity	Unit	Unit price	Amount	
					Dollars	Cents
57-T-3050-15	Treadmill, for dogs to conform to following specifications: A treadmill for dogs ranging in weight from 10 to 50 pounds, with a mean dog weight of 22 pounds. It should be operated by a motor of suitable power to produce speeds of from 2 to 20 miles per hour. 3 horsepower is the minimum capacity. It should be readily adjustable for running at various inclinations and should have a variable speed transmission. The width should be about 18 inches and of suitable length, with side guards to retain the animal on the treadmill. It is to be equipped with an electric tachometer and should operate with a minimum of noise. All parts should be accessible for cleaning to remove urine and feces passed by dog. It should permit consistent work performance records that can be repeated in experiments on the same animal. All bidders will be required to submit with their proposals detailed plans of equipment of this type now manufactured by the bidder, or detailed plans of the proposed treadmill to be provided by the bidder.	1	Each			
	Quote price only on unit of quantity as specified.					
	The undersigned represents that the prices in this bid are neither directly nor indirectly the result of any agreement with any other bidder.					

BID

_____
(Date)

In compliance with the above invitation for bids, and subject to all the conditions thereof, the undersigned offers, and agrees, if this bid be accepted within _____ days from the date of the opening, to furnish any or all of the items upon which prices are quoted, at the price set opposite each item, f. o. b., _____ and, unless otherwise specified within _____ days after receipt of order.

Discounts will be allowed for payment as follows: 10 calendar days, _____ percent; 20 calendar days, _____ percent; 30 calendar days, _____ percent.

Bidder _____ Address _____
By _____ Title _____

ACCEPTANCE BY THE GOVERNMENT

_____
(Date)

Accepted as to items Nos. _____
Name _____ Title _____

Mr. Speaker, this invitation to bid is a serious proposal on the part of the Procurement Division of the United States Treasury Department. I do not know why they limit a mean dog's weight to 22 pounds. It should be limited to 2 pounds, and only dogs with false teeth be used. The speed limit should be reduced from 20 miles to 2 miles an hour.

I call especial attention to the law under which these bids are made, which reads as follows:

No Member or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract nor to any benefit that may arise therefrom unless it be made with a corporation for its general benefit.

I would suggest that the law be amended in such a way so those benefiting from such a contract may be permitted to contribute to the campaign fund of the Democratic Party or buy Democratic campaign books.

I would suggest that in order that all parts be cleaned more easily and for other sanitary reasons, no dog shall within 24 hours of the time he is used in said treadmill be given any laxative whatsoever.

In order that both the dog and the treadmill may function more perfectly, I would suggest that a line of telephone and lamp posts interspersed by a few trees be set on each side of the treadmill.

So that the Democratic Party may benefit to the fullest extent from the patronage involved in the purchase of said treadmill and its use, both the dogs and attendants should be appointed on approval of the Democratic Members of Congress only or be selected from the so-called Friant list without regard to the classified civil-service laws.

In view of the fact that the United States Government has an interest in the dog pound at Memphis, Tenn., the Memphis dog pound be given preference in the purchase of dogs used.

Clarence Wyly Turner

MEMORIAL ADDRESS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. CLARENCE WYLY TURNER, late a Representative from the State of Tennessee

Mr. BYRNS of Tennessee. Mr. Speaker, in the death of the Honorable CLARENCE W. TURNER, the Congress sustained loss of a valuable Member, the State of Tennessee a worthy son, and I a valued friend of long standing. I had known Judge TURNER for many years, most pleasantly, and in this course of time had occasion to confer with him on many matters and to solicit his influence and assistance on others. I always found him to be unfailing in his courtesy, and he never spared himself or his time in any matter which concerned his country, his State, his district, or his friends. Judge TURNER was a true example of the finest type of Southern gentleman. I feel that I am a better and a wiser person for having been privileged to know him. During all the years of my acquaintance with him, I never knew him to say an unkind word about any person. His character, his devotion to duty, and his gentle personality will find reflection in those who knew him and loved him while he was among us here below.

Mr. Speaker, I append hereto the resolution unanimously adopted by the Committee on Military Affairs of the House, of which he was a member, and on which I had the honor to succeed him on the occasion of his unfortunate passing:

Whereas it has pleased Almighty God in His mysterious and yet wise providence to call from our midst our esteemed colleague, the Honorable CLARENCE W. TURNER, we, the members of the Committee on Military Affairs, hereby express our sorrow at the loss of one who took an active part in the deliberation of this committee during his membership on this committee; and it is hereby

Resolved, That in the death of Mr. TURNER each member of the committee has all the sense of the loss of a personal friend;

Resolved, That in the death of Mr. TURNER the Congress has lost a Member straightforward, courageous, and honest in his views, and his district a Representative who truly voiced patriotism and devotion to the principles of representative government founded by the forefathers;

Resolved, That the committee sympathizes with the bereaved family in their hour of sorrow;

Resolved, That these resolutions be spread on the minutes of the committee, be made part of the memorial service to our deceased colleague, and a copy be transmitted to the family.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1939

ADDRESS BY HON. JAMES A. FARLEY ON JUNE 6, 1939

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Virginia branch of the National League of District Postmasters, Charlottesville, Va., June 6, 1939:

At the outset I want to express my appreciation for the very kind invitation which I received to come here today and address the Virginia branch of the National League of District Postmasters.

During the past few weeks I have attended similar meetings and conventions in various sections of the middle and far West and everywhere I went I was deeply impressed by the interest in the Postal Service that is so manifest by postal employees in all branches of the Service through their attendance in large numbers at conventions of this kind.

There is much good to be derived from gatherings of this nature, where new plans and ideas for the betterment of the Service are discussed and exchanged by postmasters and supervisory officials of the Department. You are to be commended upon the splendid turnout here this morning, and my only regret is that my schedule will not permit a longer visit with you here in this delightful Virginia community, which is so steeped in the rich background and traditions of early American history.

As postal people I know that you will be interested in hearing something of the present state of affairs of the Postal Service. Postal revenues are now at the highest point in the history of the Service and are continuing to rise from month and month.

For the first 10 months of the current calendar year postal receipts were approximately $10,000,000 higher than for the same period a year ago, a most remarkable increase when we consider that the last fiscal year represented the highest 12-month revenue period in the history of the Postal Service. What has pleased me most by this continued upswing in postal receipts is that the increase has not been confined to the large commercial and industrial areas but, on the contrary, has been evenly distributed among rural communities as well as the large metropolitan cities.

I am pleased to inform you that the Postal Service is keeping its place of leadership among the agencies of the Government and is encouraging all forms of transportation by making use of fast planes, fast trains, and all other speedy transportation methods. The money we pay to the air lines and to the railroads for hauling the mails is of material assistance in the development of these private enterprises. We are using planes to carry mail in all directions in our domestic service. We are sending mail by plane across the Pacific and are now operating regularly scheduled mailings by plane across the Atlantic.

In addition to a vastly improved air service that is making such rapid strides as to make the whole world neighbors, we are witnessing in this country a marked improvement in railway transportation. The facilities of the major transportation agencies are being constantly improved to provide greater safety, greater comfort for passengers, and greater speed. We in the Postal Service are so closely associated with transportation that we sense these improvements and appreciate them more quickly than some of our fellow citizens. The owners and operators of the transportation systems in this country are the real pioneers of progress. They command the respect and admiration of the Nation.

When we compare the present-day transportation methods with those of the early days of the Postal Service we get some idea of how grateful we should be to the men who have had the courage to pioneer and plan and to provide these modern travel conveniences.

In the early days of the post, as it was then known, the function of the post office was merely to receive, transport, and deliver letters and newspapers. Postage rates then were higher than rates prevailing today; the rate for a single letter was 6 cents for a zone distance of 30 miles, while today it is only 3 cents for more than 100 times that distance in many directions. The carrying of the mails was very slow, but as fast as could be expected in those days. The horse was the fastest carrier available. The roadways and lanes were rough. In many instances travel over the trails was hazardous. Yet even under those conditions the mails moved with reasonable regularity from the more populated sections to the remote outposts.

In the early days the mail carriers really blazed the trails—going onward in the march of progress until mail was carried in regular and orderly fashion from coast to coast. Mechanical means of transportation followed; passenger service was combined with the carrying of mail and express, and improvements made from time to time eventually resulted in the amazingly efficient system which is in operation today. An agency that started for the sole purpose of carrying mail matter has developed with the country, and following the improvement of business practices, has introduced special features for the accommodation of the people, such as postage stamps for the prepayment of postage; registered mail for the protection of valuable articles; city, village, and rural delivery; postal money orders; special delivery; postal savings; and the air mail.

The postal establishment occupies an enviable position. It serves all the people at all times. Throughout its long history it has been regarded as the most necessary agency of government. Those who are privileged to serve in it have a rare opportunity to do something really worth while for their fellow man.

Since I have been Postmaster General I have had an opportunity to associate with and observe pretty closely the postmasters and postal employees, and I am proud to say that the personnel of this Department for loyalty, industry, and efficiency is not excelled by any other group in America. There have been brought to my attention so many cases of self-sacrificing service, accounts of men and women who have done things far beyond the ordinary requirements, that I could spend hours relating them to you.

I know that the people of this country appreciate the fine work you are doing, and I take advantage of every opportunity to meet with you at your conventions so I can tell you about it and thank you for your whole-hearted cooperation. Postmasters are doing good work and the postal employees are doing a good job because they are good people, carefully selected, and happy in their jobs.

The Postal Service is well-timed, well-disciplined, and sensitive to the needs of the people. It is a friendly organization. Knowing that we enjoy such a reputation and that we enjoy to the fullest extent the confidence of our customers should make us all assume the full responsibilities of our positions. I am sure that the postmasters of Virginia appreciate the importance of their places and are ready and eager to do their part in keeping up to the high standards set for them. If this is to be accomplished, we must not assume a self-satisfied attitude, take it for granted that we are well-organized, and sit back complacently and watch the wheels go round. What we need is eternal vigilance on the part of everyone. This is a tremendously busy and vitally important communication system, and we dare not relax our supervision even for a moment.

We in the Department adopt policies, promulgate regulations, and in the broader sense manage the affairs of the postal establishment. But you men and women in the field are face to face with the every-day service problems which at times must become monotonous. Some of you may feel that your part in this vast organization is not so very important—but let me assure you that the postmaster in the smallest office, the carrier on the most sparsely settled rural route, the employee in the most obscure position in the Service is just as important as the postmaster in the largest city. Stop and consider for a moment what would happen to the millions of pieces of mail that are deposited with our Service in the principal cities of the Nation if the post offices in those cities did not have means of transporting them to the smaller offices through which they reach the addresses. On the other hand, the big post offices would not be so big if they did not receive mail for delivery to their patrons from the thousands of cities, towns, and hamlets throughout the country. So I say to you in all sincerity that the Postal Service of the United States is an organization which depends for its efficiency on the thousands of small organizations and units maintained within the system itself. So bear in mind always that your part in this organization is most important. Be proud of your opportunity to do your share and be assured that your efforts are greatly appreciated.

We must remember that we are partners in the world's largest business, public or private.

During the fiscal year ended June 30, 1938, we handled more than 26,000,000,000 pieces of mail matter. Of this number more than 14,000,000,000 pieces were first class, in excess of 5,000,000,000 pieces third class, more than 600,000,000 parcels, and more than 200,000,000 pieces of air mail. The remainder was made up of newspapers, magazines, and penalty matter. The handling of that volume of business, of course, requires a huge organization, totaling nearly 400,000 people at this time.

With the exception of the motor-vehicle service in the cities, the Department itself does not own any of the transportation facilities used, but depends upon the air lines, the railroads, steamships, and other forms of service under contract to provide the actual vehicles for carrying this tremendous load across the country and around the world. We buy supplies in the open market; therefore, our operations either directly or indirectly affect a major portion of the industries of the country. For example:

During the fiscal year 1938 we paid out in salaries approximately $585,000,000, paid more than $99,000,000 to the railroads, in excess of $14,000,000 to the air lines, about $11,000,000 for ocean-mail transportation, and approximately the same amount to contractors for star-route and other vehicle service. We also spent more than $7,000,000 for mail-messenger service. We bought more than $10,000,000 worth of miscellaneous supplies used in service operations and $1,600,000 worth of supplies used in the maintenance of public buildings. We paid approximately $15,000,000 for rent for post-office quarters, and the heat and light bill for our public buildings amounted to approximately $3,000,000.

I am proud to be at the head of this business organization of the Government, which collects in the aggregate a staggering sum of money from the public each year, but considering the character of service rendered gives back in that service alone adequate return to those who patronize it. You will also observe from the facts I have just related that in salaries and money spent for work performed we immediately turn back into the channels of commerce, not at any one central point, but through all the cities, towns, and hamlets in every State in the Union, all of the money we collect. We maintain this business on a sound financial basis, for, as you know, in 4 of the 5 full years under this administration we have had a balanced budget; as a matter of fact a surplus from that part of our service which we render to the public for hire.

I know that you, as postmasters, and all postal employees are proud of your connection with the postal establishment, and that you do and should take full credit to yourselves for the contribution you make to the Department's success.

These are a few of the aspects of the Postal Service I felt you would be particularly interested in hearing about today. Of course, we have a great many problems in the Department, and we are always striving to improve the service. The cooperation of the employees everywhere has been most valuable.

In fact, the success that has been achieved in providing better postal service to the people of the country is due chiefly to the earnest efforts and loyalty of those who make up our great organization.

I came here primarily to attend the State convention of postmasters, but since this meeting has been opened to the public, I feel that a few observations on current national affairs might be of interest.

The United States, like the rest of the world, has been going through a trying period of adjustment in social, economic, and political life. This condition was not a creation of the administration now in power at Washington. On the contrary, it was handed down as a form of unwelcome heritage from the administration which preceded it. The task of clearing away the wreckage and then rebuilding is never an easy one. The new edifice does not spring up overnight as if by magic—its construction is the fruit of patience, wise understanding of the problems involved, and long hours of unremitting toil. For more than 6 years now, the Roosevelt administration has been engaged at the labor of rebuilding. During all this time, a lusty chorus of disapproval has come from those who wanted to discourage the builders. Disaster was predicted as each new step was taken. Some people, you know, love to believe that the worst is about to happen. Yet, despite the clamor of the defeatists, the work has gone on until today it may be honestly said that the United States is in the strongest position of any nation in the world.

The Roosevelt administration has based its policies on commonsense principles that should appeal to every right-minded person who has a care for the welfare of his fellow men. The administration has had two compelling objectives—to conserve natural resources, and above all, to conserve human beings. President Roosevelt has never ceased to bring home to the American people the homely fact that a nation which tolerates continuing injustice to millions of worthy citizens is gambling on its own existence. Human lives may be blighted and destroyed in destructive warfare or they may fall the victims of an unjust economic system. There were too many lives being sacrificed to an industrial system that was out of order and badly in need of repair when the present administration took office.

There were too many people living on the verge of poverty and ruin because water-power resources went undeveloped and dust storms and erosion laid waste the soil while the Federal Government did nothing about it.

Now there are two ways to meet an unwelcome situation in political affairs. The first is to turn away and do nothing, in the pious hope that time and nature will effect a cure. The second method is to look at the problem with candid eyes, measure the extent of the damage, and then proceed to correct it with the best tools that are available. President Roosevelt chose the latter course, because he believed that a courageous attack was far more typical of the American spirit than a spineless surrender. His purpose was not to add a blow-out patch that might keep the economic machine running on even keel for a few more miles but to bring about a thorough overhauling that would preserve the machine for many more years of useful service.

This job the President has done ably and well, and the proof of his accomplishment lies in the fact that not a single outstanding political opponent has had the hardihood to advocate the repeal of the Roosevelt measures. They tried to block the enactment of these reforms, not for the public good, but in the furtherance of their own selfish partisan motives. They denounced social security as a menace to the country's fiscal structure; they opposed regulation of the stock market; they tried to halt the insurance of bank deposits; and they opposed every attempt to lift the buying power of the farmers.

They are still fundamentally opposed to these great reforms, but they have come to the unhappy conclusion that it would be political suicide to urge their repeal.

It is always easy to stand on the sidelines and to offer advice and criticism to those who have been given a difficult assignment to carry out. Our Republican friends, of course, are quite dissatisfied. They have established themselves as Monday-morning quarterbacks and bleacher managers. Ignoring the many fine things that have been accomplished, concerning which they find it wise to be silent, they point to the problems that remain and demand to know why they have not been solved. The obvious answer is, Why did they not solve them when they were in authority? Every single sore spot that now troubles the Nation had its inception and grew to maturity in the 12 years of Republican misrule that took place before 1933. And please remember that an ounce of prevention is worth a pound of cure; had these sore spots been treated earlier, the task of removing them would be far easier than it is today.

The Republicans faced the same problems that exist today when they were in office. They had nothing to offer then as corrective measures, and they have nothing to offer now. They have not moved an inch from the position they occupied on public questions during the disastrous period of Mr. Hoover's reign.

The only statesmanlike leadership this country has known in our generation has come from President Roosevelt.

And as time moves onward, and the program of the Roosevelt administration is viewed in its proper perspective, the wisdom of the course pursued by the Chief Executive will be generally appreciated. He has kept the peace; he has diminished the menace of foreign aggression by rebuilding the Nation's defenses; he has given aid and support to agriculture; he has stabilized the banking

system and put a stop to reckless speculation with other people's money.

The reforms instituted by President Roosevelt will never be undone, because they are rooted deep in the American system of fair play and equal opportunity for all. We face the future confident in the knowledge that the great mass of people will continue to demand this kind of government in America.

Allard Henry Gasque

MEMORIAL ADDRESS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD H. GASQUE, late a Representative from the State of South Carolina

Mr. JOHN L. McMILLAN. Mr. Speaker, I count as one of the most valued experiences of my life the opportunity I had of serving here as secretary to Hon. ALLARD H. GASQUE for 15 years. I always found Congressman GASQUE ready to see the most humble citizens from his district, and he was never too tired to assist in solving their problems. He was a tireless worker; he spent himself unselfishly in the public service. His services could not be measured, and the loss of his talents will long be felt in the Halls of Congress and the Sixth District of South Carolina.

But, over and above all these things, Mr. Speaker, we who were close to Congressman GASQUE miss his generous friendship, his kindness, his sincere consideration for the opinions and the convenience of his constituents, his fine personal integrity; all these attributes were those which we unerringly identify with one who is properly styled a friend to humanity.

It is a source of pride and gratification to have known Congressman GASQUE and to have been associated with him as his secretary while he was a Member of Congress. Regardless of the many duties vested in him as Chairman of the powerful Pension Committee and vice chairman of the two other important committees, he always had time to offer a helping hand to those who sought his counsel. He was honest and sincere in his beliefs and steadfast in his determination to see that the people of the Sixth District received what they were justly entitled to get from the Federal Government. As successor to Congressman GASQUE, I am well aware of the fact that I will have to work hard in order to please the people of the Sixth District of South Carolina.

His rise from humble beginnings, though accompanied by heavy burdens, was steady and enduring. His unaffected simplicity and friendliness of nature endeared him to all of his acquaintances. Congressman GASQUE was never affected by the Washington society and always wanted to be called plain ALLARD GASQUE.

I would venture to say that Congressman GASQUE never did an unkind act during his lifetime and spent the greater part of his time trying to assist his fellow man. I can pay him no greater tribute than to say that in his passing the Nation lost a great servant in the public good and I shall always want to remember him as a personal friend and one who would go the extra mile for those who deserved his aid.

I shall never forget his kindness to me, his advice, his help in getting me started in my work as secretary, and his solicitude for my success. I shall always remember also his admonition to me to be a doer, rather than a man of many words, and to be interested in the welfare of the people of the sixth district of South Carolina.

Congressman GASQUE secured more for the sixth district of South Carolina than any other Congressman who has ever represented that district. He worked day and night for the veterans, and I, for one, believe that the veterans should erect a monument in his honor. Mr. Speaker, you will well remember that Congressman GASQUE served as a Member of Congress from the sixth district of South Carolina for 16 years.

Let him who thinks that coming to Congress is an easy task attempt it. To be sure, politics, like nature, is at times freakish. Once in a great while at remote intervals, a political storm will sweep, accidentally, some men into Congress, but their residence is temporary and not permanent unless they prove their worth. It is difficult for any person to get elected to Congress, and it is more difficult for him to remain here, but long before he comes here, he has been put to the test. What is the average background of these men? As has been said, the whitest lily often springs out of the muddiest hole, so the greatest men frequently come here from the most unexpected places. I am especially happy to read Congressman GASQUE's biography, as he started from a poor farm boy who was left when a child by the death of his father with a widowed mother and younger children to support. He worked his way through college and from there into the Halls of Congress, where he distinguished himself as a statesman.

It has been said that what you are speaks so loud that it is impossible to hear what you say. Our falling heroes are mourned today not so much for what they said here in Congress, but for what they did while they were here. They are remembered not for their eloquence, pleasing as it was, but for what they were; not by what they possessed, but how they performed, are they today measured. The test is not money, but mind and character. It is good to know in this fair land that these stalwart men, coming from widely scattered regions, reflecting every shade of public opinion and political, economic, social, and religious questions, were here working together in the common cause of our great Nation, working faithfully and tirelessly to keep open wide the door of equal opportunity to all men.

Mr. Speaker, while I was secretary to Congressman GASQUE for 15 years, I learned that it was not an easy or altogether pleasant task to serve as a Member of Congress, and this is particularly true today. The manifold duties and multiplying demands made on Members of Congress in and through the complex and intricate Government departments makes the life of a Congressman, if he attends to his duties properly, very short. To remain sweet when accused falsely, to silence the tongues of slander, to triumph over the strenuous efforts of formidable opponents every 2 years in primaries and general elections taxes one's strength and mind to the limit. A man who has risen to distinction in Congress as our friend Congressman GASQUE did on his own personal work, his mental capacity, and his absolute honesty deserves credit. The path is steep and rugged and is covered with everything but velvet.

Mr. Speaker, I never felt toward Congressman GASQUE as though he were a boss but as a personal and true friend and coworker. Congressman GASQUE passed away in his boots at his post of duty, which was always his wish. I know that he spent days and weeks and months in his office trying to take care of the requests from his district when he should have been a patient in the hospital. I begged him on numerous occasions to leave the office and go to a hospital, but he would always answer by saying that he would be feeling better the next day.

I feel that it will be a long time before the Sixth District of South Carolina will fully realize their loss in the death of our beloved Congressman ALLARD H. GASQUE.

Salmon Industry on the Columbia River

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

Mr. ANGELL. Mr. Speaker, on May 29, 1939, I called attention to the factual study of the benefit of the Bonneville Dam to the salmon industry on the Columbia River. Since that time I have received a tabulation of the count of fish

life through fishways at Bonneville Dam from May 1938 to April 1939, which count was under the direction of the United States district engineer for the district in which Bonneville is situated. The tabulation is as follows:

Number of fish counted through fishways at Bonneville Dam

Month	Species								
	Chinook salmon	Blueback salmon	Silver salmon	Chum salmon	Trout [1]	Shad	"Scrapfish" [2]	Whitefish	Lamprey [3]
1938									
May [4]	22,371	1,025	-------	-------	6,633	------	39,694	16	7,502
June	8,221	17,811	-------	-------	2,409	39	97,842	46	23,831
July	6,556	53,864	-------	-------	19,493	3,185	167,829	56	130,818
August	34,765	2,097	3,070	-------	29,905	1,502	37,907	315	60,821
September	197,294	235	10,995	-------	47,619	527	21,788	563	4,462
October	2,302	6	972	1,245	2,589	21	8,377	1,281	172
November	263	2	141	799	466	------	632	690	19
December	27	-------	7	73	105	------	--------	155	2
1939									
January	6	-------	3	2	34	------	--------	71	-------
February	12	-------	-------	-------	22	------	-------	-------	-------
March	121	-------	-------	-------	585	------	49	86	7
April	51,410	48	-------	-------	8,174	------	30,137	165	750
Total	323,348	75,088	15,188	2,119	118,034	5,274	404,255	3,444	228,384

[1] Mainly sea-run steelhead trout.
[2] Suckers, chubs, squaw fish, and carp.
[3] In addition to these counted, many passed between the bars of the counting stations.
[4] May 7 to 31 only. Formal counting started May 7.

Hon. Allard Henry Gasque

MEMORIAL ADDRESS
OF
HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD HENRY GASQUE, late a Representative from the State of South Carolina

Mr. HARE. Mr. Speaker, although we lived in different sections of the State, it was my privilege and pleasure to know the Honorable ALLARD H. GASQUE for a number of years before he was elected to represent the Sixth Congressional District of South Carolina in 1922, to which position he was reelected for seven successive terms, he being a candidate for reelection without opposition, after having served in Congress for a period of 16 years, when called by death at the age of 65. In early life our work and interest were quite similar, both of us having taught in the public schools of our native State for a number of years. It was in this connection that I first learned to know Mr. GASQUE and to recognize his ability and character as a young man. We had many things in common, and I feel, therefore, qualified to properly evaluate many of his outstanding virtues as a citizen as well as that of a legislator.

His early training and experience was that of the usual farm youth in his section of the State. The opportunities for education were in a way limited, but this limitation operated in the end as an asset in his life, because he learned to be a close observer, very thorough and painstaking in his work and relationship to his constituents and the public. Following his graduation at the University of South Carolina at the age of 23, he devoted his time and talent to school work in his home county of Florence. At the age of 24 he was elected county superintendent of education, and served continuously in this capacity until he was elected to Congress. His ability and efficiency in office were reflected by his popularity and the confidence reposed in him by the public, for he served in public life without defeat for nearly 40 years, his service being terminated only by his untimely death. His long recognition as a public servant by the people of his State is not only an index to his ability but a tribute to his character and sincerity in the discharge of his duties as a public official.

When I came to Congress in 1925 Mr. GASQUE demonstrated one of the great virtues of his life in offering to give me the value of his experience and observation in legislative work and in expediting the work incident to a new Congressman. I shall ever feel grateful to him for his unselfish and extremely thoughtful interest at that time. However, this was one of the outstanding virtues of his life and no doubt was one of the great contributing factors to his success as a public servant. He was absolutely unselfish and was alweays ready and anxious to render a service of any kind to his fellow man. He was particularly interested and active in promoting the welfare and interests of the people of his congressional district and no opportunity for service ever arose but that he availed himself of it. He was not the spectacular type of Congressmen we sometimes see but one who was always on duty, working for his constituents as well as the people of the entire country. He was a man possessing that other great virtue in the lives of successful public officials known as gratitude. He never forgot a favor rendered nor did he lose an opportunity to reciprocate same whenever afforded. Mr. GASQUE had all of the virtues incident to the life of a great public servant. That is, he was a man of ability, strong character, courageous in his convictions, unselfish in his dealings with fellow men, and absolutely loyal to his friends and the people of his district.

A Suggested American Menu for the White House Dinner to King George and Queen Elizabeth

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

BALTIMORE OYSTERS
(Fort McHenry style)

WHITE HOUSE CHOWDER
(Well burned)
An old recipe dating from 1814

LAKE ERIE TROUT
(À la Commodore Perry)

VERMONT TURKEY
(From Bennington)
Saratoga Chips Bunker Hill Beans

YORKTOWN PUDDING
(Made with Jackson's New Orleans Molasses)

ENGLISH TEA
(Brewed in Boston Harbor)

WELSHERS' GRAPE JUICE
(From Concord Grapes)

A number of these courses disagreed with George III. They might make George VI cough up.

Wake up, the British are coming. (Paul Revere.)
All men are created equal. (Thomas Jefferson.)
Give me liberty or give me death. (Patrick Henry.)
I regret that I have but one life to give for my country. (Nathan Hale.)
Poor as I am, the King of England is not rich enough to buy me. (Commodore John Barry.)

Hon. Allard Henry Gasque

MEMORIAL ADDRESS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD HENRY GASQUE, late a Representative from the State of South Carolina

Mr. FULMER. Mr. Speaker, on the morning of June 17, 1938, at about 1:30, just a few hours after the closing of

the Seventy-fifth Congress, our colleague, the Hon. ALLARD H. GASQUE, of Florence, S. C., passed away.

My friend and colleague, Mr. GASQUE, was born on March 8, 1873, in Marion County, now Florence County, being the eldest son of Wesley and Martha W. (Kirton) Gasque.

He attended the country school, working part time on a farm during the remainder of his young manhood until he was 17 years of age, after which he taught school, and continued to work on the farm until he reached the age of 23 years. He then entered the University of South Carolina, graduating in 1901 with an A. B. degree.

He was elected superintendent of education, Florence County, in 1902, and served continuously for 20 years, resigning that office after being elected to Congress.

Mr. GASQUE has the distinction and honor of having served his State in the lower House of Congress for about 15 years and 9 months. His record as to length of service in the lower House from South Carolina ranks very high.

Our colleague, Mr. GASQUE, was a man of ability and deeply interested in the welfare of the people of his district and State, and especially did he give full service and attention to legislation in the interest of the great masses of the people who at all times really need a conscientious Representative in the Congress of the United States.

Spanish-American War veterans should always cherish his name, in that he made an outstanding record in looking after their interests, having been able to pass in the Seventy-fifth Congress legislation of great importance in the interest of these veterans and their dependents.

Although having been confined to his bed for a number of days prior to the closing of Congress, up until the last he continued to keep in touch with just what was going on in the House, requesting that he be paired for and against legislation which was under consideration, indicating his deep interest in the merits and demerits of these bills as affecting his people.

Our colleague will answer the call of the House no more. He has answered the summons of the highest of all tribunals, and all of his colleagues can testify that he served his State and his country well.

The influence of his upright, unselfish character, his loyalty to his friends, and his devotion to his country will remain, as will his memory, in the hearts of those with whom he served.

As his friend, along with his loved ones, and his many friends back in South Carolina, I mourn his death and extend to his bereaved family my heartfelt sympathy.

His was always a friendly greeting, and with a smile.

'Tis easy enough to be pleasant,
When life flows along like a song;
But the man worth while is the one who will smile
When everything goes dead wrong;
For the test of the heart is trouble,
And it always comes with the years,
But the smile that is worth the praise of the earth
Is the smile that comes through tears.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. E. HAROLD CLUETT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. CLUETT. Mr. Speaker, one of the saddest experiences of a Member of Congress is to note the departure of loyal friends and colleagues from our midst. As day after day and year after year we join in our political deliberations, these men become a part of our lives. We acclaim them when they fight for principles of clean government under our Constitution and assert themselves in the face of bitter opposition, and our respect deepens when we realize that their fight is not for partisan preferment but for the fundamental principles underlying our democratic form of government. Those who watch from a distance fail to realize the intense devotion and day-by-day hard grind of those Members who give of their very best, even life itself, that laws may be enacted which will provide greater stability to our national life and insure those blessings of freedom and independence granted us by the great lawmakers who have gone before. Not only a great personal loss comes to us, but what is of greater moment is the fact that the country itself can ill afford to lose the services of such men.

ROBERT LOW BACON was one of those who looked upon his congressional duties as a public trust. He gave to the Congress all he possessed of his splendid talents accumulated by hard and intelligent application over a period of many years. Taken away in the very prime of life, we who knew him well are confident that wider fields of usefulness awaited him and that his splendid abilities as a legislator had hardly asserted themselves. His accomplishments as a lawyer and soldier, combined with his natural scholarly attainments, made him an ideal legislator. His friendliness and hospitality knew no bounds, and he held his friends because they had confidence in his sterling character and the ideals of good citizenship which he so eloquently exemplified. In all his dealings with his fellow men, and in all his many activities of his all too brief life, he placed service first and his own personal gain and ambition last. Sixteen years of service in the House of Representatives gave him a wide grasp of national affairs, and his opinions were eagerly sought and generously granted. His whole environment had been that of a gentleman and a true American, and his attitude on public matters bore evidence of a training which fitted him for the responsibilities which he so well and graciously assumed. Today, more than ever, men of his type are needed in our public life, and we pray that others will emulate the fine example he has left behind. We who are left to carry on the ideals of good citizenship which BOB BACON so nobly cherished may well say, Well done, good and faithful servant.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. MATTHEW J. MERRITT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. MERRITT. Mr. Speaker, I desire to pay tribute to one of New York's beloved sons, the Honorable JOHN J. BOYLAN, for many years a Representative of the Fifteenth Congressional District.

During his tenure of office he was always sincere, conscientious, and untiring in his efforts. He had the purpose to represent and serve his people. He was the possessor of splendid ability and the most pleasing personality, possessing a most contagious sense of humor. It is no wonder that the people of his district loved him as well as did his colleagues in Congress.

We who have been privileged and honored to know him have suffered a great loss.

Allard Henry Gasque

MEMORIAL ADDRESS
OF
HON. JAMES F. BYRNES
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 29, 1939

On the life, character, and public service of Hon. ALLARD HENRY GASQUE, late a Representative from the State of South Carolina

Mr. BYRNES. Mr. President, ALLARD H. GASQUE represented the Sixth Congressional District for many years in

the House of Representatives. He established friendships with the Members of the House who came to know him as did the people of the district he represented. He did not participate in the debates upon the floor except upon those subjects with which he was familiar by reason of his investigation in committee. In committees where legislation is really drafted he was an earnest worker. Because of his position as chairman of the Pensions Committee, he was particularly active in all legislation affecting veterans of the World War and of the Spanish-American War.

Congressman GASQUE knew the people of his district. He turned aside from the performance of his legislative duties to render personal service to the people who had business with the various departments of the Government. Their faith in him was demonstrated time and again by the large majorities given him in his campaigns for reelection.

He was an efficient legislator and a loyal friend. Those who served with him in the House miss him and will ever cherish his memory.

Under U. S. H. A. Joe Doaks and His Neighbors Are Compelled to Build $21,417 Homes for Others

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. WHITE of Ohio. Mr. Speaker, it is a fixed concept of the New Deal that the private building industry cannot furnish adequate housing facilities within the means of the lowest income groups and of urban slum dwellers. It bases this concept on its belief that the minimum adequate housing which can be so furnished is at a rental of $9 to $12 per room per month—statements of this general nature have been repeatedly made, of which a typical sample may be found in a brief filed by the National Public Housing Conference at the hearings on the United States Housing Act of 1936 before the Senate Committee on Education and Labor, beginning April 20, 1936, pages 135–142. This would amount to from $324 to $432 per year on a three-room establishment, and in view of the fact that under normal budget standards a family should not spend more than one-fifth of its income for rent—section 2 of the United States Housing Act of 1937 establishes the standard that income should not be more than five times the rent except for families with three or more minor dependents, when it may be six times the rent—it would require a $1,620 to $2,260 income to provide housing for themselves on this basis. Now, in 1934, the Housing Division of the Public Works Administration estimated that 17 percent of the families had an income of less than $800 per year. This means that families in this last category should pay only $160 per year rent, which would be only $3.33 per room per month on a four-room establishment. This is less than half of the amount which it is claimed would have to be paid for the cheapest adequate housing that private industry can profitably furnish, and it means either that low-income families must use far more than one-fifth of their budget for rent at the expense of other necessities of life or must be content with substandard dwelling conditions.

The results of this choice may be visualized in the real-property inventory of 1934 made by the Bureau of Foreign and Domestic Commerce, which reported that in 64 cities 2.3 percent of all residential dwellings were unfit to live in, 15.6 were in need of major structural repairs, and 44.4 percent were in need of minor repairs. In the same inventory it was shown that 8 percent of the dwellings had no interior water supply, 17.1 percent had no private indoor water closets, 1 in 4 had no bathing facilities, and approximately one-third provided only coal or wood stoves for cooking. Buildings such as these constitute our slum areas, and the New Deal has steadily claimed that the clearance of these slums and the providing of their inhabitants with adequate housing within their means cannot be achieved without Government participation in the form of loans, subsidies, and Executive direction.

With reservations relative to the truth of the New Deal's premise as to the total inability of the private building industry to furnish adequate low-income housing, it is our purpose to develop the following: First, a brief account of the administration's activities with relation to housing; and, second, an evaluation of those operations with special reference as to whether they have actually been of aid in supplying low-cost housing for the slum dweller, and, even if so, whether the goal has been achieved at reasonable cost to the taxpayer. In so doing, only the direct activities of those Government agencies—in effect, the United States Housing Authority—which loan and grant money for the building of dwellings are to be considered. Less directly related operations which have to do with home-mortgage loans, the insurance of loans for home repairs and renovation as carried on by the Home Owners' Loan Corporation and the Federal Housing Administration will be made the subject of separate memoranda.

EARLY NEW DEAL HOUSING ACTIVITIES

The Roosevelt administration early embarked on experiments in the field of housing. Its first venture was through the Housing Division of the Public Works Administration, this Division being created under section 202 (d) of the National Industrial Recovery Act, June 16, 1933. Its authorization provided for the "construction, reconstruction, alteration, or repair under public regulation or control of low-cost housing and slum-clearance projects." In view of the fact that under the United States Housing Act of 1937—to be described later—the P. W. A. Housing Division was merged with the United States Housing Authority, its exact methods of operation need not concern us here. Suffice it to say that after lending $11,000,000 between June 1933 and March 1934 for limited-dividend projects to be carried through by private agencies, the Housing Division switched to the policy of constructing demonstration projects with the Government furnishing 45 percent of the cost as an outright subsidy plus the payment of service charges in lieu of taxes, the other 55 percent being in the form of loans repayable in 60 years—this division of costs was finally fixed in the George-Healey Act passed in June 1936. Under this policy 51 projects have been constructed and leased, though in a number of them tenants have yet to be selected, this during the 5-year period commencing in March 1934, a period, be it said, far longer than should have been necessary to complete them. Forty-nine of these projects were turned over to the United States Housing Authority—two projects in Puerto Rico were turned over to the Puerto Rico Reconstruction Administration. They are located in 35 cities in 20 States, the District of Columbia, and the Virgin Islands, and contain 21,447 dwelling units and 76,914 rooms. The total cost of these projects is $127,076,671.93, or an average of approximately $5,925 per dwelling unit and $1,652 per room. In one case at Cambridge, Mass., the cost per family dwelling runs as high as $8,503, and at Harlem River Houses, New York, the cost per room is $2,628, including service charges. The average cost, therefore, is far above that allowed in the United States Housing Act as amended which even in cities of over 500,000 limits the cost per unit to $5,000 and per room to $1,250. Of these 49 projects 27 have been leased to local authorities and 22 are being operated by the United States Housing Authority. Table I attached gives pertinent data relative to the individual projects.

RENTS BEYOND SLUM FAMILIES

In this table it will be noted that the average shelter rent to be charged is given for 42 of the 49 projects. Out of these 42, only 10 have rentals which would enable them to be occupied by a family with an income of under $1,000, and in only two are the rentals low enough for that 17 percent of the families (previously referred to) whose incomes are $800 or

less—these calucations are based on a monthly income five times as large as the amount paid for rent. Thus with an income of $1,000 not more than $16.66 should be paid for rent each month, and with an income of $800 not more than $13.33. All told the average family income of the tenants occupying 41 of the projects is $1,245 per year, which is considerably above the limit for any true low-cost housing program—see report of United States Housing Authority, 1938, page 52. As a matter of fact, out of 14,185 families now occupying these projects we find the following:

	Per year
475 families with incomes of up to	$850
3,160 families with incomes of	850–999
7,775 families with incomes of	1,000–1,439
1,400 families with incomes of	1,440–1,599
500 families with incomes of	1,600–1,799
875 families with incomes of	1,800–2,399

Source: United States Housing Authority as quoted by Senator TYDINGS (Democrat) of Maryland, in CONGRESSIONAL RECORD, March 8, 1939, p. 2427.

Thus, in spite of an amortization period of 60 years—or double the normal amortization period—and a 45-percent write-off of original production costs—we find that only 3 percent of 14,185 families in the P. W. A. houses have incomes of less than $850 and only 25 percent have incomes of less than $1,000. And this takes into consideration several low-rental areas in the South and in the Virgin Islands. In short, no claim can be made that the P. W. A. housing program has supplied true low-cost housing or has afforded any substantial measure of relief to the slum dweller.

Before taking up consideration of the United States Housing Authority, which superseded the P. W. A. Housing Division, brief attention should be given to another branch of the housing activities of the administration. These were centered in the Resettlement Administration, once an independent agency created by Executive Order 7027 of April 30, 1935, but later (January 1, 1937) transferred to the Department of Agriculture where its name was changed to the Farm Security Administration. The housing program of this organization was along the two following lines:

1. Suburban resettlement: This embraced the purchase of land and the construction of three "Greenbelt" communities in suburban areas near Washington, D. C.; Cincinnati, Ohio; and Milwaukee, Wis. A fourth project at Bound Brook, N. J., was contemplated but was halted by a decision of the Circuit Court of Appeals of the District of Columbia—see Senate Document No. 242, Seventy-fourth Congress, May 18, 1936—which declared that the Emergency Relief Appropriation Act of 1935, under which this activity was financed, was unconstitutional chiefly as an invasion of State rights and unlawful delegation of congressional authority. This put an end to experiments of this sort, but not before $30,000,000 had been spent in connection with the three projects just cited at an average cost of about $8,500 per dwelling unit. This put them well out of reach of the low-income families, which these projects were supposedly designed to help.

2. Rural resettlement: The rural-resettlement plan was of much the same character as suburban resettlement, both in conception and execution, the idea being to move farmers and others from submarginal land and settle them on profitable land. There have been some 130 projects of this character involving an over-all expenditure of about $115,000,000. Exorbitant sums have been spent on some of these projects, the cost per dwelling unit at Sioux Falls, S. Dak., for example, being in the neighborhood of $20,000, and in the case of the New Jersey homesteads project nearly $14,700. The average for all the projects is about $6,800, which is well above the low-income range. This rural-resettlement activity is for the moment in abeyance, but may be revived again whenever the administration feels that the opportunity is favorable.

THE UNITED STATES HOUSING AUTHORITY

In spite of the obvious failure of the objectives of the P. W. A. Housing Division, the administration, far from giving up its rosy visions of carrying through a low-cost housing and slum-clearance program, inaugurated its most ambitious attempt along that line through the medium of the United States Housing Act of 1937. This act, approved September 1 of that year (c. 896, 50 Stat. 888; 42 U. S. C., Supp. III, 1401–1430), was amended June 21, 1938 (52 Stat. 820), and as amended supplies the authority for the administration's housing program. Its salient features are as follows:

1. General administration (secs. 3 and 4): It created in the Department of the Interior a United States Housing Authority with capital stock of $1,000,000 under an Administrator appointed by the President for 5 years at a salary of $10,000 per year, subject to confirmation by the Senate. Employees of the Authority receiving more than $1,980 per year are not required to have civil-service status, though they come under the provisions of the Classification Act of 1933.

2. Loans (sec. 9): It empowers the Authority to loan up to $800,000,000 to those local public housing agencies established by State law. As of December 31, 1938, 33 States had passed enabling legislation for the creation of such authorities, and there were a total of 221 such authorities in existence. Each individual loan constitutes 90 percent of the cost of the local undertaking, the other 10 percent being furnished by the local public housing agency. These United States Housing Authority loans carry an annual interest rate one-half of 1 percent greater than the going Federal rate—this means the interest rate on the latest Government bond issue having a maturity of 10 years or more. This interest rate is now about 2½ percent, so the total interest would be 3 percent—at the time the loan is made, and they must be paid back, both as to principal and interest, over a period of 60 years. It should be noted that under a bill (S. 591) offered by Senator WAGNER, Democrat, of New York, on January 12, 1939, the loaning power of the U. S. H. A. would be raised to $1,600,000,000.

3. Subsidies: Besides loans, the United States Housing Authority, under the terms of the act, furnishes outright grants to local public housing agencies, these grants to be used for the purpose of keeping down the rents in the projects in question. These grants may be in the two following forms:

(A) Annual contributions (sec. 10): The U. S. H. A. may give each year to each local public housing agency for the benefit of their projects a sum equivalent to the annual yield at the going Federal rate of interest plus 1 percent upon the development cost of the project to which the contribution is allocated—at the present Federal rate of interest this would make the sums so paid approximately 3½ percent of the development cost. These annual contributions may be made for 60 years, though after the first 10 years and each 5 years thereafter each contribution contract is presumably to be reviewed and then reduced if economic conditions warrant it. Furthermore, the payment of annual contributions is contingent on the carrying out of three obligations on the part of the local public housing agency. These are: (1) The local agency must contribute in the form of cash or tax remissions or exemptions an amount equal to at least 20 percent of the United States Housing Authority contributions—that is to say, for each $100 of U. S. H. A. contributions the local agency must put up $20; (2) the annual contributions must be used first to apply toward any payment of interest or principal on any loans due the U. S. H. A. from the local agency; (3) all housing projects must include the elimination or improvement of a number of unsafe or insanitary dwellings substantially equal to the number of new dwellings to be erected. Under the present act, contributions may total $28,000,000 per year, but under the bill (S. 591) already referred to the amount of contributions which the Authority could make in any one year would be raised to $45,000,000, in addition to the contracts already authorized by the Authority. As these may run to $28,000,000, annual contributions, if the new bill is passed, may reach $73,000,000.

(B) Capital grants (sec. 11): The use of the capital grant form of subsidy apparently has not been found feasible and its use is not contemplated—see House Hearings on Interior Department appropriation bill for 1940, page 121. However, as the Housing Act of 1937 permits its use, and through some change in U. S. H. A. policy it may be employed in the future, the mechanism by which it operates should be briefly ex-

plained. Provided that the local Housing Authority makes a grant of 20 percent of the cost of a project, the U. S. H. A. can make a capital grant of 25 percent and an additional grant of 15 percent from relief funds appropriated by Congress. Thus the maximum Federal grant would be 40 percent, which with the local grant of 20 percent would make 60 percent. The other 40 percent would be financed by U. S. H. A. loans at one-half of 1 percent more than the going Federal rate of interest, payable as to principal and interest over 60 years. Capital grants were limited by section 11 (d) of the act to $10,000,000 a year for the years 1938, 1939, and 1940.

4. Other salient provisions: Other provisions of the act which should be carefully noted are:

(a) Section 2 (2) in which the dwellings constructed under the terms of the act shall be available only to families whose incomes are not more than five times the rental—including heat, light, water, and cooking fuel—except for families with three or more minor dependents the ratio may be six to one.

(b) Section 14 (5) in which the U. S. H. A. cannot loan or grant funds for any project which will cost more than $4,000 per unit, or $1,000 per room, except in cities of 500,000 or over where the cost may be $5,000 per unit, or $1,250 per room. This does not include land, demolition, and nondwelling facilities. In no case shall the average construction cost be greater than that of privately built dwellings constructed under similar labor standards.

(c) Section 16, which seeks to protect labor standards through the requirement of prevailing wages, reports to the Labor Department by contractors as to number of men employed, rates of pay, and so forth.

UNITED STATES HOUSING AUTHORITY OPERATIONS UNDER THE ACT

Administrative: Since the passage of the act, the Authority had assembled by December 31, 1938, a staff of 1,638 persons. Those with salaries of $1,980 or less, and hence with civil-service status comprise 897; while 741 persons, or 45 percent of the entire personnel, all with salaries of more than $1,980 per year, were not drawn from the civil-service rolls though paid in accordance with the Classification Act of 1923. This means that they may have received their appointments through political endorsement—a common defect of nearly all New Deal agencies and one which should be rectified. The administrative expenses amount to about $5,000,000 per year. (See House hearings on Interior Department appropriation bill for 1940, pp. 147–151 and 162–191.)

Loans: The extent of the lending operations of the U. S. H. A. as of December 31, 1938, according to evidence presented in the House hearings on the Interior Department appropriation bill for 1940, page 132, is as follows:

1. Total funds requested to date from 183 cities and 7 counties, including the District of Columbia and Hawaii, $916,738,267.

2. Total amount of earmarkings outstanding and loan contracts executed and approved for 151 cities and 4 counties in 29 States, the District of Columbia, Hawaii, and Puerto Rico, $649,789,000.

3. Total earmarkings outstanding for 120 cities and 3 counties in 27 States, the District of Columbia, Hawaii, and Puerto Rico, $328,803,000.

4. Total amounts of loan contracts executed or approved for 73 cities and 2 counties in 22 States, the District of Columbia, and Hawaii, $320,986,000.

In other words, the U. S. H. A. has received requests for loans amounting to nearly $917,000,000, of which about $650,000,000 has been earmarked; and of this latter sum, $320,986,000 has actually been pledged as loans to local public housing agencies to cover 90 percent of the cost of 140 projects, none of which apparently are as yet open for occupancy, though several are near completion. The other 10 percent has been raised, as the Housing Act directs, by the local public housing agencies, and it amounts to $39,286,466. This would make the total cost of these projects $360,272,466—this figure is the sum of $320,986,000 and $39,286,466. It is $3,577,125 more than the estimated total cost of these 140 projects, which in the annual report of the United States Housing Authority for 1938 (p. 16) is given as $356,695,341. These United States Housing Authority loans, it will be remembered, are to be amortized both as to principal and 3-percent interest over a period of 60 years. Table II attached gives the amount of the U. S. H. A. loan for each project, the interest charges on these loans over 60 years, the total amortization cost, and the annual carrying charges. This table discloses the interesting fact that on the combined loans the interest charges alone over the 60-year period are $54,000,000 greater than the principal of these loans—principal, $320,986,000; interest over 60 years, $374,904,362—so that the local housing agencies will have to pay back $695,890,362 for $320,986,000 at an annual carrying charge of $11,598,173. In other words, the local housing agencies have to pay back approximately $2.17 for each dollar borrowed. Applying this same formula to the entire $800,000,000 which the U. S. H. A. may lend to local housing agencies, we find that the latter will have to pay back $1,736,000,000—or over twice the amount borrowed. This sum, be it said, is in addition to the $88,000,000 representing their 10-percent share plus interest which the local agencies will have to pay back as a result of their local borrowing. In point of fact, the money used to pay back principal and interest on the U. S. H. A. loans will be derived almost entirely from the annual contributions which the U. S. H. A. gives to the local public housing agencies, and these may now be briefly considered.

Contributions: As indicated previously, two forms of subsidy have been authorized under the Housing Act, these being capital grants and annual contributions. The latter method is the only one which has been and is likely to continue to be used. As of December 31, 1938, the U. S. H. A. has contracted to supply $13,864,364 annually to the 140 projects for which loan contracts have been executed and approved.

The local public housing agencies which are required to put up a sum at least equal to 20 percent of the Federal contribution have far exceeded this quota with $9,141,507—or approximately 65 percent of the amount furnished by the U. S. H. A. Table III attached shows the estimated development cost of the projects of each public housing agency by States, the amount of the Federal and local annual payments (based on 3½ percent of the development cost) and what these would amount to at the end of 60 years, provided they are not scaled down at the end of 10 years or any 5 years thereafter. The chief point to note is that by the end of the period the $13,864,364 of annual U. S. H. A. payments will have reached the tremendous total of $831,861,840 and the $9,141,507 of local payments will amount to $548,490,420—making a grand total of $1,380,352,260. The $13,864,364 now being contributed by the U. S. H. A. in annual payments, it should be remembered, is less than half of the $28,000,000 which can be furnished each year under the act and efforts are now being made to raise the total of such payments $45,000,000 each year, which, with the $28,000,000 available to be loaned under existing contracts, would call for total Federal outlays over 60 years of $4,380,000,000 with large local contributions in addition.

There is a certain offset to this situation, however, as explained by Senator WAGNER in a speech before the Senate on March 16, 1939 (CONGRESSIONAL RECORD, p. 2826).

In order to make loans to local housing agencies, the U. S. H. A. sells its obligations to the public. The rate of interest which it is at present obligated to pay is approximately 1⅜ percent. However, the interest which the local housing agencies have to pay to the U. S. H. A. on loans is 3 percent, and consequently the U. S. H. A. makes a profit on these loans represented by the spread between the annual debt service paid by the local housing agency to the U. S. H. A. and the debt service on the money borrowed by the U. S. H. A. for housing loans. As can readily be seen this spread is now 1⅝ percent.

This profit can be used as an offset against the $28,000,000 in annual contributions authorized under the present act. Here is the way Senator WAGNER explains it:

The present program of the United States Housing Authority involves loans of $800,000,000 for slum clearance and low-rent housing. As I have pointed out, these loans are repayable in full with

interest, and on the basis of the present rate at which the U. S. H. A. is borrowing and lending money, they will involve an annual profit to the Federal Government of about $9,240,000. As against this, the present program calls for maximum annual contributions by the United States Housing Authority of not more than $28,000,000. Subtracting the annual profit on the loans from the maximum annual subsidies, we arrive at an aggregate net cost of about $18,760,000 per year. Note this figure—an aggregate net cost to the Federal Government of about $18,760,000 per year for the present slum clearance and low-rent housing program. (CONGRESSIONAL RECORD, March 16, 1939, p. 2826.)

Now, of course, no one knows how long the U. S. H. A. will be able to borrow at 1⅜ percent, nor does Senator WAGNER, as he himself admits. But assuming that the present situation continues to exist and accepting Senator WAGNER's figures it would mean that instead of paying out $1,680,000,000 in subsidies, $28,000,000 times 60, over 60 years, the U. S. H. A. would pay out $1,125,600,000, $18,760,000 times 60, over that period.

Federal loans on the 140 projects considered in the report reached a total of $320,986,000. It is assumed that the U. S. H. A. paid 1.375 percent interest per year on this sum, or at least the greater part of it, or approximately $4,413,557. However, the local housing agencies have to pay 3 percent interest to the U. S. H. A. on this same amount, $320,986,000, or $9,629,580. The profit to the U. S. H. A. will be $5,216,023. This sum should be subtracted from the annual contributions of the U. S. H. A., so that instead of amounting to $13,864,364, these contributions amount to a net total of $8,648,341. Over a period of 60 years the sum total would be $518,900,460, to which should be added $9,141,507 in local subsidies for each year, or $548,490,420.

APPROXIMATELY $3,000 ADDED PER $1,000 OF ORIGINAL COST

This would make a grand total of $1,067,390,880 in Federal and local subsidies over the 60-year period, which would be about 300 percent greater than the original cost of these projects. In other words the taxpayers of the country are being asked to contribute over the next 60 years approximately $3,000 in subsidies for every $1,000 worth of dwellings constructed.

CONSTRUCTION COSTS ADMITTED

This brings us now to a more detailed analysis of construction costs on the 140 projects for which contracts have been approved and executed. It will be remembered that the total estimated cost of these is $356,695,341. Table IV, attached, gives a break-down of these total costs by dwelling units. It will be observed on consulting this table that the average cost of dwelling facilities per unit ranges from a low of $2,353, project No. 2, Austin, Tex., to a high of $4,542, project No. 1, Detroit, Mich. The average is in the neighborhood of $3,500 and all in consequence fulfill the requirement of the act, which, as will be remembered, sets a limit of $4,000 per unit in localities below 500,000 population and $5,000 per unit in cities of 500,000 or more.

CONSTRUCTION COSTS OMITTED

However, these figures cover only the net cost of construction of the actual dwellings, plus a small amount for equipment, architects, and overhead. When the cost of nondwelling facilities is added, as it should be, we find that the costs per unit range from a low of $2,938, project No. 1, San Antonio, Tex., to $6,330, project No. 2, New York City, with an average of approximately $4,801 per unit. Even this does not include the cost of demolition of slum sites, which must be performed under the act, nor of the land, to say nothing of the subsequent expense or annual contributions which add $3,000 for every $1,000 of original cost.

MORE THAN TWICE VALUE OF UNITED STATES HOME

If the above are included, the average cost of the 64,451 dwelling units in the 140 projects is $5,534, or an average of $1,351 for the 264,000 rooms in these projects. These averages to be sure are less by $391 and $301, respectively, than the average dwelling and room cost of the P. W. A. housing division projects. However, in view of the fact that the average cost of the average American home today is $2,282, according to median figures from the United States census of 1930, it means that the families occupying the U. S. H. A. financed projects will reside in dwellings costing on an average $3,252 more to construct than the average house occupied by the average American family. Obviously they cannot do so except for the reduced rent achieved through contributions given by the American taxpayer.

Rentals: While as previously stated, none of the U. S. H. A. projects has yet been opened for occupancy, estimated average monthly rentals have been set for the 140 projects in question. These cover only the shelter rent, which means that no utilities such as heat, light, water, and cooking fuel are included. They appear in table V attached, and it will be noted that they range from a low of $1.75 per room and $7.25 per four-room dwelling per month in certain of the Texas projects to $5 per room and $20.50 per dwelling per month in projects in New York City, the average being $3.55 per room and $14.80 per four-room dwelling per month. These, it must be remembered, are only estimated rentals, although the U. S. H. A. optimistically declares—see table V attached—that it is anticipated that actual rentals will be substantially lower, often by as much as 10 to 15 percent. Furthermore, this is shelter rent only, and to it should be added utilities charges, which in 42 P. W. A. Housing Division projects—now under United States Housing Authority supervision—average $1.73 per room per month and $6.11 per dwelling unit—a table on page 51 of the U. S. H. A. Annual Report for 1938 gives the shelter rent on these projects as $5.51 per room per month and $19.47 per dwelling unit per month, but with the addition of utilities the average rent per room per month is $7.24 and per dwelling unit $25.58. We can therefore assume that the cost of utilities averages $1.73 per room per month and $6.11 per dwelling unit. Using these as a base—for there is no reason to suppose that the charges for utilities in the U. S. H. A. projects will be materially lower than in the former P. W. A. projects, we find that the gross rental per room per month in the cheapest projects in Texas would be $2.90 and per dwelling unit $11.02 and $7.09 per room per month and $27.56 per dwelling unit in the highest-cost projects in New York City. These figures are based on a utility charge of $1.15 per room per month and $3.77 per dwelling unit on the Texas P. W. A. projects and $2.09 per room per month and $7.06 per dwelling unit in the New York City P. W. A. projects.

MISSES TARGET OF SLUM FAMILIES

The average rental would be $5.28 per room per month and $20.91 per dwelling unit, and under the formula that income would be five to six times the rental charged, the family income necessary to occupy the cheapest projects—Texas—should be $661.20 to $793.44 per year, and to occupy the New York projects the family income should be from $1,653.60 to $1,984.32 per year.

The average income would have to be $1,254.60 to $1,505.52 per year. Nevertheless, the U. S. H. A. has fitted the Texas projects to an income range of $450 to $549 per year and the New York projects to an income range of $1,050 to $1,149 per year. They will, as of the present, accept no one with an income of over $1,149, which means, in effect, that the tenants in the Texas projects of the U. S. H. A. will have to pay from 24 to 29 percent of their income for rent and the tenants in the New York projects will have to pay from 28 to 31 percent of their incomes for gross rent—the U. S. H. A. rent and income scale appears on page 6 of its Annual Report for 1938, and is as follows: Average monthly shelter rent per dwelling $8–$9.99, income range $450–$549; average monthly shelter rent per dwelling $10–$11.99, income range $550–$649; average monthly shelter rent per dwelling $12–$13.99, income range $650–$749; average monthly shelter rent per dwelling $14–$15.99, income range $750–$849; average monthly shelter rent per dwelling $16–$17.99, income range $850–$949; average monthly shelter rent per dwelling $18–$19.99, income range $950–$1,049; average monthly shelter rent per dwelling $20–$21, income range $1,050–$1,140. It should be noted that even these rentals, though not including utilities, represent more than one-fifth of the income ranges assigned to them. In other words, the gross rentals in the

U. S. H. A. projects are in no way adapted to the lowest income groups and can be met by them only at the cost of other necessities of life.

TAXPAYERS PAY $215.11 PER YEAR PER FAMILY

And it should be remembered that they are as low as they are only by virtue of the annual contributions furnished by the U. S. H. A. and the local public housing agencies. We have already discussed the question of annual contributions, but it should be pointed out once more that for 140 projects the U. S. H. A. is now furnishing grants of $13,864,364 in addition to local contributions of $9,141,507. This would make the Federal grant alone approximately $99,031 per project per year and $215.11 per dwelling per year. In other words, on the basis of 140 projects for which contracts have been approved and executed, it will apparently cost the American public $215.11 per year to maintain the average family in a U. S. H. A. dwelling, in addition to which the local housing agencies will contribute a further $141.83 per dwelling per year in the form of cash, tax exemptions, or what not. As an editorial in the Washington Post of May 5, 1939, puts it:

> The result is to magnify housing benefits to a relatively small number of families out of all proportion to other forms of public aid and relief. The U. S. H. A. recently estimated that the "economic rent" for an average dwelling in a project it is aiding in Louisville would amount to $42 per month. Federal and local subsidies will reduce this average rental to $16. In effect, tenants of this project will obtain $26 per month rent subsidy from the public purse.

THIS IS ONLY THE BEGINNING

President Roosevelt has declared that "the drive must go forward until every American family has a decent home."—U. S. H. A. release of August 3, 1938. Senator WAGNER (Democrat), of New York, the sponsor of this housing legislation, in a radio speech of October 13, 1938, stated that "this rehousing campaign has only been begun," and because the money so far appropriated "will barely scratch the surface" the program "must and will be expanded." These are theoretically laudable sentiments, and if a truly well-housed nation can be achieved under a realistic program at a reasonable cost it should command the support of all.

CAN UNITED STATES AFFORD $4,000,000,000 PER YEAR?

But consider for a moment the logical conclusion of a program which avowedly has for its goal the housing of low-income families at a cost of $356.94 per year per family, this being the sum of the $215.11 per year in Federal and $141.83 in local subsidies—the Administrator of the U. S. H. A., in a letter to the Washington Post published May 14, 1939, advances the claim that the average U. S. H. A. gross annual contribution is only $158 per family rehoused on the 140 projects. From this he subtracts the interest profit on the U. S. H. A. loans—that is, it borrows the money at 1⅞ percent interest and loans it to local public housing agencies at 3 percent interest—which, according to him, makes the net annual contribution $115.50 per family rehoused. As there are 64,451 dwellings in these projects the gross contribution on this basis should be $10,183,258 and the net contribution $7,444,090.50. However, the annual Federal contribution, according to U. S. H. A. figures, is $13,864,364, which is an average of $215.11 per year for each of the 64,451 dwelling units. The Housing Act, it should be noted, does not define a "low-income family" in terms of any specific range of income, but simply as "families in the lowest income groups and who cannot afford to pay enough to cause private enterprise in their locality or metropolitan area to build an adequate supply of decent, safe, and sanitary dwellings" (sec. 2 (2)).

Under these vague standards the United States Housing Administrator can in effect set his own limits as to what constitutes low income under the terminology of the act, and as we have seen in the case of the first 140 U. S. H. A. projects, he has set the upper income limit for the time being at $1,149 per year. Now, we do not know just how many families in urban communities, where the U. S. H. A. projects are and will be located, have incomes of less than $1,149 per year. We are informed, however, by the National Resources Committee—Consumer Incomes in the United States, published August 1938—that there are 16,496,448 families living in urban communities and of these approximately 4,000,000 families have incomes of $780 per year or less, and about 12,000,000 incomes of $1,450 per year or less. Practically all the families in the first group and a very large proportion of the second would be entitled to U. S. H. A. benefits not only on the score of income but because they live in dwellings "of faulty arrangement and design" or are regarded as too crowded or are inadequately lighted and unventilated or do not have a private bath for each family—U. S. H. A. press release, H. A. 52, March 9, 1938—which charges can be brought against many dwellings even in relatively expensive neighborhoods. If the U. S. H. A. extends the benefits of its housing to all the families with incomes of $780 per year or less in accordance with the expressed intent of President Roosevelt and other proponents of the act, and does so at combined Federal and local subsidies of $356.94 per family as at present it will cost the American public $1,427,760,000 per year, or nearly $86,000,000,000 for 60 years. If we assume that these benefits are to be extended to all families with incomes of $1,450 per year or less—only $300 per year more than the present artificially fixed limits—we would have approximately 12,000,000 families housed in U. S. H. A. projects at a total subsidy cost of $4,283,280,000 per year, or the astronomical total of over $256,000,000,000 for 60 years.

Nor would the process necessarily stop here. Naturally the advantages of occupying a dwelling on which the Government pays part of the rent are such that pressure will continually be brought to bear to extend these benefits. Pressure groups will arise to pit their voting strength in favor of bigger and better projects with bigger and better subsidies. It is easy to visualize a situation wherein nearly half of all the families in the country are housed in subsidy-supported projects, part of the rent of which is paid by the American taxpayer.

DRIVE FOR EXPANSION ALREADY UNDER WAY

And lest this should seem too fantastic, let it be noted that clamors for an extension of the program are already being made. We have already called attention to the bill (S. 591) introduced on January 13, 1939, by Senator WAGNER, Democrat, of New York, under which the lending power of the U. S. H. A. will be doubled and the annual contributions will be increased to $45,000,000 in addition to contracts already made, which in effect would permit annual contributions of $73,000,000. If this passes, no doubt requests will soon be forthcoming for still larger lending powers and still larger subsidies in a never-ending cycle.

SUMMARY

The following are the chief points of attack which may be leveled at the United States Housing Act of 1937 and amendments of June 21, 1938, and against the United States Housing Authority created under its provisions.

1. Another bureaucracy has been created nearly half of whose employees, whatever their competence, are outside of civil service and hence may have been selected primarily through political considerations. This number will undoubtedly show a considerable increase, if the U. S. H. A.'s lending and subsidy operations are expanded.

2. The U. S. H. A. loans will constitute a tremendous burden on the local housing agencies to pay back as to principal and interest even though spread over a period of 60 years. Loans of $320,986,000 so far made will require $374,904,362 in interest charges alone, making a total of $695,890,362 over that period and annual carrying charges of $11,598,173. This is approximately $2.17 for each dollar borrowed, and if we apply this formula to the entire $800,000,000 which the U. S. H. A. is empowered to lend, it will place an obligation on the local agencies of $1,736,000,000 to be paid back over a 60-year period—this in addition to $88,000,000 plus interest, which represents the 10 percent which must be raised locally. If the lending power of the U. S. H. A. is doubled, as it would be if Senator WAGNER'S bill is passed, the amount which must be paid back in principal and interest will be $3,472,000,000 in 60 years—again in addition to sums raised locally. This burden would be assumed by the 221 local public-housing agencies created as of December 31, 1938, and presumably loans will not be made to them unless there

is reasonable assurance that they will carry out their part of the contract. One wonders, however, in the light of past experience with relation to Federal loans in other fields, such as relief, for example, whether this debt may not be reduced and the taxpayer left to foot at least part of the bill.

3. The U. S. H. A. projects, according to estimate, are not cheaper to construct than similar dwellings put up by private industry. It is true that the 64,451 dwellings embraced in the 140 projects, on which contracts have been executed, fall within the limits of $4,000 per dwelling and $1,000 per room in localities of less than 500,000 population, and $5,000 per dwelling and $1,250 per room in centers of 500,000 or more. But the average of $4,507 claimed by the Administrator does not include demolition, site improvements, construction for gas, electricity, and water, and so forth, which, if included would bring the average total original cost of these projects to $5,534 per dwelling and $1,352 per room. This is $3,252 more than the $2,282 average values of existing homes in the United States. In other words, the U. S. H. A. must depend on ample grants to bring the level of rents anywhere near within reach of the low-income families it is designed to serve.

Here we come squarely face to face with the question of the Government compelling the average citizen to pay for the home of a public charge on a basis that is more than twice as expensive—for original construction costs alone—as the one he occupies after the years of family toil, thrift, and sacrifice which have been necessary for him to obtain his own home.

HIDDEN COSTS ARE BARED

Then, too, all the way through, it is necessary to remember that the original cost, or the construction cost, only tells part of the story. Those figures do not include subsequent charges. Table III strips the veil off the hidden costs. It shows Congress and the people of the United States the complete costs of the projects in various communities; the costs which have been covered up in a most complicated formula; the costs by which the American people may gage the disproportionate penalty that is imposed upon them by the existing plan and by which they can judge the real worth of the entire undertaking.

AVERAGE OF $21,417 PER FAMILY UNIT

Here we find that the public expenditure for U. S. H. A. dwellings in the final analysis amounts to $12,093 at Austin, Tex.; $21,855 at Detroit, Mich.; and an average of $21,417.08.

In order that the people of the Nation in all walks of life—the laboring man, the farmer, the housewife, the clerk, the merchant—may know what this proposition is doing to them, it is no more than reasonable that they should be informed as to the full costs and be able to compare them again with $2,282 listed in the United States Census Report of 1930 as the average value of existing homes in the country—the homes in which they themselves reside.

Clean, healthy, comfortable, wholesome shelter can be provided for a slum family at more modest cost. This would mean rents within the reach of slum families and also that many more dwellings could be provided.

4. The estimated rentals charged in U. S. H. A. projects average $3.55 per room and $14.80 per dwelling per month, ranging from a low of $1.75 per room and $7.25 per dwelling per month in Texas to $5 per room and $20.50 per dwelling per month in New York. These, however, do not include any utilities such as light, cooking fuel, and so forth. The average charge for these is $1.73 per room and $6.11 per dwelling per month, which would raise the gross rent to $5.28 per room and $20.91 per dwelling per month. This means, in effect, that families occupying these dwellings should have an average income of $1,254 to $1,505 per year, according to the income formula in the housing act prescribing an income 5 to 6 times the rental. Hence, the 17 percent of the people with incomes of $800 or less per year must pay 25 to 30 percent of their income for rent, at the expense of other necessities. As it is, an upper-income limit of $1,149 has been set for families occupying U. S. H. A. projects.

5. The rental charges just described can only be maintained through subsidies which average $215.11 per family per year from the U. S. H. A. and $141.83 from the local housing agencies, or a total of $356.94. This means that annual contributions on the 140 U. S. H. A. projects under contract amount to $13,864,364 from the U. S. H. A. and $9,141,507 from local sources. These contributions may continue for 60 years; at the end of which time they will amount to $831,861,840 and $548,490,420, esrpectively, or a grand total of approximately $1,380,000,000. This is a large charge on the taxpayer even over so long a period, but it is just the beginning. For if the administration intends to provide housing for all low-income families, and apparently they do, there are about 4,000,000 families with incomes of $780 or less, this being $369 under the upper limit now set for families in U. S. H. A. projects. At $356.94 per family per year it would cost in subsidies alone $1,427,760,000. This would come directly or indirectly from the public purse each year and over 60 years would reach the astronomical total of about $86,000,000,000. To be sure, the limit of U. S. H. A. contributions which can be made in any one year is $28,000,000, but a new bill (S. 591) sponsored by Senator WAGNER would raise this total to $73,000,000 and as the advantages of living in homes wherein the rent is partly paid by the Government becomes better known, a new pressure group will be created demanding ever larger loans and grants.

Cutting through all the complicated verbiage, we find that the application of the U. S. H. A. subsidy formula means that the Federal taxpayer actually puts up $3,000,000 for each $1,000,000 of construction.

Despite these tremendous subsidies, the money spent on construction has been so excessive that the rents on these projects are not within the reach of the incomes of slum dwellers.

While all responsive and responsible citizens surely are willing to enthusiastically support any practical and reasonable program of slum clearance these results of the present law are manifestly unfair, because:

1. The rents are too high for slum dwellers even after subsidies.

2. The Federal Government is required to contribute $3,000,000 for every $1,000,000 of construction.

3. Under the present high costs, the program already undertaken barely scratches the surface and indicates the cost of meeting complete demands would be far beyond the most rosy visions of the resources of the Government.

4. The average citizen who lives in a $2,282 home obtained at his own expense is compelled under this program to supply $5,534 homes for others, with additional subsequent costs bringing the total to an average of $21,417 in the final analysis.

TABLE II.—*U. S. Housing Authority projects: Amount of loan, interest charge, total amortization cost, and annual payments*—Continued

State and project	Amount of loan	Interest charge	Total amortization cost	Annual payments

[1] Source: CONGRESSIONAL RECORD, Mar. 8, 1939, pp. 2434–2438.

[2] Computed by subtracting the "Amount of the loan" from the "Total amortization cost."

[3] Computed by multiplying the "Amount of the loan" by 2.1679773 (the annuity of 1 by 60).

[4] Computed by multiplying the "Amount of loan" by 0.036132955 (the annuity of $1 at 3 percent for 60 years). This assumes repayment in 60 equal installments.

[1] See definition beginning on p. 1.

[2] Includes cost of land to be purchased and value of land to be donated, excluding cost or value of existing slum buildings to be torn down and land for future development; expenses of acquiring such land; and the local authority's administrative, carrying, and contingency expenses applicable to these land items.

[3] Includes construction cost of site improvements and nondwelling buildings, spaces, and equipment; preoccupancy charges; and the local authority's architectural, administrative, carrying, and contingency expenses applicable to these nondwelling facility items.

[4] Includes the cost of slum buildings to be torn down and properly chargeable to clearing old slums and not to new housing; expenses of acquiring slum buildings; demolition and clearing; and the local authority's administrative, carrying, and contingency expenses applicable to these slum-elimination items.

[5] Does not include any cost for off-site elimination since such cost does not form part of project development cost. For number of dwelling units eliminated on-site and off-site see table VII, Annual Report of the U. S. Housing Authority, 1938.

[6] Includes cost of land to be purchased and value of land to be donated, which is to be used for future development; expenses of acquiring such land; and the local authority's administrative, carrying, and contingency expenses applicable to such land.

TABLE V.—*Preliminary estimates of average monthly shelter rents per room and per dwelling unit for U. S. Housing Authority aided projects covered by approved loan contracts (as of Dec. 31, 1938)*

[These rents are preliminary estimates made by the U. S. Housing Authority at the time of loan contract, as an assurance that projects will be within reach of low-income families living in substandard housing in each particular community. They are conservative estimates, subject to revision by the local authorities. It is anticipated actual rents will be substantially lower, often by as much as 10 to 15 percent]

German Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 8 (legislative day of Monday, June 5), 1939

RADIO ADDRESS BY HON. ROBERT F. WAGNER, OF NEW YORK, JUNE 7, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address on the subject German Refugee Children, delivered by the senior Senator from New York [Mr. WAGNER], over the National Broadcasting System network on June 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends: Somewhere on the high seas tonight, between Habana, Cuba, and Hamburg, Germany, there steams an ocean liner with a tragic cargo. The 900 men, women, and children aboard, seeking escape from the terrors of the Old World, have prayed in vain for home and sanctuary in the New World overseas.

This tragic story has been multiplied in varying patterns over and over again in recent months. The miracles of modern communication have brought home to us, here in the security of our own free land, these nightmare pictures of human misery and human frustration. From time to time, we learn of other bands of refugees, drifting in barges down the Danube, sailing the seven seas, wandering in mountain passes, braving frontier barriers and fortifications—striving, fighting, dying to win freedom and peace beyond the borders of the Third Reich. One by one, these incidents impress themselves on our consciousness, until they disappear from the public prints, and a merciful curtain of obscurity is drawn over their ultimate outcome.

These homeless wanderers on the face of the earth are writing in the pages of history the unforgettable story of an exodus unparalleled in the life of civilized man. The conditions inside Germany which call forth this exodus have made an unshakable impression on the conscience of the world. The most pitiful and helpless victims of these conditions are the children of tender years—treated as social and economic outcasts, denied public education or the use of parks and playgrounds, insulted and beaten on the streets, their lives riddled with fear and insecurity.

The parents of thousands of these unfortunate waifs have been driven to death or lost forever behind the walls of concentration camps. Their ranks are made up of Jewish children, Catholic and Protestant children classified as "non-Aryan," and children of parents with political beliefs out of harmony with those of the Nazi regime.

The events of last November made utterly imperative the rescue of these children by the outside world. Within the last 6 months England has admitted 5,000 and is continuing to admit others as arrangements are made for them. Little Holland has admitted 1,500. Other countries have received and cared for many more who have made their way unattended in terror-stricken flight.

The suffering of these children and the example of other nations stimulated in our own country the sympathy and helpful understanding that have always characterized the American people. Long before there was any plan or thought of legislation to aid these children, 1,400 American families in 46 States had expressed to our religious and welfare organizations, without solicitation of any kind, their willingness to take into their homes these victims of religious and political persecution. When Congress convened last January, 50 of our outstanding Catholic and Protestant clergymen presented at the White House a moving plea that the American Nation give refuge to some of these children "as a token of our sympathy and as a symbol of our faith in the ideals of human brotherhood." From the labor movement and from men and women in every walk of life came prompt expressions of support and cooperation. The press in every part of the country echoed their interest and applauded their efforts.

To effectuate these indications of national sentiment, I introduced in the Senate, and Mrs. EDITH NOURSE ROGERS introduced in the House, a bipartisan plan within the framework of existing immigration laws. Without modifying immigration quotas for adults, the resolution authorized the admission during each of the next 2 years, of 10,000 German refugee children outside of quota restrictions. The resolution has been unanimously approved after exhaustive hearings by a joint subcommittee of the House and Senate.

The plan has been carefully devised not only for the safety and care of the children to be admitted, but also for the protection of every American interest. The selection of the children abroad will be carried out, subject to immigration regulations, by private American agencies already on the ground, including the splendid Quaker organization which has done such responsible and constructive work to alleviate distress in every part of the world. The children will be of every race and creed, and must meet the requirements of our immigration laws, as to mental and physical fitness, and political beliefs compatible with American democracy. Their transportation care in American ports of entry, and admission into American homes of their own faith, will be supervised by a group of leading child-welfare experts. The entire plan will be financed by responsible private citizens and organizations in the United States.

Coordinating all these efforts will be a volunteer nonsectarian committee, comprised of such outstanding Americans as His Eminence Cardinal Mundelein, represented by Bishop Shiel, of Chicago; Dr. Anson Phelps Stokes, canon of Washington Cathedral; Herbert H. Lehman, Governor of the State of New York; William Allen White, editor of the Emporia Gazette; Helen Taft Manning, dean of Bryn Mawr College; Frank P. Graham, president of the University of North Carolina; Owen D. Young, leading New York industrialist and humanitarian; and Clarence E. Pickett, of the American Friends Service Committee.

There is no danger that any of these children will become public charges, for not a single child may be admitted unless assurances satisfactory to the Secretary of Labor are given in advance that it will be cared for at private expense. Moreover, these children, ranging from about 6 to 14 years of age, will be consumers of American products, not competitors for American jobs. Certainly organized labor would not be unanimously behind this plan if it threatened our workers' security or broke down the quota system which labor was instrumental in establishing.

I want to emphasize especially that the resolution if adopted would not contribute to the breaking up of families abroad. It is the present Nazi regime which is tearing children and parents asunder. This resolution would alleviate, not aggravate, that tragic situation. It would bring help only where help is urgently wanted—for orphans and for those children whose parents are willing to place them temporarily in friendly hands, beyond the reach of the terror and oppression they are themselves unable to avoid. It merely affords an opportunity for thousands of American citizens to respond to the call of humanity.

The cause which unites these citizens, and the millions of others who stand ready to lend aid and strength to their efforts, is deeply rooted in our national heritage. By long tradition, America has been the "mother of exiles," a haven for the oppressed and persecuted of all lands. It is literally true that we are a nation of refugees. The brave men and women who first colonized this continent were political and religious refugees. Over the years that have intervened, millions of every nationality and creed have entered our portals to breathe the air of freedom, to assume the responsibility of citizenship, and to do their full share toward the development of the America we know and cherish.

In the light of the problems confronting world civilization today, the enactment of this resolution would be the most immediate and practical contribution by the American people to the cause of human freedom. Because the resolution is in keeping with the finest precepts of Americanism, I am confident that our people will make that contribution.

Refugee Children From Germany

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 8 (legislative day of Monday, June 5), 1939

LETTER WRITTEN BY WILLIAM B. GRIFFITH

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed by Mr. William B. Griffith, chairman of the Immigration Restriction League, of New York City, to the editor of the New York Times under date of May 2, 1939, re the Wagner-Rogers resolution pertaining to refugee children from Germany, and I call particular attention to the statement of fact that we in the United States have admitted more refugees for permanent residence than have all other countries of the world.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 2, 1939.

To the EDITOR OF THE NEW YORK TIMES.

SIR: There is so much misrepresentation and so much misinformation about the Wagner so-called refugee resolution that it ought to be corrected. In your editorial of February 18, 1939, you erroneously state, obviously misled by all this well-organized misleading propaganda in favor of the resolution, that it would admit "a certain number of German refugee children," when not a single child who, or whose parents have, been persecuted because of race, or religious, or political views, need be admitted under it, and every one of the "20,000 children under 14 years of age" could be Nazi children, and no one of them a refugee child. The language of the Wagner-Dingell-Rogers resolution after the enacting clause, and only the language following the enacting clause is enacted into law, reads as follows, and in no way mentions refugee or persecuted children: "Children 14 years of age or under who reside, or at any time since January 1, 1933, have resided in any territory now incorporated in Germany."

Not only would it not apply to only refugee children but the equitable national origins fundamental proration of quotas among 68 countries in the 1924 Quota Act would be violated by its enactment.

Germany has an enormous, disproportionate annual quota of 27,370, and last year used only 17,199 of its quota. If refugee children should come first, then reserve 20,000 quota numbers of next year's 27,370 for them, instead of increasing Germany's enormous quota of 27,370 this and next year.

During the past 12 months we have received more refugees for permanent residence than all the rest of the countries put together. England, Holland, France, Switzerland, and European countries are receiving them only temporarily and "in transitu." During the past 4 years the German Children's Aid, Inc., has brought to the United States and placed in desirable homes annually from 200 to 300 persecuted German refugee children. I understand the H. I. A. S. has also been on the job, as well as other Jewish welfare corporations. It is a gross slander on Americans and the Jewish people, who always look after their own, to intimate that they and America have not been doing even more than their share in bringing here German refugees.

With the United States "neglecting our own native-born children," as the President told the Fourth White House Conference on Child Welfare last Thursday, and the United States having, according to the League of Nations statisticians over 70 percent of the world's unemployed employables, I submit the Wagner resolution, which, if enacted, might not admit a single refugee German child and might admit 20,000 Nazi children, ought not pass. Neither the Department of Labor nor the Department of State has recommended the Wagner resolution, and both Cabinet Secretaries have written both congressional Immigration Committee chairmen that no recommendation is made. Their attitudes are significant and so is the fact that the Department of State says it would cost $150,000 to administer the Wagner resolution if it becomes law. The Wagner resolution should be defeated.

Yours truly,

WM. B. GRIFFITH.

Lake Charles Deep-Water Channel

EXTENSION OF REMARKS

OF

HON. RENÉ L. DeROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

STATEMENT BY HON. RENÉ L. DeROUEN, OF LOUISIANA, BEFORE THE HOUSE APPROPRIATIONS COMMITTEE, MARCH 24, 1939

Mr. DeROUEN. Mr. Speaker, I am addressing myself to the completion of the Calcasieu River and Pass, La., project, the short ship channel from Lake Charles, La., to the Gulf of Mexico.

The present water route from Lake Charles to the Gulf, via the Calcasieu River, Intracoastal Canal, and Sabine River, is 75 miles, and the project now under construction—the Calcasieu River and Pass, La., channel—will shorten the distance to approximately 33 miles, and result in a great saving not only to the shippers, steamship companies, and buyers, but to the public itself. At the present time it requires a whole day to navigate the distance through the channel from the Gulf of Mexico to Lake Charles, and the large steamships arriving at the Sabine Pass after midday are forced to tie up for the night and wait until the following morning, as it is impossible to navigate the existing narrow channel after dark. Such waiting is both inconvenient and expensive.

It was our understanding when this project was initiated that this was to be a 3-year program; and unless sufficient funds are allotted for the continuation of the dredging work this year, the work on the channel and the development of the port of Lake Charles, La., and the area it serves will suffer. The channel should be completed this year and the work on the jetties begun the following year, 1941, as to undertake both phases of the work during 1940 would result in confusion and retard the use of the new channel, thereby depriving southwest Louisiana and Arkansas of the economic benefits which will accrue when this channel is completed and open to the public. The channel, it seems to me, should be completed before the work of repairing and extending the jetties in the Gulf of Mexico is undertaken, as ships could use the channel even though the jetties were not complete.

In other words, this channel could be producing revenue, helping the economic condition of the area served for at least a couple of years, and national and international commerce benefited before the jetties are completed. Bear in mind that new jetties are not being constructed; the old ones are merely being repaired and extended. Common sense and business acumen point to the completion of the new channel first and the later improvement of the jetties if this project is to be completed at an early date and opened to commerce and the public.

[Statement of Hon. RENÉ L. DeROUEN, of Louisiana, before the House Appropriations Committee on the hearings on the War Department civil functions appropriation, 1940]

LAKE CHARLES DEEP-WATER CHANNEL—STATEMENT OF HON. RENÉ L. DeROUEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. SNYDER. We have with us this morning Representative DeROUEN, of Louisiana. Mr. DeROUEN, you may proceed in your own way and give us such information as you desire.

Mr. DeROUEN. Mr. Chairman, at this moment, I want to address myself to the river and harbor appropriation recommended by the Bureau of the Budget, and, in that connection, I want to insert in the record this table showing the estimates made by the Chief of Engineers and the amounts allocated by the Bureau of the Budget for flood control and river and harbor improvements.

Mr. SNYDER. It may be inserted at this point.

The table referred to is as follows:

Estimates (76th Cong., 1st sess.)

	The Budget	Chief of Engineers
Flood control:		
General	$110,000,000	$195,525,500
Mississippi River	31,000,000	50,000,000
Sacramento River	2,000,000	1,754,400
Mississippi River, emergency	800,000	1,000,000
Power plant:		
Bonneville Dam	7,000,000	----------
Fort Peck Dam	2,000,000	----------
Rivers and harbors:		
Improvement	30,000,000	102,975,800
Maintenance	41,135,000	51,738,210
Total	223,935,000	402,993,910

Mr. DeROUEN. May I say to you, gentlemen, that we of the Rivers and Harbors Committee are amazed at these estimates. I happen to be one of the ranking members of the committee. Mr. MANSFIELD is ill, in a hospital, and is not able to appear. We were amazed at the tremendous cuts made to $30,000,000 for the entire United States, for improvements for rivers and harbors. It is simply impossible, and you might as well have no money for that purpose.

Throughout the entire country, on the Atlantic, Pacific, and the Gulf, there are projects under contract that should go forward.

At this moment may I quote what the President of the United States said yesterday to the National Rivers and Harbors Congress. He said, "I congratulate you on what you have achieved in the past"; and he then went on to recommend the continuation of projects which, by vision and foresight, and after due consideration, have proved to be good and worthy projects.

Certainly we cannot carry on these projects with this amount. If they are carried out, as intended, they would serve to create a condition of reemployment of people all over the country.

I now address myself particularly to those projects on the Gulf coast, such as the Calcasieu River and Pass, La., project; the new ship channel to Lake Charles, La.; and those on the coast between Louisiana and Texas, connecting all of the great ports on the Gulf, including Lake Charles, Houston, Beaumont, Orange, Galveston, etc. These waterways carry today 50,000,000 tons, nearly as large as the tonnage of the Great Lakes, which ranks

as No. 1, so far as tonnage is concerned. The Lake Charles or Calcasieu River and Pass project was approved in 1872.

Mr. SNYDER. By the Army engineers?

Mr. DEROUEN. Yes. It was of great importance because of the potential volume of raw material located in this area and valuable for purposes of national defense. In this area you find the great sulfur deposits, in Louisiana and Texas, which is used today in the manufacturing of TNT and many of our other explosives.

Mr. SNYDER. Is that the only place it is found?

Mr. DEROUEN. I mean this is the largest sulfur-producing area in the United States. There is some small production elsewhere, but I am talking about the greater volume of sulfur, as bearing on the necessity for continuing these improvements. This is one reason why we should complete this improvement as expeditiously as possible.

The port of Lake Charles was developed through local interests at an expense of $6,500,000. The report I have here indicates that it was built by local interests and turned over to the United States. This is the report of the Army engineers, approved by the Secretary of War. On page 2 of Document No. 299, Seventy-fifth Congress, covering the Lake Charles deep-water channel, ship channel, and Calcasieu River and Pass, La., you will find this statement:

"The Board of Engineers for Rivers and Harbors, after considering the reports of the district and division engineers and the additional information submitted by local interests at a hearing before the Board, finds that the substantial and growing ocean commerce of the port of Lake Charles is now handicapped by the restricted dimensions of the existing channel and by the heavy and increasing barge traffic therein. The construction of the channel direct to the Gulf as recommended by the reporting officers will afford a new and shorter route for this commerce, with substantial savings in transportation costs; and provide an emergency outlet for the ocean commerce of the entire Sabine-Neches area, which in 1935 exceeded 32,000,000 tons. The prospective benefits of the improvement to the extensive water-borne commerce, especially the petroleum industry of the locality, warrant its prosecution at Federal expense."

Mr. SNYDER. What was the tonnage in 1938?

Mr. DEROUEN. About 50,000,000 tons.

Mr. SNYDER. How does that compare with the tonnage in 1933 or with 1928?

Mr. DEROUEN. There has been a 200-percent increase.

Mr. SNYDER. Since 1928?

Mr. DEROUEN. Yes; it has continually increased, even during the depression. Instead of the volume diminishing it increased during a period when commerce in other parts of the Nation was at a standstill.

Mr. SNYDER. How do you account for the fact that the volume of traffic increased during the depression years?

Mr. DEROUEN. I can well understand that. This is the only section where sufficient petroleum supplies could be found to carry them over, or to meet the great demands resulting from the development within the last 10 years of automobiles, airplanes, and other petroleum-consuming motors. A condition was created where we did not have sufficient transportation facilities for the traffic involved. Consequently, barges and tankers were pressed into service in handling the agricultural and petroleum products, and as Lake Charles is the natural outlet to the sea of this area, the commerce of the port increased by leaps and bounds.

We were carrying full loads of petroleum products during all of that time. That is about the explanation of it. The East was buying raw materials, while prices were low, and storing them. This accumulation of material, particularly of petroleum, sulphur, naval stores, etc., resulted in increased traffic through the port of Lake Charles and its ship channel as water transportation offered the cheapest and most accommodating method of moving these products. Manufacturing, particularly in the East, has also played an important part in the development of the port. For instance, the Mathieson Alkali Works, of New York, built a plant at Lake Charles, La., costing about $15,000,000, and was busily engaged in the manufacture of caustic soda and many other ingredients that are used in the manufacturing of munitions. In an effort to find ways of protection, they were storing these products in the East, which accounts for barge movements during the depression period, especially in the movement of oyster shells and chemicals. Further, world-wide commerce emanated from the port; cargoes of oil, cotton, rice, grains, naval stores, petroleum, etc., going forward to Central and South America, Europe, Asia, and Australia.

In Document 172, Seventy-second Congress, containing the report of the Chief of Engineers on preliminary examination and survey of Lake Charles deep-water channel, dealing with the question of enlarging the channel, making it 250 feet wide instead of 125 feet, with a depth of 30 feet, the Secretary of War said, in recommending the improvement, the following:

"Based on the comparative freight rates, submitted under the appendix II, and the cargo tonnage handled through the port of Lake Charles during the calendar year 1929, the saving in freight accruing was $1,169,458.40, as compared with the rates through the nearest competing port in the instance of each commodity. This saving does not include 137,030 tons of miscellaneous cargo, principally shells, sand, and gravel for which there is no comparative rate. However, it may safely be said that these materials could not be marketed were it not for the water transportation provided by the deep-water channel."

In Document 299, Seventy-fifth Congress, the recommendation was made that it should be a 3-year program. Now, do not forget that the people have contributed $6,500,000 and an additional $3,000,000 for rights-of-way, or practically $10,000,000, already. This 3-year program contemplates straightening of the channel, shortening the distance through the river and lakes to the Gulf, and the repair, extension, and improvement of the jetties at the mouth of Calcasieu Pass in the Gulf of Mexico.

Mr. SNYDER. How many miles is that?

Mr. DEROUEN. It is 33 miles to the Gulf by the straight channel, and if we followed the present route it would be 75 miles. The engineers conceived the idea of shortening this for two reasons: One was that when a large ship came from the Gulf it could not enter the small channel at night, therefore it would have to remain in the Gulf until daylight before entering the channel, which raised the cost per ton-mile exorbitantly high. Secondly, the contemplated improvement would be a saving of 42 miles in the distance from the port to the Gulf of Mexico. We still have now from this point, indicated by the yellow streak [indicating] over here, 40,000,000 yards of material to be removed at this time. The first amount appropriated was the $1,000,000 last year, whereas the Army engineers had recommended $1,955,000.

Now, there are right here in this area three dredging boats, one of which is the largest dredging boat in the world, dredging material and removing it to a point a mile away. You can imagine what would happen if we do not have sufficient money to carry on this operation. These contractors would have to move away, and that would mean a loss of at least $1,000,000 to the contractors and, in addition, it would throw out of employment all of the men who are working on this channel. Of course, they would be thrown out of employment.

Mr. SNYDER. How many are there?

Mr. DEROUEN. They have about 895 men at work. I am not counting the Government officials who would be paid whether they were working or not, but I am speaking of the laboring class who would be forced on relief, also the thousands who are employed in producing the tonnage shipped through this port. We ask you to provide the $1,500,000 recommended for this year and an additional $1,000,000, making a total of two and one-half millions. I would like to say now that we had a conference with the Chief of Army Engineers, and he said this: "You ought to have more money, but my hands are tied because I have to make allocations within the Budget recommendation."

The district engineer, Col. R. W. Crawford, on March 5, made the statement in New Orleans that this work should be done at once. He said that the project was needed right now.

Mr. KERR. How much would it cost to complete this channel?

Mr. DEROUEN. About $6,000,000, but this figure applies only if completed in 3 years. And here is what Colonel Crawford said:

"NEW ORLEANS, March 4.—Oil to power the battle fleets of the United States in times of national crisis will find another exit into the Gulf of Mexico when the short-cut channel connecting Lake Charles to the Gulf is completed, Col. R. W. Crawford declared here today.

"'At present,' Colonel Crawford, who is United States district engineer for the first New Orleans district, said, 'stoppage of the Sabine Pass would temporarily shut off the movement of fuel coming out of Port Arthur, Beaumont, and Orange, Tex., as well as those from Lake Charles, La.

MORE DIFFICULT TO BLOCK

"'Another entry to the Gulf, such as the project which links Lake Charles directly to the Gulf through Calcasieu Pass and gives the Texas ports access there through the Intracoastal Canal, would make it more difficult to block off oil supplies.'

"Citing other advantages for the new straight-line waterway, which is being constructed through a straightened Calcasieu River and out through Calcasieu Pass, Crawford said:

"'In addition, oil that came originally from the Lake Charles district and was intended either for the Atlantic seaboard or a battle fleet, could move to the Gulf with more speed than it can over its present route—by way of the Lake Charles deep-water channel and the Sabine Pass.

SEVENTY MILES SAVED

"'On that particular trip, about 70 miles or approximately 10 hours' running time would be saved.

"'Under all conditions,' the Colonel continued, 'the new channel will serve as an alternate pass for some 30,000,000 tons of petroleum products shipped annually to the refineries along the Atlantic seaboard.'

"Other advantages which the new channel will offer in times of national emergency, the Colonel envisioned as:

OUTLET FOR FOOD

"'To provide a relatively speedy outlet for food from the cattle and grain sections around Lake Charles to Atlantic ports or to ships at sea.

"'In event of chemical developments in this region, to provide faster movement of such cargoes destined to points in the Gulf of Mexico.'

"The Lake Charles channel, according to report, should be completed during 1940 or 1941."

I have here a recent report, just out, by the Corps of Engineers and the Maritime Commission, on the port of Lake Charles. This report is signed by the Chief of Engineers, and it is entitled "Port Series No. 31, 1938," covering the Port of Lake Charles, La. This report indicates the necessity of completing the project at this time.

Within this area are located plants of the Mathieson Chemical Co. of New York, and a number of the big oil companies, including the Gulf Refining Co., the Mellon Oil interests of Pennsylvania, the Continental Oil Co., and many others. Here are located their main storage and loading plants. In addition to that, Swift & Co. have acquired 640 acres there, and have one of their largest plants located there. That has been done during the last 2 years, and they are employing about 1,000 men. There is a glass factory planned, which is in course of being built, and there are some alkali works also. Those people, in those industries, are seeking an opportunity to spend hundreds of millions of dollars there, and they will do so if proper port facilities are provided, thus creating new employment, thereby reducing the relief rolls. I have letters from them saying that they will have to abandon their plans unless these facilities are provided. They say, "we are ready to put men to work when these facilities are provided." All of those investments are predicated upon the completion of the work within 3 years, because the Government said to them, "you can go ahead and build your manufacturing plants, and we assure you that the facilities will be completed in 3 years." Now, if we do not complete the work in 3 years, I think those people will move away and seek other places in which to operate, and that would mean a great loss to all those States in the South bordering on the Gulf.

We had at the meeting down there representatives of some of our greatest financial and industrial institutions, including the vice president of the Missouri Pacific, the president of the Louisiana & Arkansas, and executive officers of the Texas & Pacific, Kansas City Southern, and Southern Pacific railroads, Mr. Dan Moran, president of the Continental Oil Co., of Ponca City, Okla., and many other representatives of leading financial and industrial institutions, and they all wanted this constructed at once. Now, we have been inviting those people to come there and build factories so as to put more men to work, and then we find ourselves defaulting on the promise, or we find that there is a default on the promise that the Government made to us. That is the situation there.

Mr. STARNES. How much money do you recommend for that project?

Mr. DEROUEN. We should have $1,000,000 more, or $2,500,000. That would keep the construction companies going.

Mr. STARNES. Would that complete the project in its entirety?

Mr. DEROUEN. No; that would only be carrying out the promise of the Government to complete it in 3 years. We of the State of Louisiana did the first job on it. In doing the first job we spent $10,000,000. The Government has said, or the report of the Chief of Engineers, approved by the Secretary of War, has recommended a 3-year program. The Government has promised to complete it within 3 years. Assurance was given to the world that it would be completed in 3 years, but now we are defaulting on that. It is a serious situation. Here is an instance where we could put men to work. The large petroleum companies want to operate in our section; they are seeking material that is produced there, and they have built many large boats and tankers for the transportation of oil, but if they are cut off because of the lack of these facilities, they will operate in other localities.

But for the operations down there you would be paying 38 cents per gallon for gasoline right now. That is what we have been saving to the country as a result of those operations. But for that you would be paying 100 percent more for sulfuric acid than you now pay, and that saving is largely attributable to water carriage or water transportation. This channel will be an integral part of our national defense and as such the project's speedy completion should be further assured by the allocation of sufficient funds to carry on the dredging work planned for the year 1940.

I am glad to have this opportunity of appearing before you, and I do hope you will see fit to grant this increase. When we do this we provide employment for men who would otherwise be out of work. It seems strange to me that in one breath we say, "Let us put men to work," and then in another breath we say, "No; we will not do that—we will not put men to work." I do not see how we can expect industry to put men to work when we say to them, "You cannot invest your capital in a way that will permit you to put men to work." We cannot expect that result when we cut off not less than $75,000,000 for projects under construction and which should be completed. Of course, there are a great many projects that should be completed, and certainly we should continue in employment those who are now on the job.

Mr. SNYDER. We thank you for your statement, Mr. DEROUEN, and you will have the privilege of revising and extending your remarks.

Mr. DEROUEN. Thank you, Mr. Chairman.

National Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

Mr. WOLCOTT. Mr. Speaker, when H. R. 6466, the so-called Townsend old-age pension bill, was presented to the House of Representatives for action last Wednesday, it was under circumstances almost unprecedented in the annals of this body.

It was reported out of the Ways and Means Committee, with no recommendation, no report, no discussion of the merits or demerits of the bill itself.

It was brought to the floor by the Rules Committee under a closed rule, which in popular parlance is known as a gag rule.

Four hours of debate were allowed, 2 hours for the proponents and 2 hours for the opponents of this measure—4 hours in which to discuss its merits or demerits and in which the Members of the House had to find, if possible, an opportunity to explain their reasons for voting either for or against the bill.

Manifestly, it was impossible for the greater number of those voting on the bill to have any opportunity to say anything at all, and it was impossible for those who did have a chance to speak to do much more than explain the merits and the demerits of the bill in the most superficial and cursory fashion.

Therefore, Mr. Speaker, I want at this time to sum up the reasons why I found it impossible to support this legislation. Let me say in advance that I favor whatever pension plan can be worked out on a practical and constitutional basis to provide for the support in reasonable comfort of our aged citizens. I am not willing to have my hands tied, my ankles ironed, my lips gagged, and my eyes blinded, and then be compelled to vote on a measure as far-reaching as this measure was; and I believe that any fair-minded man or woman who will read the record and acquaint himself or herself with the conditions and circumstances under which this bill was brought to the House will agree with those who refused to enact such fundamentally important legislation under any such conditions.

I resent the way this bill was brought to the floor of the House. It was brought in under the conditions which prevailed because the administration and those who control the proceedings of this body wanted to avoid a fair and open discussion of the proposed bill or any chance for its amendment; the open and declared purpose was to try to put many Members of this body in an embarrassing political position. It was a disgraceful and vicious procedure that is to be condemned by every citizen who values constitutional government and constructive, intelligent methods of legislation.

Here was a situation, Mr. Speaker, which was admitted by the Democratic chairman of the Ways and Means Committee [Mr. DOUGHTON] to be an unusual procedure. He said:

> It is a fact that this is an unusual procedure, and so far as I recall this is the first bill that has ever been reported in this manner by the Ways and Means Committee since I have been a member of that committee, some 14 or 15 years, and certainly the first bill that has been reported in this way since I have been its chairman. * * *
>
> Scores, and I may say hundreds, of Members of this House, some for and some against the measure, some favorable and some unfavorable, have said to me that this bill is of sufficient importance to the membership of the House and to the entire country that the Members should be given an opportunity to vote on it.

Mr. Speaker, here we have the chairman of the great Ways and Means Committee himself stating that the Members of this House, some for and some against the proposed legislation, had asked that the bill be brought to the floor, and yet the Ways and Means Committee submitted the bill without any recommendation, without any report, without any discussion of the merits or demerits of the bill, and then the Rules Committee reported the bill under a gag rule that prevented any amendment whatsoever and precluded any adequate opportunity even for reasonable debate and discussion. It is a performance of which those who control the proceedings of this House certainly cannot be proud.

The whole situation was well stated by the gentleman from Michigan, the Honorable CARL MAPES, a member of the Rules Committee, when he said:

> Let me emphasize the statement that the distinguished chairman of the Committee on Ways and Means made, that this is the first and only time in his experience in the House of Representatives that the Committee on Ways and Means has ever reported a piece of legislation to the House without recommendation.

In that connection, I call attention to the fact that the distinguished chairman of that committee has been a Member of the House of Representatives for 30 years.

In order to keep the record straight, let me say at the outset, as one member of the committee, I voted against this rule in the Committee on Rules. It is a gag rule and ought to be defeated. It provides for 4 hours of talk, 4 hours of balderdash only, and then compels a vote on the bill as it is without any opportunity to amend or perfect it. I am opposed to being gagged and bound that way.

Under this rule * * * the House can do nothing more than go through the motions of considering a piece of legislation which has been characterized as "one of the most far-reaching revenue measures that has ever been presented to the American people," without its ever having been seriously considered by the Committee on Ways and Means, to which it was referred, and without the benefit of any recommendation on it by that or any other committee of Congress. Indeed, it is more accurate to say that the rule not only compelled consideration of it under those circumstances, but required that the bill be voted up or down without any opportunity to consider it seriously even on the floor of the House * * * What a travesty on legislative procedure.

The bill before us is not H. R. 2, which the Townsend people have been writing us about. It is a new bill.

No one knows how much anyone would get if this bill should be enacted into law. Townsendites are looking for $200 per month. Everyone concedes that they would get no more than a small fraction of that amount under this bill * * *.

This bill was never even considered by the Committee on Ways and Means. The draft which we are asked to vote upon was not introduced until the day before the committee washed its hands of it by reporting it without recommendation. It was available in printed form only an hour or so before the committee took the action it did. No one familiar with legislative procedure and with Congress has any expectation or hope that it will be enacted into law. It is not here for that purpose. It is here for political purposes only. Everyone knows that. The purpose is so clear that it is transparent. There ought to be some better reason for the passage or consideration of legislation so vital to the welfare of the Nation and to those whose hearts are set upon getting legislation which will provide them with reasonable security in their declining years. * * *

In this connection it must be remembered that the Democratic Party is in control of the Committee on Ways and Means, as it is of all other committees of the House. It determines what legislation will be considered and what will not.

The friends and advocates of legislation to provide adequate security for old people in their declining years cannot help but be greatly disappointed over the situation with which the House is confronted. Regardless of the merits of the legislation, the procedure adopted to bring it up is a hoax pure and simple. No one can be proud of it. No one can defend it. We are asked to pass a gag rule, which will permit of no amendment, to consider legislation of vital importance which is full of loopholes, imperfections, and ambiguities, and which is not recommended by the committee to which it was referred, nor any member of it, as far as the record shows.

Now, Mr. Speaker, keeping in mind that picture of the procedure under which H. R. 6466 was brought to the floor of the House, and with the observation that the majority party of the House voted to support the gag rule, let me now proceed to quote some of those who could and did get the time to discuss some of the provisions of the bill and their probable effects not only upon the Nation as a whole but upon the elderly citizens of the Nation particularly.

The chairman of the Ways and Means Committee, Mr. DOUGHTON, is to be regarded, I think, as one of the most authoritative sources to which to refer for the facts concerning the proposed legislation. As chairman of the Ways and Means Committee, he sat for months considering at various times different plans proposed by the Townsend group. He discussed H. R. 6466 on the floor, in part, as follows:

This bill will not only impose a new tax but the heaviest tax ever levied in the history of this or any other country. The primary purpose of this tax, as expressed by the proponents of the measure, is not to pay pensions to aged people but to promote recovery—business recovery and permanent prosperity. In other words, the first purpose is not to pay pensions to aged people but is to bring about the enrichment of all people.

It will impose not only a tax, the heaviest tax in all history, but it would impose a tax without any reference or regard whatever to ability to pay, and pretending, I say, to promote business recovery. It is also claimed that this bill, if enacted into law, would abolish poverty, would banish the poorhouse, eliminate courts and jails. * * *

Since 1933, when the first petition was filed with Congress to pay pensions of $200 a month to aged people, the money to be raised by a transactions tax, the Townsend plan has undergone many changes, mutations, and about-faces. But there is one respect in which it has undergone no change, and that is constantly dangling in the faces of the old people and drumming in their ears $200-a-month pensions * * *. Two hundred dollars a month is to be paid, regardless of need, regardless of income, or regardless of wealth.

Said Mr. DOUGHTON further:

Funds to finance this program are to be obtained by levying a transaction, or gross-income tax, of 2 percent upon individuals, corporations, firms, partnerships, or other entities on each and every transaction, with a few exceptions, except that producers, manufacturers, and wholesalers only pay one-half of 1 percent. It has been reliably estimated that the 2-percent tax would apply to 70 percent of the transactions in dollars and the one-half of 1 percent would only apply to 30 percent of transactions in dollars.

* * * Both taxes would apply on every article over and over again, because it is a multiple tax. It multiplies itself with every transaction. This pyramiding adds enormously to the iniquitous effects of the tax. No tax that I can conceive of is so unequal, so unjust, so unsound, so fanatical, so intolerable, and so inequitable. * * * We must not lose sight of the fact that this multiple sales pay-roll tax is a superimposed tax, imposed upon all other taxes.

Mr. DOUGHTON continued:

We must not lose sight of the fact that this multiple-sales and pay-roll tax is to be superimposed upon our present tax structure, or is in addition to all of the taxes levied by the Federal Government, States, counties, and local taxing units. At least, it will have the effect of doubling our Federal tax burden, and if sufficient funds are obtained from the tax to pay the $200 per month, and which Dr. Townsend testified was only a "starter," it will more than double the tax collections now made by all Government units. Dr. Townsend even says that $300 per month is the ultimate goal. He also suggests that ultimately the national debt may be paid off out of this tax. It would impose an average tax burden upon each man, woman, and child in the United States, in addition to all other taxes now paid, of $185 per year, or more than one-third of our present per capita income of $547.

The chairman of the Ways and Means Committee said further:

This tax would give an enormous advantage to large distributors who distribute directly to the consumer, as the total tax payable with respect to any commodity varies with the number of hands through which it passes. Also to chain stores who buy direct from the manufacturers or produce their own goods. Middlemen, in many cases, will be eliminated. Small jobbers and small merchants will be wiped out, thus fostering monopoly, as independent small businesses will be crushed and unable to compete with the producers who have sufficient capital to develop retail outlets. Even Dr. Townsend admits this and states that they ought to be wiped out.

As to the actual consequences of such a plan, were it placed into operation, I desire to refer you to the testimony of outstanding economists, businessmen, farm and labor organizations, and those who are qualified to judge as to the economic effect of the Townsend program. Among the large array of witnesses brought forward by the Townsend organization during the course of the hearings, there did not appear a single economist or recognized tax expert to support their plan. Among those appearing voluntarily before the committee and taking the position that the bill was unsound, impracticable, unworkable, and dangerous were the following:

Dr. Slichter, of Harvard University; Dr. Frank Graham, of Princeton University; Dr. Frederic Dewhurst, of the Twentieth Century Fund; Prof. Paul Haensel, of Northwestern University; Dr. Albert Hart, of Chicago; Prof. Paul Studenski, of New York University; Dr. Harold G. Moulton, president of the Brookings Institution; Dr. Francis Tyson, of the University of Pittsburgh, and John T. Flynn, and David Cushman Coyle, both economists and nationally-known writers.

Representatives of business included Gerard Swope, president of General Electric; Marion B. Folsom, of Eastman Kodak Co.; also Matthew Woll, vice president of the American Federation of Labor—he made it clear that labor did not favor the Townsend bill or the principle underlying it.

As to its effect upon agriculture, Dr. John Lee Coulter, probably the most outstanding agricultural economist in America today, stated, in effect, that the adoption of the Townsend plan would be ruinous to the farmer and destructive to the entire agricultural system.

Mr. Speaker, I now desire to note some of the written protests which reached the Ways and Means Committee against H. R. 6466 and other measures which have from time to time been proposed by the promoters of the Townsend plan.

On May 25, 1939, William Green, president of the American Federation of Labor, wrote to the Ways and Means Committee at length, and among other things stated:

We are convinced that to pretend to offer up to a maximum of $200 a month to all old persons regardless of need, as is done by H. R. 6466, is both dishonest and undesirable. It is dishonest because no such large sums could be paid to individual annuitants even with the burdensome taxes proposed. The amounts actually paid would be very much under the maximum and would fluctuate

from month to month, so that no real security could be achieved for those who really need it, while others would receive sums entirely unnecessary in their economy.

It is undesirable because it taxes wages and gross incomes with practically no regard for ability to pay, and because it offers tremendous incentive to integration of producing and marketing units at the expense of small independent business. The independent retailer, the consumer, and the wage earner will be the losers under this program. A gross-income tax of a flat percent cannot be other than regressive in effect; it is a thoroughly bad form of taxation. * * *

The American Federation of Labor believes in enlarged social security for the Nation but achieved by reasonable methods. It condemns H. R. 2 and even more H. R. 6466 as wholly unreasonable devices and as unable to fulfill the implied extravagant promise of large pensions on the basis of which they make their appeal.

The American Farm Bureau Federation, through its president, Edward A. O'Neal, wrote the committee from Chicago, Ill., May 29, 1939, submitting a detailed analysis of the Townsend old-age pension plan and of H. R. 6466, and said:

It would be fiscal suicide for this Nation to undertake to pay old-age pensions provided for in H. R. 6466.

* * * Every farmer, every workingman, every businessman, and every person receiving income of any kind from any source would be subject to this gross-revenue tax. The only exemptions are the revenues derived from national banks, fraternal organizations, religious and educational organizations, nonprofit cooperatives, building and loan associations to a certain extent, life-insurance policies, Federal tax payments, and Federal benefit payments.

Every time a commodity is sold, every time it is transported commercially, every time a wage or salary payment is made, every time an income payment is received, a tax would be levied on the total gross amount of the sale, wage payment, or income payment, with no deductions for losses, expense, or cost of any kind.

This means that the tax would be pyramided over and over again in the channels of trade and distribution, so that its total effects would be cumulative and would be manyfold what appears on the surface.

It would be especially burdensome to agriculture. For example, in the case of wheat, a tax would be levied on the total wages of farm hands employed in producing the wheat; the farmer would pay a tax on the total sales value of the wheat sold to the local elevator; the elevator in turn would pay a tax on the total sales value of the wheat when sold to terminal agency; and the latter in turn a tax on the total sales value of the wheat when sold to the mill. The mill processing the wheat into flour and byproduct feeds would pay a tax on the total sales value of these products—likewise, the wholesaler, then the local jobber, and then the retailer. Each time the product is sold the tax on the entire amount must be absorbed and the tax is thus compounded again and again. It should also be borne in mind that every time the commodity is handled by labor and wages are paid, a tax is paid on the full amount of such wages; also that every time the commodity is transported by rail, water, or by truck for hire the tax is paid on the cost of transportation.

All these cumulative taxes are compounded together like compound interest. To the extent they can be passed on, the consumer will pay the bill in his loaf of bread; to the extent they cannot be passed on, such taxes would be passed back to the farmer in lower prices for wheat. * * *

According to the United States Bureau of the Census, there were 10,110,000 American citizens 60 years of age and over in 1935, or about 8 percent of the total population.

It is estimated that by 1945 the total number of persons 60 years of age and over will be 15,710,000 and 24,980,000 by 1965 (Scripps Foundation for Research in Population Problems).

To pay a pension of $200 per month to 10,000,000 persons would require an annual revenue of $24,000,000,000. In order to pay such a pension to 25,000,000 persons in 1965 would cost $60,000,000,000 annually. In establishing a pension system, it is necessary to take into account not only present costs but probable costs in the future.

It should be carefully noted, Mr. Speaker, that one of the most dangerous inequities of this legislation lies in the fact that a tax would have to be paid by each individual on his losses just the same as on his gains. If on a transaction he lost $100 or $1,000 he would be taxed to the same extent and in the same way as though he had gained $100 or $1,000.

The National Grange, the Railway Labor Executive Association, the American Association for Social Security, Inc., all were unalterably opposed to H. R. 6466 and to any other similar plan of multiple taxation.

Mr. Speaker, it is both illuminating and startling to see in tabulated form just what the tax burden which would have been imposed by H. R. 6466 would have been upon each State. The chairman of the Ways and Means Committee included in his remarks a table prepared by W. L. Price, of the staff of the Joint Committee on Internal Revenue Taxation, showing the estimated additional tax burden necessary to pay maximum pensions of $200 per month to 8,000,000 and 10,000,000 persons, based upon per capita and computed on population of 130,000,000. I desire to include that table in my remarks at this point in order that anyone may see for himself just what it would cost the taxpayers of the Nation for an old-age pension of $50 a month, $100 a month, $150 a month, $200 a month, or any figure above that amount.

The Townsend plan—Estimated additional tax burden necessary to pay maximum pensions of $200 per month to 8,000,000 and 10,000,000 persons, based upon per capita cost computed on population of 130,000,000

MAXIMUM PENSION, $200

Pensioners	Annual cost	Per capita cost
8,000,000	$19,200,000,000	$147.69
10,000,000	24,000,000,000	184.62

COST OF TOWNSEND PLAN BY STATES

[On per capita basis—1936 estimated population 128,884,000]

State	Actual internal-revenue collections 1938	Estimated additional cost, maximum of $200 per month	
		8,000,000 pensioners	10,000,000 pensioners
Alabama	$16,929,203.24	$422,984,160	$528,751,680
Arizona	4,513,075.19	59,962,140	74,955,720

Wyoming	3,352,877.76	34,411,770	43,016,460

Estimated additional cost of paying pensions of $100 per month is one-half of above estimates—$50 per month one-fourth of above estimates.

Mr. Speaker, there is probably no abler economist and student of taxation in the world than Dr. Harold G. Moulton, of the Brookings Institution, of Washington, D. C. In discussing the legislation, he said:

Two percent on transactions sounds like an innocent enough tax rate, but, if applied as intended, it would really mean a tax that would absorb from 25 to 30 percent of the total national income.

I think the point that I want to emphasize most in connection with this is the magnitude of the expectations held forth to the old people. Even though the figure of $2,400 is not a provision of the act, that is the figure that is in the minds of the people. That is the way it has been sold to the country. The point is this, that $2,400 a year for each person, or 10,000,000 people, roughly speaking, means $24,000,000,000 of additional taxes.

Of course, that is absolutely fantastic on the face of it. The total revenue, with all the tax machinery that we have—Federal

State, and local—is $12,000,000,000. This is double that total. It is an impossibility. It would wreck the economic system if you undertook to collect such a tax.

My distinguished colleague, the Honorable CLIFFORD HOPE, of Kansas, stated the position of those who felt compelled to vote against this measure very concisely when he said:

One of the reasons why I felt it imperative to make my position clear on this matter from the very beginning was because of the fact that I did not want to be a party, either actively or passively, to the deception, either wittingly or unwittingly, in good faith or bad, which has been carried on in behalf of this measure among the fine elderly people of this country. The growth of the Townsend pension program offers perhaps the most conspicuous example of the power of skillful propaganda that has ever been afforded in this country * * *.

Since the introduction of the first McGroarty bill early in 1926 there have been at least four other bills which have been sponsored by the Townsend organization, to say nothing of the bills sponsored by other pension groups. These new bills have been introduced because even the sponsors of the earlier legislation conceded that it could not work. Yet the Townsend organizers and lecturers have, on the occasion of the introduction of every one of these bills, informed the members of the organization that they were perfect bills and that they should importune Members of Congress to pass them without amendment.

The publicity and discussion which has occurred throughout the country with respect to these measures has, of course, demonstrated clearly that there is no possible way by which a tax can be levied upon the American people which would result in payment of $200 a month to all those over 60 years of age.

* * * Members of the organization, when questioned concerning the matter, frankly admit that the taxes provided for in the present bill will not raise enough money to pay even one-fourth of such an amount. * * * It is wrong to deceive the splendid elderly people of this country in such a fashion. Congress ought not to be a party to it. * * *

Any fair analysis of the present bill, or any other of the bills embodying this plan, will quickly demonstrate that the plan is unsound, that it is unworkable, and cannot possibly do what its sponsors claim for it. * * * From the very beginning, the paid organizers and workers for the plan have based their arguments on the theory that the plan would cost nothing and that it is possible to pay out to the elderly people of this country as much as $20,000,000,000 per year without its actually having to come out of anyone's pocket.

The theory of the bill as expounded by its supporters is that by levying a tax it is possible to accelerate the circulation of money. Strangely enough, if this is the theory, the tax is to be levied not upon idle money or hoarded money which is out of circulation but upon money which is already actually in circulation. It is a tax to be levied upon business transactions so that every penny which would, by means of this tax, be diverted to pension payments, is a penny taken away from someone who is actually preparing to spend it at the time it was taken away by taxation. In other words, all the transactions tax does is to take the dollar that is being spent for goods and commodities and divert a part of it to the Federal Government in the form of a tax. * * * The only difference is that in one case it would have been spent by the man who worked for it and earned it, and in the second case it is spent by the man to whom it is paid as a pension.

Mr. Speaker, I desire to include at this point in my remarks a very illuminating table inserted in the RECORD by my colleague [Mr. BUCK]. This is a table compiled by Dr. J. Frederic Dewhurst, of the Twentieth Century Fund, showing an estimate of the average monthly pension under H. R. 2. This gives a very clear idea of the most that could be expected under H. R. 6466 if it were enacted into law. Following is the table:

Estimated tax yields and pensions payable under H. R. 2

GROSS TRANSACTIONS AND TRANSFERS

1. Total gross transactions (or gross income) 1936	$449,000,000,000
2. Estimated transfers of money by devise, bequest, etc. (1935)	2,500,000,000
3. Estimated transfer of money by gift (1935)	1,100,000,000
4. Estimated total transactions and transfers	452,600,000,000

ESTIMATED EXEMPTIONS AND DEDUCTIONS UNDER H. R. 2

5. Payments for personal service of employees	37,368,000,000
6. Gross income to Government (1937) total	12,500,000,000
7. Estimated sale of Government securities	3,000,000,000
8. Shrinkage in security transactions resulting from 2-percent tax	76,288,000,000
9. Shrinkage in sales of tangible goods resulting from 2-percent tax	14,483,000,000
10. Total exemptions and deductions	143,639,000,000

Estimated tax yields and pensions payable under H. R. 2—Con.

11. Total transactions and transfers	$452,600,000,000
12. Total exemptions and deductions	143,639,000,000
13. Theoretical taxable balance	308,961,000,000
14. Yield of 2-percent transactions tax	6,179,220,000
15. Number of persons over 60 years old	12,600,000
16. Number of persons who would accept H. R. 2 pensions	10,100,000
17. Average annual pension under H. R. 2	$612
18. Average monthly pension under H. R. 2	$51

Now, as to the question of constitutionality. It is my opinion that H. R. 6466 was unconstitutional in several particulars; as an example, section 11 of the bill provided:

* * * the Secretary of the Treasury is hereby authorized and directed to pay from the money or moneys available in said general welfare fund, the money necessary to cover the expenses of administration of this act and the monthly annuities to the qualified annuitants * * *.

This is clearly in violation of clause 7 of section 9 of article I of the Constitution, which provides:

No money shall be drawn from the Treasury, but in consequence of appropriations made by law.

Delegation of the appropriating power of the Congress to the Treasury of the United States is obviously not in keeping with these constitutional provisions.

Mr. Speaker, I could go on for hours quoting economists, businessmen, educators, organizations of various sorts, including labor organizations, agricultural organizations, all unanimous in their verdict that the Townsend plan is, unfortunately, unworkable.

All of this evidence has been presented over and over again. All of these arguments have been made over and over again.

I do not say that all of those who have led in the Townsend movement or who have aided it have been dishonest or insincere in their efforts. I do not hesitate to say that I believe, and I think it has been amply proved time and again, that some of those active in the promotion of the Townsend plan have been motivated by impulses other than honesty and sincerity.

The tragic aspect of this whole proposition is the fact that fine, elderly citizens who have lived useful lives are now, in the sunset of their years, faced with a hopeless quest of an annuity which it is utterly impossible for the Government to collect from the citizens and pay to them.

I now want to make an appeal to the reason of the elderly citizens of this Nation. I hope that this appeal will reach each one of them. I hope that they will call upon their own reason and good common sense as they ponder this appeal and realize the sincerity and the truth of it.

To the old folks of America I want to put these propositions:

You realize that many Members of the Congress have aged living parents. You realize that many economists, many individuals who opposed H. R. 6466 have aged parents and other relatives.

Do you, the elderly citizens of this country, believe that every Member of Congress, that every economist, that every businessman, that every individual who opposed that bill is in a conspiracy—some great national plot—to prevent you, including their own aged relatives, from receiving a pension which would keep you and them in comfort to the end of your days?

Do you honestly believe that all the Members of the Congress, all the economists of the Nation, the businessmen, the labor leaders, the leaders of the agricultural organizations, of the educational institutions, of the churches, who are seeking earnestly for some solution to this depression which is working hardship on all of us actually would have rejected the plan if there were even a reasonable hope that it would restore prosperity to this country by such a humane and pleasing method as paying you old folks $100 or $200 or $300 a month?

Do you elderly citizens of this Nation believe that the opposition to the plan was based upon some widespread and deep-seated enmity or hostility to you on the part of your

own relatives and friends, your own Representatives in the Congress, your own neighbors and associates?

Can you not see, each one of you, that if the plan would work, as you were persuaded that it would work, that we in Congress would be eager to enact it into law and put it into operation as soon as possible?

Do you elderly citizens believe that only the leaders of the plan, and none others of all the people in the United States, have any knowledge of economics or of the effects of taxation or of the relationship between the velocity and the quantity of money in circulation?

Do you believe that an entire Nation is so hard-hearted, is so dead to all kindly human impulses, is so lost to all love and affection, that it would refuse any workable plan that would give to its own fathers and mothers past 60 years of age the comfort and luxury in their declining years that would not only make of their lives a happy round of pleasure but would rescue the Nation itself from the depths of a depression?

I say to you that there is not a Member of this Congress, that there is not a single economist who opposed the plan, that there is not an individual anywhere who would not gladly see enacted into law a plan that would give you elderly citizens the greatest possible annuity the Nation's economy could support. You must know that this is so. You must realize if you will think this over carefully that this is true. You must realize, if you will ponder the questions I have propounded to you, that it is grotesque, incredible, and fantastic, that everybody in the Nation under the age of 60 is in a conspiracy to deprive those of you who are 60 years or older of any pension or annuity that could be given you, particularly if the granting of such a pension or annuity would operate to improve the condition of all of the rest of us.

In conclusion, Mr. Speaker, I want to say that I shall, without reservation, support any legislation that can be shown to be sound, practicable, and workable, and constitutional to provide the greatest possible annuity for the aged citizens of this country under whatever plan can be demonstrated to be the most sound and workable and which can be most quickly put into effect.

Water Power in Nebraska

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

ARTICLES BY V. T. BOUGHTON

Mr. NORRIS. Mr. President, I hold in my hand two articles written by Mr. V. T. Boughton, managing editor of the Engineering News-Record, which is a national engineering magazine. Mr. Boughton is neither a friend nor a foe of the projects about which he writes. So far as I know, he has not been in consultation with either side of the controversy that has raged more or less in Nebraska about these projects. He neither praises nor condemns, but gives his technical judgment as to the merits of the subject about which he is writing. The subject is Water Power in Nebraska. I ask that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Engineering News-Record of April 27, 1939]

WATER POWER IN NEBRASKA

(By V. T. Boughton, managing editor, Engineering News-Record)

Five years ago Nebraska began the public development of the State's water-power resources with money from the Public Works Administration in the form of loans and grants. To date the Federal Government has made commitments totaling about $60,000,000 to three public power and irrigation districts having water-power development as a major part of their programs. These are the Platte Valley public power and irrigation district, the central Nebraska public power and irrigation district, and the Loup River public power district. Local people have contributed about $200,000 for promotional work in these districts.

Widely characterized as Nebraska's "little T. V. A.," these public power and irrigation projects have been the subject of much adverse comment by those who are opposed to their construction. Total costs have been declared to be so high as to put the unit cost of power and irrigation water beyond reason; question has been raised as to whether any considerable amount of firm power can be produced because of the uncertainty of the water supply; power markets have been declared to be lacking, and the operating difficulties of the two completed projects have been held up as evidence of the impracticability of the undertakings. As a consequence, unbiased information concerning the undertaking is hard to obtain.

Opposition to the projects is both local and national. Locally, the opposition is due chiefly to factors peculiar to the region in which the projects are being built. In the first place, water in Nebraska is a valuable commodity which is jealously guarded by those who need it to irrigate their lands. People on existing irrigation projects who have seen the Platte River go dry and their crops burn up are violently opposed to further drafts for any new combined power and irrigation project. Quite naturally, the privately owned power companies are opposed to the projects, but it is rather surprising to find the power companies supported by town officials in communities having municipally owned power plants. The reason for this is found in the fact that the relatively high rates charged by these plants bring in a tidy income which carries a large part of the municipal expenses, and the town officials see in the public power districts a move to confine surpluses to a general reduction in domestic rates.

But for engineers the Nebraska undertakings hold out much wider interest than those that lie in the controversial subject of public versus private power development. First, there are completed or under construction three hydroelectric power undertakings that are unique both as to design and as to cost of construction; and second, there are questions of water conservation and use which are important for all concerned with development of the water resources of the arid regions of the West. To date, three diversion dams and two reservoirs have been built, 88 miles of power canals have been dug, and three power plants of moderate size have been put into operation. Now under construction is the Nation's second largest earthfill dam, a fourth diversion dam, 67 miles of power supply canals, three more power plants, 102 miles of main irrigation canals, and 540 miles of small laterals.

POWER AIDS IRRIGATION

Nebraska's climate ranges from subhumid along the eastern edge to semiarid in the west, with a wide central area where there is insufficient rainfall for crop production. Dry farming has been practiced extensively in this area, a large section of it having been put under cultivation in the war days, when wheat prices were high, but there is evidence everywhere that the record has been one of frequent crop failure, especially in the recent dry years.

Irrigation of land in the wide flat valley of the Platte River was begun in a small way as far back as 1866, and has gradually expanded to include about 200,000 acres now under irrigation canals. But the flow of the Platte River is so uncertain in the central part of the State that these bottom lands have not always been able to obtain from direct flow as much water as they needed, and stored water has not been available. Lands at higher elevations never have been reached, and yet they need little water in normal years to make them suitable for a wide variety of crops. Rainfall in Phelps, Kearney, and Adams Counties, where the lands now being irrigated lie, averages 24 inches per year, while 36 inches is needed to carry crops to maturity. Hence the irrigation system is designed to supply 12 inches per acre, or about 200,000 acre-feet, for the work now in hand, which combines storage with use of any available direct flow.

Schemes for providing irrigation water for the fertile lands lying south of the Platte River in the central part of the State have been actively promoted for many years, but as the low flow of the North Platte River—the principal source of water for the south-central area—is overappropriated, these schemes were largely based on storage and use of floodwaters which come down both the North and South Platte in large quantities every spring. Storage, however, was difficult to obtain. Because the river bottoms are wide and the underlying material porous, the construction of on-river reservoirs long appeared too costly. On the other hand, the off-river storage sites were neither large nor numerous, and the amount that can be diverted into them during the short flood season is limited by the amount that can be carried through long supply canals. Some of these studies of off-river sites indicated that power could be developed in bringing water down into the valley from storage reservoirs in the hills, but in all cases costs appeared prohibitive.

This was the situation when, in 1933, the National Recovery Act was passed, and it soon became evident that liberal Federal aid would be available to foster construction of projects that could not be financed if required to repay their full cost out of earnings. The same year the Nebraska Legislature passed an act providing for the establishment of public power and irrigation districts and authorizing the district to borrow money from the Public Works Administration on loans secured by the potential earnings of the district.

POWER DISTRICTS FORMED

Among the first power districts to be organized was the Platte Valley Power and Irrigation District to build what is commonly known as the Sutherland project. It was followed by the formation of the Loup River Public Power District for construction of the Columbus project, a power project without irrigation features on the Loup River, and subsequently by the formation of the Central Nebraska Public Power and Irrigation District, to build what is commonly known as the tricounty project, a project that then was expected would be able to supply irrigation water to about 500,000 acres and would develop a large amount of power. Also organized were two smaller irrigation projects on the North and Middle Loup Rivers. Neither of these latter included the development of power as part of its undertaking but both were authorized to buy or generate and distribute power.

The basic scheme around which the three major projects were designed is the same. The valleys of all the rivers in central Nebraska are wide and flat and are flanked with low hills of loess or fine sandy material. The valley slopes are gentle and the only way in which heads for power development can be obtained is through the use of long canals leading water out of the bottomlands into the hills and then carrying it downstream many miles to some point where the river swings close enough to the hills to permit the water to be returned to the river channel through a power plant. This results in long canals through loess and sandy material—too many miles to make lining feasible—and calls for many structures to take care of cross drainage. Storage reservoirs must be formed in shallow basins by the use of long and fairly high earth dikes. The general drop of the rivers is about 7 feet per mile; that of the canals, 2 to 3 inches.

Construction of the Sutherland project was begun in August 1934, and it was put into service in December 1935, but trouble with ice developed almost immediately and the project did not begin to produce power commercially until February of this year. Details of its design and of its troubles with canals and structures will be given in a subsequent article. Its power plant develops an average head of 204 feet and contains two units of 18,000-horsepower capacity having an output of 13,000 kilowatts at 90 percent power factor and using 900 second-feet of water.

The water used by the Sutherland project belongs to irrigators below the tailrace of its power plant. Flood waters stored in Sutherland Reservoir are to be sold to those irrigators to help pay for the project.

Construction of the Columbus project was begun early in 1935. The Loup River on which it is built has a much more uniform flow than the Platte, hence water supply was not a major question, but a most difficult problem was presented by the fact that the river carries a large quantity of silt. The silt problem will be taken up in the subsequent article.

The Columbus project has two power stations designed to use a uniform draft up to 3,000 second-feet, supplemented by pondage for peak loads. The Monroe station contains three 3,200-horsepower units, developing a head of 32 feet, and the Columbus station has three 18,000-horsepower units, developing a normal head of 112 feet. The system has been in operation since September 1938.

Work on the tricounty project of the Central Nebraska Power and Irrigation District was begun in the spring of 1936, but active construction was held up for many months by legal questions. The project differs from the other two in that it includes construction of a reservoir of 2,000,000-acre-feet capacity near Keystone, above the intake of the Sutherland project, for the storage of floodwaters of the North Platte. The district has rights only to floodwaters. Water released at the dam is to be picked up below the tailrace of the Sutherland power plant and run through the three power stations of the district before it is delivered to irrigators down in Phelps, Kearney, and Adams Counties.

Work on the tricounty project is now well along; it is scheduled for completion in 1940. Its three power stations are designed for a flow of 1,800 second-feet, supplemented by poundage and some off-river storage. They will have an installed capacity of 54,000 kilowatts.

WATER SUPPLY

Water supply was a major problem of the Sutherland project and still is for the tri-county project. Now that the tri-county district is building its big storage reservoir just above the intake of the Sutherland project a water supply is assured for the irrigators whose water the district uses for power development because they have first claim to enough water to meet their authorized appropriations. And while there is no question but that the storage of 2,000,000 acre-feet behind Kingsley Dam (formerly called Keystone) would meet both the needs of these and other power appropriations and would still leave ample to irrigate the lands under the canals of the tricounty project there is question as to whether there are enough floodwaters in the North Platte River to fill such a reservoir and keep it replenished annually. Studies of records for the past 20 years indicate that such a reservoir would have been filled to overflowing in all but 4 years. Current studies show that from October 1 of last year to March 1 of this year, 584,700 acre-feet passed the gaging station at Overton, Nebr. Of this amount, 150,000 acre-feet would have been released to meet the needs of the water-power plant at Kearney leaving 434,000 acre-feet that could have been stored in 5 months, with the period of melting snow yet to come.

A major cause for uncertainty arises from the fact that the United States Reclamation Bureau is now beginning to store water behind Seminoe Dam for the irrigation of 66,000 acres in the Kendricks project near Casper, Wyo. The Seminoe Reservoir has a capacity of 1,070,000 acre-feet. What effect this storage will have on the flow of the North Platte is unknown, as the flow in central Nebraska will depend in some part upon the return flow from the irrigated land in the Kendricks project. Officials of the tricounty projects hold that their rights to the waters of the North Platte are superior to those of the Kendricks project.

On the other hand, a favorable factor in the water-supply situation will be the start of the diversion of water from the headwaters of the Colorado into the headwaters of the South Platte River, as planned for the Colorado-Big Thompson project now under construction in Colorado. This diversion should add to the low flow of the South Platte River, aiding the irrigators below the confluence of the South and North Platte and so making possible the storage of more water in the Kingsley Reservoir.

Another factor favorable to the success of the present undertaking is a finding by the Nebraska Supreme Court to the effect that the central Nebraska district may not take water out of the Platte River Valley for the irrigation of lands lying over in the Republican River watershed, as was proposed when the district was organized. This reduces the land under the tricounty irrigation canals from 500,000 acres to 220,000 and materially reduces the amount of water that will have to be drawn from the Keystone Reservoir. Thus the carry-over will help to offset any shortage in dry years.

SUTHERLAND POWER

The Sutherland project began commercial sale of power in February of this year and since March 1 the average daily output has been 115,000 kilowatt-hours, the peak being about 70 percent of the capacity of one of the two generators in the power station. Power goes to local private power companies, to municipalities, and to other public power districts. This load is about 40 percent of the designed capacity. Within a few weeks the contractors at Kingsley Dam will begin hydraulic fill operations, which, when the dredges are up to capacity, will require about 240,000 kilowatt-hours per day. That work will continue until September 1940, and by 1941 the district officials believe that they will have built up a sufficient market to take over that power.

The total amount advanced by the P. W. A. in the form of loans and grants is $11,226,000, of which a considerable sum is still available for working capital during the load-building period. About $700,000 annually is required to pay interest, amortize the loan, and operate the plant. Of this, $100,000 will come from water users as soon as water can be stored in Sutherland Reservoir. The power output of the system should be about 100,000,000 kilowatt-hours annually. Deducting line losses, this power can be sold for about 7½ mills per kilowatt-hour and yet produce enough income to provide the remaining $600,000.

LOUP RIVER POWER

Last year the two power stations of the Columbus project produced 46,000,000 kilowatt-hours, as against 188,000,000 kilowatt-hours estimated as the average annual output of the project. It is expected that the output will be up to about 90,000,000 kilowatt-hours by the end of this year.

The district has $9,000,000 in bonds outstanding. Interest, amortization, and operating cost amount to about $870,000 per year, which means that the average income from the power should be 4½ or 5 mills. The district has had an offer of 5 mills from private power companies for all the power it can produce, but its officers believe that one of their functions is to build up the local use of power, especially in the rural areas. Consequently the district is doing all it can to help the local districts of the Rural Electrification Administration, of which there are now 28 in the State. At the present time 2,500,000 kilowatt-hours of the Columbus output is going to the R. E. A. districts throughout the State, power being sold to the various districts at 1 cent per kilowatt-hour average. The Loup district has 378 miles of rural line built and contracts let for 170 miles more. Lines are built where an average of 2.2 customers per mile can be obtained. Of the 830 customers already signed up, 305 are connected to the system. Average sales were 66.3 kilowatt-hours to purely rural customers in January.

TRI-COUNTY POWER

A study of the flow of the Platte River between 1895 and 1909 shows that there was sufficient water, supplemented by storage in the Kingsley Reservoir, to have operated the three power plants of the district at 100-percent capacity factor for the whole period. From 1910 to 1916 an average of about 90 percent could have been maintained; from 1917 to 1931, 100-percent-capacity factor would have been possible, and from 1931 to the end of 1937 a reduction to about 50-percent-capacity factor would have been necessary due to the long drought. The average annual generation of the district over the 43½-year period studied would have been 353,368,000 kilowatt-hours. These figures are based on assumed evaporation losses from the reservoir 25 percent higher than available data would indicate will occur, and on the assumption that the reservoirs and canals are full at all times. Losses from the canals which were being seasoned last year were somewhat less than one-tenth of 1 percent per mile, which is lower than the loss figure used in this study.

Under normal conditions there is a considerable increase in the flow of the river between the site of Kingsley Dam and the diversion dam just below North Platte. This pick-up amounts to 1,500 second-feet during the nonirrigation months, and to 2,500 second-feet during the irrigation months, but these figures were reduced

by 50 percent in making the flow studies. Due to the conformation of the river valley, seepage losses from the Kingsley Reservoir are expected to reappear downstream.

With the bonded indebtedness of the district being $19,793,000, 40 percent of which is charged to irrigation and 60 percent to power, and with annual power operating costs estimated at $196,000, the district expects to be able to sell its power at 7 mills per kilowatt-hour.

POWER INTERCHANGE

Negotiations are now nearing completion for an interchange of power between the Platte Valley project, the Loup project, and the tricounty project, by which it is hoped to be able to make the most advantageous use of the water resources of the three districts. Upon completion of Kingsley Dam it will be possible to about double the firm power of the Sutherland system by diverting water for the tricounty project through its canals and power station. But without this added water, the Sutherland project is expected to be up to its designed capacity by 1942. Officers of the Loup River Public Power District estimate that upon completion of the pending agreement for the interchange of power with the other two power districts they will be able to build up their load to a paying basis by 1943.

If a projected plan for setting up a State-wide public power system through the purchase of existing privately owned power companies by the public power districts is consummated, the Loop district should be on a paying basis by 1942. Late last year it looked as though the State-wide scheme would soon be an accomplished fact, but uncertainty as to what the State legislature will do has postponed further action until it adjourns.

ECONOMIC JUSTIFICATION

From the economic angle, it would probably be easy to show that for the total investment—including both P. W. A. grants and loans—these projects never can pay on a purely bookkeeping basis. But it must be recognized that they were undertaken as part of the Nation's great program of creating employment through the construction of useful projects, and that as such they have created a large amount of continuous employment for a great many people. And having been carried out by normal methods as undertakings of the public power districts, the work being let out by contract under the supervision of regular engineering forces, rather than as relief operations, the employment created has been altogether normal in character. And one cannot traverse the area in which this work has been carried out without seeing on every hand the evidence of intangible benefits which cannot be easily evaluated on a dollars-and-cents basis.

Charging off the P. W. A. grants against the intangibles, there is substantial evidence that income from the power developments and from the sale of irrigation water will repay the loans from the Federal Government. And it should be noted that the Government subsidies do not bring the power costs down to the point where the public power districts can take business away from the private companies by undercutting their rates; the success of the public power development schemes appears to rest on the ability of the districts to build new business.

Looking upon these Nebraska projects as pioneering attempts to promote and coordinate the development of natural resources as public undertakings, little can be found to criticize and much will be found to commend. Though fostered by Federal aid, their major virtue lies in the fact that they are essentially local in character; unmistakable evidence of the willingness on the part of local people to risk something in the development of the region in which they live.

[From the Engineering News-Record of May 25, 1939]

ENGINEERING PROBLEMS OF NEBRASKA POWER

(By V. T. Boughton, managing editor, Engineering News-Record)

Seepage, bank slumping, and ice were the chief sources of early trouble in Nebraska's water-power developments that were described in the issue of April 27, page 546. They still are major sources of trouble, but the engineers are confident that their worst troubles are behind them and that such as remain can be eliminated. Silt was expected to be a big source of trouble on the Columbus project, but, due to the success of the silt-handling facilities put in when that project was built, silt disposal has become largely a matter of routine.

SUTHERLAND PROJECT

The Sutherland project of the Platte Valley public power and irrigation district was the first to be built. Its supply canal takes water from behind a diversion weir across the North Platte near Keystone, carries the water through a winding canal of 1,750 second-feet capacity along the south side of the valley, then through a cut 140 feet deep to a 7,400-foot concrete siphon 14 feet in diameter which crosses under the South Platte at Paxton. The siphon discharges into an open canal in the hills to the south of the river which carries the water east again to Sutherland Reservoir, a total distance of 32.3 miles. The reservoir is a basin of 175,000 acre-feet capacity formed by rolled fill dikes. It was designed for a draw-down of 55 feet, that depth being used to store floodwaters to supplement the limited supply of irrigators taking water from the river below the confluence of the North and South Platte.

From the reservoir a canal of 1,400 second-feet capacity, 19.2 miles long, leads to a smaller regulating reservoir from which water is drawn for the Platte Valley power plant where an average head of 204 feet is developed by two hydroelectric units of 13,000-kilowatt capacity. Below the power plant a 2½-mile tailrace returns the water to the river below the town of North Platte. Thus the water taken out at the diversion dam travels about 55 miles through canals and reservoirs before it is returned to the river.

One of the obvious difficulties of this long canal system is the light and porous nature of the soil through which the canals were to be built. The canals were too long to be lined throughout, hence seepage losses were expected to be large during the early period of operation, and slumping of banks at some points was anticipated. In sections where physical conditions called for a slope steeper than 1 on 1½, the canal was lined; in the other sections it was hoped that deposits of the fine silt carried by the river would reduce seepage losses to a negligible quantity within a few years after putting the project into service.

TROUBLES DEVELOP

The project went into service in December 1935 in a limited way to season the canals and reservoirs, but it soon had to be closed down due to partial failure of the drop structure in which water from the supply canals goes down into the Sutherland Reservoir. During the 3 following years the project was out of operation most of the time due to numerous troubles, including two breaks in the siphon under the South Platte River, difficulties with ice in the canal and at the control structures, and seepage from the canal in regions where it is built above ground.

Ice troubles in the supply canal were due chiefly to the rapid changes that occur in the rate of flow of the North Platte River in winter when practically the whole volume of the river is diverted into the canal. Thus it often happens that a flow of 1,500 second-feet drops to 200 second-feet in 2 or 3 hours, and increases occur just as rapidly. Without control of the water level in the canal, ice that formed on the surface would drop to the bottom of the canal. The ice in falling pulled loose much of the 2-inch shotcrete lining in the lined sections. With an increase in flow it was picked up and carried downstream to form ice jams.

CAUSED PAXTON FAILURE

It was such a jam that was responsible for the failure of the Paxton siphon on February 3, 1937. Ice, piling up behind a control structure, caused a surge that overtopped the banks at the south end of the siphon scouring out the bank, undermining the siphon, and causing the collapse of its southern end. This break was repaired and the system put into operation again on March 3, only to have the southern end of the siphon collapse again on March 30. The cause of the second collapse never was definitely fixed, there having been no ice in the canal and no abnormal hydraulic conditions. One theory put forward is that a large quantity of ice from the initial break fell into the hole scoured under the outlet end of the siphon, was buried there by the wash from the siphon, and was not discovered when the hole was refilled. Melting of this ice with the warmer weather resulted in settlement and collapse of the siphon.

The original control structures consisted of a series of openings about 6 feet wide in which operators could place stoplogs to keep the water surface nearly constant. As the piers between these openings checked the movement of ice they have been removed and levels now are maintained by the use of hand-operated steel gates placed in the wider openings.

In places where the canal banks have slumped badly the slope has been reduced from 1 on 1½ to 1 on 2, curves have been protected against erosion by a gravel blanket and where bad seepage developed clay blankets have been placed. Silt deposits are slowly reducing the minor seepage losses.

The damaged 2-inch shotcrete lining has been replaced with thicker slabs of concete poured in place on the canal slopes.

SEEPAGE FROM RESERVOIR

The high embankments forming Sutherland Reservoir were built of carefully controlled rolled fill and were lined with concrete, but seepage developed when filling of the reservoir began. It was of such magnitude as to interfere with cultivation of land below the reservoir, hence the reservoir never has been filled to within 30 feet of its top.

Silting of the reservoir bottom is slowly checking the seepage. When visited this spring, the flow from under the main embankment amounted to about 2 second-feet.

Seepage may yet add materially to the cost of these projects, as the State supreme court recently upheld an award of $7,100 damage to a farmer whose land was put out of use by seepage from the Sutherland Reservoir.

Diversion of water into Sutherland Reservoir was resumed in November 1938, and the power plant was put into operation in December of that year. Production of commercial power was begun in February of this year and has been uninterrupted since then despite partial failure of the lining of the stilling basin at the outlet of Sutherland Reservoir late in March. The lining has been repaired temporarily.

LOUP RIVER SILT

Silt has long been recognized as a major obstacle to the development of power on the Loup River because the stream carries from 0.05 to 2 percent of silt and it is planned to use almost the entire flow during periods of low water.

The Columbus project of the Loup River Public Power District consists of a low diversion dam and skimming weir about 5½ miles above the town of Genoa, a desilting basin 200 feet wide, 10,000 feet long, and 16 feet deep, and a second skimming weir at its

lower end from which a canal 11½ miles long and having a capacity of 3,000 second-feet extends to a power station just north of the town of Monroe. This station contains three hydroelectric units of 3,200 horsepower each, developing a head of 32 feet. From this plant the low-line canal extends 13 miles to a regulating reservoir 3 miles north of Columbus having a total capacity of 11,000 acre-feet, of which 6,000 acre-feet is usable for power generation. A supply canal 1½ miles long and having a capacity of 4,800 second-feet extends from the reservoir to the Columbus power station, which contains three hydroelectric units of 18,000 horsepower capacity each. Below this station a tailrace 5½ miles long carries the water to the Platte River just below the confluence of the Platte and the Loup.

Water is drawn into the Loup River over a long skimming weir along the north bank of the river. This provides the first step in the desilting operation. Sluice gates in the main river weir at the lower end of the skimming weir make it possible to flush silt from in front of the skimmer. The second and final stage of desilting is in the long stilling basin, which, according to the first plans approved by the P. W. A., was to be equipped with a dredge mounted on a gantry spanning the basin and capable of traveling its full length. This dredge was to pump silt from any point in the basin to a concrete and steel flume on the river side of the basin which would discharge it along the river bank below the dam at points where it would be carried away during high water. As now operated, a 28-inch floating dredge of the "dust pan" type has been substituted for the gantry dredge. A flexible discharge line carries the dredged material to the flume, but at the present time it is being discharged over the bank to fill low land along the river.

Present practice is to operate the dredge from March to December on one 8-hour shift per day. This is with a diversion of about 600 second-feet, or about one-quarter of the proposed rate of 2,400 second-feet when the power plant is up to capacity. Pumping 65 cubic feet per second, the dredge removes about 1,200 cubic yards per hour. As power is used during off-peak periods, the cost, based on a plant output of 200,000,000 kilowatt-hours, is about $0.00054 per kilowatt-hour.

To date the much-discussed silt problem of this project has given the operators little trouble. Samples taken from the canal below the desilting basin have a silt content of one-tenth of 1 percent.

Ice piled up in front of the intake last November and for a time reduced the amount of water that could be taken in. However, it did not cause a complete shut-down of the plant. An ice boom was installed in December and no further ice trouble developed.

Little trouble has been experienced with the canals of the Columbus project. Learning from the difficulties of the Sutherland project, the engineers made the canal slopes flatter and avoided sharp changes which would disturb the ice cover. The results so far have been very satisfactory.

SEEPAGE LOSSES

A major problem in the operation of the Columbus project is seepage in areas below the regulating reservoir back of Columbus, and at some points below the supply canal. Parts of the canal system have been in service now for 3 years. In these sections the seepage has reduced materially each year and little further trouble is anticipated.

Borrow pits that were full of water at first are now dry and some meadows that were too wet for crops the first year were used for crops last year. Water has been in the reservoir for 2 years but has been maintained at a low level to minimize seepage losses. About 1,000 acres of land in areas lying to the north and south of the reservoir have been affected by seepage, but here also the blanketing of the reservoir bottom with fine silt is materially reducing the seepage loss. Much of the area affected had little natural drainage. A drainage ditch, cut by the district, has materially helped the situation and little trouble is anticipated during the growing season this year. Farmers whose lands are put out of production are paid on the basis of what the land would have produced in good years, which has been a very satisfactory arrangement for the farmers in the past two dry seasons.

LESSONS PUT TO USE

Lessons learned on the Sutherland and Columbus projects are being put to use on the tri-county project now under construction. Most notable is the location of the canals far enough back into the hills to get the flow line below natural ground level, thus avoiding the long wet embankments of the Sutherland project that resulted from efforts to do the work at the lowest possible cost.

By carrying the canal back into the hills it has been found possible to use natural valleys for considerable lengths of the canal, closing off the lower end of valleys with a dam, taking the local drainage into the canal, and cutting through to an adjoining valley at the upper end. Flumes and siphons have been avoided wherever possible, as they are sure to cause rise or fall in the water surface of such long canals as are required for that project. Control structures have been designed to present the least possible resistance to the movement of ice that may be freed in the canal. The natural stilling basins where valleys are used for the canal are expected to be useful in controlling ice.

ENGINEERING

In the previous article the economic aspects of these power and irrigation projects were discussed. The projects also are interesting from an engineering angle as demonstrating what can be done in developing power on rivers having as flat slopes as the Platte and the Loup, and as showing the pitfalls to be avoided. Much has been said about the engineering mistake and failure of structures during the early stage of this work. Even those most directly concerned are frank to admit that mistakes were made, but they were due almost entirely to the speed that was demanded by the P. W. A. in order to get the work under way and to the consequent lack of adequate knowledge of underground conditions, soil behavior, and the like. Preliminary designs had to be hastily made and yet could not be extravagant on the side of conservatism because it was known from the start that costs would be high at best.

Taken as a whole, the engineering work has been skillfully done and there are many ingenious examples of doing what engineers are supposed to do, make a dollar go further than it would in the hands of untrained men. Skillful planning of the grading and earth-handling operation has resulted in remarkably low bids for the vast amount of earth moving involved in the tri-county project.

One fact that impresses the outsider visiting the project is the extent to which the engineering work now is being directed by local men. In the past, Nebraska had few engineering projects, hence it was to be expected that outside engineering talent would be brought in on these large projects when they were first begun. Thus the firm of Parsons, Klapp, Brinckerhoff & Douglas, of New York, was engaged for the Sutherland project and the Harza Engineering Co., of Chicago, was engaged to handle the engineering work of the Columbus project. But now the engineering is largely in the hands of native Nebraskans. Hence the engineering set-up also serves to emphasize the local character of the undertaking as contrasted with the T. V. A., where all the money and most of the engineering talent has been and still is imported.

On the two projects that have passed from the construction of the operating stage, I. B. Jones, long associated with irrigation work in the arid West, is now in charge of civil-engineering work of the Sutherland project and Fred C. Albert, a native Nebraskan, is in charge at Columbus. On the tri-county project the engineering has been chiefly local since its start, but the district staff has had the advice of the Fargo Engineering Co., of Jackson, Mich., and numerous consulting engineers in special fields. George E. Johnson, former State engineer of Nebraska is chief engineer and general manager, and R. O. Green is assistant chief engineer in charge of the field work. George N. Carter is resident engineer at Kingsley Dam, D. A. Buzzell was hydraulic engineer until a few weeks ago, W. J. Turnbull is soils engineer and I. W. Barber is materials engineer. On the electrical side, E. E. Chilberg is electrical engineer, and Andrew McCall is resident engineer in charge of powerhouse construction. Johnson, Green, Turnbull, Carter, and Buzzell all are men who gained part of their engineering training in Nebraska.

The Death of Hideyo Noguchi—A Tribute to the Distinguished Japanese-American Scientist and Physician

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, MAY 24, 1928

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered in the House of Representatives on May 24, 1928:

Mr. SIROVICH. Mr. Speaker, ladies, and gentlemen, yesterday there died on the golden coast of Africa one of the most eminent and distinguished scientists of the twentieth century, Dr. Hideyo Noguchi, born in Japan, yet belonging to the citizenship of the world.

America, the land of liberty and of his adoption, gave him the laboratory of opportunity to demonstrate his profound and scientific knowledge, so that his genius could explore those mysterious realms which harbor virulent organisms that have been responsible for the causation of the terrible plagues, scourges, and diseases that have afflicted and ravaged humanity the world over for thousands and thousands of years.

If life is but a dream and death be its awakening, then in the world of dreams the work, the fame, the name of Hideyo Noguchi will forever endure.

His contributions to the service and knowledge of humanity will immortalize his name and bequeath a heritage of scientific and useful service to a grateful posterity for having been able to force from the unyielding bosom of Nature those mysterious secrets that for centuries Nature has held inviolate and unbroken, until the

fertile imagination and persistent efforts of the genius of Noguchi forced Nature to surrender its secrets to the microscope of science. [Applause.]

The Supreme Architect of the Universe reveals Himself to humble and lowly man in three mystical and inexplicable ways. First, through the life of the universe, which we term Nature. Second, through the thoughts of man, which we term art. And third, through the precision and exactness of the mind, through correct observation and thinking, which we term science.

In this great arena of life intellectual man worships at the shrine of nature, science, and art. Here in this temple of culture are seated side by side to each other nature, science, and art, presided over by God Almighty Himself, to whom we graciously bow our heads in humble submission as the great All-Powerful from whom all life and goodness flows. [Applause.]

The disciples of nature, art, and science recognize no distinction in race, creed, and color. The world is their country. The brotherhood of mankind is their shibboleth and watchword, and love and service to humanity everywhere is the cement that binds them together until the curtain of life falls upon them. [Applause.]

Who are the men who have immortalized their names on the altar of medical service? Hippocrates the Great was the father of medicine. He lived 300 years before Christ was born. The oath that every physician subscribes to, ere he is permitted to embark upon his medical career, is named after him and is known the world over as the "Hippocratic oath."

Four hundred years after the death of Hippocrates there flourished in Rome the greatest commentator on the 60 books written by Hippocrates, a physician whose name was Galen. For 15 centuries Galen was worshiped by the medical fraternity as the foremost figure on the medical firmament, whose skill and ingenuity in the field of medicine was revered and honored by the countless legions who were his devoted followers.

In the year 1132 there was born in Cordova, Spain, the most eminent physician of his time, Moses Maimonides. He was educated in Tripoli, Morocco, and Algiers. He was physician to Saladin the Great of Cairo, Egypt, who sent him out to treat Richard the Lion-Hearted when he led the second crusade to redeem the Holy Lands from the infidels. Maimonides was the outstanding figure in medicine, in science, in art, and in philosophy during the Dark Ages of our world.

During the period of the Renaissance, the years 1500 to 1600, Italy gave to the world five of the greatest anatomists the world has ever known—Jacobus Sylvius, the uncanny genius whose work on the human brain is immortalized by the great Sylvian fissure of the brain that is named after him—Andreas Vesalius, the distinguished and learned pupil of Sylvius, who discovered the fact that veins have valves, and whose anatomical clinics were crowded and packed with students from all over Europe who came to pay tribute to his phenomenal knowledge of human anatomy—Fallopius, the adroit and expert scholar after whom the Fallopian tubes of the female generative organs are named—Bartelemo Eustachius who was the first to describe the Eustachian tube, that runs from the back of the nose to the middle ear, whom posterity has honored in naming the Eustachian tube after him, and last but not the least—Francois Rabelais, one of the greatest anatomists of the world who lectured on every phase of human anatomy, demonstrating his lectures on the dissected body to crowded, enthusiastic, and overawed audiences.

Paracelsus, who was contemporaneous with these brilliant anatomists, was born in Switzerland in 1493, and was the pioneer in anticipating the field of infection and contagion, and the first doctor to introduce mineral substances in the treatment of disease as professor of medicine in the University of Basle. Associated with him in his investigations was Ambrose Pare, professor in the University of Paris, who through his indefatigable zeal, skill, and technique laid the foundation of modern surgery and was the greatest surgeon of his time.

From the years 1600 to 1700 three mighty characters held the center of the stage in the field of scientific medical endeavor—Jean Baptiste Van Helmont, born in Brussels, Belgium, considered the father of biological chemistry, and the first physician to ever examine chemically the blood and urine of human beings to definitely determine the causative factor of disease. Helmont was considered one of the greatest masters of his day.

The year 1628 commemorates forever the outstanding contribution of England to the science of medicine. That period will forever remain famous as the year that William Harvey discovered the circulation of the blood, that revolutionized the concept and the function of the heart and blood vessels because Hippocrates and his ancient disciples thought that the air was transported throughout the blood vessels of the body in order to feed the innate heat.

Dr. Thomas Sydenham was worshiped by his contemporaries and by the public at large as one of the greatest clinicians and diagnosticians of his time.

From the year 1700 to 1800 England contributed the greatest public benefactor to humanity in the person of Emil Janner, who in 1796 discovered the principle of vaccination, a discovery of the highest importance to civilization that has made it possible through vaccination to drive that malignant and pestilent scourge of smallpox from the face of the world.

The years 1800 to 1900 find every nation of continental Europe, including our own beloved country, America, all vying with each other to subjugate sickness and disease, so that longevity might be prolonged and the health of humanity bettered.

In America the versatile, talented, and gifted author and doctor, Oliver Wendell Holmes, the father of our distinguished Judge Holmes, of the United States Supreme Court, was first to write upon the subject of puerperal sepsis. He felt that motherhood was paying too great a penalty upon the altar of childbirth. He proved that puerperal sepsis was caused by dirt infection. He was laughed at and jeered at for his views. But 50 years later Dr. Semmelweiss, an obstetrician, of the University of Budapest, confirmed his views. The medical fraternity treated Semmelweiss as the American doctors treated Oliver Wendell Holmes. Semmelweiss, keenly sensitive to this terrible criticism, became insane and died in a madhouse. Today a monument stands in his memory in the principal square of Budapest, a statue that rightfully belongs to our own beloved scholar and scientist, Dr. Oliver Wendell Holmes. [Applause.]

The Battle of Bunker Hill and Lexington did not bring as much amazement to the citizens of Boston as did the newspaper announcement in the spring of 1846 that Dr. William Morton had discovered a gaseous substance called ether, that could anesthetize any human being and make him unconscious to the knife and scalpel. This drug revolutionized surgery, for prior to its discovery victims of surgical intervention had to be subjected to the deadening effects of opiates and saturated with liquor to deaden their anguish and pain.

Millions of human beings were literally dying every year from infection following operations, until in 1866 Guerin invented absorbent cotton dressings, which formed a barrier to the spreading of this condition.

Two years later, in 1868, the world was electrified by the announcement that the great Lord Lister had solved the cause of infection by practicing the methods of antisepsis before, during, and after operations, which reduced the frightful morbidity and mortality following operations, and made surgery safe and sound when applied to any condition in which the knife had to be used in order to save life or limb.

It was just about this time that the greatest scientific genius of the nineteenth century, Pasteur, came upon the horizon of science. Within a short time he demonstrated to a skeptical and amazed world that infection was due to a bacterial invasion. To a dazed and dumbfounded world he revealed these new organisms—cocci, bacilli, spirillae, fungi, yeasts. A new world. A conquest of chemical culture and the microscope. These discoveries of Pasteur completely resurrected surgery and chiefly transformed the treatment of modern diseases.

Thus far Egypt, Greece, Italy, Spain, France, England, and America had blazed the trail of medical and surgical pioneering. Teuton culture and civilization became inspired by these intrepid soldiers of the microscope, the agar culture, and chemistry, and finally Germany gave to the world the peer and master of all bacteriologists of all time in the person of Dr. Koch, who thrilled and bewildered an amazed world when he announced the discovery of the tubercle bacillus that was responsible for the causation of tuberculosis and led the mortality tables of the world in the causation of death from consumption.

Ehrlich, the wizard of biochemistry, is Germany's and the world's greatest contributor to the successful treatment of modern disease. His "606," known as salvarsan, is an absolute specific in the treatment of syphilis, that had ravaged the world for centuries and made syphilitic treatment the curse of the possessor and the bane of the physician.

From time immemorial the organism that caused syphilis was unknown. Only a decade ago a great German savant and scholar isolated this frightful assassin of human life under the field of the dark microscope and to perpetuate his memory the scientific world named this reaction after the founder in the examination of human blood and calls it in his honor "the Wassermann test."

In this, the twentieth century of civilization, America ranks in the forefront as the proud possessor of the greatest scientists of the world. Behold its roster in Public Health Service—men who have distinguished themselves in arduous and dangerous research to promote the interests and happiness of mankind.

Where is there a patriotic man or woman who will forget the courageous heroism of Dr. Lazar, who, under the supervision of Dr. Walter Reed, gave up his life upon the altar of science in order to have himself infected with the mosquito to prove to the world that the mosquito is the cause of malaria and yellow fever.

It was this wonderful experiment in which Lazar gave up his life that gave the knowledge to Dr. Gorgas to eradicate yellow fever and malaria from the Panama Canal, which made it possible for American engineers to build the canal.

DR. HENRY R. CARTER

World-recognized authority on yellow fever and malaria. In 1900–1901, by purely epidemiological studies, demonstrated that yellow fever must be conveyed by an intermediate host, and measured with accuracy the periods of incubation in that host and in man, thus laying a solid scientific basis for the subsequent experimental verification.

DR. CHARLES WARDELL STILES

Discovered the American species of hookworm, demonstrated its great prevalence, worked out its epidemiology, devised methods for the control of the disease, and inaugurated the successful campaign against it.

DRS. MILTON J. ROSENAU AND JOHN F. ANDERSON

Pioneers in the study of anaphylaxis, concerning which they contributed many of the fundamental facts. This phenomenon is of great importance in the modern conception of disease processes.

DRS. GEORGE W. M'COY AND C. W. CHAPIN

Discovered and cultivated the bacillus tularence, making methods available for its further study. They did their work in 1910 on California ground squirrels.

DR. EDWARD FRANCIS

Contributed nearly all that is known concerning the disease tularemia in man. Showed its methods of transmission and what to do in order to avoid it.

DR. R. R. SPENCER

Worked out a vaccine against Rocky Mountain spotted fever. Demonstrated its efficacy in experimental animals and its harmlessness by injecting himself first. Showed by use in hundreds of persons who are exposed by occupation that it confers a large measure of protection. The preparation of this vaccine involves a new principle of immunology. Vaccine used on humans, 1925.

DR. JOSEPH GOLDBERGER

Showed the dietary origin and cure of pellagra. This is a most notable achievement since this dease has baffled the best European talent for centuries. At times it has threatened to become seriously prevalent in the United States, but with this new knowledge the threat has been permanently removed. Study of pellagra begun in 1912, and is going on at the present time.

DR. WADE H. FROST

Planned and conducted the first thoroughgoing and fundamental investigation of the problems offered by the pollution of streams in this country. In view of the increase of population and manufactures along our streams this has been a most valuable activity. Investigation of the pollution of the Ohio River began under his direction July 1913.

DR. JOHN M'MULLEN

Demonstrated the practicability of virtually eradicating trachoma and preventing blindness therefrom in mountainous areas of Kentucky and other States by the establishment of small hospitals and the employment of skillful treatment.

BACTERIOLOGIST ALICE EVANS

In 1918 she showed similarity of causes of Malta fever and contagious abortion and occurrence of latter infection in people. Now increasingly recognized as a cause of human illness.

DR. VICTOR HEISER, CHIEF QUARANTINE OFFICER, PHILIPPINES, 1903–15

Demonstrated the possibility of establishing effective health service in a large tropical country with diverse aboriginal population.

DR. M. A. BARBER

Originated single cell culture method which he first used in 1902. This opened up a prolific field of investigation. The use of Paris green control of mosquitoes in 1921. This cheap method has made malaria control feasible in many areas where it was formerly impossible because of the expense.

In the science, skill, and technique of surgery, America leads the world. Where are the surgeons that are comparable to the Mayo brothers, of Rochester, Minn.; Crile, of Cleveland; Ochsner, of Chicago; Cushing, of Boston; Deaver, of Philadelphia; Kelly and Wilmer, of Baltimore; Blake, Brewer, Albert A. Berg, John Erdman, John J. McGrath, Howard C. Taylor, George Schwartz, John Pollack, and John Prescott Grant, of New York City—men of the highest caliber and ability, whose very names are household words in the cities from whence they come, where thousands of their benefactors are praying for their health and happiness? [Applause.]

Within a radius of a mile from the Fourteenth Congressional District, which I have the honor to represent, is the greatest medical research center in the world. It is called the Rockefeller Institute. It is a monument to two of the greatest philanthropists that the world has ever known, John D. Rockefeller and his wonderful and gracious son, who is emulating his father in devoting his fortune to the best service of his fellow man. This brilliant institute has become famous through three of nature's noblemen—a triumvirate whose name and fame will persist as long as time endures.

These distinguished scholars thus far represent the three greatest scientists of the twentieth century—Alexis Carrell, Simon Flexner, and Hideyo Noguchi.

Alexis Carrell won the Nobel prize a few years ago for his brilliant discoveries in the realm of physiology, biology, and collateral subjects. He is the outstanding genius of our present time.

Simon Flexner, a great name to conjure with, internationally famous. He will live in the memory of generations that are to come for having isolated the infantile-paralysis virus, for his cure of snake venom, and, above all, for the serum that he has perfected that helps to cure and save the lives of thousands of sufferers from epidemic meningitis. As long as anywhere the tradition of science survives, Flexner's work will always endure. What conqueror has ever had such victories attached to his name as Flexner has in his service to mankind? [Applause.]

Hideyo Noguchi—the great son of Nippon—came to this country in 1900 and subsequently became associated with Professor Flexner and Dr. Carrell. He devoted his supreme and brilliant talent to ferret out the causes of terrible diseases which baffled medical skill, and whose treatment made no impress upon the nature of the disease. Seldom did he fail in his accomplishment; success usually crowned his efforts.

Through his genius the organism that caused paresis was isolated. Paresis was filling the insane institutions of the world with the victims of this unfortunate malady. He localized the organism in the brain and through the microscope forced it to reveal itself to the amazed scientific world. Noguchi proved that paresis was caused by the spirochita pallida, the organism that caused syphilis.

The versatility and genius of Noguchi further manifested itself in his brilliant discovery of the organism that was responsible for the causation of trachoma—an eye affliction and disease that caused more blindness in the world than any other condition known to mankind.

The SPEAKER. The time of the gentleman from New York has expired.

Mr. SIROVICH. Mr. Speaker, I ask unanimous consent of the House to proceed for 2 more minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. SIROVICH. Mr. Speaker, ladies, and gentlemen, Hideyo Noguchi was not content with his extraordinary and brilliant conquests in this his adopted land; he was looking for new fields of endeavor, new lands for conquest. In the name of science he set sail for South America to determine the cause of yellow fever in that land. In a short time the world was again thrilled by his announcement—he had again triumphed. He isolated the yellow-fever organism in South America. To determine whether the yellow fever of Africa was caused by the same species as South America he set sail for that pest hole in Africa.

In a short while Noguchi had himself infected with the dreaded organism that caused African yellow fever. Chills and fever raked his body fore and aft. His militant and brilliant mind refused to surrender to the hosts of yellow fever's organism. The battle waged on. At last Noguchi isolated the organism and gave to the world the knowledge that the yellow fever of South America and Africa was caused by two different hosts. Science triumphed, but Noguchi fell a victim to this dreadful disease. He died a martyr to duty. He will live in the memory of humanity and mankind. Greater love hath no man, than to give up his life for another. God bless his soul!

Mr. Speaker, ladies, and gentlemen, if the grave is the end of all life, then Hideyo Noguchi's name will forever remain immortal through the great contribution he has given to mankind; but if the grave be the gateway to some future state of existence, then Hideyo Noguchi, in conjunction with the great illustrious immortals that have gone beyond the Great Divide to sleep in eternal rest, will forever be revered, honored, and remembered by grateful mankind for having given of his today that others may have their tomorrow. [Loud applause.]

Puerto Rico

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RESOLUTION OF THE LEGISLATURE OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of Puerto Rico:

GOVERNMENT OF PUERTO RICO,
BUREAU OF TRANSLATIONS,
San Juan, P. R., April 15, 1939.

George W. Roberts, chief of the bureau of translations of the Legislature of Puerto Rico, hereby certifies to the Governor of Puerto Rico, and Luis A. Deliz, assistant chief of the said bureau, certifies to the president of the Senate and to the speaker of the House of Representatives of Puerto Rico, that each of them has duly compared the English and Spanish texts of a certain act (S. Con. Res. 9) of the third session of the Fourteenth Legislature of Puerto Rico, entitled: "Concurrent resolution to set forth the very acute crisis now experienced by the island of Puerto Rico; to make urgent demands upon the President of the United States of America and the National Administration for a remedy for this situation," and finds that the same are full, true, and correct versions of each other.

GEO. W. ROBERTS,
Chief, Bureau of Translations.
LUIS A. DELIZ,
Assistant Chief, Bureau of Translations.

Senate Concurrent Resolution 9

Concurrent resolution to set forth the very acute crisis now experienced by the island of Puerto Rico; to make urgent demands upon the President of the United States of America and the national administration for a remedy for this situation

Whereas the exports of Puerto Rico have fallen from $114,953,827 in 1937 to $82,077,178 in 1938, i. e., a decrease of 28.5 percent. In 1938, imports amounted to $93,314,783, which showed a trade balance against Puerto Rico of $11,237,605 in the year 1938;

Whereas due to the restrictions resulting from the quotas assigned to Puerto Rico for this year, there can be no new plantings of sugarcane, the sugar-grinding season will close in May, it being one of the shortest there has ever been in Puerto Rico, and at the close of the grinding season there will be over 200,000 laborers out of work;

Whereas according to reports of the administrator of P. R. R. A., the number of cases certified for relief reached 222,606 unemployed in November 1938, a figure which represents, counting their dependents, 1,121,035 persons without means of subsistence;

Whereas Puerto Rico has suffered considerable reductions in the export values of its agricultural products during the year 1938 as compared with 1937, reductions which are distributed approximately as follows: Sugar, $21,240,000; coffee, $1,059,000; tobacco, $1,631,000; fruits, $691,000; needlework, $9,199,000;

Whereas, in accordance with the agreement entered into with Cuba on September 3, 1934, by virtue of which the tariff on canned and fresh pineapples was reduced, the Republic of Cuba bound itself to furnish seeds to Puerto Rico, an obligation which it has refused to perform, thus violating the conditions of said treaty;

Whereas these reductions (with the exception of coffee) have all been due directly to acts, both legislative and administrative, of the National Government, to wit:

(a) Sugar Act of 1937, which in the distribution of quotas allots to Puerto Rico a ratio of only 11.94 percent out of the total estimated consumption of the Nation;

(b) The Wage and Hour Act which prescribes wages at a rate that the most important of the industries affected cannot withstand;

(c) Trade agreement with France whereby the duty on bay oil was reduced from 25 percent to 12½ percent, which caused our sales of this oil to the United States to drop from $29,181 in 1937 to $17,223 in 1938.

(d) Trade agreement with Cuba, dated September 3, 1934, reducing the duty on cigars from $3.60 a pound, plus 20 percent ad valorem, to $2.25 a pound, plus 12½ percent ad valorem, which caused a drop from $1,453,340 in 1934 to $42,813 in 1938 in the value of Puerto Rican cigars in the United States.

(e) Trade agreement with the United Kingdom, dated January 1, 1939, reducing the duty on coconuts from $5 a thousand to $2.50 a thousand, which reduction is likewise applicable to coconuts imported from Panama, Colombia, Venezuela, Cuba, and Santo Domingo, under the "most-favored-nation" clause in their commercial treaties with the United States, which has resulted in such a drop in the price of coconuts that it is hardly worth while to ship them.

(f) Trade agreements with El Salvador, Guatemala, and Canada, dated May 31, 1937, June 15, 1938, and January 1, 1939, reducing the import duty on honey from $0.03 to $0.02 a pound, for which reason the sales of honey from Puerto Rico in the United States have dropped from $75,175 in 1936 to $47,924 in 1938.

(g) Trade agreement with Switzerland, dated December 15, 1936, which on pages 375–410 reads as follows: Handkerchiefs, wholly or in part of machine-made lace; handkerchiefs embroidered (whether with a plain or fancy initial, monogram, or otherwise, and whether or not the embroidery is on a scalloped edge), tamboured, appliqued, or from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving to finish or ornament the openwork, not including one row of straight hemstitching adjoining the hem; any of the foregoing, finished or unfinished, which contain no hand-made lace and which is not embroidered or tamboured in any part by hand: Composed wholly or in chief value of cotton, 2 cents each and 30 percent ad valorem. Composed wholly or in chief value of vegetable fiber other than cotton: If finished and valued at 80 cents or more per dozen, 2 cents each and 30 percent ad valorem.

If unhemmed and without any finished edge, and valued at 45 cents or more per dozen, 2 cents each and 30 percent ad valorem.

"The Treasury Department decided that, inasmuch as paragraph 1529 (b) above cited, specifically exempts only handkerchiefs, which are not embroidered or tamboured in any part by hand, but does not specifically exempt other hand-made ornaments such as applique, works from which threads have been omitted, etc., handkerchiefs on which such handwork has been done shall be included under the new tariff rate of the treaty."

The above did not favor Switzerland but instead favored China, which totally invaded the handkerchief market of the United States to the detriment of the handkerchief market of Puerto Rico.

(h) Competition with China, the Philippines, Portugal, Japan, Italy, and Madeira, subject to this tariff under the most-favored-nation clause caused a drop in the value of our sales of needlework to the United States from $20,811,000 in 1937 to $11,612,000 in 1938; this when the wage rates fixed by the National Wage and Hour Act were still to be prescribed;

(i) Trade agreement with Cuba, of September 3, 1934, lowering the tariff on cucumbers, peppers, canned and fresh pineapples, as follows: Cucumbers, from $0.024 a pound to $0.012 a pound; peppers, from $0.02 a pound to $0.015 a pound; canned pineapples, from $0.016 a pound to $0.008 a pound; fresh pineapples, from $0.40 a crate to $0.20 a crate. These reductions in the tariff on cucumbers and peppers are aggravated by the fact that such reductions are effective from December 1 to the last day of the following February in the case of cucumbers, and from January 1 to April 30 in the case of peppers, and it is between these dates for which the reduction has been granted that Puerto Rico ships these products to the continent, when the other producing areas of the Nation have finished selling their crops, thus giving the advantage to Cuba exclusively at the expense of Puerto Rico, while complete protection is afforded to the other producing areas of the continent. As a result, the sale of Puerto Rican cucumbers to the United States has dropped from 2,923,230 pounds in 1935 to 2,562,450 pounds in 1938; and sales of peppers have dropped from 149,845 pounds in 1935 to 78,255 pounds in 1938. Even though this reduction is not of the greatest significance, it is important, however, that a business which, if it enjoyed adequate protection, could increase in importance and perhaps become a leading factor in our sources of wealth, has been brought to a standstill:

(j) As regards fresh pineapples, the agreement with Cuba will practically do away with the cultivation of this fruit in Puerto Rico, considering that Cuban exports of fresh pineapples to the United States have increased from 52.7 percent of the total pineapple imports in 1935 to 55.4 percent in 1936 and 64.6 percent in 1937, while Puerto Rican shipments decreased during the same period from 34.2 percent in 1936 to 28.3 percent in 1937. As a result of competition, furthermore, prices dropped from $2.66 a case in the New York market in 1935 to $2.47 a case in 1936, to $2.24 a case in 1937, and to $1.94 a case in 1938, and the prices on canned pineapples likewise dropped from $0.066 a pound in 1935 to $0.064 a pound in 1936, to $0.058 a pound in 1937, and to $0.057 a pound in 1938; and the whole situation is now further aggravated by the fact that the canning and packing of pineapples for the market is now made enormously expensive through the application of the Wage and Hour Act. Agreements similar to that made with Cuba in regard to pineapples, made with Honduras, Guatemala, Haiti, and Costa Rica, have reduced the duty on fresh pineapples from $0.50 a crate to $0.35 a crate, and the agreement with the United Kingdom of England dated January 1, 1939, now also fixes the duty at $0.35 a crate;

(k) Trade agreement with Cuba (September 3, 1934) and Haiti (June 3, 1935) reducing the duty on rum from $4 to $2 a gallon in the case of Cuba and from $5 to $2.50 a gallon in the case of Haiti. Through these concessions the expansion of our liquor industry has necessarily been checked, which with the effective protection previously enjoyed, could have developed into a source of income of almost as much consequence as the sugar industry;

(l) Trade agreement of September 3, 1934, with Cuba, making reductions in the duty on unstripped tobacco; agreement of February 1, 1936, with Holland, lowering the duty on cigar wrappers; agreement of January 1, 1939, with the United Kingdom, lowering the duty on cut tobacco; agreement of September 3, 1934, with Cuba, lowering the duty on fresh tomatoes and grapefruit, all of them to the grave injury of the price of our tobacco, our tomatoes, and our grapefruit;

(m) Trade agreement of June 15, 1936, with France, lowering the duty on vanilla from $0.30 a pound to $0.15 a pound, a reduction which deprives Puerto Rico of the protection offered to this product the cultivation of which was being promoted for the purpose of creating the vanilla industry, in view of the fact that Puerto Rico needs diversification of agriculture and the development of new industries;

(n) Under the security offered by a protective tariff of $0.02 a pound, we essayed the promotion of the planting and cultivation of citron as a suitable crop to supplement the coffee crop in the interior of the island. It grew well, and the cultivation of this crop acquired ever greater importance, but the Congress of the United States removed the tariff and now, selling at prices of 3 and 4 cents a pound in the New York market, Italy, with great strides, displaces Puerto Rican producers who cannot compete at these prices, for in Italy this product is salted with sea water and lower wages are paid, and, in addition, the Government subsidizes producers.

(o) The exportation of manganese, the only mineral that we mined on a commercial scale, has had to be stopped because Congress took away the tariff protection it previously enjoyed;

Whereas the Department of State now proposes to lower the duty on Cuban sugar from 90 cents to 75 cents a hundredweight, according to a notice dated November 30, 1938, and this will be another blow aimed at our economy and affecting our chief agricultural product, inasmuch as the mere announcement of the reduction in the duty brought the prices down, which forced the Secretary of Agriculture to cut down on his estimate of consumption for the purpose of maintaining prices, which will work fresh injury on us, inasmuch as the market quota originally allotted to us will have to be cut down in proportion;

Whereas in making the agreement with Czechoslovakia, Puerto Rican coffee did not receive adequate consideration and was allotted a minimum quota smaller than that of any of the other countries that sell coffee in that market, despite the fact that Czechoslovakian coffee importers are desirous of buying it, and such action has prevented the increased importation of Puerto Rican coffee;

Whereas the application of the provisions of the Sugar Act of 1937 has reduced the income derived from sugar out of all proportion to the needs of the country and has injured the interests of the producers and laborers of Puerto Rico, a situation made worse through the discrimination of which Puerto Rico has been made a victim, for while continental areas have had the benefit of quotas which represented no reduction of their normal crops, while neither Hawaii nor the Philippines have filled the quotas allotted to them, while Cuba is allotted a quota twice as large as that allotted to Puerto Rico, and Puerto Rico has always filled its quota to excess, our island is allotted a grinding quota for 1939 that amounts to a restriction of 21.5 percent on its 1938 production which totaled 1,077,128 tons, notwithstanding the fact that sugar is the foundation of our economy, the mother industry on which we depend for paying wages to 150,000 of our laborers;

Whereas it will not be allowed during this year 1939 to manufacture sugar in excess of the quota assigned for the continental market and consumption in the island, which will mean a difference of 108,139 tons less sugar manufactured by us this year, and for this reason the grinding season will last 3 months only and sufficient cane will remain standing in the fields to meet the requirements of practically the whole of the next grinding season, a circumstance this that will prevent new plantings and will, as a consequence, leave over 130,000 industrial laborers without work and create a state of unemployment after the end of May which will have no parallel in the history of Puerto Rico, while the continental areas, Hawaii, and the Philippines will be able to use all the sugar beet and all the cane there may be in their fields;

Whereas the right of Puerto Rico to promote and develop all the industries for which favorable conditions exist here was arbitrarily violated and restricted when the said Sugar Act of 1937 imposed a fixed permissible quantity of sugar to be refined in Puerto Rico;

Whereas we are being arbitrarily sacrificed through the provisions of the Sugar Act while neither the continental sugar-beet States nor the sugarcane States of Florida and Louisiana have filled their quotas, with the sole exception of Louisiana in the crop year 1935–36, in which year, however, through redistributions made by the national administration, Louisiana was permitted to sell its excess production;

Whereas the Sugar Act of 1937, which, in defining "liquid sugar," expressly excludes "the sirup of cane juice produced from sugarcane grown in the continental United States," produces the effect of not charging against the quotas of Louisiana and Florida the sirup manufactured in those States, while the sirup produced in Puerto Rico is charged against the quota of this country; and those States are free to turn into sirup any cane in excess of their fixed sugar quotas, while Puerto Rico is denied the right to do so;

Whereas these discriminations against the Puerto Rican sugar industry have no justification and can well be branded inhuman and selfish, if the relative importance of the said industry in the economy of the States of the American Union and in Puerto Rico is considered, and one thinks of the number of human beings affected in one case and the other;

Whereas, through enactments of the Congress of the United States which have removed the customs duty on many of the products produced in Puerto Rico; through the Sugar Act of 1937, which inhumanly restricts our production of sugar; through the Wage and Hour Act, which increases the cost of production of a great many industrial products to a point where, for purposes of competition, they cannot withstand the wage rates fixed; through the agreements made with various foreign nations; which have affected our sugar, our tobacco, our cucumbers, our peppers, our tomatoes, our fresh and canned pineapples, our citrons, our vanilla, our coffee, our needlework, our manganese, and our grapefruit, the decrease in the value of our exports and the consequent decrease in our purchasing power has been so enormous as to cause a frightful unemployment crisis which is a very serious menace to the peace and the welfare of our country;

Whereas these acts on the part of the Congress of the United States and of the national administration will undoubtedly cause the total ruin of all our sources of wealth, and they now discourage all the initiative of the businessmen of Puerto Rico and kill all hope of promoting the creation of new industries;

Whereas the United States of America contracted, with the whole world as a witness, the solemn obligation to govern Puerto Rico democratically and to insure the liberty and happiness of the Puerto Ricans: Now, therefore, be it

Resolved by the Senate of Puerto Rico (the house of representatives concurring):

(1) To petition the President of the United States to create as soon as possible, in view of the critical economic condition of the island and the need of a prompt and effective remedy, an interdepartmental board having sufficient authority to discuss and consider at a round-table conference with a duly accredited representation of the legitimate interests of the island, the present condition of Puerto Rico and its problems and needs, and also to study and agree upon measures leading to their solution, including the modification of the administrative and financial laws and measures that are adversely affecting our economy.

(2) To demand that sufficient power and authority be granted to the Legislature of Puerto Rico to create a board to regulate wages and hours in accordance with the possibilities and financial potentiality of the industries and the need of our laborers to enjoy fair wages, both in industries engaged in local business and in industries engaged in interstate commerce.

(3) To demand from the national administration and from the Congress of the United States that the sugar quota of Puerto Rico be increased by 125,000 additional tons of sugar.

(4) To request from the Congress of the United States legislation to restore the import duty on those products of Puerto Rico which have been detrimentally affected by the removal of the tariff or import duty previously existing.

(5) That all such provisions of commercial treaties with foreign countries be denounced and amended as cause the ruin of our agriculture and of our sources of wealth, plunging Puerto Rico into a chaotic financial situation, and our laborers, through unemployment, into a condition of unbearable penury and starvation.

(6) That as our excess of population, one of our most serious problems, establishes a state of unbalance between production and consumption, it be demanded from the Government of the United States of America that it negotiate for the colonization of large areas of land in Santo Domingo and Venezuela by 30 or 40 thousand Puerto Rican families, a step that would contribute toward the decrease of unemployment and would tend to reestablish to a great extent the balance between production in the island and consumption by our population.

(7) That a certified copy of this resolution be sent to the President of the United States of America, the Honorable Franklin Delano Roosevelt; to the Committee on Insular Affairs of the Senate and of the House of Representatives; to the Committee on Territories of the House of Representatives; to the Secretaries of all the various departments of the national administration; to every Senator and Representative in the United States Congress; to all the Commissioners and Delegates of all the possessions and Territories of the United States, and to a great number of the leading newspapers edited on the continent.

We, Enrique González Mena and Antonio Arroyo, Secretaries of the Senate and the House of Representatives of Puerto Rico, respectively, do hereby certify:

That the foregoing concurrent resolution was unanimously approved by the Senate and the House of Representatives of Puerto Rico, on April 10 and April 14, respectively, 1939.

In witness whereof, we have hereunto set our hands and caused to be affixed the seals of the Senate and the House of Representatives of Puerto Rico, in our offices at San Juan, Puerto Rico, on this the 15th day of April A. D. 1939.

ENRIQUE GONZÁLEZ MENA,
Secretary, Senate of Puerto Rico.
ANTONIO ARROYO,
Secretary, House of Representatives of Puerto Rico.

Aproved:

RAFAEL MARTÍNEZ NADAL,
President, Senate of Puerto Rico.
MIGUEL A. GARCÍA MÉNDEZ,
Speaker, House of Representatives of Puerto Rico.

Do W. P. A. Workers Refuse Jobs in Private Industry?

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 8, 1939

RADIO ADDRESS BY HOWARD O. HUNTER, JUNE 2, 1939

Mr. CASEY of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Howard O. Hunter, Deputy Administrator of the Works Progress Administration, over the Mutual Broadcasting System network from station WOL, Washington, D. C., Friday, June 2, 1939:

Have you heard the latest W. P. A. story? It is being told all over the country, and it is very popular because it seems to be what people want to believe. Have you heard it? It goes like this: W. P. A. workers are a lazy, good-for-nothing bunch of bums who spend their time leaning on shovels. They are so dead set against working for a living that if anyone offers them a job they turn it down quicker than they can straighten up from the shovel handle. The story may refer to a specific type of worker—usually farm hands or housemaids—and it always claims that there are good jobs in the vicinity if only the lazy W. P. A. workers could be persuaded to take them. But they always turn them down. They'd rather be supported for doing nothing. They intend to stay on W. P. A. for the rest of their lives.

Now, I think that story flatters W. P. A. altogether too much. We may be good but we're not as good as that. As a matter of fact, any W. P. A. project supervisor will tell you that the greatest

production problem he has is caused by the fact that his men always leave the rolls the minute they get a chance to get back into private industry. Every month over a hundred thousand workers leave the W. P. A. to take private jobs. Since the W. P. A. began in 1935 nearly four and a half million workers have left the rolls. Of course, the rolls have had to be cut from time to time because of Budget requirements, but the vast majority of workers who leave W. P. A. do so voluntarily to take jobs in private industry the minute they can get them.

Here is another interesting fact. A survey recently made on duration of W. P. A. employment shows that the average period of continuous employment for all workers on W. P. A. is just a fraction of a month over 1 year. Nearly two-thirds of the workers on the rolls were found to have been put on since the beginning of the recession period in the fall of 1937, less than a year and one-half ago. Only one out of six has been employed continuously for 3 years or more by any Federal agency. And of those who had been on for the longer periods, the greatest proportion were older people—people who were above the age limit tacitly set by private industry and yet who had to go on supporting their families just the same. Over seven and one-half million different persons have had jobs on the W. P. A. since 1935. This means that 26,000,000 people, or 20 percent of the population, have at one time or another been dependent on the W. P. A. For myself I would think twice before I made the statement some people make that 20 percent of the American population are shovel leaners and bums.

Why is it, then, that the same old story about W. P. A. workers refusing private jobs keeps bobbing up? It's getting to be a national folk tale, spread by word of mouth, letters to the newspapers, complaints to Congressmen—wherever rumor has a chance to spread you will find it.

Now, as a matter of routine, the Works Progress Administration makes it a practice to investigate every single one of these stories of job rejection by W. P. A. workers wherever it turns up. Wherever possible the local administrator sends a notary out to take affidavits of testimony in the case. You may say that nothing will come of investigations made by W. P. A. about itself. But think for a minute. If we don't investigate these charges, who else is going to bother? Who else cares? If you are libelled, aren't you the person who sets to work to establish the facts? If you have a good case, don't you bring those facts out in the open where anyone can refute them if they are wrong?

Well, here are the facts. We have received hundreds of complaints involving thousands of workers. The complaints are always to the effect that the W. P. A. is creating a labor shortage in a given area and that nobody can get workers for the jobs that are available. We have investigated every one of these complaints, and we have a complete file of every case of so-called job rejection by a W. P. A. worker. When a man writes to the papers about a case he knows of, a W. P. A. investigator calls on that man. When someone writes a column or a magazine story or an editorial or a telegram telling about lazy W. P. A. women who won't take positions as housemaids at excellent salaries, or about lazy W. P. A. men who refuse to take jobs in the fields in harvesting season, we get in touch with the writer of that story or editorial or telegram. When a constituent writes a Congressman and the Congressman calls for the facts, we get them for him.

Now, we have found one single overwhelming fact in all these cases—as soon as we ask for concrete details, with names and dates, the stories melt away into nothing but idle rumor. Out of all the complaints that have come to us, less than one-tenth of 1 percent have had any validity. But in those few cases, the W. P. A. workers involved were immediately fired.

The other 99.9 percent of the cases were the most amazing collection of rumors, wish fulfillments, ax grindings, and idle dreams you ever saw. I want to give you a few examples out of the many which are on file with photostatic copies of all the evidence, at W. P. A. headquarters for anyone to investigate who cares to. This material is also available to the newspapers and the magazines that print the original complaints, but they usually lose interest as soon as the facts are discovered.

Case A: In Collier's magazine for April 15 of this year, the editor published part of a letter from a Mr. J. C. Richaberger, of Vinton, Tex., in which it was stated that a friend of the writer's had tried to hire a woman named Maria to do housework for him, but couldn't get her because she was on a W. P. A. sewing project at $40 a month. Not only that, but her daughter was also working for W. P. A. at $38 a month, her son was in the C. C. C. and was getting $30 a month, and her husband, whose name was Miguel, was also working for relief at $12 a week. Furthermore, Miguel said he was thinking of becoming a citizen so that he could vote against such niggardly treatment.

Now, Collier's magazine gave so much weight to this letter that it commented on its as "a hot symptom" of what was wrong with America. Did Collier's investigate first? No. The story went out all over the country and no doubt there were hundreds of thousands of people who believed it. Score another black eye for W. P. A.

But one Congressman received a letter from a constituent indignantly quoting the Collier's story as evidence that a purge of ineligibles on W. P. A. was needed at once. The Congressman asked us to investigate. And we did.

Here is what we found, and we had affidavits made on the spot as to all the facts. Upon direct examination Mr. Richaberger, who had written so boldly to Collier's, owned up to a complete hoax. The names in his letter had been made up. He heard the story from somebody else and had passed it on. He said he was sorry that his story had caused so much trouble. He had no evidence that any housemaids or any other workers on W. P. A. had ever refused any jobs offered to them.

Our investigator tracked down the man who was supposed to have discovered the family in the story, and he said it had never happened to him, it was just a sort of legend in the district, based on something that was supposed to have happened several years ago, before there was any W. P. A. in existence. He couldn't give the names of the original cases or of any others. The whole thing had just been "a good story," that was all.

Very well, we sent the evidence in the case to the editor of Collier's asking for a retraction and that the evidence be printed. Did he reprint it? He did not. It wasn't "a good story" any longer. Maybe he thought his readers wouldn't be interested in the truth about W. P. A., but only in attacks upon it. That attitude is rather general among some who wish to use smear tactics by taking the most convenient method—spreading rumors that make front-page headlines, making "news" out of baseless allegations, and then passing on to the next "good story" that comes to hand.

Here are a few more examples of the kind of complaints that are made. A financial columnist named B. C. Forbes recently claimed that a New York department store wanted to hire 2,000 part-time clerks but was unable to get them because of W. P. A. competition. We wrote to Mr. Forbes on April 17, asking for the name of the store. You would think that on so important a matter we would have got a telegram right back, and we wouldn't have minded if it had been sent collect, either. Up to the present time we have received no reply from Mr. Forbes.

Here is another interesting case. On November 20, 1937, the New York Times published a letter from a Mr. David P. Gaines telling of "several farmers" in his district who were unable to get help, although they offered high wages and good living conditions, because workers preferred to remain on W. P. A. When the investigator called on Mr. Gaines he turned out to be from Waterbury, Conn. He was very polite, but when asked to give the names of the "several farmers" he had mentioned, he could not give a single one. The investigator told Mr. Gaines that any W. P. A. worker who refused a job would be dropped from the rolls. Who were the workers known to him who had refused the jobs he had written the Times about? Mr. Gaines couldn't say.

Now take the question from another point of view, and see what happens when actual jobs are offered. Why people break down the doors to apply for them. I have here three clippings which tell the story. Last February, when 12 jobs were offered by the city of New York for laboratory helpers, a mob of women started forming 30 hours before the dead line. They sat up all night long, singing songs and waiting for morning to come. By 9 o'clock there were over 4,000 of them, and 90 policemen had to be called out to handle the crowd. Incidentally, the salary for the jobs was $80 a month. A second clipping, from a Boston paper, tells how 7,000 men swarmed into the Boston Navy Yard last April to apply for 25 jobs. They had to call out the police to keep order there, too. A third case occurred in Washington, D. C., on October 12, 1938. The Civil Service Commission there announced that applications would be taken to build up an eligibility list for Federal charwomen. There were no jobs open at the time, mind you—the Commission had enough people already on its lists to take care of any job vacancies that might occur for a year. All it advertised was a chance for a place on a waiting list. Twenty thousand women stampeded the Fourth Precinct Station trying to get their names on that waiting list. The officials finally had to shut up shop and be taken from the place in patrol cars. Traffic had to be detoured for three blocks. Even after the officials had gone away, that mob of women refused to vacate the vicinity and remained there milling around for hours. That is what happens when jobs really are available.

Then why do I bother to quote from complaints of job rejection at all? Because they are repeated over and over until people believe them—even the people who made them up in the first place.

It is an interesting fact that a large percent of these complaints come from farming communities. We seldom get them from industrial centers. Since only 8 percent of W. P. A. workers are agricultural laborers, it is obvious that complaints of job rejection concern only a small percentage of total W. P. A. employment, and a very special kind of employment. Yet even here, when we investigate the complaints, we find that they are all alike. They don't concern specific people who refuse specific jobs—they are just the same old rumors we have tracked down before and have proved to be without any foundation. Let me give you an example that will do for all of them.

One day Harry Hopkins received a telegram, collect, addressed to him personally, signed by six gentlemen of Dexter, Ga. They weren't content with sending one telegram, though. The Secretary of Agriculture got one, too, also collect. The telegram said that farmers in that section were threatened with loss of crops because W. P. A. had all surplus labor. The grain was falling down in the fields and the grass was taking the crops. Couldn't some arrangement be made, the telegram asked, to get W. P. A. labor back to the farms?

This looked urgent. We sent some telegrams ourselves. The six gentlemen were visited by an investigator right off the bat. Three of them were very much surprised. They said they'd never signed any such telegram. Two said that they'd signed a petition in anticipation of a temporary shortage of cotton pickers in the fall. All five

said that there was no shortage at the present time. Then none of them needed workers, the investigator asked? No; none of them needed workers. As for the man who had really sent the telegram, a Mr. Clayton Nicholson, he was out of town and couldn't be reached. Did he need any workers? the investigator asked his wife. No. He had needed some the year before, but didn't want any now.

So with all the stories. They are told by somebody who has an ax to grind. They are a form of wish fulfillment.

If you don't believe this, suppose you put the matter to a test. The next time you hear any complaint of lazy W. P. A. workers refusing jobs in private industry ask for their names. Ask where the jobs are. A certain banker, who wrote to us complaining of labor shortages in his district caused by W. P. A., has a lot of fun doing just that now. When we investigated his complaint he said he knew of no specific cases of job refusal, but that the farmers in his district had told him that W. P. A. workers wouldn't take jobs. He asked if we would give a list of names of W. P. A. workers in the district who were available for private employment. We were delighted to give him such a list. Now, whenever this banker hears any complaints from his friends he says, "All right; here's a list of W. P. A. workers ready and waiting to be hired." He finds that people don't complain about job rejections to him any more.

Any time private industry wants any workers from the W. P. A. it can have them for the asking. The minute private industry needs any type of skilled or unskilled labor, down go our projects in private industry's favor. We stand ready to send out one man, a hundred men, a thousand, a million, any time private industry wants to speak up and ask for them.

Shall private industry have the responsibility for the millions of workers who make up the labor surplus? And remember that there are just as many unemployed workers who are not on W. P. A. rolls as there are on the projects. Can private industry handle them? It would be a happy day for the United States if it could, and I hope it can soon. Meanwhile, who has to take the responsibility? The Federal Government itself takes this responsibility because unemployment is a national problem beyond the control of any local community or any particular industry. Obviously the Federal Government does not blame a business or an industry for unemployment, and neither should business blame the Federal Government for giving jobs to the unemployed.

The people who administer the W. P. A. program, as well as the people on W. P. A. rolls, would be delighted if all these stories of good jobs being turned down were really true, for they would show that there were actually jobs to be had. The workers are anxious to get off the W. P. A. rolls. They are tired of being blamed for everything that goes wrong, tired of being called lazy bums and shovel leaners, in spite of the thousands of miles of roads they have built, the schools and hospitals they have constructed, the innumberable useful public works and public services they have furnished. W. P. A. workers want jobs.

The next time you hear of a W. P. A. worker turning down a job let us know about it. Ask the person who tells the story if he has a job to offer. Does he know of anybody who does have a job to offer? Do you know of a job? Do you know anybody who might know of one? What W. P. A. workers want are private jobs, not rumors of jobs. Does anybody have a job to offer? We have 2,600,000 people on the W. P. A. rolls. They are waiting anxiously to hear where these jobs are.

Increased Pensions for the Aged

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the Members of the House to the developments that have taken place in the last 24 hours with reference to the concerted effort that is being made by those of us who are interested in seeing benefits for the aged needy liberalized.

Mr. Speaker, there is a disposition upon the part of this Congress to liberalize these benefits to the aged needy. The bill as reported out by the powerful Ways and Means Committee, with all due deference to the distinguished gentlemen of that committee, does not in any sense liberalize these pensions over and above that provided in the existing law. The increase granted from $15 of Federal contribution to $20 is at the most a gesture. The truth of this statement can readily be verified by glancing at the chart which I placed in the RECORD on June 6, showing that at present there is only one State in the Union that matches the present $15. So far as the aged needy are concerned, the Ways and Means Committee could just as well have provided a Federal contribution of $100 provided the States matched it.

The membership realizing this status of affairs, and desiring to see these benefits increased for these aged people, is giving this matter considerable thought and study. In response to a few hours' notice which I gave from the floor yesterday, and by letter this morning, there were 86 Members who met in the caucus room of the Old House Office Building this morning to consider this proposition of liberalizing the old-age pensions. In spite of the short notice and the fact that Their Majesties the King and Queen of England were expected on the Capitol Grounds this morning, this large number appeared and discussed this momentous question.

After a discussion thereof the following things were done. The group—

First. Adopted a resolution favoring the Colmer amendment.

Second. Resolved itself into a steering committee to foster a liberal amendment.

Third. Elected a chairman and a secretary, WILLIAM M. COLMER (Mississippi) and JOHN J. DEMPSEY (New Mexico), respectively.

Fourth. Authorized the chairman to appoint a committee of not less than 15 members from the steering committee to serve as an executive committee.

The following Members of the House were present and constituted the steering committee:

Alabama: Sam Hobbs, Pete Jarman, John J. Sparkman, Joe Starnes.
Arizona: John R. Murdock.
Arkansas: W. F. Norrell, David D. Terry, Wade Kitchens, E. C. Gathings, Clyde T. Ellis.
California: Lee E. Geyer, Richard J. Welch, H. Jerry Voorhis, Harry R. Sheppard, Thomas F. Ford, Thomas M. Eaton, Leland M. Ford, Albert E. Carter.
Connecticut: Thomas R. Ball.
Florida: Millard F. Caldwell.
Georgia: Robert Ramspeck, Paul Brown, Stephen Pace.
Illinois: Frank W. Fries, Anton J. Johnson.
Indiana: Gerald W. Landis.
Iowa: Henry O. Talle.
Kansas: John M. Houston.
Kentucky: John M. Robsion.
Louisiana: René L. DeRouen, A. Leonard Allen, Overton Brooks, John K. Griffith.
Maine: James C. Oliver.
Michigan: Clarence J. McLeod.
Minnesota: H. Carl Andersen.
Mississippi: John E. Rankin, Aaron Lane Ford, Dan R. McGehee, Will M. Whittington, William M. Colmer, Ross A. Collins, Wall Doxey.
Missouri: C. Arthur Anderson.
Montana: James F. O'Connor.
Nevada: James G. Scrugham.
New Hampshire: Foster Stearns.
New Mexico: John J. Dempsey.
New York: Pius L. Schwert, Caroline O'Day.
North Carolina: Harold D. Cooley.
North Dakota: William Lemke.
Ohio: John F. Hunter.
Oklahoma: Jed Johnson, Phil Ferguson, Sam Massingale, Jack Nichols, Will Rogers, Wilburn Cartwright, Mike Monroney.
Oregon: James W. Mott, Homer D. Angell.
Pennsylvania: Guy L. Moser, Ivor D. Fenton, Charles L. Gerlach.
South Carolina: Hampton P. Fulmer, Butler B. Hare, Joseph R. Bryson, James P. Richards.
South Dakota: Karl E. Mundt.
Tennessee: J. Will Taylor, Joseph W. Byrns, Jr., Herron Pearson.
Texas: Wright Patman, W. R. Poage, Clyde L. Garrett.
Utah: J. W. Robinson, Abe Murdock.
Virginia: Howard W. Smith.
Washington: Charles H. Leavy, Knute Hill.
West Virginia: Jennings Randolph, A. C. Schiffler.
Wisconsin: Merlin Hull, Lewis D. Thill.
Wyoming: Frank O. Horton.

Many others who did not have an opportunity to attend due to the shortness of the notice and other unavoidable circumstances have expressed a desire to foster this legislation and be considered on the steering committee. Their names will be added to the list and will appear in a future issue of the RECORD.

Unfortunately, we have not been able to get an accurate figure as to what the additional cost to the Federal Government would be if this amendment is adopted. The best figures obtainable upon the basis which the Social Security Board is now operating indicate that the additional cost to the

Federal Government would be $114,000,000. Of course, if more people qualified it would cost more just as it would cost more if more people qualified under the bill as reported out by the Ways and Means Committee. But in no event will the additional cost amount to more than the additional cost of the present bill under consideration, providing for a $20 Federal contribution, if the several States matched that $20 Federal contribution. In fact, it would not amount to nearly as much.

Mr. Speaker, for the benefit of the membership and the country at large, I have secured a statement, which was prepared by an officer of the Federal Social Security Board, which shows how our amendment would affect the aged who qualify under the bill. This chart discloses that upon the present basis, with the adoption of our amendment, the aged needy of every State of the Union would be benefited and their pensions increased, as follows:

Average amount of old-age assistance per aged needy individual for April 1939, by States, compared with maximum possible average amount under a revised plan of four-fifths Federal matching on $25 per month per aged individual

[Based upon assumption that States continue to expend as much as they now expend and use all the additional Federal funds for increased grants to the aged]

	Average amount paid for April 1939	Maximum possible amount payable under revised four-fifths plan
Region I:		
Connecticut	25.88	32.94
Maine	20.54	30.27
Massachusetts	28.57	34.29
New Hampshire	23.54	31.77
Rhode Island	18.85	29.43
Vermont	15.04	27.52
Region II: New York	24.20	32.10
Region III:		
Delaware	10.89	25.45
New Jersey	19.52	29.76
Pennsylvania	17.65	28.83
Region IV:		
District of Columbia	25.62	32.81
Maryland	17.28	28.64
North Carolina	9.55	23.90
Virginia	9.64	24.10
West Virginia	13.89	26.95
Region V:		
Kentucky	8.67	21.70
Michigan	16.64	28.32
Ohio	22.55	31.28
Region VI:		
Illinois	18.97	29.49
Indiana	17.01	28.51
Wisconsin	21.09	30.55
Region VII:		
Alabama	9.38	18.76
Florida	13.83	26.92
Georgia	8.55	21.40
Mississippi	7.22	18.05
South Carolina	7.79	19.50
Tennessee	13.22	26.61
Region VIII:		
Iowa	19.85	29.93
Minnesota	20.65	30.33
Nebraska	15.72	27.86
North Dakota	17.66	28.83
South Dakota	18.98	29.49
Region IX:		
Arkansas	6.05	15.15
Kansas	18.71	29.36
Missouri	18.67	29.34
Oklahoma	19.79	29.99
Region X:		
Louisiana	10.46	25.23
New Mexico	11.80	25.90
Texas	14.02	27.01
Region XI:		
Arizona	26.26	33.13
Colorado	28.12	34.06
Idaho	21.31	30.66
Montana	16.99	28.50
Utah	20.66	30.33
Wyoming	21.85	30.93
Region XII:		
California	32.46	36.23
Nevada	26.57	33.29
Oregon	21.32	30.66
Washington	22.16	31.08
Territories:		
Alaska	27.50	38.75
Hawaii	12.69	26.35

NOTE.—The average payments shown for the revised plan are made on the assumption that each State maintains the number of recipients as at present and uses all the additional Federal funds for increased grants to the aged. Those States which wish to put additional individuals on the rolls and also raise the payment somewhat would have different averages than shown above.

In conclusion, allow me to say that there are many who favor a larger pension. There are some who do not favor as much. All legislation is a compromise. Many Members who have bills pending and who are prepared to offer amendments have, out of their very fine and broad spirit, seen fit to subjugate their own private opinions and bills on the theory that this is the best that we can hope to do. In other words, they have realized that this is a common ground upon which we who favor a more adequate pension can all get together. They are willing to lay aside pride of opinion and authorship. Moreover, they are willing to agree upon the principle that this is an opportunity to render some real service to the aged needy of this country rather than to render lip service. We respectfully submit our views to the House Members as a whole and ask you to go along with us.

Whither, You Democrats?

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

ARTICLE BY ATTORNEY WILLIAM V. COWAN, OF KIRKLAND, WASH.

Mr. COFFEE of Washington. Mr. Speaker, among my constituents are many citizens of profound intelligence and scholarship. I am proud of the literacy and civic-mindedness of the people of the State of Washington. They are alert to the needs of the hour and are sedulously endeavoring to promote sound and well-considered legislation designed to remedy our difficulties. Among these citizens will be found the Honorable William V. Cowan, attorney, of Kirkland, Wash. Mr. Cowan is a highly educated and well-grounded progressive, who has given much thought to the economic ills of America. Two years ago I placed in the CONGRESSIONAL RECORD a superbly written and beautifully rational article from his pen, wherein he set forth with irrefutable logic the case for the President's plan for reform in the Federal judiciary.

It is therefore with particular pleasure that I am able to present another article written by the gifted pen of this remarkable figure of my State. I commend its careful reading to my colleagues and to those who are privileged to read the CONGRESSIONAL RECORD.

There may be sentiments or statements in the article with which I may be personally in disagreement. I cannot attempt to vouch for or wholly approve every individual sentiment or expression of Progressives who, while they mean to achieve the same objectives, sometimes advocate varying modi operandi as means of accomplishing such results. The article is thought-provoking, disturbing, and arresting. It offers a challenge. Is America prepared to meet it?

WHITHER, YOU DEMOCRATS?

(By Attorney William V. Cowan, of Kirkland, Wash.)

Farmer Ben lived with his family on a farm out West. He had 12 children. Susie, the oldest, was his pet and favorite. He doted on her. She was smart and pretty, and when the banker in town smiled on her and the preacher praised her, Farmer Ben waxed with pride and decided that the farm was no place for Susie. So he let the rest of the family go even in rags while he fixed Susie up to live in town. As soon as she got a new spring hat and gown she straightway changed her name to Suzette.

A FARMER'S DAUGHTER BECOMES IMPORTUNATE

And, true to human nature, the more Farmer Ben gave to Suzette the more she worked him for more. In order to appease her vanity he and the boys toiled like smoke early and late to raise all the alfalfa and wheat the virgin soil would produce. Mindless of future needs, he failed to summer fallow. The wheat field soon played out. Then alfalfa was his mainstay. In order to have more of it to sell, he skimped on the cows. They soon dried up. He robbed too much honey from the bees. They starved to death in the long winter. He turned the team out on the sagebrush. They strayed

into a blizzard and were too weak to escape home. Then he plastered the farm with a mortgage. Thus he kept Suzette in her fripperies and gewgaws, for she had her eye on the banker's son, who was royalty itself to her.

A CONSULTATION ABOUT SUZETTE'S EXTRAVAGANT DEMANDS

Finally Farmer Ben held a consultation with his family. "We've got to send grandma to the poor farm," he said. "We can't afford to keep her here any longer." "But," protested the children, "she's a good old soul, Dad. She's worked all her life for us, darning our socks, patching our pants, mending our shirts——" "Yes; yes; I know," replied Farmer Ben, "but we simply can't keep her any longer. She's had her day; eats too much; got an awful appetite for an old lady; and, besides, she's growing blind."

"Well, I'll pray for her," put in Mrs. Ben, "and I know God will make her comfortable."

SUZETTE MARRIES WHILE HER SACRIFICING FAMILY EXULTS

Suzette married the banker's son and drove off to the city in a spank 12-cylinder car. After coughing 2 years, three girls and a boy died of tuberculosis. To be sure, when Farmer Ben realized their condition he doled out four bits a week for extra food, though he claimed that they themselves were solely to blame. One boy turned out a "bum," another a tinhorn. One girl became a strumpet. The rest of the children, scratching hungrily among the foothills, got married and had batches of kids, who bragged about their rich aunt and her fine cars.

That, of course, is only a rural picture.

But dress Farmer Ben in a long-tailed coat and striped red and white pantaloons, call him "Uncle Sam," and you have a Boston to San Diego sweep.

THE FOREGOING WAS A PARALLEL

Never in our history have so many facts and figures been produced to show that our national economy has been similar to that of Farmer Ben—steadily shoving 90 percent of the American people into serfdom. The black slaves of the South were certain of good care and food in their old age. The economic slaves of today have no such pleasant outlook.

ALL IS SUBORDINATED TO SPECIAL PRIVILEGE

Books and magazines have brought out the suppressed and hidden facts of history. Speakers and editors, columnists and economic thinkers have exposed to view the plain picture of a mad and ruthless capitalism staggering blindly, drunkenly toward the precipice. In strong, forceful rhetoric our President has pleaded, admonished, even scolded. Nation-wide polls show the unmistakable desire of the people. The long, sickening story of financial racketeering in America, done with the permission of Congress and the aid of the courts from the days of the funding scandals of Alexander Hamilton to the tax-refunding scandals of Andrew Mellon, has been frequently repeated. Yet the Farmer Ben pewholders of both parties in the church of toryism cling tenaciously to their Hazzard-suggested, English-made doctrines, all fearful lest they bruise the tender feelings of their favorite Suzette families.

INDIGENCE AMID ABUNDANCE

Like a fierce wind, the facts and figures howl around the smug church. Millions of unemployed tramp past its gilded doors, demanding only a chance to work for bread. Starving old age occasionally hurls a rock through the windows or kills itself on the church's marble steps. Yet the well-fed, rotund bellies in the pews support twiddling thumbs and listen only to the Hoover-Glass versions of "the American way."

PRIVILEGE VERSUS POVERTY

Tariff pensioners, patent pensioners, land pensioners, ship-subsidy pensioners, reconstruction-finance pensioners, and all the others who have been on public relief since the days of Hamilton, hug their bellies and their billions and pray that a tory Hitler will come along and rescue them from their own greed and sins, or that a Chamberlain will appear who can appease the crowds outside with somebody else's food and property.

LIBERALS ARE INSULTINGLY DERIDED

If any of us draw unpleasant deductions from those facts and figures we are accused of "stirring up class hatred." If we suggest an unconventional plan to take care of grandma we are dubbed "crackpots." If we voice aloud the names of the families who are playing the role of Suzette we are "dangerous reds" and ought to be jailed or deported.

Nevertheless, the facts are there, howling their heads off, trying to show us that we are just as silly as Farmer Ben.

RAILROADS HAVE BEEN LONG ON RELIEF—THAT HAS BEEN RESPECTABLE

For 80 years now our railroads have been on public relief. We have given them not only more land than all New England and New York combined, but we have also, in one way or another, shelled out enough cash to buy them two or three times over. They are still begging.

WE VOTE FUNDS TO AID MONOPOLY AND TARIFFS FOR PRIVILEGE

For more than a hundred years the yarn with which grandma darns our socks, the spools of thread she uses, her needles and scissors, and every stitch of clothes she wears have been on old-age pensions. Grandpa's tools, hammer, saw, and rake likewise for the same period have drawn their bit of governmental charity. And none of those articles waited for the wrinkles of age. They got theirs even when they were "infant industries." How grandpa would have loved that much proportionate aid before his grocery store went bankrupt.

For nearly a hundred years the Steel Trust, the Cement Trust, the Oil Trust, the Beef Trust, the Tobacco Trust, and the rest have been continuous beggars in the public relief line. All on W. P. A. since the days of Henry Clay, who profanely called that sort of beggary "The American system." And now, when a few thin pennies are dribbled out to grandma, it is called "charity."

TARIFF SUBSIDIES EXPENSIVE TO CONSUMERS

Over 40 years ago, in 1897, in the Halls of Congress, Representative Roger Q. Mills, of Texas, speaking against the high tariff on alcoholic compounds, window glass, wool blankets, and carpets, stated that because of "this stupendous system of legislative rapine and robbery" of the people $2,293,000,000 annually went to the tariff beneficiaries to the protected classes. That was before even the Dingley tariff. A present estimate is that for the last 50 years those beneficiaries, the Suzette families of America, have received an annual average of more than $4,000,000,000 from the tariff alone.

Said a prominent economist lately, "The tariff is only a sort of sales tax."

The taxes Americans have paid on their lands are a mere pittance beside the taxes they paid indirectly through legislative chicane to the so-called America's 60 families. In the days of Louis XVI the favorites were granted authority to levy direct taxes. In our days, from McKinley to Hoover, a more subtle method was used for a bigger steal from the common people.

PLUTOCRACY'S IRON GUARDS ATTACK W. P. A. AND OLD-AGE PENSIONS

Today the smug sons of those legislative beneficiaries are the sly gentlemen who pull the strings by which a thousand storm troopers of plutocracy, a thousand Charley McCarthys bellow against W. P. A. and old-age security and shout against adequate relief to starving folk, the millions of them, who have taxed themselves for decades in order to appease the vanity and greed of those few favored families.

LACKEYS OF BOURBONISM AFFLICT THE EARTH

Not only legislators but also courts have rushed forward to make more effective the laws by which we have helped those few families build up their regal fortunes. And so powerful have they become that they now sneer at governments and join with the favorite families of Britain, of Germany, of France, and of Japan in a wild effort to gobble up the whole earth and make the children of all mankind their serfs and flunkies. Our beloved America they have turned into a plutocracy. Today, as never before, their sleek retainers, their storm troopers, beset our 48 legislatures and Congress, hover about every administrative official, begging, threatening, cajoling, commanding.

PROFIT TRIUMPHING OVER JUSTICE

Where will it end? When will it end? Go into every legislative group and watch the sly maneuverings of the privileged few in their mad effort to make more profit. Go into the numerous circles of money changers and listen to the whispers of expected fascism in America. How they linger over the details of the visit of a descendant of a King who drove Thomas Paine out of England because he wrote the Rights of Man. Wishful lingerings! Wishful whispers!

Then go into the cobble streets of America and out into the farm districts and hear the murmurings of the undernourished and illy clad, gaunt in a "land of plenty."

WE'VE BEEN COWARDLY IN THE FACE OF WRONG

Then, too, check up on the numerous silences of our vaunted press. How many of them carried the La Follette committee report proving that their chambers of commerce had purchased bombs and machine guns to use on fellow citizens, on subscribers to and readers of their noisy papers? What Congressman in righteous wrath rose to condemn it? What minister of the Gospel of Christ has assailed that sort of ghastly business? What official has stripped the pretense of "Americanism," of "100-percent Americanism," from the face of those chambers and revealed the ugly features of greed behind the veil?

WE REFUSE TO DECREE CESSATION OF ARMS SHIPMENTS TO JAPAN

One other illustration. Bills to stop the exportation of war materials to Japan find every impediment in their way. Every subtle argument is made against them. Why? Because we must not disturb the flow of profit to your favorite families.

To be sure, we sent missionaries to China for six decades to tell them how much we love them, to preach our gospel of love, claiming it better than any other kind of brotherly love. And now, of course, it is only a casualty of fate that American bandages are used to bind those Chinese wounds made by American scrap iron dropped from American-made planes. Why don't the churches who sent those missionaries remonstrate? They are too busy shouting against foreign "isms," they don't like to bother much about plutocratic inconsistencies.

RESTORE GOVERNMENT TO THE PLAIN PEOPLE

America has wandered a long way from Jefferson's and Jackson's and Lincoln's dream of a democratic republic. The New Deal is merely an effort to take it back to democracy, nothing more. Real Democrats in all parties do not want to destroy the profit system entirely. It has merit in the smaller brackets. Real Democrats will fight before they permit the country to go into bolshevism, or fascism, or a usurping plutocracy to retain its strangle hold. And whether or no, the citizens of this Republic are determined that genuine democracy shall work.

MISERY SPEAKS IN ELOQUENT LANGUAGE

Our Constitution is the greatest collectivist document ever penned, aimed primarily to secure the blessings of liberty to all of us and our posterity. While Americans are long-suffering and are a prodigal bunch of Farmer Bens, they can be pressed too far. And when you press an American too far you've got trouble—plenty of it.

"O God! That bread should be so dear
And flesh and blood so cheap."

sang Thomas Hood in the Song of the Shirt. In America today children attend school with scarcely one good meal a day; old folk turn on the gas to escape the slower death of starvation. Men, ill and weak, wearing thin rubbers and rags on aching feet, grub with W. P. A. shovels for scanty food. Millions of sharecroppers, tenant and mortgage farmers toil for less than a living, not realizing that monopolies, a high tariff, and the money system has made them unconscious slaves.

This in America. Not in Russia nor China nor in darkest Africa.

INJUSTICE MUST BE REMEDIED NOW

It doesn't spell sense. It spells eventual trouble for somebody. Standing idly by while a favored few amass the wealth of the world at the expense of the rest is not the genuine American way. The issues today are tremendous. This economic war is America's most serious. Who are the men who will fight to save to us our real democratic Republic? Let them step across the line and show their colors now. On whom can we depend? Let them prove it now. For it is far more important just now that we secure to all fellow Americans the blessings of liberty than that we worry overmuch about who will "make the world safe for democracy."

Republican Press Condemns Attacks on President Roosevelt

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. SABATH. Mr. Speaker, on a number of occasions I have called the attention of the House to some of the unfair, unpatriotic, and unwarranted attacks that are being made upon our President, both by the Republican press of the country and some of the Republican Members in both Houses. Although Franklin D. Roosevelt was elected on the Democratic ticket, he received millions of votes from independent and Republican citizens, who placed the interests of the Nation above political or selfish personal motives. It is regrettable that some of the reactionary newspapers and partisan-inspired legislators cannot, in this time of unsettled world conditions, follow the nonpartisan example of those splendid citizens.

I myself have at all times felt that regardless of what political label a man is elected President under that he is the President of all the people and of the entire country. I recognize the need for honest criticisms of policy when such criticisms are justifiable. Washington, Jefferson, Jackson, Lincoln, Cleveland, Theodore Roosevelt, and Wilson were from time to time subjected to scurrilous and vicious attacks questioning their motives and their sincerity when they were faced with great problems. These attacks history has proven were not only unjustifiable, but were inspired by selfish men and forces who desired to promote their own personal political fortunes, even at the expense of the welfare and unity of our country. In all history, however, no President has been the subject of so much unfair criticism and such concentrated venom as has President Roosevelt.

In my frequent pleas for a fair and square deal for our President I have urged Members to desist in the partisan and shabby attacks that some are constantly leveling at him. Thus it was with a great deal of satisfaction that I read in a recent issue of the Washington Star an editorial which expresses my opinion so much clearer and stronger than I could put it myself, against such "sniping" practices, that I ask permission to include the clipping at this point in my remarks.

[From the Washington Evening Star of April 22, 1939]

"BALLYHOO"

In charging the President with "ballyhooing the foreign situation" in an effort to divert attention from the shortcomings of the New Deal, Senator TAFT, who has been prominently mentioned as the next Republican Presidential nominee, places himself and his party in a dangerous position and imputes to the President motives too sinister to be bandied about in political statements.

Those who believe that America should remain aloof from the foreign scene and make no effort to avert the calamity of war in Europe—a group which includes the Ohio Senator—have contended that the course followed by Mr. Roosevelt is apt to involve the United States in the war if war comes. Assuming that to be true, although there is little basis for the belief that some other course would prevent the same eventual American entanglement, the gist of Senator TAFT's accusation is that the President is willing to plunge this country into war, sacrificing American youth, for the sole purpose of salvaging his own political fortunes.

It is difficult to conceive of a graver charge, or of one with less foundation in fact. If the Senator merely was stating his personal conjecture, and that seems to have been the case, his remarks were not in keeping with the high office that he holds. By making such serious charges he prejudices not only his own position but that of his party as well. Nor can the fact be overlooked that such an extravagant indictment of the President is bound to lend comfort to the aggressor states in their apparent determination to pursue a course which can only result in damaging the interests of this country.

Senator TAFT was on sound ground in attacking the failures of the New Deal. And it would seem to be to his advantage, as well as that of the country, to concentrate his fire on that point rather than to indulge himself in the sort of ballyhoo which he imputes to the President.

Again, on Sunday, April 23, this same newspaper published another editorial condemning this unpatriotic type of "political sniping" at a President, and I likewise ask permission to include the editorial in my remarks. Readers of the RECORD can thereby verify the fact that even a substantial portion of the Republican press right here in Washington condemns and resents such unfair and clearly partisan attacks on our President. It is personally pleasing to me, also, that editorials in similar vein appear in many other newspapers throughout the country.

[From the Washington Sunday Star of April 23, 1939]

"THE ZONE OF PARTISANSHIP"

When former Secretary of State Stimson discussed neutrality before the Senate Foreign Relations Committee on April 5 he emphasized that, stalwart Republican though he is, he believes, in critical times like these that "the zone of partisanship" should be "limited." The chief of the State Department during the Hoover administration has given unceasing demonstration of his conviction that politics should end at the water's edge—that, where foreign affairs are concerned, there are neither Republicans nor Democrats, but only Americans.

Representative HAMILTON FISH, in a broadcast Friday evening, identified himself as an unabashed exponent of unlimited partisanship in foreign affairs. The tall sycamore of the Hudson probably would resent the imputation that he is motivated in his censorious opposition to the administration's external policy by the fact that he is the Republican Representative of President Roosevelt's home congressional district. But the Member for Hyde Park lays himself open to the suspicion that the horizon of Dutchess County, rather than that of the troubled world at large, encompasses his vision of the international situation.

Thus, speaking as the chairman of a temporary organization called the National Committee to Keep America Out of War, Representative FISH finds the hour meet to "accuse" President Roosevelt and Secretary Hull—though he is careful to level his indictment at the New Deal—of an indiscriminate assortment of high crimes and misdemeanors. They are "instigating war propaganda and hysteria"; "deliberately scrapping our traditional foreign policy for internationalism, collective security, economic sanctions, naval alliances, and war commitments"; "conducting a campaign of name calling, hatred, and abuse"; and "leading the American people to a rendezvous with war, death, and bankruptcy."

At Rome on Thursday Mussolini used language like this in replying to President Roosevelt's plea for nonaggression assurances by the dictators. It is certain to be the tone, if not the text, of Hitler's answer in the Reichstag this week. It is deplorable at any time for a Member of the House of Representatives and of its Foreign Affairs Committee thus publicly to assail the constitutional conductors of America's relations with the world. It is worse than deplorable that a Member of Congress should stoop to such tactics at a moment of international tension. Never was the time less propitious for divided counsels in the United States or for creating the impression that they exist.

If Representative FISH's grandfather, whose honored name he bears, had been subjected to such sniping while he was President Grant's Secretary of State, the brilliant chapter of American diplomacy that Hamilton Fish wrote between 1869 and 1877 might not

have been enriched by the settlement of the Alabama claims with Great Britain, the compulsion of Spain to recognize American rights in Cuba, the humbling of even the mighty Bismarck in connection with the passing of sealed American dispatches through the German lines during the siege of Paris, or by our protest against anti-Semitism in Rumania nearly 70 years ago.

Mr. Speaker, it has been hard for me to understand what motives otherwise intelligent men could have that permit them for political reasons to allow themselves to be used by their party leaders for such un-American and unfair purpose. I try not to criticize or find fault with fellow Members. I endeavor to always give each and every Member of both Houses full credit for sincerity and patriotic purpose. That is why I am compelled, in the interest of those who have allowed themselves to be carried away by prejudice and political hatred, to insert here in the RECORD the comments of the press on these attempts to destroy the confidence of the American people in our President.

I hope the gentleman who is mentioned in one editorial will not emulate those who betrayed Woodrow Wilson after having assured him their support, or that he will try to copy a most unsavory page in our history in order to create a political issue at this time, as was done in the past, when our people need to be united in a common bond of understanding in order to solve the great problems that face us all. Could those men of more than 20 years ago have seen the unfortunate results of their reversal, I doubt that they would have permitted themselves to be used for such selfish, partisan purposes. Partisanship has its place, but in matters concerning the peace and safety of our Nation the Senator from Ohio [Mr. TAFT] should be the first to give serious thought to the line of demarcation before he permits himself to be used for attacking the President, who is struggling night and day with a grave international threat to the peace and security of the world. Those who put personal political ambition above the unity of the country in order to try and destroy a President and created a political issue only a generation ago are remembered today only for the harm they have done. Let us hope the gentlemen these editorials discuss will be remembered in history for a better contribution to patriotism and the welfare of their country than they would otherwise be, even if they achieved the high political prominence for which they hope.

Proposed Laws Affecting Aliens

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

ADDRESS BY MSGR. JOHN A. RYAN

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Msgr. John A. Ryan, director, social action, of the National Catholic Welfare Conference, at the National Emergency Conference, Sunday, May 14, 1939:

I am glad Senator MURRAY had a manuscript that could be used. When I was asked for my manuscript I said I hadn't any; I had not time to prepare any. I observed that Senator MURRAY, in looking for a historical parallel, went back to the alien and sedition laws, which were bad, of course. But there is a nearer instance of the same kind than that. There was the attempt to deport thousands of aliens all at one time, practically, made by Attorney General Palmer in 1919–20. Some of you, no doubt, remember about it. The psychology of the times and the arguments were much the same as we have here now. Fortunately, however, the man who is now Attorney General of the United States is not going to start any deportation "racket." I use the word "racket" advisedly, because I think Attorney General Palmer resorted to deportations in order to get the Democratic nomination for the Presidency in 1920. He failed.

I have here a short piece which I wrote in June 1923 about this antialien agitation. I titled it "The End of Hysteria":

"The Attorney General of the United States" (Mr. Stone, who has been for many years on the Supreme Bench) "made an announcement on May 13, 1923, which deserves much more attention than it has received. It has a much wider significance than its wording would lead the average reader to infer. The statement was simply to the effect that Attorney General Stone would himself direct the reorganization and the operations of the Bureau of Investigation of the Department of Justice, and that the Bureau would be employed henceforh for the purpose of aiding the lawyers of the Department of Justice in the preparation and prosecution of cases brought to their attention.

"Within the compass of this innocuous statement is contained an official reversal of one of the major policies followed by the Bureau of Investigation for more than 5 years. That policy consisted in the very active investigation and pursuit of revolutionary persons who were held to be a menace to the Government of the United States.

"These activities may be said to date from the appearance of Attorney General Palmer before the Appropriations Commmittee of the House of Representatives something over a year before the end of the Wilson administration. On that occasion Mr. Palmer asked for an appropriation of some three million dollars in order to combat what he declared to be an organized conspiracy to overthrow the Government. Having obtained from Congress the money for this purpose, he carried out the notorious raids upon aliens at the end of 1919 and early in 1920. Some 10,000 aliens were taken into custody on the ground that they believed in or were threatening the overthrow of the Government by violence. Less than 600 of them—600 out of 10,000—less than 600 of them were finally found to be subject, under the law, for deportation. And nearly all of these were sent out of the country merely for membership in certain organizations which had been adjudged illegal. No conspiracy to overthrow the Government was found to exist.

"The dangerous material seized in the raids consisted of four pistols, some stage muskets used in amateur theatricals, four iron balls which dissolved in water, and large quantities of 'revolutionary documents.' The raids were accompanied and followed by enormous hardships to hundreds of those who were arrested."

I recall very vividly reading in the New York Times—then, as now, very enterprising and comprehensive—a list of the aliens who were seized by the Attorney General's men the night before and day before in Greater New York and Connecticut. There were hundreds and hundreds of them. I looked through these names—mostly Slavic. I reflected that probably there wasn't much danger; I said, "These fellows have a fat chance to overturn the Government."

In his report to the second session of the Sixty-seventh Congress, Senator Thomas J. Walsh thus summarized the illegal actions committed by the Department of Justice in these wholesale arrests:

"The Bureau of Investigation had no authority to make arrests in deportation proceedings. A large percentage of the warrants authorizing the arrests were 'in plain violation of the fourth amendment to the Constitution of the United States.'

"The searches carried out by the agents of the Department of Justice were without authority in law, as also was the issuance of search warrants in these proceedings."

About 2 years after making his report Senator Walsh, in a review of Louis F. Post's book, The Deportation Delirium of Nineteen Twenty, drew terrific indictment of the Palmer raids. It is interesting reading now. The thing which I am proud of in this volume is the dedication by the author: "Rev. John A. Ryan, an American in principle regardless of percentages. With the friendly compliments of Louis F. Post."

I pass over Senator Walsh's description of these raids and go on.

"While the Palmer raids were the first and last of their kind, the spirit which provoked them remained in the Department of Justice under the administration which succeeded that of Mr. Palmer." More history about that: Communist and Communist sympathizers, and the assertion that most of the Communists—they called them Bolshevists rather than Communists in those days—were aliens. We have the same thing now. So history is repeating itself.

"The hysteria concerning bolshevism and 'red' revolution which was aroused during the last year of the war continued long afterward in official as well as in unofficial circles."

Some of you recall the Assembly of New York expelled five men because they were Socialists. Of course, any legislative body has the right to judge the qualifications of its members, whether they all have red hair or are known to be bald-headed. That is technically legal. But the expulsion of those men was against all decency, which I am glad I protested. I was called down by a leading member of the New York bar and a member of my church because I thought so much of the principles of liberty and the decencies of administration and legislation.

"In the second place, the words 'revolutionary,' 'red,' 'radical,' 'Bolshevist,' were used in such a confused way as to bring discredit upon reform movements and persons interested in industrial reform. The connection between the violent revolutionist and the industrial progressive was established by some such process as this: Bolshevist equals Communist, Communist equals Socialist, Socialist equals 'red,' 'red' equals radical—that is, almost anyone who criticizes existing industrial or political arrangements or conditions.

"Attorney General Stone's announcement with reference to the Bureau of Investigation marks the end of official complicity in these abuses and in this confusion of popular thought. It marks an official return to sanity. Even if the new Attorney General (now Mr. Justice Stone) should perform no other noteworthy act during his term of office, his administration would deserve well of the American people."

That is the nearer historical parallel that I want to bring before you, and this little piece I wrote was after the hysteria was over. I thought that was the end of hysteria. Some more hysteria, apparently, has taken possession of the country now, but I think not to the same extent as was the case in those days.

While I am not a prophet nor even the grandson of a prophet, I do not believe even one of these bills will become law. I do not think it is possible—I mean practically possible. I do not think I should take up much of your time discussing bills in particular. You have heard some of them ably analyzed by Senator MURRAY and have heard others analyzed by other speakers, I am sure.

I want to refer very briefly to two or three, however. There is the Dempsey bill which Senator MURRAY did not identify by mentioning the name of the introducer. This is the one which makes it a crime to advocate even a change in the Constitution. Here again we have historical parallels from Post's book.

Post refers to one bill that was introduced when Senator Sterling was chairman of the Judiciary Committee of the Senate. There were several very bad bills introduced then. None of them passed the Senate. One of them would have made it a crime for any person to display at any meeting or parade any flag, banner, picture, or emblem which tends to incite the population or overthrow or change—get the word change—or defeat the Constitution of the United States and the laws in accord therewith.

Mr. Post goes on to say this did not apply merely to aliens. It applied to everybody, and could have been used in relation to the repeal of the eighteenth or nineteenth amendments. Every display of emblems indicating a purpose to make any of these changes in our Constitution would have been a crime, unless the Federal courts declared the law unconstitutional.

There is another group of bills Senator MURRAY did not refer to, bills introduced by Senator REYNOLDS, and Congressmen STARNES, PACE, LESINSKI, and BROWN. I group these together because they are all based on the same fear—the fear that the aliens are taking too many jobs in present conditions, when jobs are pretty scarce anyhow. Two of these, those by LESINSKI and BROWN, are kind of mild. All they provide is that nobody shall commute to a job in the United States. Mr. LESINSKI, I believe, comes from Judge O'BRIEN's town, and Mr. BROWN, I suppose, is in the same category. Some persons live in Canada and work in Detroit. These bills would prevent that. It sounds ridiculous.

The bills introduced by REYNOLDS and STARNES would reduce the quota, shut out 90 percent of the relatively small number that can come in now. That by Mr. PACE would suspend immigration for a period of years. These proposals are futile; they are childish. Suppose you do reduce the quota by 90 percent, or wipe it out altogether. What difference would that make, practically, in the unemployment situation here? There is a lack of sense of proportion. It is as bad as the arguments of these people who oppose letting in some 20,000 refugee children.

Two or three months ago I went with Canon Stokes and a Lutheran minister and a Jewish rabbi to see the President to ask him to become interested in this measure about bringing in here some 20,000 refugee children—Jews and gentiles. We all thought that it was merely a matter of form and would go through. Apparently it will not be enacted. Senator REYNOLDS—the great defender of the purity of the American race—is opposing it.

The real remedy is to rearrange our economic machinery so that there will be jobs for everybody. Reducing the number of competitors for jobs by one-half of 1 percent, or something like that, shows a lack of proportion, and I think it also shows a lack of sense of humor.

The bills by TAYLOR and RANDOLPH, requiring aliens to declare their intention to become citizens within a year, have some merit. Senator MURRAY referred to the bill by Senator Walsh, which would facilitate the admission of aliens to citizenship. If that is done, I don't see anything wrong with these bills. I know that there are considerable obstacles or formalities in the way of the person who seeks to become a citizen, and that many of them get discouraged and some haven't got the money.

If the desire or ability of the persons to become citizens can be facilitated, as by the Walsh bill, I do not see any particular objection to the Taylor and Randolph proposals. But there is a lot of confusion about this citizenship business. I remember when the Commissioner of Immigration was before the Senate committee some 4 years ago, he pointed out that becoming a citizen was not such a simple thing as many who blame aliens for neglecting this matter would assume.

We ought all to be citizens—but some of these citizens who were born here do not make intelligent use of the franchise. We have got to have it—that is democracy. Anything that will facilitate the entrance of aliens into citizenship and which is not unfair to them deserves consideration.

Thank you.

Amendment of the Social Security Act

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

Mr. DEMPSEY. Mr. Speaker, there seems to be no question but that the great majority of the membership of this House recognizes the need and the desirability for liberalization of our social-security program, with particular reference to old-age assistance. That is indicated, I believe, in the report of the Ways and Means Committee, which recommends an increase in the participation by the Federal Government in the payment of old-age benefits to a maximum amount of $20 per month, as compared with the present maximum of $15.

Under our present social-security law many of the pensions which are being paid to aged needy persons are nothing more than a pauper's pittance. In fact, pauper allowances in some of the States of the Union in years past exceeded the amount being paid to aged men and women under our present social-security set-up.

It is now proposed that the Federal Government liberalize its contribution, but the method by which this liberalization is to be accomplished, it seems to me, is entirely inadequate. In fact, with the provision made that the States must match dollar for dollar the Federal contribution, a mere increase in the maximum amount which the Federal Government will contribute is no liberalization at all, because some of the States today are participating in as great a degree as is financially possible. So it is that no matter what the Federal Government may contribute, the pension of each needy aged individual would not be increased.

It is my contention, and that of my colleagues who have joined together to further this amendment, that the obligation of the Federal Government to an aged person is the same, whether that person resides in one of the more populous and affluent Eastern States or in one of the States in the western area, where the same scale of participation by the State would be virtually impossible. The aged man and woman who lives in Idaho, Nevada, or New Mexico, for instance, is just as much in need of assistance as if they lived in New York, Michigan, Pennsylvania, or our other highly industrialized States, where large tax incomes are derived from industry and commerce.

Then, too, many of our newer Western States contain large areas of lands under Federal ownership, properties which do not contribute a dollar of tax income to the States in which they are located. Because of this heavy Federal ownership, which in the case of New Mexico is more than half of the total area of the State, the Federal Government, under present conditions, is shifting to the State far more than the State's equal share. If for no other reason than an equalization of old-age assistance, this amendment should become a part of the social-security law.

I therefore urge the need for a stabilization or standardization of this Federal contribution at a fixed figure of $20 per month, and contingent only upon a contribution by the State on the basis of one dollar to every four. This would enable every State to grant to needy aged persons a pension of approximately $25 a month. Most certainly this is not out of reason, and based upon our present standards of living still will be meager enough so that those who have contributed much to the growth and development of our Nation will be able to afford only the barest necessities, let alone comforts that most surely are desirable for a generation which has given its all in the upbuilding of our country. There may be the contention raised that such a provision would have a tendency to cause the various States to rest content with meeting

the minimum amount required as a contribution. I, for one, do not believe that contention to be well founded, for we find throughout the United States today several Commonwealths which are contributing in excess of the requirement so that aged persons in that State may have sufficient support to prevent them from undergoing undue hardships or privation.

I am free to confess that I cannot see wherein lies the difference, as far as the Federal Government is concerned, whether a State matches the $20 maximum dollar for dollar or provides a lesser amount. The Federal Government is obligated to pay $20 under certain conditions, and the inability of the States to match that amount dollar for dollar can result only in hardship upon those whom we are trying to help. In other words, the aged will have to bear the brunt of any partiality which shall be shown because of the inability of any individual State to carry its end of the pension payments. That is not consistent with the American way of doing things. Most certainly it would abrogate our declared principle of equality for all, and would strike its severest blow at those who are least able to withstand it.

I sincerely trust that the membership of this House will agree that in liberalizing our social-security program we shall do it in actuality rather than resort to a gesture which will fall far short of the accomplishment of the purpose for which we are passing this legislation.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 24, 1939

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Nebraska Chapter of the National Association of Postmasters, Omaha, Nebr., Wednesday evening, May 24, 1939:

I am grateful for the invitation from your officers which enables me to be here this evening with the postmasters of Nebraska. I heartily approve of these meetings. That is demonstrated, I think, by the fact that during the past 2 weeks I have attended a number of similar affairs in the Midwestern and Western States.

At the outset I want to thank the postmasters of this great State of Nebraska for their cooperation during my administration as Postmaster General. You have responded enthusiastically to every request made of you by the Department, and I want you to know that I am deeply grateful to each and every one of you.

We are doing well in the Postal Service. Our receipts are increasing, our mail volume is increasing, the service to the public is more efficient, and the employees are better off than at any time in the history of the Service. Viewed from almost any angle, the postal system of the United States presents almost unbelievable figures as to volume. For example:

The yearly issues of postage stamps approximate 15,000,000,000. We also issue about 2,000,000,000 postal cards and more than one and a half billion stamped envelopes. The money derived from the sale of this stamped paper represents approximately 75 percent of the gross of the ordinary revenues of the Postal Service. In addition to the sale of our own stamps we sell annually about $4,000,000 worth of documentary internal-revenue stamps for the Treasury Department, and in the last few years we have been issuing migratory bird-hunting stamps, the sales of which now are approximately $800,000 a year. First-class matter is the major source of our profitable revenue. The postage collected on that matter exceeds $400,000,000 annually. The mailings of second-class matter, which includes newspapers and magazines, were well in excess of a billion pounds last year. There are more than 25,000 publications entered as second-class matter. The use of business reply cards and letters in business-reply envelopes, which have come into use within recent years, are now passing through the mails at the rate of almost 100,000,000 pieces a year.

Last year we celebrated the silver anniversary of the establishment of parcel post, which was inaugurated January 1, 1913, and very quickly became one of the outstanding services offered by this Department. There are many fine delivery and transportation agencies for merchandise, but the parcel post stands alone as the only system that reaches every home, every office, every factory, and every farm in America. Today the revenue from parcel post represents more than 18 percent of the gross postal receipts. It is second only to first-class matter as a revenue producer. Each day we handle more than two and one-fourth million parcels.

During this administration there has been a 31-percent increase in the number of parcels mailed, with a corresponding increase in revenues of from $100,000,000 to approximately $137,000,000. Our cost ascertainment reports show that a deficit of $32,000,000 in 1933, chargeable to parcel post, has been reduced to $17,000,000, notwithstanding the fact that this service is now charged with an annual expense of $7,000,000 for the maintenance of public buildings, which was carried as a charge against the Treasury Department in 1933. The cost ascertainment reports also show that the Department pays to the railroads of the country between forty-eight and fifty million dollars a year for the transportation of parcels. This represents about one-half of all the money paid to the railroads for the transportation of the mails. The Department pays more for this transportation item on parcel post than it keeps for itself from the revenues of that service. The average parcel weighs about 5 pounds. The average haul is about 413 miles.

The Air Mail Service was reorganized in 1934, at which time a number of new routes were established and other routes were extended to logical terminals. The period from that time to the present time has seen a complete retirement of the old single-motor mail planes. Every plane now operated in both the domestic and foreign air-mail systems is of the multimotor type. These planes are among the most modern in use in the world. The speed, which in some instances is upward of 200 miles an hour, is, even with a heavy passenger load, about double the speed of the planes of 20 years ago. These modern planes are heated and soundproof, and offer every convenience for passenger travel as well as speed and safety for the mails. This period has also been marked by the advent of the modern sleeper planes. The large ships now being used on the main lines in the domestic system carry 21 passengers. The flying clipper ships used in the foreign system are capable of carrying greater passenger loads.

The air-mail system has expanded to more than 32,000 miles in the domestic service, and in excess of 30,000 miles in the foreign service, making the total mileage in the system more than 62,000 miles. Mail planes fly more than 70,000,000 miles annually. Every State has direct air-mail service with the exception of one. This one State, Delaware, has been served by stops at nearby points, but effective June 4, Wilmington will be included in an experimental pick-up service covering 59 cities and towns, which, with the exception of Wilmington, are located in the States of Pennsylvania, West Virginia, and Ohio. In this experimental service, which was commenced at some of the points during this month and will be extended to the entire 59 points by July, the planes will not stop but will fly over the airports, deliver the mail by dropping the pouches at a designated point, and pick up the outgoing mail from a catcher device.

We will also establish for an experimental period, commencing in the near future, autogiro service on a regular schedule operating from the Camden airport to the roof of the Philadelphia post office. As you know, we are flying regularly scheduled trips across the Pacific. Experimental flights have been completed across the Atlantic. Rates of postage have been established for the new European service, and I am confident that this trans-Atlantic operation will be successfully maintained. So, I am proud to report to you that an air-mail system, domestic and foreign, which has been so greatly improved since 1934 is taking advantage of every opportunity to experiment with more modern facilities, and you may be assured that as conditions permit we will make even further extensions of this high-speed service.

In the fiscal year 1932, when the 5-cent air-mail rate was in effect, approximately 8,900,000 pounds of air mail was transported in the domestic system, whereas, in the fiscal year of 1938, even with a higher rate of 6 cents in effect, the air mail exceeded 21,000,000 pounds, an increase of more than 12,000,000 in pounds, or 137 percent. Substantial increases were also shown in the number of passengers carried, and in the volume of air express.

On July 1, 1938, there were 44,667 post offices. It is in these post offices, our field agencies, under the supervision of the postmasters, that this tremendous volume of business originates, and it is therefore obvious that it is the individual postmaster and his staff of local workers who carry the real responsibility in making the Service what it is. In saying this I do not minimize the responsibility of the bureau heads and the administrative experts in the Department. They are performing a difficult task in a most satisfactory manner, and they are backed up with an efficient corps of post office inspectors and the Railway Mail Service—all of them playing a most essential part, but all of their efforts would be in vain if you men who are on the ground in daily contact with the people who use the Service fail to carry out your part of the job.

I am very happy to say that the postmasters and their local post-office forces are rendering excellent service. The complaints we receive in the Department are negligible. We rarely get reports of

indifferent service and I am grateful to you for the record you are making. The people of this country have great admiration and respect for the postal establishment, and properly so. Its personnel is made up of good people who realize fully that they are public servants and who, with few exceptions, are doing everything they know how to do to faithfully serve our vast and many-sided patronage.

The history of this establishment shows that it has developed with the Nation. As a matter of fact, the post office has done quite a bit of pioneering. The people in this section of the country know that we pioneered in air transportation, because one of the important headquarters points of the original transcontinental system was located in Omaha. In many other respects this service has set the example for speed in transportation facilities. This section also knows something of the history of the Pony Express, the development of the transcontinental railroads; the need for carrying the mails faster and faster was one of the primary objectives which served as an incentive for all these developments. The money that this service spends annually for transportation of all kinds is a most important item of income to the railroads, the air lines, and other general transportation agencies.

I know that you are proud to be connected with this great communication system. I can truthfully say that I have enjoyed to the fullest my experience as Postmaster General. It has been pleasing to observe and learn of the fine loyalty and devotion to duty of the people in the Postal Service. In this they are not excelled by any other group of workers in America. I am grateful for the part I have been permitted to play in its recent development. I am glad of the opportunity to publicly express my appreciation for all the good things that have been done by my predecessors, for I do not have the idea that all of the good in this Service originated under the present administration. Every student of public affairs knows that since the beginning of this country there has been steady and constant progress in the development of the postal system. I only claim that under this administration we have recognized our duty in the handling of the affairs of the Post Office Department, that we have done a great deal to revitalize the Service, to bring it upward in every way, to give faster, better service at a reasonable cost, and to establish the fiscal affairs on a sound business basis. In doing that we have not overlooked the rights of the individual worker in the Service. We have done what we could, consistent with the income of the Department, to provide better buildings for the public and the workers, to provide modern equipment, and to insure regular employment at good wages. The result is that we unquestionably have an improved service and no one will deny that we have made rapid and steady strides in the direction of a balanced budget. I am quite sure that if you will ask any postal employee he will tell you that he is fairly treated under this administration.

I am delighted to have been with you this evening and hope that the next time I come to Omaha I can have a longer visit with you.

Rescue From the "Squalus"

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

LETTER FROM MRS. MASON B. McLEES, OF RICHMOND, KANS.

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert in the RECORD a letter written by Mrs. Mason B. McLees, of Richmond, Kans., who is the mother of one of the boys rescued from the submarine *Squalus*. The country is safe as long as we have such heroic mothers.

RICHMOND, KANS., *May 31, 1939.*

U. S. GUYER,
Washington, D. C.

DEAR MR. GUYER: We want to sincerely thank you for so promptly sending the telegram to our mayor telling us of the safety of our son. It came just a few moments after we received the word over the radio. Our son is now all right and says he's ready to go again as soon as the boat is up and ready to sail. Our Navy I think is a wonderful training for any boy and am glad our son has chosen that for his career.

The Navy surely did all it could to save the lives of all the boys and my heart aches for the mothers of those dead boys.

We hope some day submarines and battleships will be unnecessary but as long as they are we have to have men to run them.

Thanking you again, I remain,

Sincerely,

Mrs. MASON B. MCLEES,
Richmond, Kans.

Shall the American Indian Remain in Bondage?

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

Mr. BURDICK. Mr. Speaker, public opinion in the United States is divided into two groups as to the future of the American Indian. One school desires to perpetuate the Indian of romantic history in all of his quaint and fantastic methods of living—beings quite apart from our present state of civilization. They strive to perpetuate the past, quite forgetting that our original Indian cannot be perpetuated unless we can instantaneously destroy in him our ideas of civilization, which for a century and a half we have insisted upon his acceptance; unless we can recreate our hills, mountains, streams, and hunting grounds; unless we can bring back the buffalo which we ourselves insisted upon destroying to more easily civilize the Indian. The other school looks upon the American Indian as one of us, capable of doing his part and doing it well in our present status of civilization. This school looks upon the American Indian as a citizen well entitled to all the rights, privileges, and immunities as all other citizens; that we have insisted on the Indian living like us for so long now that turning back the pages of history is a complete impossibility. The Indian is among us—he holds office and otherwise discharges the duties of citizenship with credit to the race and distinction among us. The Indian holds judicial positions in our courts; the Indian is in the legislative halls of the various States and in the Congress.

In many sections of the United States the Indians and whites are intermarried, and in another hundred years there will be no Indians except those who live in the history of the past. They will all be Americans—this is what we started out to do, but in the administration of the affairs of the Indian Bureau we have had many administrations who desire to perpetuate the Indian of history. We have put him under the supervision of a bureau, and the money we owe him for lands taken in the past we refuse to deliver to him, but use it ourselves to keep up and perpetuate an overlordship among the Indians, which, while the law says he is a citizen, makes him nothing but a subservient creature of the Indian Bureau. We refuse to deal with him fairly under treaties and agreements and keep him figuratively in chains and rob him of the benefits, privileges, and immunities of citizenship.

This sentiment is not of my own creation; it comes from the Indians themselves. The most warlike of all the tribes of American Indians were the Sioux. They were the last to surrender to the vast hordes that our civilization sent against them, but just as they were fierce and warlike, they are now men and women of thought, ability, and gifted with the natural power of expression. Mr. Speaker, I desire to present to the Congress and the country a letter received from a descendant of the warlike Sioux, who, in this letter, reviews the present status of the Indian under bureau control. I submit this letter as exhibit A in the proof of the fact that the Indian is capable of managing his own affairs as well as any other citizen of the United States. The letter follows:

BLACK HILLS CLAIM AND TREATY COUNCIL,
Cheyenne Agency, S. Dak., June 2, 1939.

Senator USHER L. BURDICK,
Committee on Indian Affairs, Washington, D. C.

Honorable Senator BURDICK: I have been authorized by the Black Hills Claim and Treaty Council to write to you personally and explain the chaotic condition in our reservation caused by the bill known as Reorganization Act. Our officials state that we accept the act. But did they state how? They did not vote for charter because it would have been rejected, so they took a so-called straw

vote; that is, some of their employees went from project to project and getting votes. They had our chief police here collecting votes, and he went to those he knew would vote for it, and the rest were left out. This example was exercised when they made us accept the reorganization bill. Facts as this can be obtained, so we pray that you and your associates to steer us to victory with God's help. We are for democracy, democracy for all. I could write volumes of mistreatment and injuries done to us for many years by the officials.

We, the members of this organization, abide by the United States Constitution; we love America; we support its flag and defended this Nation against all enemies. Tests have proven that our beloved fathers, sons, brothers have sacrificed their lives on foreign soil that democracy will be ours in America; that happiness and security be bestowed upon our citizens; that no form of foreign government be exercised in this land of liberty; that according to our Constitution we have the right to petition the Government for redress of grievances.

"Our brains," the Indian Bureau, has created antagonism here. Our once peace-loving, friendly Indians have been riled over this act. Now all understand the form of government and are much riled against it. The officials here, using some of our respectful Indians as tools, threatening, dictating, blacklisting, discriminating those who oppose the act for the sole purpose of fatiguing them into compliance with their measures. They have shattered our Constitution and our great state paper, the Declaration of Independence to gain their end. We who faithfully signed the exemption petition, 3903, will gladly produce evidences against any person employed by this agency for our own benefit. It is true that statements have been made to you and your officials about our progress, but I can say it is not as expected of us by the Congress. Why? We are handcuffed. Those who are free are those that are used as tools, making traitors out of them—very un-American. So we pray and appeal to you and your associates, with the help of Almighty, to request the Indian Bureau to refrain from further campaign to us who signed the exemption petition, refrain from exercising their laws, entanglements, and what not. Only bloodshed may result from such action as the two factions now in operation here are revolving with intense feeling. One spark and God only knows what is to come. All mankind are forced to take action when in defense of their nation.

This may be a scheme to cause a clash, to hand us again hostile, to reduce us to absolute despotism, so the officials can profit by the act, so they can reap bigger fortunes from the appropriations asked for the Indians. It will be a good idea to first define the word "Indian," and who are to have the right of the way according to our treaties. Some of our genuine Indians are, you might say, forgotten, and they all wonder where the money came from and who is supposed to benefit by them. Not us, so why pay the bill? Evidences are numerous, and I am positive that nearly every Indian can produce these evidences. When our Indian Bureau states that we help the Indians, before the world, it is covering a big field, and by deeds committed we say "No." Probably you will hear more when our delegates appear there again.

We have realized that mighty Congress made appropriations for us that some day we may be self-supporting, be equaled to our fellow men. Yet sometimes we wonder if they know that very little of that gets into our pockets, and Bureau officials' bank accounts are growing by leaps and bounds. It is wise to investigate them, and probably they may help this Nation by paying income tax.

You may wonder why I write such letter. I have been taught in white school, but because I am a full-blood I am not wanted when I can help my people. If I did get in, you know one chance is too much for me. Yet they can get by by mock trials. When you see facts, evidences, who is afraid?

Had we been given the right kind of officials, our Indians, I am positive, we would have been what Congress expected of us. In order to check injuries done to us and use our appropriations as outlined, to be economical to our America, we have a program to present to you people. Is not that what you people expected us to do? Not be a mechanical man and woman as we are now. So consider this matter carefully for our people. If Honorable Collier wants to proceed with his set-up, he may finance the organization, but those Indian members be severed from tribal relations. Most of them are clever, to enjoy life when patent fees were given to them and lost everything. Now they are clever enough to be chiseling off the old Indians. You can check this statement there, because the New Deal delegates that appeared there only one I am sure still has his allotment, and that is Mr. Thomas Eagle Staff. The chairman is landless, Mr. Luke Gilbert. So you see why we protested much. It's the breeds that are anxious to get rich in a day. They forgot that "Rome was not built in a day."

Democracy is our belief, not a foreign form of government. Let those who wish to exercise such government be transferred where there is no democracy.

Therefore we pray and appeal to every Congressman to steer us to victory by supporting our exemption bill 3903 on our own reservation; we, who faithfully signed and do pledge our support to enactment. Also a petition protesting the bill of ROGERS, H. R. 5409, now before the House Indian Committee. This bill will give the Bureau officials additional power over our lives and property, more appropriations, a protection, invincible. We see the new form of government a destructive one to our Nation. Already it is exercised on the basis of a vice syndicate. If by mistake you happen to arouse the feeling of our superintendent or one of the employees, you are blacklisted, helpless—no aid, so what? Perhaps you can see the result. Many evidences of this statement can be produced. Probably they want to make beggars out of us. Many officers, swarms of officers to harass our people are to come. We are not bad. Yes; it is a protection for someone. Who? Congress enacted the Reorganization Act and it was not carried out as outlined. Honorable Collier's promises are broken. What they try to exercise now should have been exercised in 1934. This is 1939, but it is too late now.

The council men, as provided by the enactment, have shattered our great State papers. It is best that they go on themselves or else I am afraid terrible things will happen. It will not be our fault. I have been here among our Indians, and what I say is true, so if anyone contradicts my story I am willing to appear in any court in defense of our people. Is not that what you people want us to do? I am a thorn to these employees. I am happy that I am.

The New Deal delegates made a trip to the Indian Bureau on tribal funds without the consent of the people. Why? Because they were supposed to have much power. But they held meetings in unusual places, passed important bills in the night when all are asleep. Is this enough? Now, when it is too late, they attempt to enforce the act. The Black Hills claim and treaty council at large is too powerful now to check it, so consider this letter very carefully.

One thing I can say about this meeting is that the meetings are held under an American flag; this other organization forgot about our flag. Why? And this treaty council is not financed by the Indian Bureau or by our agency. Yet it is gaining foothold rapidly, because it is what the people want. Brain is what counts, not money.

All the Indians did not comprehend this complicated legislation and most of them did not vote or because they could not get to the poll. If you were for it you were transported, otherwise you go or not so much the better. Unscrupulous campaigners persuaded many while transporting them to the polls, and because they cannot comprehend, you can see how easily, gained their end. Now that it is understood it is being opposed nearly to every man and woman. It was the Indian Bureau's mistake when they kept many important secrets that was to benefit us. You know, figure out where we would have been. It will be a good idea to check on the person who branded us hostile and sue him. The United States made treaties with us, and made us a peaceful loving race. Again we made the United States safe for democracy when you asked for our help we gladly enlisted and fought side by side with our white brothers. Yet they are willing to brand us "hostile." I am sure that our CHAN GURNEY can testify for us that we are not hostile.

We have names to be sent, and already some sent, to Odan Gurney, and more to come; so wait and see. We are many who object to the act introduced here. I am for the full-bloods and half-breeds because they are rather quiet, hesitating, fear they may hurt someone; so Indians who are nearly all white are profiting. It is best to check for our benefit and protect our race. Names of some of our greatest modern full-blood Indians are on these petitions, so scan the list carefully. If anyone says we are misrepresented, I say we are not, because we back anyone who is our chief chairman; and I can say, if all full-bloods and half-breeds, as treaty states, were put together in a nice form of government, no friction will arise. Now quarter-breeds and nearly whites are trying to make we Indians say "yes" for their benefit; but we won't, so of course hard feeling is among the tribe. We will stand by our constitutional right for our welfare.

Also, too, before our superintendent, W. F. Dickens, retires, have an investigator visit here secretly; and we would appreciate an action as stated by our people. He is to visit the reservation first, not the office.

We are positive that Superintendent Dickens committed some offenses that would be a penitentiary offense. And some of his employees. Yet council men are all being kept by the superintendent, so no one dares to interrupt the superintendent of his business. He admits at times of his mistakes. Yet the council men, who were supposed to have much power by the Collier Act, are just tools as we see them. Even after he resigns, arrange it so that if proof is obtained, that he loses all his bonds as a superintendent, pension, and lose everything for creating an antagonism among our people. He senses trouble so I won't be surprised if he leaves and gives some reasons for his absence I am sure will be false. If by chance I am wanted for emergency, I am always here in agency, so I can be located in few minutes. As I am in a rush, I must conclude. Copy must be sent to Francis Case. Please notify your associates, and may God be with you and your associates. God bless you.

I am a friend.

CLYDE F. LOWDOG,
Box 53.

P. S.—More letters to come; some evidences of importance.

Jewish National Home in Palestine

EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

ARTICLE FROM THE DETROIT JEWISH CHRONICLE OF MAY 26, 1939

Mr. McLEOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, which appeared in the Detroit Jewish Chronicle for May 26:

[From the Detroit Jewish Chronicle of May 26, 1939]

SENATOR VANDENBERG IN FOREFRONT AS OUTSTANDING CHRISTIAN PRO-ZIONIST—CONSISTENTLY SUPPORTS PROGRAM FOR JEWISH NATIONAL HOME; REAFFIRMS HIS INTEREST AND DECLARES "BALFOUR ASSURANCES SHOULD NOT DEFAULT"

(By Philip Slomovitz)

United States Senator ARTHUR H. VANDENBERG, of Michigan, who is often spoken of as the most logical candidate for the Republican nomination for the Presidency in 1940, emerges in the present critical time for the Zionist movement as one of the most consistent Christian supporters of the movement for the upbuilding of the Jewish National Home in Palestine.

For 10 years Senator VANDENBERG not only endorsed the Zionist cause but stanchly defended Jewish rights in Palestine. As one of the ranking members of the Senate Committee on Foreign Relations, he has been helpful with his expressions in support of the Jewish national cause. This week, at a time when his encouragement was needed the most, he again unequivocally alined himself with the forces that stand for justice to the Jew. His support of the Jewish position in Palestine is contained in the following telegram:

"I believe today more than ever in the Zionist home in Palestine. As a member of the original Christian Pro-Palestine Committee I thought I saw a great vision. It is clearer than ever today and the inhumanity of man makes it more logical and more essential than ever. I emphatically favor every cooperation that America can give to the promised culmination of this promised Jewish homeland. The Balfour assurances should not default. The Jews of the world took them in good faith and have invested heart and fortune in them. They have a right to every international cooperation in behalf of this Jewish homeland. Count upon my interest to the limit."

Senator VANDENBERG's reference to his participation in the formation of the Christian Pro-Palestine Committee serves to recall an interesting incident in the history of Christian pro-Zionist activities in this country. In January 1932 the American Pro-Palestine Committee was organized in Washington under the leadership of Vice President Charles Curtis. Outstanding American Christians participated in that historic movement. Senator VANDENBERG was among them. On February 5, 1932, on the occasion of this historic event, he made the following statement to this writer:

"The Zionist movement always has appealed to my imagination and to my sense of racial justice. A Jewish home in Palestine, as originally warranted by the Balfour Declaration and endorsed by the unanimous action of the American Congress several years ago, was one of the great ideals born in the liquidation of the World War. The actual progress subsequently made in the evolution of this ideal has been not only proof of its sound reality, but also proof of the unselfish devotion which Jews, returning 'home,' are dedicating to the actual toil and sacrifices involved in this great adventure. I have been glad to join with other non-Jews in the organization of a national committee to express our American sympathy with and interest in this epochal movement—one of the most important ethnic and cultural movements in the life of the modern world. I attended the preliminary organization meeting of this committee in Washington and I listened for 2 hours to the amazing first-hand story of this forward-moving Zionist romance in Palestine. It is a brave story of hope and faith and works. It is the unfolding triumph of implacable racial aspiration which has declined to die for 2,000 years, it is little enough for the non-Jews of the world to give the movement our cordial encouragement."

Senator VANDENBERG's interest in the Zionist cause dates back to the disturbances of 1929 in Palestine. At that time on September 3, 1929, he wired this writer, then in his capacity as president of the Zionist Organization of Detroit:

"I am glad to report to you that my investigation here indicates Palestine situation now well under control. British Government primarily responsible under mandates from League of Nations. British Government has vigorously concentrated defense forces, and there should be no more serious trouble. While comparatively few American citizens are involved, nevertheless, the traditional policy of the United States demands our aggressive interest in the safety of life and property for every American wherever he is legitimately anywhere on earth. Any other attitude would violate basic Americanism. The noble Jewish drama of a national home in Palestine is not shattered by this tragedy. Great ideals like gold are purest when tried by fire."

A year later Senator VANDENBERG had occasion to make another significant statement. On November 9, 1930, when British betrayal of Jewish trust in Palestine was expressed in the infamous Passfield white paper, he expressed himself in favor of "a complete and official inquiry" by our Government to make plain the realities upon which to renew America's own interests in Palestine. That statement is sufficiently important for perusal today. Senator VANDENBERG then stated:

"The Passfield dictum—putting nullifying strictures upon the Balfour promise of a Jewish national home—is a distinct shock to our hopes for this great adventure in behalf of your 'home, sweet home.'

"I have too often endorsed this magnificent aspiration in autonomy not to share all of your liveliest concerns in the face of the present hazard. Of course, the ultimate ideal itself cannot be affected by the Passfield limitation upon Jewish immigration to Palestine and upon land sales by Arabs to Jews in this new sanctuary. The ideal is too powerful and too sound to be shattered by transient difficulties. It is too firmly entrenched in the world's comity—as demonstrated, for example, by the sympathetic action of our own Congress in 1922 and again in 1925. Therefore the real question today is solely one of temporary policy. The ultimate security of the Jewish National Home is inevitable. The universal interest and sympathy of the whole civilized world is its warrant. But since 'eternal vigilance is the price of liberty,' there is every reason for the closest and most critical scrutiny of each episode in the enterprise—particularly on the part of Americans who have poured so much of themselves and their resources into it.

"I am engaged in precisely such scrutiny at the present time; and you may be assured that I do so with every continuing sympathy with the noble objective defined in the Balfour Declaration of 13 years ago. I want to see all of the Passfield papers and I want to know the whole purpose behind them. On their face they seem to betray the Zionist ideal—and to scorn the rather blunt warnings recently uttered in the League of Nations. If the purpose proves to be a permanent and conclusive desertion of the mandated project for 'the establishment in Palestine of a national home for the Jewish people' (I quote the phrase literally from the Balfour letter of November 2, 1917), then we confront an astounding breach of faith which is not calculated to be accepted by the humane and liberal public opinion of the civilized world.

"On the other hand, if the purpose is temporarily strategic within the meaning of Lord Balfour's other phrase—that 'nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine' (quoted from the same letter of November 2, 1917)—and if it aims at the immediate safety of the existing enterprise, with a long-range advantage to be gained from briefly marking time while new and happier relationships between Arabs and Jews are evolved, then the end might justify the means.

"It may be correctly said that there is nothing in the reported Passfield statement to warrant any hope that the latter construction is justified. I wish this were not so. But I have been a member of the Committee on Foreign Relations of our own United States Senate long enough to know that there may be grave questions of public policy which cannot always be canvassed in the open all the while—although I am one of those who believe that the governed always are entitled to the whole truth from their governors. But there may be times when it would not be useful to precipitate premature controversy. Furthermore, there may be collateral involvements in a given situation with which we—thousands of miles away from either Britain or Palestine—cannot be intimately familiar. I mentioned these cautions not by way of excuse for apparent desertion of the intent of the original Balfour pronouncement, but by way of hope that the realities may involve no lapse in Zion's dream.

"Primarily, we must hold Britain responsible for the safety of existing life and property in this sector dedicated to the new Jewish national home. This involves native relationships which, happy in some respects, do not appear to have been fostered by British policy in adequate degree. If there is an interim—however inexplicable to us—in which the best ultimate welfare calls for the new Passfield limitations, this fact should be made plain. Obviously these limitations cannot be permanent without draining the enterprise of all vitality, since there can be no expansion of the new sanctuary without immigrants and land ownership. The world's opinion, and emphatically America's, will resist any such fatality. It can tolerate even an interim only when and if the Passfield limitations are satisfactorily explained as an emergent necessity. Meanwhile, the present episode has the compensation in it that it once more aggressively mobilizes the friendly

interest of millions of people who once more make uncompromisingly plain fidelity of an ideal which, like every other great ideal, will thrive upon attempts at crucifixation. The world again has its attention riveted upon Palestine.

"I favor complete and official inquiry to make plain the realities upon which to renew America's own interest in this behalf."

There is vision intermingled with vision in this series of expressions which find their highest declaration in the latest statement of this eminent Senator that "the Balfour assurances should not default."

Americans by Choice

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 8, 1939

Mr. CELLER. Mr. Speaker, some years ago John Palmer Gavit wrote a splended book entitled "Americans By Choice." Among other things, this book contains the Carnegie study of petitions for final naturalization. The author comes to some very startling conclusions, particularly concerning the average interval between the time of the alien's arrival in this country and the time when he files his petition for naturalization. (Petitions for final naturalization may not be filed until the petitioner is 21 years of age or more.) He made particular study of those aliens who came to this country at the ages of 1 to 14 years; the study is by race and covers 2,900 petitions. An examination of the following tables, I, II, and III, indicate that the average interval for all countries before filing petitions for final naturalization is 6.2 years. It will also be noted that these tables I, II, and III give the average interval of years by each country of origin.

TABLE I

	Years
France	12.9
Norway	12.5
Switzerland	12.4
Sweden	12.4
Scotland	11.8
England	11.6
Ireland	10.8
Germany	10.3
Canada	9.8
Denmark	9.5
Holland	9.5
Hungary	5.8
Greece	5.5
Finland	5.3
Russia	5.0
Italy	4.9
Austria	4.5
Turkey in Asia	4.0
Rumania	3.8
Turkey in Europe	3.6

It is interesting to note that it takes the Englishman and the Scotchman over 11 years to determine to become an American citizen, whereas the lowly Rumanian and Turk of Europe petition for their final papers in a little over 3 years. While it takes the Swede and Frenchman over 12 years to decide to become an American, it takes the Greek and the Finlander a little more than 5 years, the Italian 4.9 years, and the Austrian 4.5 years.

In other words, the races that we might term the "despised" races are the ones who appear to be most desirous of becoming American citizens, whereas the so-called privileged races seem to be least inclined to become citizens.

Furthermore, these tables indicate that where there is the greatest amount of persecution in the native land, there appears to be a comparable greatest desire to become an American citizen and to become assimilated in the American way of life.

The following table II shows the average interval of time which elapses before filing the petition, after arrival, at the ages of 15 to 20 years, by races.

TABLE II.—*Average interval (9,512 petitions)*

	Years
All countries	11.0
France	17.7
Canada	17.3
Switzerland	15.6
Germany	14.1
England	13.6
Sweden	12.7
Scotland	12.7
Denmark	12.2
Holland	12.2
Finland	11.7
Ireland	11.5
Norway	11.3
Italy	10.8
Hungary	10.8
Austria	10.6
Rumania	10.2
Russia	9.9
Greece	9.7
Turkey in Asia	9.0
Turkey in Europe	7.9

The conclusions derived from a study of table I are the same as those derived from a study of table II, and similarly so from a study of table III, set forth below.

TABLE III.—*Average interval before filing petition after arrival at ages 21 or over, by races, (13,849 petitions)*

	Years
All countries	10.6
Canada	16.4
Sweden	13.1
Switzerland	12.2
France	11.9
Germany	11.9
England	11.7
Italy	11.4
Norway	10.8
Scotland	10.6
Finland	10.5
Austria	10.5
Denmark	10.2
Holland	10.1
Hungary	9.9
Rumania	9.8
Russia	9.6
Ireland	9.6
Greece	8.6
Turkey in Asia	8.5
Turkey in Europe	8.1

It will be noted that whereas the Englishman, who comes to this country after 21 years of age waits 11.7 years before filing a petition for naturalization, and a Canadian waits 16.4 years, the Hollander files his petition in 10.1 years. The average interval for all countries, where the arrival has been at the age of 21 years or over, is 10.6 years. In this connection it should be noted that the natives of Turkey, Greece, Ireland, Russia, Rumania, Hungary, Holland, Denmark, Austria, and Finland petition for their final papers after an elapse of time which is under the average number of years.

Again it will be noted that the nations to which we give the greatest preference are the ones whose natives appear to be least inclined to become American citizens, and to avail themselves of the rare privileges American citizenship offers.

THE LENGTH OF TIME THAT IT TAKES PERSONS OF DIFFERENT NATIONALITIES TO BECOME NATURALIZED IN THE UNITED STATES

While the statistics do not indicate the average period in which the newly-made citizens of different nationalities had resided in this country as aliens, compilations of the Immigration Service show that of a representative group 54 percent of the total had been residents of this country from 5 to 9 years, 16 percent were here from 10 to 14 years, 15 percent from 15 to 19 years, and 15 percent for 20 years and over—United States Immigration and Naturalization Service, second service, lecture No. 30, January 7, 1935, page 13. This information can be summarized, and an average for the group as a whole obtained.

Percentage of total (1)	Average number of years resident (2)	Sum total (1)×(2) (3)
Percent		*Years*
54	7	378
16	12	192
15	17	255
15	20	300
100	----------	1,125

It takes 1,125 years for 100 percent, or a group of 100 aliens to become naturalized in the United States. It would, accordingly, take 11¼ years for the average alien to become naturalized.

At this point it is essential to point out that not all aliens are naturalized. Table IV indicates the number and percentage of aliens of different nationalities that had obtained naturalization papers and the number and percentage of immigrants to this country who had never taken steps to obtain American citizenship. It is logical to conclude that the greater the proportion of aliens from any particular country who obtain naturalization papers the more quickly does that group become citizens of the country of their adoption. Furthermore, as the ratio of those naturalized to the total number of immigrants declines as between groups the more slowly is citizenship obtained for the various groups of nationalities. That presumption holding true then table IV shows that the nationality groups listed in the following order obtained citizenship in the shortest period of time.

1. Swedish.
2. Welsh.
3. Irish.
4. German.
5. Hebrew, German.
6. Hebrew, Polish.
7. Dutch.
8. English.
9. Hebrew, Rumanian.
10. Hebrew, Russian.
11. Bohemian or Moravian.
12. Scotch.
13. Polish.
14. Canadian, other than French.
15. Italian, North.
16. Lithuanian.
17. Italian, South.
18. Ruthenian.
19. Italian, not specified.
20. Canadian, French.
21. Slovak.
22. Magyar.
23. Portuguese.

The extent to which nationality groups have become naturalized is directly related to the ability to speak English; and the ability to speak English is a measure of assimilation of those groups of citizens who came to the United States from non-English-speaking foreign countries. Table V shows the number and percentage of those nationality groups who spoke English and the number and percentage of those groups who did not speak English. The column in this table showing the percentage who spoke English, when ranked in descending order, indicates that the following nationality groups were most quickly assimilated to the national life of the United States:

1. Swedish.
2. Hebrew, German.
3. Canadian, French.
4. Dutch.
5. German.
6. Hebrew, Polish.
7. Hebrew, Russian.
8. Lithuanian.
9. Italian, North.
10. Italian, not specified.
11. Hebrew, Rumanian.
12. Portuguese.
13. Italian, south.
14. Polish.
15. Slovak.
16. Bohemian and Moravian.
17. Magyar.
18. Ruthenian.

Correlating the findings of the two tables it is concluded that the Swedish; the English and Irish; the German and Hebrew, German; the Dutch; and the Hebrew, Polish obtained citizenship and were most quickly assimilated to the national life of the United States. The Magyar, the Slovak, the Ruthenian, and the Portuguese were the groups showing least ability to become citizens, or to become assimilated:

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. CLYDE T. ELLIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. ELLIS. Mr. Speaker and fellow Members, only 10 days after the beginning of this momentous session, Arkansas and the Nation were shocked by the sudden death of the beloved dean of the Arkansas delegation in the House of Representatives. Once, early in life, he had served the Fourth Arkansas District with honor and distinction, retiring voluntarily; then, in 1933, he returned and served continuously until his death.

Less than a week before he last set foot in these halls Mr. CRAVENS called our delegation together at his office to assist us in organizing a campaign for committee places—four of us were new. He was a sick man then but determined to carry on in his effort to be of assistance to his fellowman. This was characteristic of the leadership that endeared him to everyone here, for there is none but loved and respected him.

Our State has suffered a great loss.

When the history of the times has finally been carved into the Rock of Ages, yonder in the great Southwest, in the land called Arkansas, there will be written on the tallest hills among the great intellects of his day the name of BEN CRAVENS.

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. GATHINGS. Mr. Speaker, ladies, and gentlemen, we are met here today to do honor to those distinguished Members of both Houses of Congress who have answered the final roll call and who have entered upon a journey "from out of whose bourn no traveler returns." Among those whom we honor is the Honorable BEN CRAVENS, of Arkansas, late a Member of the House of Representatives.

BEN CRAVENS died in Washington City on January 13 of this year. His public career was a marvelous one. Born in Fort Smith, Ark., he practiced law in that city until he was elected prosecuting attorney of the twelfth judicial district in 1900. He ably served the people of his district in that capacity for three terms, when he was first elected to the House of Representatives—1906. He was a Member of Congress for three terms, 1907–13, but was not a candidate for a fourth term. His next public service began when he was elected to the Seventy-third Congress without opposition. He was elected to each suceeding Congress, including the present Seventy-sixth Congress.

He was married to Miss Carolyn Dial, who was his constant companion throughout a useful life.

To them was born one son, Fadjo Cravens, city attorney of Fort Smith, Ark., and one daughter, Mrs. William Eads, of Fort Smith. He died at the age of 67 years.

Horace said: "Pale death with impartial step knocks at the palace and the cottage gate." This sentiment expressed more than 2,000 years ago by the Latin poet forces itself unconsciously upon our minds today. The many fatalities of this House and of the Senate during the present Congress has been such that we need not the admonition of poet or philosopher to convince us that neither rank nor station can stay death's relentless grasp.

BEN CRAVENS was a lovable man; kind, considerate, and ever thoughtful of others. It was my pleasure to call on him for counsel and advice on entering upon my duties as a new Member from Arkansas. Graciously did he assist me. He gave me encouragement that I will never forget. The last day that he was in attendance in the House of Representatives, and only a few days before his death, he consulted with many of his Member friends in the interest of committee assignments for all four of the new Members from his State. He was a friend in the truest sense. That he is gone dawns slowly upon us who served with him.

In the long vista of years to roll,
With me his memory nor his honor fade;
And though other land retain his soul,
He lives also here—
In the results of his deeds and friendships made.

Celebration of the Golden Jubilee of the Missouri Military Academy

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 14, 1939

Mr. CANNON of Missouri. Mr. Speaker, the Missouri Military Academy, located at Mexico, Mo., where General Grant established his first Missouri headquarters, has just celebrated its golden jubilee. For 50 years this great academy has been training young men in the classics, in military science, and in the highest ideals of American citizenship. Its graduates are to be found in practically every State of the Union and rank among the representative businessmen of their respective communities, occupying key positions in the economic system of the country, but ready for effective military service whenever the Nation calls.

The military department of the school is under Government supervision. M. M. A. graduates who have passed the proper examination are granted official recognition by the United States Government. The War Department furnishes the arms, ammunition, and camping equipment required by the Academy and is represented by a resident officer of the United States Army, who is a graduate of the United States Military Academy at West Point. While the courses of study at the Academy embrace all branches requisite to successful business life, and the social graces of the modern American home, they also provide training, discipline, and proficiency in military science qualifying for enlistment as officers in any military service which the Nation may require.

On Sunday, May 14, 1939, in commemoration of the fiftieth anniversary of the establishment of the academy, the Honorable James A. Farley, Postmaster General of the United States, who himself has a son in a similar military school in New York, delivered an address which I ask to include as a part of my remarks. The address is a scholarly and timely discussion of one of the pressing problems of our times by one of the great Americans of our times, who

is probably as well qualified to speak with understanding and authority on matters under discussion in the Nation at large as any man in public life today.

The address is as follows:

Colonel Stribling, members of the faculty of the Missouri Military Academy, distinguished guests, and particularly the students of this institution, my thanks to you for this opportunity to present the views of a Cabinet officer—a politician, if you please—on the subject of military training.

To begin with, let me state that in my opinion the young men and boys I see before me are the most fortunate among the youth of America. Not only are you enjoying exceptional advantages in the matter of general education and physical education but you are being made ready to perform what in an emergency is the greatest service a citizen could render his country. Let me emphasize one thing, however, and that is that you are not being trained for war but you are being trained for activity should the great calamity of war again fall on this Nation.

It is the hope of every one of us of course that none of you will ever have to face the great ordeal of international battle for, in the modern times at least, war brings no victories in the long run. It is only the last alternative to a worse condition. It is justifiable only to preserve the honor of your country or to defend it against either direct or indirect attack. If the attack is direct; that is, if there is attempted invasion or other acts of positive aggression against the United States, you officers of the future will have to step out with the troops forthwith and repel the assault. That, however, is not a likely thing to happen.

Nowadays war comes to the world by stages. It comes by subtle moves that tend to weaken our defenses, by methods and processes that make us more vulnerable and the potential enemy more powerful. It is the function of the diplomatic branch of the Government to deal with these incidents as far as they can. It is the function of the State Department to head off a threatening war by every means possible—by negotiation, by reprisal, diplomatic methods, or in any other way that a clash may be averted. But hand in hand with these efforts to preserve peace must go our preparations for any eventuality. I think it is generally agreed that the most nearly certain way of guarding against either encroachment or attack is by presenting to the world a military front so powerful that no fierce and greedy nation or aggregation of nations will dare the final step. That is the meaning of our recent measures to create a navy capable of dealing with any force that anybody thinks of sending against us and of building the nucleus of an army that can be expanded to whatever is requisite for our complete defense.

Our preparedness methods and activities are measures of peace, not of war. We are a peaceful Nation. We are plagued with no desires to take any country, or any part of any country, away from its own people to add to our territory. We aspire to no domination over the world or any part of the world. All we want is to be let alone, to solve our own problems, and work out our own destinies. The world has many things that we need and we have many things that the world needs.

We are eager to trade, for our mutual advantage, and ask nothing from other nations but a fair opportunity to sell our goods and to buy theirs.

One would think that with such a program there would never be danger of war. The world has so developed, however, that new means of communication, which almost eliminate distance, have made even the wide oceans no longer a certain protection to our country. Moreover, these same advances in mechanics and science have made complete isolation much more difficult of maintenance than it was in the past. Whatever of moment happens in one part of the world has a definite effect on all the rest of the world. Our formula could only be successful if it was adopted by all the other powerful countries. Unfortunately, there are nations that refuse to play the game according to the rules. They, either through lust for power, or desire for empire, or in defense against the aggressions or encroachments by others, are driven to adventures and expedients that threaten at any time to involve them in a great war. In such a war, the rights of neutrals are bound to be ignored. A nation fighting for its life is not and cannot be scrupulous in observing international amenities. And it is up to the neutrals, or those who would be neutral, to take care of themselves. That is where you and the thousands of other boys who are getting training similar to that which you are undergoing, really come into the picture. It is to be hoped, and I believe every intelligent person in the United States shares the hope, that you will never be called upon to exercise the skill that is being drilled into you. That you may never have to lead soldiers against an armed enemy. That what you are learning of strategy may never be employed in circumventing the plans of an armed foe. And that, in short, you may be spared the miseries of major warfare, the prospect of which is more terrible now than at any previous period in the world's history.

Nevertheless, we know that war comes even to the most peace-loving countries on the globe. We have seen in the last few years peoples bombed, blasted, and slaughtered in order to make them unwilling subjects of a conquering power. We have seen other countries bereft of their independence to gratify the ambitions of dictators, with no more valid excuse than the desire—real or pretended—for materials they needed or the acquirement of positions that would make them less vulnerable in a military sense. It is too much to expect that the praying nations do not cast covetous eyes on South America, for example, should they succeed in gaining the mastery of the other continents. Should they attempt to put their desires in this direction into effect, we must be ready with the adequate countermoves. We would not go to war for sentimental reasons in such a case, but because of the principles established a century ago, when we notified the world that foreign conquests in any part of America would be regarded as a threat to ourselves, which it would be.

So I tell you again that you are being fitted for what may be the greatest service a patriot may render his country.

Incidentally, what you learn here will not be knowledge wasted, even if it is never applied to soldiering. When you are learning to lead men in possible battle, you are also learning the principles of leadership which mean success in the professions and in business. When you are studying strategies of international combat, you are acquiring also the faculty of judgment invaluable in a competitive industrial world. This thought was well expressed in a statement issued by an organization of patriotic women a dozen years ago. Let me recite that statement to you:

"Military training for the national defense is the most American thing in America. Not only because it fits the boy to do his part, if war comes, for his country, but because it makes him a stronger, straighter, cleaner, more democratic boy.

"Order may be the first law of nature, but order is often the last law of youth. And health and good habits, and clear thinking, and industry, and success follow in the footsteps of physical and mental discipline.

"If a boy slouches along, his destiny is likely to slouch along. If he sags at the knees, he is likely to sag at the base of his brain. But, if he learns to look a target in the face, he learns to look a difficulty in the face.

"If he learns to hit the bull's-eye in military training, he acquires the habit of hitting the bull's-eye all through life."

The National Defense Act of 1920 made provision for the establishment of the Reserve Officers' Training Corps in educational institutions of the United States. Prior to the world conflict of 1914–18 military instruction had been conducted in numerous military academies and some civilian colleges and institutions. However, those pre-war instructional units had no well-defined mission and definite objective as have the senior and junior units of the Reserve Officers' Training Corps of our day. At the present time the Reserve Officers' Training Corps is the medium whereby over 6,000 graduates of institutions of higher learning become well-equipped junior Reserve officers each year.

The vital role played in the national-defense set-up by this training activity is evidenced by the fact that, of the 100,000 Reserve officers now borne on the rolls of the Officers' Reserve Corps, barely 15,000 had World War experience. By maintaining at the Missouri Military Academy and in other institutions units of the Reserve Officers' Training Corps, the Government affords military instruction which is far more effective and thorough than the hurried and intensive preparation that characterized the brief training periods conducted for the instruction of emergency officers during the World War period. The Reserve Officers' Training Corps, therefore, is an institution indispensable to the national defense, constituting what might be termed the "West Point of the Organized Reserves." That corps is the very foundation of our potential national armies of the future.

Every student at the Missouri Military Academy is a potential commissioned or noncommissioned officer in the event of a prolonged major war involving the United States. The greater the number of such potential military leaders, the greater the degree of security to our Republic. Historically the United States has always placed its peacetime military reliance upon the volunteer—be he officer or soldier, be he of the Regular Army, the National Guard, or the Organized Reserves. Therefore, the combination of education for civilian pursuits and education for possible war service is, by long and deep tradition, a thoroughly American procedure. In undertaking this combined education you students of the Missouri Military Academy assume the highest responsibilities of true American citizenship.

I dare say that some of you youngsters have occasional spells when the austerity of discipline gets on your nerves. This is simply, I am sure, a normal manifestation of the restlessness of youth. I have a boy in just such another school as this. So, as you may imagine, I know a good deal about it. However, I do not require instruction at Jimmy's hands to enlighten me as to the atmosphere of a military school. It is easy for me to remember my own boyhood, and I assure you the school of experience for a small-town boy was a good deal harder than any soldiering academy. I envy him, and I envy you your great opportunities. Discipline is the hardest thing to learn and the most valuable byproduct of any education. You must learn how to take orders before you know how to give them. What you acquire as a subordinate makes you understand the sentiments and rights of your subordinates when you lead them either in the army or in business. Just as your instructors today have to think for you, so some day you will have to think for other men. And you will know then that this thinking must be directed more for their contentment than for your own.

I did not mean to preach a sermon, for I am sure that your education has progressed so far that the things that I have been telling you are largely known to yourselves already. We all have certain duties, and the highest of these duties is to perform such service for our country that lies within our opportunity and our capacity. We are one of the few nations on earth where a man's destiny is in his own hands. A few years from now your genera-

tion will be governing the country. Whether you know it or not, some of you are training for the highest positions within the gift of the people. It is the job for each of us, whether he be President of the United States or a boy at school, to keep our country free and great. There must be no backward step that would make the Nation that your generation will direct 20 years from now perhaps, less secure, contented, and free than it is today.

I know that there are some people who are not satisfied with the present state of the Nation, but I also know that there never was a period in our history when some people did not think that times could be better. Nations have their ups and downs like individuals. There are periods of great prosperity and periods of depression, periods of calm, and periods of turbulence. But, as you are learning from your history books, the difficulties of any period get straightened out in the long run. We of today can thank our lucky stars that such troubles as some of us think we have are relatively of the least importance. In what other country, I might suggest you ask yourselves, can a man complain of what he may think are errors in our Government or in our political system? In the United States, thank God, a man can get on a soap box or put a piece in the newspaper criticizing anybody or anything. I will say it is not always pleasant to listen to or to read these expressions of dissatisfaction. But at the same time I realize that in this freedom of speech, and with this liberty of the press and the radio, lies the salvation of the country. If the criticism is illogical or baseless, it is soon forgotten. If the complaint is just, it develops into a crusade that ultimately results in the correction of what may be wrong.

Whoever thinks nowadays of the bitter comments that were made against the acts of Washington or Jefferson or, in fact, of every President we ever had?

Whichever of the boys who is now poring over his school problems is President of the United States 30 or 40 years hence, he must expect just the same sort of criticisms and be prepared, as his predecessors were, to take them with a smile and to get surcease from them in the satisfaction of his own conscience and the knowledge that he is doing the best he can for his country. By the time you leave these academic halls you will have learned discipline, you will have acquired a standard of conduct and a system of ethics that you must never forget. It is given to no man to be right all the time, but the privilege is withheld from no person of doing the best he can and doing what he thinks is right.

With whatever woes some of us are contending today, our condition is so much better than that of any other people on earth that we can be proud of ourselves and proud of our country. We can be proud that in a world that is in a state of terror at what may come tomorrow we have nothing more serious to worry about than how the next election is coming off. We can be proud that as a people, we chose as our Chief, in the midst of a really great economic emergency, perhaps the only man available who knew what to do and how to do it, and had the courage to go ahead with it. So, as I understand is customary on these occasions to give young people a personality to emulate and an example to follow, I suggest to you, in closing, that you study the career of Franklin D. Roosevelt, President of the United States, who, I believe, will occupy as great a place in history as those other great men you have encountered in your studies. I make this suggestion, not merely because of the success he has made of his life but rather because he has always played the game.

Taxes and More Taxes—One Firm Pays 41.5 Percent of Gross Earnings in Taxes

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 9, 1939

Mr. ALEXANDER. Mr. Speaker, social security and old-age annuities are a modern idealism, and I agree that their objectives are highly desirable. However, I greatly question the wisdom of the system we have set up as a Federal program. Not only that, but the method of raising the necessary funds is wrong, and, in my estimation, much less practical than the plan proposed in H. R. 6466.

It is said that the power to tax is the power to destroy. This measure now under consideration—social security, H. R. 6635—is one of the greatest tax measures this Nation ever placed on the statute books. Has it occurred to the Members of Congress that we may be destroying the very sources of support and life not only for the workers of America but also of the very Government itself when we burden commerce, industry, and business—indeed, every employment source—with these destructive taxes?

If I am not mistaken there is a general and widespread demand on the part of not only business but the masses of the people themselves that we encourage business, that we reduce spending and thereby put a stop to increased taxation. I am receiving many letters daily indicating such a demand on the part of the public, as I know most of you are likewise.

As an excellent indication of the tenor of these letters I wish to insert in the RECORD a very thoughtful communication which I received a few days ago from an outstanding firm in my district in Minneapolis, which graphically describes in some detail the problems, needs, desires, and plight of business in America today under our mistaken policies of taxation and of more Government control and interference, not only in business, but in agriculture.

It is these measures of control which are costing us such vast sums of money, but which are getting us absolutely nowhere, except to chaos, disintegration, and destruction. In terms of improved business conditions, in terms of improved labor conditions and employment, in terms of better prices for agriculture, our basic industry at least in the Northwest, and in terms of a higher standard of living, yes, even in terms of life, liberty, and happiness, the basic pursuits and aims under our Constitution, where are all these measures of control and taxing getting us? Just where? We all know the answer. It is oblivion, bankruptcy, war, and a complete smash-up of everything we hold dear in a democracy.

Read the following letter and consider the various angles covered paragraph by paragraph. Here is indeed a clear, concise statement of the exact problem of business, the greatest source of employment in this Nation. If we cannot listen to these needs of business we cannot expect to put our unemployed back to work.

PAKO CORPORATION,
Minneapolis, May 24, 1939.

JOHN G. ALEXANDER,
House Office Building, Washington, D. C.

DEAR MR. ALEXANDER: It has come to my attention that some Members of the Congress begin to feel that many businessmen are not interested in Federal tax revision now.

I'm writing to tell you that all the businessmen I associate with are keenly interested in immediate tax revision. We can't be shouting and clamoring for it continuously for two good reasons: First, if we did, you would conclude it was the old "Wolf! Wolf!" cry and would not heed us; and, second, we businessmen have to use most of our time making a living for our employees out of our own businesses. We have to give full value to our customers, and we have to keep our expenditures within our incomes.

First of all, the present Federal tax law is too complicated. It takes altogether too much time and study to determine one's tax liability. If you could only experience my work for a year you would know what I mean and would then work in earnest to simplify the whole Federal tax situation.

I respectfully urge you to support an immediate Federal tax-revision program, which includes the following points:

1. Drastic modification of the capital gains and losses tax.
2. Drastic reduction of income surtaxes, preferably to a maximum of 25 percent.
3. Complete repeal of the undistributed-profits tax.
4. Substitution of a single income tax for the present corporate income tax, capital-stock tax, and excess-profits tax.
5. Granting the right to corporations to carry over their net losses for at least 2 years, preferably 5 years.
6. Elimination of the tax on intercorporate dividends.
7. Elimination of the individual normal income tax on corporate dividends.
8. Permission for affiliated corporations to file consolidated returns.

In closing, I want to urge you, when planning the new income-tax rates, to remember the heavy pay-roll taxes—old-age benefit and unemployment insurance—you have imposed on us, and also the fact that we have to pay State and local taxes, too. For example, in my corporation for the calendar year of 1938 one-third of our total tax load—Federal, State, and local—was for pay-roll taxes, one quarter for State and local taxes, and our total tax load was 41.5 percent of our annual gross earnings, before taxes.

We want a simplified Federal tax law, and we want it from this Seventy-sixth Congress.

Respectfully yours,

GLEN M. DYE.

Now, I said in my opening remarks that I question the wisdom of the system set up by the social-security law in the name of unemployment insurance and old-age pensions. I wish to elaborate briefly on that statement. The weakness

of this law lies in the fact that it does not help our great army of economically dispossessed unemployed people who are now, and have been for nearly 10 years, off the pay rolls of industry and business. This law only seeks to aid those who are still employed, as it is a pay-roll tax. If they are still employed after the depression wringer they have been put through in the past few years, they will probably seldom, if ever, need unemployment insurance, and similarly as to old-age pensions. In view of the continued depression, the workers now employed are doubtless more or less permanently engaged and therefore can be expected to provide their own old-age fund or rainy-day nest egg.

But what good is this law either to the old people already out of employment or to the army of many millions of unemployed? If we are to have an unemployment-insurance law and an old-age assistance system, let us have a real one. Let us have a general law which will really provide for the unemployed and aged and not be fooling the people by calling this makeshift, misnamed statute under a false name. It is clearly a misrepresentation, if not a fraud, on the confidence of the general public.

This law and other similar fake Federal programs not only destroys business but it discourages the employment of additional men and women, as pointed out in Mr. Dye's letter.

It is costing us all a great deal of money, and any benefits, either present or future, are of a very doubtful and imaginary value. Why not wake up and ask ourselves a real question such as this: Who are the unemployed and who are the needy aged? This bill says it is for the unemployed and for the needy aged. But the only people it affects or has anything to do with are the employed. What a misnomer! What a travesty on our legislative justice!

No wonder business, the people, and the whole country are in the low state we find them in today when we fool ourselves into imagining we have done something, or are doing something, for the great mass of the individuals and especially the unfortunate poor and needy individuals in this great, wealthy Nation when we take time out to put such a law on the statute books, and to have a Roman holiday amending it in every session of Congress as we are doing. What we should do is to throw this law out, get down to sound fundamentals, and really solve a few of our problems.

The National Youth Administration Budget

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 9, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, I have heretofore called attention to the fact that there is a definite disposition in "certain quarters" to reduce the Budget request of the National Youth Administration from $123,000,000 to $81,000,000. Before final action is taken on this very important legislation, I am anxious to present additional pertinent information which I think all the Members of Congress should carefully consider before voting to reduce by $42,000,000 the President's request of $123,000,000 for this important agency of Government.

First, I think we must consider very seriously certain facts about the Nation's youth, and the lack of job and educational opportunities confronting 4,000,000 young Americans. Of the 21,000,000 between 16 and 24 years of age, there are 5,000,000 in schools and colleges, another 8,000,000 are employed, 3,000,000 are in the home or not available for gainful work. But Members should bear in mind that there are 4,300,000 totally unemployed and another 1,300,000 partially unemployed. This makes a vast group of between four and six million future citizens of this great Nation either out of work entirely or spasmodically employed at part-time jobs. We must thoughtfully consider the fact that there is a net increase of 450,000 inexperienced youth each year who are adding their pressure to the labor market—200,000 more rural youth are coming of age than there are jobs available in the rural areas, and 250,000 urban youth are crowding for their place in the business and industrial life of our towns and cities. These young people are begging for an opportunity to go back to school, to get work experience, to have a job of some kind so that their energies and talents will not deteriorate—so that they can hope for a chance to marry and have a family, and the chance to take care of that family. This is what each succeeding generation of youth feels is its inalienable right in a democracy.

The 4,000,000 and more young people, about whose fate and future each one of us is vitally concerned, is the group with which the National Youth Administration has been working and to which it has extended educational opportunities, work experience, and training. Not only has this agency helped to reduce pressure on the labor market and competition for adult jobs, but it has given youth experience in every kind of job which prepares him vocationally and avocationally for living.

The current need among young people for education, work, and training has not been decreasing in the last 8 years, but steadily becomes more dangerously acute. We cannot tolerate a vast "lost generation" of youth which fluctuates between four and six million and which has been practically disowned by industry, by our educational system, and by society. Idleness, ignorance, and wasted energy of youth constitute a menace to our society and to our democratic institutions. Can the morale of millions of youth withstand the adverse effects of this situation? If this Nation were preparing for war, there would be no necessity to discuss youth and work. Their future would be in the hands of the war god. But in the United States we are not giving military training to our boys and girls and controlling their destiny with the iron hand of a dictator or demagogue so that they emerge with guns and swords in their hands instead of plowshares and machine tools. The primary purpose of the administration is to mold, not cannon fodder, but loyal, patriotic citizens who will become productive workers within a democratic society. By providing youth with an articulate agency for the expression of their needs and a focal point of direct action, the National Youth Administration has contributed to meet the problem of unemployed youth and has prepared youth for work. There is and can be no criticism of the National Youth Administration as to inadequacy of function, but if this proposed unreasonable cut is allowed to stand, there will be serious criticism that Congress has limited and restricted its program because of an insufficient appropriation. So long as Congress appropriates $50,000,000 to $100,000,000 each for many new battleships, as this session has done, it cannot consistently quibble over a few millions of dollars which can be used so effectively and economically in providing education, work experience, practical guidance, and placement in private jobs of the Nation's youth.

An appropriation of $123,000,000 to the National Youth Administration will give 800,000 young men and women the benefits of education and work—200,000 more than have been on the N. Y. A. this year. These 800,000 will be busy doing constructive work, and their capacities will not be allowed to degenerate. We all know that unemployment tends to produce unemployability and youth are eager and capable for work. One more point is worthy of emphasis—the N. Y. A. through its job-placement activities can reasonably place 200,000 youth in private jobs next year. Thus, at least 1,000,000 young people will be kept conditioned by more normal experience of work and education than the experience of deadly idleness and hopelessness.

With $123,000,000 the N. Y. A. will provide part-time work and educational opportunities to 460,000 needy young people to assist them in continuing in schools, colleges, and universities, an increase of 83,000 over this year.

Work experience and training on a wide variety of public projects will be provided to 350,000 out-of-school, unemployed youth, an increase of 120,000 over this year.

Judging the future program of the N. Y. A. by the past, it is safe to say that the N. Y. A. will initiate a sane and moderate program of youth services to provide young people on N. Y. A. projects with guidance and counseling services and occupational information; related training to give the elementary essentials to intelligent job performance, medical examinations and, wherever possible, to arrange medical treatment through cooperative means.

I want to list only a few of the important facts about the N. Y. A. which are in themselves sufficient justification for favorable action by the House to appropriate $123,000,000 for the extension of the splendid work of this agency. These facts and figures have been furnished by the N. Y. A. upon my request, so are therefore authentic.

(1) Currently, under the student-aid program, 378,000 needy students from low-income families are assisted in continuing their education in almost 26,000 high schools and 1,650 colleges; on the works program 235,000 are employed on a great variety of public projects. A total of 613,000 young men and women are gainfully occupied under the provisions of this agency.

In my own State of Oklahoma, under the able leadership of Mr. Houston A. Wright, the State director, the N. Y. A. has done an exceptionally good job. The N. Y. A. in Oklahoma today commands the respect and support of all classes of our citizens. Many of the leading high-school superintendents and college presidents in Oklahoma have wired or written me warmly commending this great youth program in my State. There are over 14,000 students employed part time in 909 high schools and 43 colleges; and 7,875 out-of-school youth are employed on the work projects. Conservative estimates made to me by these school men and others indicate that 75,000 Oklahoma young people are in serious need of the opportunities provided by the National Youth Administration.

(2) The payment to young people is on the basis of actual work performed and averages $6.45 a month on the student-aid program, so I am advised, and $18.89 a month on the works program.

Third. The annual cost per youth to the N. Y. A. is so low as to be startling. On the student-aid program a high-school student is helped to stay in school at an annual average of about $38 and a college student receives financial assistance at an average annual cost of $108. While these annual costs seem remarkably low, this cash sum represents the difference needed for the student to remain in high school or college. On the work projects for out-of-school, unemployed youth I am officially advised that the average annual cost is $233. The overall annual cost to the Federal Government of the three main programs approximates $123. During the current year this low man-year cost has made it possible to reach over 600,000 needy young people.

We cannot underestimate the importance of the student-aid program. It extends into every State and congressional district in the United States.

Fourth. This program extends into all but 17 of the 3,071 counties in the United States. I am further authoritatively advised that the works program operates projects in 2,777 counties. This is an almost complete integration into the urban and rural life of the Nation.

Fifth. The N. Y. A. reaches young people from the low-income families as is shown by the fact that N. Y. A. students come from families with a median annual income of $667. N. Y. A. project workers come from relief families, and more than half have never had a job before and only one-fourth of them have had the opportunity to finish high school.

Sixth. In the student-aid program N. Y. A. students have demonstrated that they can work for an education and at the same time maintain satisfactory scholarship. Here is another fact that may surprise some. Officials of the N. Y. A., after a careful Nation-wide N. Y. A. survey, advise me that such students are on the whole equal to, if not superior to, the average student in scholastic achievement. The N. Y. A. has not only extended educational opportunities but has uncovered a reservoir of competent youth.

Seventh. The N. Y. A. project program urges young people to try for other avenues of experience. About 10 percent of the out-of-school youth leave projects each month, the majority of whom leave for private jobs or some other form of self-support, or to go back to school. This project turn-over demonstrates to me a healthy reaction on the part of both the supervisors and the youth. Certainly these young people are not using the Federal Government as a permanent refuge for a job.

Eighth. Since the beginning of the N. Y. A. local sponsorship of N. Y. A. work projects has resulted in $18,000,000 of contributions, or 13 percent of all funds expended on work projects for out-of-school youth. The N. Y. A. and its 3,000 local advisory committees have shown the advantage of united effort.

In conclusion, there are several important reasons why the N. Y. A. should receive an appropriation of $123,000,000, as requested by President Roosevelt. The more significant of these may be summarized as follows:

First. The undeniable extent of need for this type of assistance among 4,000,000 and more American youth.

Second. The extremely low annual per capita cost of approximately $123.

Third. The practical and sane approach to work, training, and education, which is the basic policy of the National Youth Administration.

Fourth. The N. Y. A. system of decentralized control, which has resulted in the successful cooperation of a Federal agency with private as well as public agencies.

Since 1933 there have been many different types of emergency programs developed. Members of the Congress are familiar with these. Most of them were created as the result of extreme emergencies made acute by the depression which started in 1929. Many of these attempts have proved successful and represent necessary programs for the social welfare of this Nation. One of the most outstanding of these efforts has been the work and contribution made by the National Youth Administration. All of us are aware of the unusually fine acceptance by the public of this program for the welfare of our underprivileged youth. The President's request of $123,000,000 for its continuance and extension is, in my judgment, entirely reasonable; and I submit that this Congress cannot justify the unreasonable cut that has been proposed. Such a proposal, if adopted, would prove to be false economy.

The Sugar Industry in Louisiana

EXTENSION OF REMARKS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 9, 1939

LETTER FROM CHARLES A. FARWELL

Mr. MALONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Charles A. Farwell, of the American Sugar Cane League, answering erroneous impressions regarding the sugar industry in Louisiana:

AMERICAN SUGAR CANE LEAGUE OF THE U. S. A., INC.,
New Orleans, May 19, 1939.

Hon. PAUL H. MALONEY,
House Office Building, Washington, D. C.

DEAR MR. MALONEY: On April 18, 1939, President Roosevelt wrote a letter to Congressman MARVIN JONES in connection with the Ellender bill, S. 69, which letter was printed in the CONGRESSIONAL RECORD.

In view of the fact that subordinates in the various departments who are consulted by the President in regard to the sugar program

have proven themselves unfriendly to the continental sugar industry, it appears to us that the record should be kept straight in several particulars so that the President and Congress may know the reasons for the complaints from the industry. It is impossible for us in Louisiana to understand the frame of mind which orders American farmers to destroy 25 percent of a growing crop of sugarcane when that crop was planted in entire good faith and within the existing regulations of the Department of Agriculture. Subsequent regulations have practically put this proposition up to the farmers in Louisiana: If you are unwilling to destroy 25 percent of your growing crop, then you are warned that you will probably be required to reduce your sugarcane acreage 47 pecent in 1940.

Department of Agriculture officials have claimed that there is nothing mandatory about plowing up sugarcane acreage in Louisiana. This could only be said with the tongue in the cheek, because marketing allotments have now been announced which absolutely fix the amount of sugar that can be sold during the present calendar year. When you tell a man that he can create something for commerce and prohibit him from selling the product in commerce, the result is a mandatory order, whether it is accomplished by one or two or three sets of regulations.

Much emphasis has been placed upon Cuban relations by the writer of the letter which the President signed. It is interesting to remark that the exports to Cuba are cited on the basis of comparison between 1933 and 1937. The Department of Commerce issued a pamphlet in March which shows the trade of the United States with Cuba in 1938, but that official release shows that the 1938 exports and imports between the United States and Cuba declined greatly in value. The United States exports to Cuba declined from $92,000,000 in 1937 to $76,000,000 in 1938, which is more than 17 percent. We know that one of the chief reasons is the price of sugar, which has been depressed by the Department of Agriculture. Nothing is said in the letter about that, although it is the chief cause for distress in all areas that produce sugar for the United States market.

We are continually hearing about foreign commerce and yet the records of the United States Department of Commerce itself demonstrate that of all the business transacted in the United States, more than 90 percent is domestic commerce and less than 10 percent is foreign commerce. Admitting that this 10 percent has some importance, it insults the intelligence of the American people to try to convince them that it is more important to have foreign commerce than to stimulate domestic commerce by encouraging industry within the United States.

The letter to Congressman JONES places a great deal of stress upon the relationships among the American Republics. For the purposes of the record, I am enclosing six photostatic copies of pages taken out of one of the most recent Krupp catalogs. It can readily be seen from these photostats that South and Central American countries, especially Peru, while demanding a share of the American sugar market, are purchasing the machinery with which to make this sugar not from the United States but from Germany. Based on American prices, the equipment listed on the enclosed pages from Krupp's catalog would run well in excess of a million dollars. I cannot understand where there is any reciprocity in giving these people a share of our sugar market and then letting them spend the money paid for that sugar for foreign machinery, when our own machinery manufacturers need that business. These photostats, by the way, may be interesting to the Department of State.

Statistics taken from the Sugar Journal of October 1938 give the increases in sugar production during the past 40 years for some of the principal sources supplying the United States market as follows:

	Percent
Louisiana	138
Hawaii	550
Philippine Islands	1,080
Puerto Rico	2,635
Beet sugar (United States)	3,611

You have probably read about the statement that the domestic sugar industry costs consumers $350,000,000. When that statement first came out it was based upon conditions existing in 1936, but in recent months we have two Cabinet officers using the same figure on the basis that it costs the consumers of the United States every year $350,000,000. From the standpoint of the technician this charge cannot be substantiated. In fact, it is a completely ridiculous charge. The figure is based upon the assumption of some economists with a very vivid imagination that if there would be no domestic-sugar industry at all, and if there were no tariff or quotas or taxes on sugar, then foreign countries would be willing to sell their sugar in the United States at less than cost of production. It is so utterly impossible that no one would consider the statement for a moment, except that the economists and statisticians of the departments in Washington are apparently encouraging Cabinet officers to repeat the figures which they know cannot be justified or substantiated. The best answer to these men of great imagination is to remind them that in 1919, when the Cubans had no domestic competition, they made American consumers pay 25 cents per pound for sugar by simply refusing to sell until the market reached that point. The statement about 50 loaves of bread and 50 quarts of milk is evidently based upon the figure of $350,000,000, which has been repeatedly disproved and exploded, as shown by the discussions on the subject in the CONGRESSIONAL RECORD for the present session of Congress.

Reliable statistics show that less than 8 percent of the sugar consumed in the world is sold at the so-called world price. Therefore, to use this as a basis of any comparative statistics is very much a case of letting the tail wag the dog.

We cannot help but view this destruction of growing sugarcane as simply a repetition of the "killing little pigs campaign."

We whose families, friends, and neighbors will have to bear the brunt of this provenly unsuccessful theory of governmental economics naturally feel that we have been given a very raw deal, because a great many of us have been brought up to believe that the fundamental theory of American taxation was to tax those things which were capable of production and earning. It seems to us fundamentally wrong and fundamentally un-American to tax a man on his land and then tell him that he cannot plant it in a crop which the Department of Agriculture itself recognizes as being the most suitable crop for his land.

Unless Congress acts, there is going to be, in this part of the country, an inestimable amount of waste, deprivation, and human misery in our farm lands caused not by destructive nature but by an artificial destruction of our wealth to create wealth for a foreign nation. A growing crop that has already cost hundreds of thousands of dollars to bring up to its present state must be destroyed. Should the present regulations be carried out according to the estimates of the Sugar Division, the sugarcane farmers of Louisiana are being deprived of wealth amounting to more than $12,000,000 during the next 2 years, with all of the resulting hardships. And yet we produce less than 30 percent of the sugar we consume in the United States.

In spite of all of this, I can assure you that there is not a single man engaged in the sugar-producing industry in Louisiana who has any doubt that our greatest safeguard lies in the fair-mindedness and good judgment of the elected representatives of the American people, and we look to you with confidence for legislative relief from difficulties and losses placed upon us administratively and, we believe, unjustifiably.

I would appreciate your inserting this letter in the CONGRESSIONAL RECORD.

Yours very truly,

CHAS. A. FARWELL,
Chairman, Publicity Committee.

O States' Rights, What Omissions Occur in Thy Name!

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 9, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, during the debates on this social-security measure, H. R. 6635, as well as on numerous other pieces of legislation before this House, we have often heard it said, "We must not do so and so for that would infringe on the power of the States." One is sometimes led to believe that there are some who hide behind this excuse as a reason for doing nothing when something needs to be done. However, we are reminded that this is not a new constitutional situation, for the same thing has confronted our national lawmakers for the past 150 years. The problem seems to be growing more acute in these later years.

When the fathers of this Republic wrote the Constitution of the United States, they attempted to weld into one political entity the 13 virtually sovereign political entities in order that our country could have all the advantages of political unity while retaining as much as possible local control and independence to a maximum degree consistent with safety. Therefore the powers given to this Congress by the basic law are delegated powers, and we are here circumscribed in all of our law making by the Constitution itself.

No one questions the wisdom of the fathers in creating this dual system of government. They sought to have only those necessary things performed by the General Government, such as coining of money and regulating the value thereof, conducting foreign affairs, carrying the mail, and furnishing an army and a navy, and the like. On the other hand the local units called States were to build roads and other internal improvements, conduct education, govern all of the various human relationships, and exercise a broad, extensive police power for the maintenance of order and the protection of life and property.

This was an admirable scheme for America a century and a half ago, well suited to the temper of our people, who enjoyed self-government and were jealous of local independence. Then, too, it was admirably suited for a vast country such as ours where institutions of society and government logically and necessarily vary greatly.

The logical need of the original scheme of dual government has changed constantly through the passing years. Every mechanical invention, shortening distances, facilitating communication, and tending to dim State lines has tended more and more to centralize power at Washington, and to diminish the power and importance of the States. Thoughtful students of constitutional government see the need and the inexorable logic of such centralization, but fear it. Of course, there is an opposite danger of decentralization, but it has not shown up so frequently in our political history. It must not be overlooked that there are these two opposing dangers in the American political system—that is, too great a centralization on the one hand and too great a decentralization on the other.

The Central Government and the family of States have often been compared to the solar system; that is, the sun surrounded by its planets. Two great opposing physical forces maintain the planets in their proper relation to the sun. If the centripetal force of gravity should fail for a moment, the planets would plunge out of their orbits, and be lost in interstellar space. On the other hand, if the centrifugal force of planetary motion in their orbits should fail for a moment, the planets would be drawn into the sun and consumed. In either case, destruction would follow the maladjustment of these balanced forces. In the same way, it is said that our dual system of constitutional government is likely to be destroyed, if the States throw off entirely, or to a large degree, the control of the Central Government, or, on the other hand, if the Central Government usurps the power of the States.

As our country has become more closely knitted with fast communication and travel and people move readily from one part of the country to another, riding over State lines while asleep in Pullmans, or flying over them in airplanes, we find that we need to have more uniform laws concerning many things. Such matters as marriage and divorce, wages and hours, and a great many intricate police regulations need more uniformity. We need uniformity where before we had diversity, and yet the basic provisions stand in the way. True, we have seen the Central Government embarking upon many functions which were formerly left entirely to the States. Road building used to be exclusively a local function of government, but has now become more largely a national function; charity and relief used to be altogether a local matter, but we had to consider it in this last crisis a national matter, and the end of this centralizing trend is not yet.

As a schoolman I am proud of the splendid schools of America, where each State has vied with other States in furnishing the best, but, although wholesome competition has brought about a degree of improvement, I find that some States are far behind other States in this vital matter of education.

While I recognize real dangers in a centralization of control of education at Washington, I do see the need of financial aid from Washington. I would have a large degree of local control lodged in the States and I would have a large portion of financial support furnished from Washington. All this I favor in order to equalize educational opportunities for all of our children.

In the matter of social security, I would like to see, not a 50-50 division of the burden, but a larger proportion furnished from Washington with only minimum safeguards and a large degree of local control. All this, I believe, is absolutely necessary to equalize social security for our citizens in various parts of the country.

The founding fathers sought to protect human rights in the Constitution and one of these great human rights was the right of private property. In the Constitution, we find such provisions as the following: "No State shall impair the obligation of contract." "No State shall coin money." "No State shall make anything but gold or silver a legal tender in payment of debts." The police power of the State over property rights is also limited by the fifth and the fourteenth amendments. All of this has been done to prevent States from infringing upon property rights. Surely it would be just as logical to prevent States from infringing upon individual human rights. I believe that individual human rights have been infringed upon by a State that neglects to give its children schooling, or by a State that neglects or is unwilling or unable to give its deserving elderly citizens social security. I believe it is just as unconstitutional for a State to deprive a citizen of life or the means of life as it is for a State to deprive a citizen of property.

Therefore, while keeping in mind the dangers of over centralization, I favor a wise extension of the powers of the Central Government in regard to social security and general welfare just as far as we safely can under a liberal interpretation of the Constitution of the United States. It may even be necessary to amend the Constitution to make possible, constitutional, and effective these vital steps in social and economic welfare.

America at the Crossroads—Some Views on Neutrality Legislation

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

Mr. LUDLOW. Mr. Speaker, the time is at hand when the Members of this House must give serious consideration to neutrality legislation. I cannot believe that the people of America want to set this Nation up as a participant in the power politics of Europe. I cannot believe that our people want us to write a law that will make the United States an ally of Great Britain in any future war in which that country chooses to engage. I cannot believe that our people want America to be the arsenal and storehouse from which instruments of death will be shipped to kill and maim people in other lands with whom we have no quarrel.

No less serious than these are the issues involved in the proposed legislation which I understand is to be reported from the Committee on Foreign Affairs with the backing of the State Department. It is a time when we, the representatives of the people of America, should be giving serious consideration to the advisability of keeping America out of foreign entanglements, instead of injecting America into the power politics of Europe up to the hilt. We have problems of domestic rehabilitation critical and important enough to demand all of our attention.

I believe this proposed legislation puts us at the crossroads, and we shall have to decide whether we shall take the road that leads to peace and security under the policy of nonentanglement outlined by George Washington or whether we shall throw the manhood and resources of America into the pot of power politics that has been boiling in Europe a thousand years and that probably will be boiling just the same a thousand years after we are dead and gone. If we ever are going to establish a policy of America for Americans, now is the time. The issue is drawn.

The United States News asked me for my views on neutrality legislation, and by consent of the House I present my statement, which appears in the current issue of that publication, as follows:

While I have the greatest respect for Secretary of State Hull and regard him as a man of the highest character and ideals and would gladly follow his able leadership in matters of domestic policy, I utterly disapprove of one feature of his neutrality program which I believe is not only inadvisable but dangerous. With most of his proposals I agree, but I dissent without reservation to his endorsement of the cash-and-carry plan of selling goods to belligerents.

To my way of thinking, this proposal is not in harmony with true Americanism. It flavors too much of British domination. I

believe it would make America the source and storehouse of supplies for Britain and her ally, France, in any war in the future in which they may elect to engage and it would lay the groundwork which sooner or later would almost inevitably draw America into the war on the side of the British and French.

Let us not deceive ourselves in regard to the effect of this proposal. From the date of its enactment it would make America the ally of Britain and France just as certainly as if we were to officially declare ourselves to be their ally.

What do we owe the British and why should we develop such Anglophile tendencies? I confess I do not know.

The British tried to stamp the liberty and independence out of us when we were an infant people. They tried again to destroy us and burned our Capitol in 1814. They tried to break up the Union in 1863 to 1865. They imposed upon us in the World War era by borrowing $4,300,000,000 and then welching on their debt, refusing to make even a token payment.

What do we owe the British that we should make ourselves their ally, as this proposal would do?

I fear that is a part of the same old internationalist mosaic, an outcropping of the philosophy that we have a Messianic mission to correct the evils of the world. If I am a good judge, the American people have repudiated that theory and have definitely and finally determined that we shall keep out of foreign entanglements and pursue our national destiny free and untrammeled under the direction laid down by President Washington when he counseled his posterity to cultivate friendly relations with all nations and entangling alliances with none.

Under the cash-and-carry system we not only would be lining up on one side among the contending forces of the world which control the seas but we would be furnishing implements of destruction to kill people by wholesale in other lands, and it is shocking to think that a Christian nation should lend itself to such un-Christian practices.

I do not believe the cash-and-carry system will pass Congress, and I base that prediction on the belief that when the people of America come to know the dangers that lurk behind this system they will become thoroughly aroused and alarmed and will make their views definitely known to Congress.

The other proposals advocated by Secretary Hull relating to prohibition of loans and credit to belligerents, regulation of solicitation of funds in the United States for belligerents, and continuance of the National Munitions Control Board, are, I believe, wise and salutary.

In replying to your request for a statement of my views on these matters I wish again to express my great esteem for Secretary Hull, but I would feel derelict in duty if I did not voice my uncompromising opposition to that one of his neutrality proposals which advocates letting down the bars so that foreign nations which control ocean transportation may come to America for their war supplies and the substitution of the cash-and-carry system for the present embargo to belligerents.

James Hamilton Lewis

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. SABATH. Mr. Speaker, social and political association during a period of about 35 years with the one to whose memory we are paying tribute today welded our friendship with mutual consideration of affection and esteem.

My acquaintance with the deceased Senator dates back to 1903, when he came to Chicago from the State of Washington, which he served as Representative at Large during the 1897–99 period.

It is a singular tribute to this extraordinary man that he was, within 2 years of assuming citizenship of Illinois, chosen corporation counsel of that great city.

Almost from the day Senator LEWIS reached Chicago he joined with Altgeld, Dunn, Alschuler, the Harrisons, me, and others to create, stimulate, and maintain the principles of the Democratic Party, which party then was at low ebb. I assure you that such was not an easy and encouraging task in the face of the strongly entrenched Republican Party headed nationally by McKinley and Hanna and locally by such political strategists as John R. Tanner, Deneen, Lorimer, Pease, Herz, and Busse.

From 1903 to the time of the Senator's death we worked harmoniously and unceasingly in many nonpartisan civic enterprises and in behalf of the Democratic Party, nationally and locally. True, there were at times minor political differences between us, but ultimately those differences were, by compromise, resolved for the good of our party, as we believed.

Senator LEWIS had a long and varied career, both in and out of public life. He was a Virginian by tragic chance. His mother, Julia Hamilton Lewis, was hurrying from the family home in Augusta, Ga., to Richmond, where Maj. John Cable Lewis, her husband, was near death from the after effects of wounds incurred in the Confederate Army. At Danville a son was born on May 18, 1866, and Julia Lewis died.

Major Lewis was an invalid the remainder of his life, and the son was reared by relatives. He was educated at Houghton College in Georgia and the University of Virginia, and later studied law in Savannah.

Going to the then Territory of Washington in 1886 young LEWIS found little employment for attorneys. He taught languages 2 years at the University of Washington but was dropped when the faculty was pruned.

For a time he was a teacher, then a stevedore, lawyer, Representative, soldier, diplomat, and Senator—but always he was the erudite, perfect gentleman. His courtly manners and scholarly attainments were well known from the water front of Seattle, where he labored in young manhood, to the Senate halls in Washington and the capitals of Europe where his strikingly transcendent career took him.

He had the rare distinction of having represented two States in this honorable Congress. A Representative at Large from the State of Washington, 1897–99, as I have said, he was a Senator from Illinois 1913–19 and 1931–37. He was reelected in 1936 for a 6-year term. He was the first Senate whip to be named to that post by the Democratic majority early in his first term in the Senate.

In 1936 Mr. LEWIS defeated his opponent by about 650,000, becoming the first Illinois Senator to win election for two successive terms since the origin of the direct primary.

As a member of the Senate Committee on Foreign Relations the Senator had shown more interest in foreign than domestic affairs. He devoted much time and study to the war-debt problem, advancing a plan whereby he said our two major debtors could deduct from their debts to this country amounts lent the United States during the Revolutionary and the Civil Wars.

Our departed friend's wide and successful experience embraced the Spanish-American conflict and the World War. In the former he was a staff colonel, first with General Brook in Cuba, and later with Gen. Fred D. Grant in Puerto Rico. Sent to France in 1918 by President Wilson on missions for the War and the Navy Departments, he became an aide on the staff of Gen. George Bell on the Chateau Thierry front, and was returning home on the naval transport *Mount Vernon*, when the vessel was torpedoed and forced to limp back to Brest.

His diplomatic work included membership on a joint high commission on the Alaskan-Canadian boundary, which met in London and to which he was appointed by President Wilson. In 1914 he was a United States commissioner to London to help to devise laws for increasing safety at sea.

In 1923 he represented concessionaires in Turkish oil fields and in 1924 he handled a $28,000,000 loan to Mexico. In 1925 he handled the legal details of a loan of $100,000,000 to continental European nations.

In June 1932, after a strenuous tour of duty in the Senate, Senator LEWIS underwent a surgical operation. The strain of overwork slowed his recovery, but he accepted a Government mission to Europe. While in Russia he was stricken and unable to return to this country before October 1932.

He died at Garfield Hospital, in the city of Washington, D. C., at 8:25 o'clock p. m., Sunday, April 9, 1939, very shortly after returning from Chicago.

Senator LEWIS strove fairly and tolerantly to do his best on earth and to make it, so far as he could in his comparatively short existence, a better place for his fellow men. He was not slothful in business, working hard and toiling in his field and on the stormy seas. He sought with all his strength to give willing men and women freedom and opportunity in body and mind. He tried to reduce the sum of human misery, the suffering inseparable from human existence. Whatever our faith, whatever our belief in progress, there can be no nobler purpose for man than thus to deal with the only earth he knows and the fragment of time awarded him for his existence here. As we think of our departed friend in this, the only true way, our reverence and our admiration alike grow even stronger. We turn to him in gratitude and commend what he did and his example to those who come after us. While the great Republic is true in heart and deed to the memory of such men as this deceased, it will take no detriment even from the hand of Time.

After his second election to the Senate, and when journalists urged him to make a statement concerning the election returns, he said, true to his chivalry, "Gentlemen, I will not exult over the defeat of a woman."

The deceased Senator, a man of letters, had that entire simplicity of manner and mode of life which is the crowning result of the highest culture and the finest nature.

Our friend was more than a Democrat; more than a Republican. He was a Senator of the whole United States of precise attainments. Injured innocence could always resort to him with confidence.

Senator LEWIS had known the bitter sorrows that come to men, but his fine optimism could not be crushed. Disappointments only whetted his determination to achieve; delays only strengthened his patience; opposition only refined his courage. Is it any wonder our people loved him so?

His useful life and beneficial work have identified him among the immortal statesmen who have boldly proclaimed the true object of all who have struggled for the redress of human wrongs and for the development, stimulation, and advancement of progressive, democratic government.

It may be of interest to retell the history of the Senator's first election to the upper House. In 1912, when I, as the chairman of the central committee, was seeking a popular candidate for attorney general of my State, the name of Mr. LEWIS suggested itself. The suggestion did not appeal to him because, as he said, he did not think well of the chance for success of the State Democratic ticket, but did have accurate intuition to sense that the Democrats would be successful nationally. Therefore, he agreed to be a candidate for United States Senator in the primary election, feeling that, even though he might be defeated, he would probably be rewarded nationally for his local sacrifice.

Although the Senator obtained a majority in the preferential election, reactionary interests tried to prevent his selection by our State legislature, and not until I succeeded in convincing President Wilson that the will of the voters should not be ignored, by selecting other than Mr. LEWIS, was Mr. LEWIS selected after nearly 3 months of voting by the State legislature.

While there were times when all was not perfectly harmonious between the Senator and myself, nevertheless, it always has been a source of gratification that I was able to contribute especially to his first election as United States Senator because, due to his extraordinary ability as an orator, campaigner, and precise gentleman, he became the most popular Democrat in our State.

A scholarly gentleman, a rhetorician, and a grammaticaster, still he was in no sense artificial or superficial. He looked to uncertain tomorrows and surveyed the tangled skeins of a great intricate world, its history, and its complex affairs with intelligence, tolerance, and accuracy, and then acted wisely.

Senator LEWIS was a great American. He thoroughly believed in America. He believed that the safety of the Nation lies in the patriotic devotion of the people, especially the commonalty, in their continued unselfish practice of true Americanism, and in their willingness to fight while they are here to protect, preserve, and perpetuate American institutions, so that they may be handed down to be preserved and venerated by the generations that are to people this great country, which is humanity's brightest hope, in the ages to come.

He rests from his labors; we grudge him not his rest; his work does follow him.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. RABAUT. Mr. Speaker, I rise to pay my humble tribute to a deceased Member of the House, ROBERT LOW BACON, with whom I had the good fortune to be associated quite closely in official duties. It was my privilege to be cast on the same Committee of Appropriations with this distinguished Representative from New York, and I grew to admire and respect him as one whose views transcended partisan lines and made him a servant of all of the people.

Mr. BACON was a man of diverse talents and powers. Consecutively he devoted most of his energy to three distinct fields of endeavor and was outstanding in all of them. As a scholar he received degrees from Harvard College and, later, Harvard University Law School; as a soldier he won the Distinguished Service Medal for his activity as an officer in the Field Artillery of his country during the World War; and as a Member of the United States House of Representatives during eight terms in the Sixty-eighth to Seventy-fifth Congresses, he served on nearly a score of important committees and commissions. His broad range of knowledge and understanding of human nature marked him as a great public servant, able, conscientious, sincere, and devoted to his duty. Primarily, he was at all times a gentleman, respectful of the opinions of others.

Representative BACON'S personal characteristics and background made him stand out as an especially valuable member of the Appropriations Subcommittee of State, Justice, Commerce, and Labor, on which I served with him. Here his thorough knowledge of law and statesmanship and his tolerant viewpoint were of inestimable worth to his fellow members.

There is no doubt in my mind that his passing will not only be mourned by the people of his district and his colleagues on the Hill, but that likewise the influence of his wise counsel will be missed by the departments of our Government with which he was so intimate.

His passing was indeed a national loss.

James Hamilton Lewis

MEMORIAL ADDRESS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. REED of Illinois. Mr. Speaker, once more the messenger of death has knocked at the door of the United States Senate. This time he has summoned to everlasting life the

senior Senator from Illinois, JAMES HAMILTON LEWIS. The passing of this renowned American removes from the legislative chambers of the Nation a courtly, eloquent, and brilliant statesman whose counsel was eagerly sought and whose judgment was invariably sound.

It was in 1912 that I was first privileged to become personally acquainted with him. At that time I was a student in the Webster College of Law at Chicago, of which institution he was the first president. I can well recall his classroom lectures, in which he expounded the doctrines and opinions of Blackstone, Kent, Chitty, Marshall, and other noted law writers and jurists. On numerous occasions I have witnessed him in action as an advocate before courts and juries in my own State. During my service in Congress I have had the opportunity to observe at close range his achievements as a Senator and to note the respect that was accorded him by his colleagues, regardless of political affiliations. In each of these capacities—as an educator, as a lawyer, and as a legislator—he exhibited keenness, generosity, resourcefulness, wit, and an understanding sympathy, characteristics that endeared him to the hearts of Illinoisans. But towering above all these attributes is the one we have all almost unconsciously said to ourselves, "He was always a perfect gentleman."

When news of the death of Senator LEWIS was flashed to the Nation an old friend of mine, Judge Frank Earl Herrick, of Wheaton, Ill., sat down and penned the following beautiful and eloquent tribute to his memory:

A gentleman who walked through life
With a white flower pinned on his lapel,
With bow and courtesy and graciousness,
Has gone down like the sun at night
With gorgeous vestments streaming still
And flowing 'round his couch of rest!

A type too seldom seen in these crude days
Of impolite and tasteless tact,
We feel a loss as when some rare
And polished gem is stolen from the crown of life,
Or when some crass and vandal heel
Tramples spring flowers in the dust!

The honey of the Hybla bees was on his lips,
He held the Court and Forum by his charm,
A soldier soul was in his fearless breast,
With chivalry and kindly knightliness
He bore a noble lance in all the jousts of life
And won the Quest of a True Gentleman!

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. SABATH. Mr. Speaker, although Mr. COLDEN was born in Peoria County of my own State, I did not meet him until he came here at the beginning of the Seventy-third Congress.

The beautiful testimonials already given by our departed friend's more intimate associates leave little to be said. The life of Mr. COLDEN is ended, and we who for a comparatively brief span sat with him in this virile forum, in the calmness of the present, now turn to survey with pleasure and profit his useful life. For an hour the turmoil of life is stilled, and we reverently survey the career of this good man, among others, whose constructive tongue is silent and whose story must be told by others.

From the very first day Mr. COLDEN entered the House he attracted my admiring attention by his quiet affability and thorough understanding of the needs of the hour. His training as farmer, newspaper editor, building constructor, State legislator, school man, maritime expert, city councilman, and sociologist was of inestimable value here, not only to his State but to the whole country. His sincerity, unostentation, and ability to consider accurately and accomplish important tasks are too rare in our legislative halls today.

He would not dicker or barter in political views or upon political convictions. He would not trade upon one subject in the hope that he might advance another. He would not strike hands with wrong upon the theory that he might advance the right.

He took his positions upon public questions after thorough research and profound reflection. One could not hasten him, neither could one long delay him; but a position once taken, he was seldom, if ever, ready to compromise or to barter. When others began to talk of change of program or defeat he would move out and off to himself and prepare for a more determined struggle. Few men ever possessed finer moral courage, and his iron will and high purpose were such as should accomplish his quality of purpose.

It may be that there should be, in affairs of state and in public life, those who can reconcile and harmonize; but in the interest of truth and thoroughness, in the interest of purity in public life and of unpurchasable justice, the man of unswerving convictions is indispensable. Such a man was Mr. COLDEN. How many silent and lonely hours our deceased colleague spent wrestling with great problems which others believed hopeless we all know. He had the great capacity of clear and straight thinking—unhappily so rare—and he followed with relentless purpose the admonitions of his splendid intellect.

It is to the enduring credit of Mr. COLDEN that no measure of the many he advocated could not be reconciled to the fundamental principles of sound constitutional government. He was, as we all know, a lifelong student of our system of government. He believed unfalteringly in the whole theory and spirit of the founding fathers. His sympathies were ever with the exploited and the oppressed. He was not afraid of being with the minority. No cause was ever sufficiently unpopular to frighten him from his convictions.

The demagogue seeks the popular trend, scents the drift of public opinion, and hastens to get in line. Mr. COLDEN took his positions upon public questions because he believed these positions sound and righteous and then devoted his unusual talents and spared himself not at all in making them popular.

If we may hope that this teaching and example have been endued by death with new potency in the creation and stimulation of patriotic ideals, and if we may hope that our countrymen will with sincerity heed the way of duty they point out, we may not only be doubly assured that our dead is not lost to us, but may with confidence renew our faith in the American people as custodians of their scheme of free government.

John Joseph Boylan

MEMORIAL ADDRESS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN JOSEPH BOYLAN, late a Representative from the State of New York

Mr. RABAUT. Mr. Speaker, the death of JOHN JOSEPH BOYLAN, late a Representative from New York, has meant a deep loss not only to his many personal friends, but also to Congress and the people of the United States in general.

And yet, although God has seen fit to recall his soul to Him, the influence of Mr. BOYLAN upon those of us who remain is far from dead. Even as I speak, mighty hammers clank, mighty muscles bulge, and mighty workmen sweat the honored sweat of honest labor to bring to a reality the plans for a great monumental work of art which was Mr. BOYLAN'S dream and vision. I am referring, of course, to the Thomas Jefferson Memorial now under construction, and I deeply regret with many others among his colleagues that Mr.

BOYLAN did not live to see its completion. His many friends are well aware how devoted and dedicated he was to the task of glorifying the memory of this American statesman, and we remember how tirelessly he worked as chairman of the Thomas Jefferson Memorial Commission to bring his vision to fruition.

I should like to point out, however, that JOHN JOSEPH BOYLAN'S real influence today lives on in an even more significant and vital way than in the beautiful, sculptured marble of the Jefferson Memorial. For, although his mortal body has passed from us the spirit of Representative BOYLAN lives on in the halls of Congress through being implanted in the hearts of its Members, inspiring and guiding many of us in our decisions on the grave problems now confronting the American people. I for one always particularly shall remember him for his interest and kindnesses to me when I first came to the House as a new Member. His patent sincerity and devotion to justice instilled in me a sense of confidence in him that remained with me throughout my association with him and is a great inspiration to me today. I am sure that all of his colleagues who worked with him on either the Committee on Appropriations or in connection with some other of his many services to Congress could testify similarly to the inspiration Mr. BOYLAN'S character has been to them. He reminded us all, by deed rather than word, of the essential meaning of democracy, as set forth by Jefferson, and taught us how to draw a lesson from that statesman's words: "Eternal vigilance is the price of liberty."

JOHN JOSEPH BOYLAN'S faithful service to the American people ran through eight terms as a Member of the Sixty-eighth to the Seventy-fifth Congresses. His long career in the House brought testimony, silent but real, to the high place he held in the hearts of his constituency. Like a glorious fabric, he wore well with those who knew him.

John Joseph Boylan

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN JOSEPH BOYLAN, late a Representative from the State of New York

Mr. SABATH. The death of Mr. BOYLAN marks the passing of another of those good men who, just as their splendid powers were in full fruit and flower, have gone to join that distinguished knot of departed Representatives whose names have come to be numbered among the real benefactors of our country.

It is not for me to attempt to add luster to the name of JOHN J. BOYLAN or to perpetuate his good name, for his work and life are their own enduring monuments; but a feeling of profound respect for his ability and assiduity and of sincere admiration for the man, whom I knew intimately, prompt me to pay my tribute to his memory.

I first met our departed friend when he came here at the beginning of the Sixty-eighth Congress after an experience of 2 years in the New York Assembly and 9 years in the New York Senate. The successful experience Mr. BOYLAN gained in the service of his great State was very valuable to this House when he became a Member. His first important committee assignment, as I recall, was to the Committee on Military Affairs, from which, after a distinguished term, he went to the Committee on Appropriations, where he remained until his regrettable passing.

Mr. BOYLAN was peculiarly an interesting personage. He had that entire simplicity of manner and mode of life which is the crowning result of the highest culture and the finest nature. He was all intelligent energy. It seemed that some intuition from on high had told him that his days on earth would be cut short and he should work at top speed to accomplish all the good he had in mind.

Of our departed friend it may truthfully be said he served his State and his country with honesty, ability, courage, and high purpose. I do not know any man who was more determined and courageous in fighting for what he believed to be right. He possessed a rare, broad, and penetrating knowledge of this great intricate world, its history, and its complex affairs. Our colleague was capable of prolonged study and adequate reflection. His mental equilibrium was not upset by gusts of passion, and he had no aptitude for attempts to sway others by tempestuous eloquence. He cared not for the histrionic. He sought to convince, and he became formidable in debate because he was thorough in preparation and precise in statement. He was exceptionally forthright; tolerant in spirit, conciliatory in action so long as conciliation did not involve flexibility of righteous purpose. Simply to hear his voice was to hear the earnest expression of a lofty soul. We shall very much miss his singular qualities of mind and heart.

Mr. BOYLAN loved his fellow men. His actions showed it all through life. For them he wanted greater happiness. To that he dedicated himself, and in that effort for their happiness he found his own, a happiness that he valued above riches, or praise, or material reward.

Our friend wanted for the masses of our people a fuller expression in the halls of government. He felt that their interests were not pressed as vigorously as those of the smaller, more powerful group. He saw their privileges slipping away from them, saw the steadily increasing advantages of the monopolistic industrial and financial groups, and he saw that protesting voices were too few and too weak to combat this tendency successfully.

That was his life work—to raise his clear and assuring voice for the inarticulate, to represent faithfully and ably the great mass of unorganized citizens who were not able to use influence and strategy to protect their rights and interests, to stand unswerving in the path of any legislative proposal that would not be for the greatest good to the greatest mass of people, to vision sound and constructive remedies, and to fight for their adoption regardless of the consequences to BOYLAN, the man. At any time or place injured innocence could with confidence resort to him.

Mr. BOYLAN was a thorough Jeffersonian Democrat. One of the supreme pleasures of his last days was in connection with his leadership of the Jefferson Memorial Commission, in which position he rendered high and enduring service by effecting legislation, after many years' trial, to appropriately commemorate this colossal character.

Such qualities as Mr. BOYLAN possessed are the greatest earthly arguments for the life everlasting in the world to come. Is it possible that the Creator would give a man such virtues as Mr. BOYLAN possessed and then let perish the mind that drove that hand or the soul that prompted that help for his fellow men? His life here and his confident reward hereafter beckon us also to do our best.

Not now but in the coming years
It may be in a better land,
We'll read the meaning of our tears,
And there sometime we'll understand.

Requiescat in Pace

In memory of my dear and lovable colleague and neighbor "across the Hall" "CHARLEY" COLDEN

MEMORIAL ADDRESS
OF
HON. ED. V. IZAC
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. IZAC. Mr. Speaker, in the period of 4 years which I have served as a Member of this House, I have come to know

and esteem the high qualities which manifest themselves in the membership of this body. And when death takes from our midst one who exemplifies those fine qualities to such a degree, it can be only a source of extreme sorrow to those of us who remain.

CHARLEY COLDEN, my colleague from San Pedro, Calif., was so well liked and had such a host of friends among the Members of the House that it will be difficult to fill the place he leaves behind. To me personally his passing is a distinct loss since we were neighbors not only geographically along the shores of the Golden State, but even more intimately "across the hall" in the old House Office Building. Many were the times Charley stopped in to talk over his plans to put through progressive legislation and bring the benefits of the New Deal to the people of his district. And even though sick and ailing for several months before his final illness, he assiduously and without complaint devoted himself to the duties of his office, forgetting self in his desire to serve the people.

If we, his colleagues, but profit by the example he has set for us, he will not have toiled in vain.

Robert Low Bacon

MEMORIAL ADDRESS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. MERRITT. Mr. Speaker, in the passing of our colleague ROBERT LOW BACON the First Congressional District of New York has lost a very able and conscientious legislator and a friend.

Even before I had the opportunity to serve in the House of Representatives I had found him to be a man of comprehensive understanding and sympathetic to the needs of his constituency.

The passing of friends such as the Honorable ROBERT LOW BACON affects us in various ways and produces in us conflicting emotions. Some we may know for many years, and while the knowledge of their passing may cause a certain feeling of regret, yet they are soon forgotten. I am sure that the memory of our late colleague will linger with us for many, many years.

John Burrwood Daly

MEMORIAL ADDRESS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN BURRWOOD DALY, late a Representative from the State of Pennsylvania

Mr. RABAUT. Mr. Speaker, the death of a person close to us, and with whom we have intimate daily contacts, seems always to be to a certain extent an impossibility which suddenly becomes a reality.

This, I think, will seem especially true when we recall how shocked we were during this session to learn of the sudden death of our colleague from Pennsylvania, JOHN BURRWOOD DALY. It was, I know, indeed true of those of us who, because of similar committee assignments, had been working with him on legislative problems only a short time before a fatal illness carried him into the Great Beyond.

As one who became a Member of the House of Representatives and entered upon legislative duties here at the same time as Mr. DALY, I remember him as a man who from the beginning was not afraid to express his convictions and to stand courageously in the open for his beliefs. His trenchant wit was well known to those who heard him speak either on the floor of the House or in committee session. He was an extremely valuable member of the Committee on Appropriations, and the loss of his able membership will be deeply felt by those of us who served on that body with him.

Prior to coming to Washington in the Seventy-fourth Congress, Congressman DALY was assistant solicitor of Philadelphia for 12 years, a member of the Philadelphia bar, and served on the faculty of La Salle College, where he had received his doctor's degree in law some years previously. His was an unusual background that provided a union of the practical and theoretical and gave him a well-rounded perspective as a legislator. His constituents were quick to discern his outstanding qualifications, and after his first term, to which he was elected by a majority of 385 votes, being the first Democrat ever elected to Congress from his district, he was returned to the Seventy-fifth Congress by a 35,861 majority and reelected again to the present session.

JOHN BURRWOOD DALY was a courageous and energetic Member of Congress. Let us hope that the sterling qualities of his life may encourage others to follow and imitate his example.

The Danger of Communism and False Propaganda

REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. THORKELSON. Mr. Speaker, why does the gentleman from Illinois object to extension of my remarks in the RECORD? I have not discussed race, creed, or color, but instead have confined my remarks to socialism and proletarian communism, which are found in the United States. Why do a few Members of Congress object when I discuss these evils? My colleagues from Illinois and New York, I believe, voted for and were included in that large group that set aside $100,000 for the Dies committee to find out all about the socialist and the proletarian Communist. What excuse can the gentlemen give now for objecting to such information? Is Congress and the destiny of the Nation to be left in the hands of the gentlemen who object to having my remarks inserted in the RECORD and those who adhere to their philosophies? I hope not. The Catholic, Lutheran, Episcopal, and other Protestant creeds do not cry "Fascist" and "Nazi" when I speak on socialism and proletarian communism. Why should others or special groups who claim to be 100 percent Americans object when I speak on un-American activities? I expect the Socialist and Communist to shout "Fascist" and "Nazi," but I am surprised when anyone who claims to be 100 percent American joins the chorus.

Let us not shout "America," but let us live American every hour and every day so that America may remain strong for centuries to come. It is the duty of every American to express himself when the Nation's life is at stake, and the attitude of our people at this time is a definite reaction to proletarian communism as it exists in the United States today. Socialism and communism must be eradicated now before the dupes begin to foul the air with more misleading propaganda. The American people want results. We want to clean the Nation of those who are Socialists and Communists, and particularly of all of those who adhere to such foul philosophies. We want to preserve, protect, and defend the United States of America for those who subscribe to

sound constitutional government; and we do not, now or at any other time, wish to be ruled by the proletariat of Russia.

No one is to be blamed for the present racial feeling except those who accept the challenge. When anyone shouts "Fascist" and "Nazi" to those who speak on Americanism and who stand in defense of the fundamental principles upon which our Nation came into being, he leaves himself in a precarious position. If the principles discussed are sound, American constitutional government and the rights of the people to live free and unmolested by foreign influences, then it follows that those who oppose such discussion sit under the sword of Damocles.

The right to free discussion of sound constitutional principles should not be abrogated or censored by money power simply because they own and control avenues of publicity. Why should publicity like this be allowed?—

During the last months you have undoubtedly noticed that an unprecedented wave of anti-Semitism is sweeping the country. It is estimated by the Institute of Propaganda Analysis that there are no less than 800 anti-Semitic organizations functioning in the United States. Speaking before the United States Conference of Mayors on May 15, Attorney General Frank Murphy warned: "We face the fact that a large number of our people subscribe to the philosophy that has reduced the Jews of central Europe to a condition of misery seldom equaled in the world's history."

You probably have had some personal experience with the activities of some of these organizations, or came across some anti-Semitic literature published by them, or perhaps you have listened to some of the anti-Semitic utterances of Father Coughlin. Their propaganda is calculated to weaken the foundations of our country by dividing our people and undermining our national unity—by planting race hatred and intolerance and aiming to substitute fascism for our democratic way of life.

To meet this evil our committee is planning a Nation-wide radio campaign to combat anti-Semitism and promote race tolerance; also to petition our Government to prohibit the defamation of a group of people because of their religious, racial, or national origin.

This letter, which is signed by William Weiner, is self-explanatory. I shall not state the committee of which Mr. Weiner is president, for it would serve no purpose at the present time. It is, however, well to bear in mind that race tolerance is protected in the Constitution of the United States, and anyone that adheres to those principles will have nothing to fear in the United States of America. The United States is not a Nation to be dominated by race, but it is instead a Nation composed of American people, and as such, each and every one enjoys equal rights.

I am not a member of any "anti" society, but, like all other citizens, I ask only to be allowed to remain 100 percent American. I now ask all of those who believe my principles are wrong to state where my error may be found.

In the letter I have quoted you will note that reference is made to division of our people, and it is my desire to remark at this point that truth should never weaken a people, but should unite them instead. Why is anyone restricted from the use of newspapers or radio when he confines himself truly to American principles? Yet such is the case today. It is well for the Radio Commission to bear in mind that 120,000,000 people in the United States will speak in no uncertain terms if any attempt is made to destroy our country, and it is better now for those involved to take heed of this sentiment before it is too late.

One of my constituents from Montana was in my office and informs me that in western Montana investigations have been made of a number of people who are receiving patriotic publications. I now ask, Who is conducting this investigation, and what intelligence department is concerned in it? The people in the United States want to know.

Is it possible that investigations are being conducted by the Institute of Propaganda Analysis referred to in the letter signed by Mr. Weiner?

Mr. Speaker, I am addressing the House today on behalf of the many millions of our people who still believe in constitutional government, and who have not given their constitutional consent to either amend or abandon the Constitution of the United States. I ask the Members to bear in mind that we swore fealty to the Constitution and the people of the United States—and not to the President. The Secretary of the Interior erred when he said we swore "fealty" to the President, for if he will read the Constitution, he will find that he and all of us swore allegiance to the Constitution of the United States.

I now request Congress to direct the President to give orders for a special investigation of un-American activities, and I believe it is high time that Congress takes this matter in their own hands, in common defense and for the general welfare of the United States.

Mr. Speaker, on June 5, when I attempted to lay before the House information to show who drafts the socialistic legislation which is introduced in Congress, objections were raised by the gentleman from Texas [Mr. RAYBURN] and the gentleman from New York [Mr. DICKSTEIN].

I, as one who voted $100,000 for the investigation of subversive activities, so that Congress could be reliably informed as to who the enemies are in our midst, now ask the gentlemen who objected why this information is not pertinent at the present time, and particularly after the taxpayers have been charged $100,000 for investigation of subversive activities so that the truth may be had.

It is not my desire to enter into detail at this time, but I wish to inform the Members of the House that proletarian, socialistic legislation is drafted by the commonwealth federations, and the officers and members of these federations are engaged in subversive activities and are therefore enemies of the United States.

I shall now name some of the members, so that Congress may be better acquainted with conditions as they actually are:

Commonwealth Federation of New York, Inc.: Henry Pratt Fairchild, William H. Spencer, Charlotte Williams, Thomas R. Amlie, Alfred M. Bingham, John H. Bosch, Paul Douglas, Lillian Herstein, Edward J. Jeffries, Ray McKaig, Frank Rosenblum, George J. Schneider, Howard Y. Williams, John F. Wirds.

Farmer Labor Political Federation: John Dewey, Harold O'Neil, Maurice Gans, Irving B. Altman, Arthur Braun, Esther Schwartz, William J. F. Hannemann, M. S. Schoenbaum, Joseph Schneider, Curwen Stoddard (affiliated with the American Commonwealth Federation).

As I have already stated, I charge the enumerated persons with being engaged in subversive activities, and in addition to that I include the following names, which may be found in the pamphlet called the Commonwealth Congress for Progressive Social Legislation, the motto of which is, "After the Supreme Court What?" and the principles of which are to destroy the Constitution of the United States: Irving B. Altman, Thomas R. Amlie, Jacob Baker, Roger Baldwin, Charles Belous, John T. Bernard, Alfred M. Bingham, Samuel Blinken, Leroy E. Bowman, Arthur Braun, Paul F. Brissenden, Stuart Chase, Nathaniel P. Clough, Ethel Clyde, Eugene P. Connolly, George S. Counts, Edward T. Devine, John Dewey, Bella Dodd, Andree Emery, Morris Ernst, Mordecai Ezekiel, Henry Pratt Fairchild, Felix J. Frazer, Hyman N. Glickstein, Arthur Harlow, Jr., Herbert Harris, Robert H. Haskell, Charles J. Hendley, Thomas G. Herendeen, Elinore M. Herrick, William Hinckley, Ben Howe, Dewey Johnson, Oscar Kanny, John J. Klaber, Gaston Koch, Harry W. Laidler, Abraham Lefkowitz, Max Lerner, Johanna Lindlof, Edward C. Lindeman, Edward Littleton, Harold Loeb, James E. Mendenhall, Darwin J. Meserole, Dorothy McConnell, Arthur McNulty, Henry Neumann, Jessie O'Brien, Meyer Parodneck, Langdon W. Post, A. Philip Randolph, Jesse S. Raphael, Ira S. Robbins, Harold Rugg, Joseph Schlossberg, George J. Schneider, Esther Schwartz, Byron Scott, John W. Seymour, Henry A. Soffer, William H. Spender, Estelle M. Sternberger, Curwen Stoddart, Henry Teigan, Frankel P. Thau, B. Charney Vladeck, James Wallerstein, Jerome Davis. These are the names of the sponsoring committee of the Commonwealth Congress.

On Saturday, April 17, 1937, the following names were listed in the proceedings of the Commonwealth Congress for Progressive Social Legislation: Alfred M. Bingham, secretary of the American Commonwealth Federation; Henry Pratt Fairchild, chairman of the Commonwealth Federation of New York; Harold Loeb; Benjamin C. Marsh; John T. Bernard; Elinore M. Herrick; Carl D. Thompson; Thomas R. Amlie; Julius Hockman; Morris Ernst; B. Charney Vladeck; Jacob

Baker; Stuart Chase; Mordecai Ezekiel; John T. Flynn; George Galloway; Henry T. Hunt; Langdon Post; and Byron Scott.

I shall now inform Congress of some of the subjects which were discussed during this meeting:

Legislation is necessary to amplify the Wagner Labor Relations Act, to assure civil liberties to workers, to assist the present great unionization drive, to remove any doubt of the legality of the sit-down strike, to outlaw the labor injunction and labor spying, and otherwise to protect and foster democracy in industry.

If the Constitution as interpreted by the present Supreme Court is not to remain a permanent barrier to change—until an explosion—three steps are probably necessary: Liberalizing the Court's personnel as proposed by the President, an amendment limiting the Court's power to nullify the popular will, and an amendment giving Congress explicit power to legislate in the economic and social field.

It strikes me that any organization that advocates principles of that sort should be investigated, for they are certainly un-American and a danger to sound government. In order that you may have a clearer understanding, it occurs to me that you should know some of the fundamental principles upon which these subversive organizations are based, and this is taken from their own publication:

Is the present Congress in Washington facing the real issues on which the welfare of America depends? Are measures being taken to release production so that an abundant supply of goods and services can be had by all? Is unemployment being solved? Is a housing program going through which will satisfy the needs of the American people? Are civil rights and democratic privileges being jealously guarded?

We believe not. The great majority of the present Congress are Democrats, but they are divided against each other on the question of the President's leadership. Off on the conservative wing are a small number of Republicans. Off on the truly liberal wing is a group of progressives, including some members of the old parties, as well as the Farmer-Laborites and Progressive Party members. It is from this liberal wing that intelligent leadership must increasingly come. Support must be won for an adequate national program.

The issue now uppermost, whether the Supreme Court is to make the Constitution a permanent barrier to progress, leaves unanswered the basic problems of national policy which will arise when our elected representatives become free to legislate. The Commonwealth Federation of New York, affiliated with the American Commonwealth Federation, is calling its own congress to formulate such a national program. Backed by the sponsors listed here it is extending this invitation to all individuals and organizations concerned with these basic problems.

Committees of experts in the various fields are at work drafting legislation for the commonwealth congress or selecting the best available bills from those already introduced in the Congress in Washington. Distinguished speakers will discuss the tentative proposals brought in by the committees, in special hearings and in open session. The public will have full opportunity to add its testimony. Out of the 2-day conference will come, we believe, a more considered and more adequate program than any previously drafted. Progressives in New York and throughout the country, labor unions, farm organizations, liberal groups will have a definite set of measures to support as they bring pressure to bear on their Senators and Congressmen.

President Roosevelt has declared that one-third of our people are ill-fed, ill-clad, and ill-housed. We ask you to help us take up that challenge to our Americanism.

The Commonwealth Federation of New York is a federation of individuals and organizations of New York State believing in and working for a new national party based on the principle of production for use and democracy in industry with economic planning to release full production according to the needs of the people.

The old order is breaking down and must be replaced by an economic system which will substitute planning for chaos, service for profit, and abundance for poverty.

We believe in the democratic form of government and in equal political and economic rights and civil liberties for all.

The Commonwealth Federation of New York was formed in 1935 by a number of representative individuals who felt that the time is coming for a definite break from the two old parties. Among these individuals were leaders of independent political groups, such as the City Fusion Party, the Continental Committee, the Knickerbocker Democrats, and Socialists along with significant leaders in civic, trade-union, farming, religious, cooperative, and educational groups, and distinguished members of the professions and representatives of small business interests.

The American Commonwealth Federation, with which the Commonwealth Federation of New York is affiliated, is carrying on an extensive and organized program from coast to coast, working with the Minnesota Farmer-Labor Party, the Wisconsin Farmer-Labor Progressive Federation, the Washington Commonwealth Federation, and other State and local movements. * * *

This is a true copy from the Commonwealth Federation and from the Commonwealth Congress of New York City.

I respectfully submit this to Congress and to the President of the United States so that steps may be taken for special investigation of these un-American activities, which will be for the common defense of the Nation and for the general welfare of all the people in the United States.

[Here the gavel fell.]

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 16, 1939

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Oklahoma Chapter of the National Association of Postmasters, held at Oklahoma City, Okla., on Tuesday evening, May 16, 1939:

I am pleased to come here in my official capacity as Postmaster General and to bring to the postmasters of Oklahoma the personal greetings of the President of the United States. May I also express to you my sincere appreciation for your cooperation with the Department? I like to attend these conventions of postmasters and want you to know that I appreciate your kind invitation which enables me to be present here today. Your attendance at this meeting indicates that the postmasters of Oklahoma, as the postmasters of a number of other States which I have visited within the past week, take a serious interest in their work.

I am pleased to inform you that business is good. The postal receipts for the month of March were higher than for any previous March in the history of the Postal Service. They exceeded by more than a million dollars the former record of March 1937. Likewise, the postal revenues for the first 9 months of this fiscal year totaled more than $561,000,000, an all-time high for the period. When business is good with us it indicates an upswing in general business conditions throughout the country.

Conditions are different now than they were when we took over the affairs of the Department in March 1933. When this administration came into power a survey was ordered of the many and far-flung agencies of the Department. When the results were presented to me I concluded that under proper businesslike management and with the return of normal business conditions we could expect a balanced Budget. With the help of my executive and administrative forces in Washington I set out to accomplish that. In the interval between March 1933 and the present time we have reduced the postage rate on first-class mail for local delivery from 3 cents to 2 cents. We have taken over the management and maintenance of a great majority of the Government buildings throughout the country, and we have provided a shorter workweek for postal employees.

In reducing the postage rate on local first-class matter we gave up millions of dollars in income, but felt it was the fair thing to do in justice to the patrons. In taking over the management of the Government buildings and shortening the workweek of the employees, we increased the expenditures of the Department by millions of dollars. In spite of all this we have succeeded in greatly improving the fiscal condition of the Department. By this I mean that by using the same methods of accounting used by my predecessors, and taking credit for what are termed "nonpostal items," we have maintained the postal establishment within its revenues, and in fact have shown a surplus in 4 of the 5 full fiscal years of my administration, from that part of the operations which are rendered to the public for hire.

I do not think the Postal Service should be operated for profit, but am strongly of the opinion that under normal business conditions when the people are using the facilities of the Department on a normal basis we should be able to pay our own way and make no demands on the General Treasury for funds.

The efficiency of the Postal Service and the welfare of the employees is dependent to a great extent on the capacity of the postmasters. I am happy to say to you that a great majority of the postmasters are living up to the high standards set for them by the Department. You should not feel, however, that we have reached a state of perfection that would justify a relaxation of our efforts to improve.

Your first duty as postmaster is to see that the mails are safeguarded and that dispatches and deliveries are prompt and regular, and that the schedules set up for the local service are such as to meet the ordinary requirements of your community. The public has a right to expect punctual service and courteous attention to their needs. Obviously there will be occasional delays due to un-

foreseen difficulties, such as storms and interruptions to transportation, but such incidents do not occur frequently, and when they do happen the public is usually most tolerant. There is no excuse, however, for irregular or tardy service due to indifference or lack of interest on the part of postal people. Regardless of the size of the office, the postmaster's first consideration must be "on time" service.

Next in importance is courtesy. If a customer of a private business does not receive fair treatment he can retaliate by taking his business to some other concern, but such is not the case in our business. We enjoy a monopoly insofar as the transmission of letters is concerned, therefore the people are compelled to deal with us regardless of their wishes in the matter. The knowledge of this should make everyone connected with the Department exercise great care in dealing with our customers. There is no reason why postal people should be servile, neither should they be condescending in their attitude toward the public. Many times a disappointed and complaining patron is entirely in the wrong. The trouble of which he complains may be due to his own negligence, but regardless of the circumstances, listen to his story patiently, then tactfully explain the cause of his complaint. Express your regrets whether the service is at fault or he is at fault, and in most cases you will secure his good will. Cultivate a quiet, courteous manner in your dealings with everyone around you.

May I suggest also that you give your personal attention to the official correspondence of your office? Answer letters promptly. If you are not in a position to give the information requested immediately, prepare a brief acknowledgment indicating that when the investigation has been completed or the information is secured it will be forthcoming. This will satisfy your correspondent that you are doing business in a businesslike way. The Department furnishes many forms that are helpful to you and that will expedite the conduct of your routine correspondence. It is also essential that you reply to departmental correspondence promptly and give all of the facts relating to a subject in your first reply. A great deal of labor is wasted when additional letters must be written to secure the facts. Adopt a simple, clear, understandable form of expression in your preparation of all of your letters, and have them prepared carefully and neatly. Often the patron or the official in the Department who receives your letter has no other means of judging you, so it is important that your correspondence be truly representative of the Postal Service and of you as an individual official.

Another important duty of a postmaster is to look out for the welfare of the employees. I am greatly interested in that. Our employees should have every consideration in the matter of working conditions and hours of employment, in order that they may reflect the policies of a progressive administration of the Government. I believe that good wages and good working conditions are essential to the successful operation of any business.

Throughout my administration I have followed a straightforward policy of dealing fairly with the employees. We in this administration deal frankly with the representatives of the postmasters' organizations, and likewise with the representatives of the employees' organizations. I think everyone understands that we can enter into no negotiations directly with any group regarding rates of pay, as the rates are fixed by the Congress and the President. We do, however, receive the employees and their representatives and permit them to present their grievances and suggestions. We have a friendly and open discussion of all matters presented, and after considering all of the elements involved we make our own decisions and our own recommendations. Of course, the officials of the Department and the representatives of the organizations do not always agree. It would be strange if they did, but we never assume an arbitrary attitude, and to my knowledge there has not been a single instance where bad feeling or ill will has resulted from these discussions.

I think this same practice should be followed by the postmasters in dealing with their employees, either in groups or as individuals. You will not surrender one bit of your authority by receiving representatives of postal organizations for a discussion of their grievances, and by following such a practice you will settle most of your local problems at home. Often situations are presented to the Department for a decision after a controversy has reached quite a serious stage, and when the facts are developed it is found that there was no reason for controversy at all. Most of our difficulties in matters relating to the personnel result from misunderstanding or an intolerant attitude on the part of one or all of the parties concerned.

You are the local managers of the Post Office Department's affairs, and in the main you should operate your office within the scope of the regulations and within the limits of your allowances covering expenditures as you would operate your own private business. When you do this you may be assured of our wholehearted support. Do not misunderstand me; there are some things you should bring to our attention—things that we should know immediately, particularly matters relating to policy, losses of funds or mail matter, and anything else of a serious nature that interferes with the efficient handling of the mails.

You may be assured that the Department will cooperate with you in solving your problems, but I think you understand that the administrative staff at headquarters can only formulate policies and issue rules and regulations that are calculated to cover service conditions generally. The application of these policies and regulations must be left to the postmasters in the field.

Without your enthusiastic support our efforts would be fruitless. It is you who directly contact the patrons of the Service and the employees who render that service. It is important that we understand one another, and I am convinced that conventions such as this offer us our best opportunity for such an understanding. I therefore congratulate you for the interest in the public service which prompts you to maintain the National Association of Postmasters. At these State meetings and in your national conventions you meet on intimate and friendly terms with the leaders in your own organization, with the officials of the Department, and with the post-office inspectors, who are the Department's field representatives. During your discussions here you are enabled to get first-hand information concerning postal matters that might be difficult to clarify by correspondence.

I am proud of the accomplishments of the postal establishment and grateful that with your cooperation and help we are keeping the Post Office in the front rank of governmental agencies, and I want to express to each and everyone here my sincere personal appreciation for the fine job you are doing.

Bibleland or Koranland

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

LETTER TO THE PRESIDENT OF THE UNITED STATES

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, which I have sent to the President of the United States and to Hon. Cordell Hull, the Secretary of State, which speaks for itself:

JUNE 6, 1939.

To the Honorable FRANKLIN DELANO ROOSEVELT,
President of the United States.

DEAR MR. PRESIDENT: The Jewish and Christian Churches are guided and inspired by the Bible, which is a book of man, of spiritual man, of man with his individual soul and his individual relations to God and to his fellow man. But since to the present day the Biblical spirit continues to spell man, the contemporary totalitarian and authoritarian states pronounce the Christian and Jewish churches to be their arch enemies.

In the totalitarian scheme of things there is no room for the Bible nor for what it represents spiritually and ethically, for Biblicism and totalitarianism are polaric forces. The one grants man freedom, calling upon him to choose between good and evil and teaching him that his is the freedom to choose, while the other deprives him of this freedom, asserting that the state alone may make his decisions for him. In the latter day totalitarian and authoritarian states Biblical influences are being ruthlessly counteracted and the reading of the Bible discouraged. This tendency has assumed such extreme forms that not so long ago a German court granted even a divorce to a woman whose only complaint against her husband was that he was a constant Bible reader.

Even those Nazis who are not entirely addicted to paganism would reduce the Bible to a few portions of the New Testament which they would intermix with Nazi idolatrous doctrines of blood, race, soil, and the state as a deity, revealing itself in omnipotence. But in the Christian scheme of things the state is not so much an institution of force as a spiritual establishment with ethical and intellectual obligations toward the individual; while blood, race, and soil are recognized to be forces of nature, not of the spirit. Nature which is a-ethical cannot possibly be man's guide, pathfinder, or teacher, and hence Christianity cannot accept the doctrines of blood and soil as a substitute for God and the spirit. Nazi naturalism, depriving man of his dignity and holiness, and Christian idealism, claiming for man dignity and freedom, represent two antagonistic forces between which no compromise is possible. Their conflict is one of rising paganic naturalism against traditional religious idealism—in short, the struggle of paganism versus Biblicism.

Like every naturalistic force, nazi-ism, too, is imperialistic in its motives. It is animated by an inner drive to extend its rule in all directions and to impose its ideology upon all nations. Its missionaries travel the world over so as to preach the dogma of nazi-ism, to plant the seed of Germanic paganism, and to diffuse the doctrine of anti-Semitism. In Anglo-Saxon countries they are particularly active. Just as the Communists are working for world revolution because they recognize that so long as Russia remains the only Communist state so long is its future uncertain, so do the Nazi leaders in Berlin fully understand that Nazi Germany can perpetuate itself only if a considerable section of the world be overwhelmed by the Nazi spirit. This imperialistic drive of nazi-ism is gathering momentum daily and moving from strength to strength because of its appeal to the baser instincts and prejudices of man. In the United States alone the Nazi movement now claims some

200,000 followers. The main content of Nazi propaganda everywhere are anti-Semitism, authoritarianism, and attacks upon democracy.

Nazi Jew hatred implies much more than the social and political anti-Semitism of pre-Aryan days. It implies a war upon the Bible, the greatest spiritual force in white man's history. In the final analysis, it implies not only the destruction of the synagogue but the annihilation of the church as well. If the Bible is eliminated, the entire fabric of Christianity must collapse. The Nazis beholding a naturalistic world must necessarily battle the Bible with its purely spiritual outlook upon life. This explains best the statement so often made by Nazi leaders that the war upon Judaism will not end with the destruction of German Jewry, for the enemy is not so much the Jew as his Book, the Bible. The Nazis are sensible of the fact that Biblical idealism overwhelmed and defeated naturalistic Rome and, if left untouched, will one day overcome and destroy nazi-ism as well. Hence, the Bible and its creator, the Jew, must be annihilated and its present adherents, Christian and Jewish, weakened and uprooted.

This is not the first time that Christianity and Judaism have jointly been threatened with destruction by a common enemy. During the fourth and fifth centuries, A. D., the Manicheans represented as sinister a threat to the church and the synagogue as nazi-ism does today. St. Augustine, who secured the victory of Christianity over Manicheism, thereby preserved the synagogue from destruction as well. This victory may be regarded to be one of the most fateful in the history of the world.

Throughout all ages, when sinister forces arose to oppose Christianity they attacked the synagogue at the same time, because both Biblical religions, in spite of their many metaphysical and theological differences, share the anthropocentric world view which alone raises man to the dignity of a spiritual being and endows his life with meaning and significance. In the Old Testament this anthropocentric outlook found its most powerful expression in the story of the man Moses, who induced God to change His decree. In the New Testament the son of man becomes the Son of God. Both Testaments express man's spiritual character and dignity and the possibility of his spiritual development. Both exhort man to be good, to be guided by the idea of the good, and to express his love for God by demonstrating his love for his fellowman. Both Scriptures portray the character of the Messiah who symbolizes man's spiritual future. In both Testaments man is uplifted from the realm of Nature into the realm of spirituality. For these reasons all the forces of naturalism and materialism continue to wage war upon the Bible and its representatives—Christianity and Judaism. Today this battle against Biblicism has assumed world-wide proportions and is being fought with extraordinary bitterness upon every continent on earth.

To bring about the red millenium the Communist comrades everywhere attack capitalism. To bring about the brown millenium the Nazi Aryans attack Judaism everywhere. With certified Germanic efficiency the Nazis are seeking to undermine the position of the Jew, even in his own ancestral land, Palestine, so that it shall not be even a land of refuge for him. There they have established an intimate contact with the Arabs and have inspired a reign of terror against the Jew. German diplomatic and consular representatives in the Holy Land have allied themselves openly with the Arab terrorists, supplying them with arms and money. Almost all the guns confiscated from these Arabs have been of German manufacture. The Nazi-Arab concord, assuming the form of an open alliance against the Jew is easily traceable to the fact that in the Mohammedan, as in the Nazi state, the religious or ethnic minority, in accordance with the unbending logic of the totalitarian principle, is outlawed. This state demands not only political loyalty but the full surrender of the human personality—its mind and its emotions as well. Just as there exists in Germany a Nazi "mathematics," a Nazi "physics," a Nazi "jurisprudence," a Nazi "philosophy," and a Nazi "literature," so in Mohammedan lands a Mohammedan "science," a Mohammedan "literature," and a Mohammedan "philosophy," are to be found.

These striking similarities between the Moslem and the Nazi states reveal the Arabs as the Nazis of the East, and the Nazis as the Arabs of the West. In both instances the ideal to be attained is the absolute control of the state over the individual. Hence the schools of the Moslems and the Nazis are not educational establishments in the western sense of the term, but training centers for their respective ideologies, Islamic or Nazi. Both types of commonwealths assert that the state is omniscient, omnipotent, and imperialistic. Although their attitude toward the Bible is dissimilar, the effects of their policies lead to similar consequences. The Nazis in their relentless war upon the Bible and the Arabs in their merciless war against the Jew, if carried out to the bitter end, would destroy the possibility of Biblical life in Palestine and ultimately exterminate the spirit of the Bible from that land; then Bibleland will become Koranland, and both Biblical religions severed from their roots altogether. The consummation of this program will free the Arabs from both antagonists, Judaism and Christianity, simultaneously.

The new Arab states of the Near East are resolved to be Islamic in the fullest degree. The fate of the Christian Assyrians in the Iraq and of the Jews in the Yemen and in all other Arab countries exemplifies best the character of Arab totalitarianism, resulting in cruel religious intolerance and in war upon religious minorities. To protect the one-half million Christians in the Lebanon from Arab persecution, the French Government in granting independence to Syria was compelled to carve out Christian Lebanon as a separate state. The experiences of non-Moslems in Islamic countries fully justifies such measures. The fear is therefore but too well founded that if Bibleland becomes Koranland not only the Jewish population of almost one-half million souls but also its Christian group of 110,000 will be doomed.

Neither Judaism nor Christianity can afford to permit their common spiritual motherland to come under the dominion of totalitarian and authoritarian Islam. A celebrated American statesman, the late Senator Henry Cabot Lodge, expressed this conviction soon after the English conquest of Palestine. In an address delivered at the Hotel Astor, New York City, on June 13, 1922, he stated:

"Because of my belief in religious freedom and in religious tolerance, I never could accept in patience the thought that Jerusalem and Palestine should be under the control of the Mohammedans, as they have been since 1244 with only a brief interval. I had, of course, intense sympathy with the Crusaders and it seems to me a great wrong that Palestine should be under Moslem rule."

Henry Cabot Lodge expressed thereby not his own conviction alone, but that of all thinking Christians throughout the centuries. A thousand years ago when the Crescent drove the Cross from Palestine, Christendom arose as one to wrest the birthplace of the Bible from the forces of Islam. In this struggle many hundreds of thousands of Christians yielded up their lives. The tradition springing from these memorable events has made it possible for a European prince to still bear the proud title of King of Jerusalem. Today, as in ages past, Jerusalem is as much a source of inspiration to Christianity as to Judaism, for certain of the most memorable events and fateful moments in the formation of both Biblical religions transpired within the walls of the Holy City. Christianity and Judaism without Palestine are as unthinkable as Islam without Mecca or Buddhism without Benares. It is therefore obvious that the preservation of Palestine as Bibleland must be one of the main postulates of the Christian Church. Nazi-ism is not only a threat to Christianity and Judaism alike in the West, but because of its alliance with pan-Islamism, it is menacing the position of both Biblical religions in the East as well.

During the past thousand years both Biblical religions faced a common enemy in the West boring from within Christianity itself, in the form of Neo-Manicheism in its various manifestations—Bogomilism, Catharism, Panlicianism, etc. These Neo-Manichean anti-Christian sects of the Middle Ages, in attacking the church, simultaneously planted everywhere the seed of Jew hatred. The ferocious attacks against the Biblical mother religion during the Middle Ages originated not in Christian but in anti-Christian sources. The spiritual leaders of Christianity repeatedly have protected the people of the Book against the insidious attacks of sinister and malevolent forces emanating from these various anti-Christian sects. This fact disposes of the argument of those who are engaged in disseminating Jew hatred that Christianity itself has been waging a war against Judaism.

While the church was engaged in grappling with the destructive elements boring from within, it was simultaneously occupied in a life and death struggle with Islam for the liberation of the Holy Land. It required a supreme effort to break the predominance of the Koran in Palestine, though even for a brief period. Not war upon Islam per se was the objective of the crusaders but to wrest Palestine, the land of the Nativity and of the people of Jesus, from the hostile Moslems, for even medieval Christendom, whose vision was impaired in some respects, was fully sensible that Biblical religiosity can grow and prosper only when it is not severed from its motherland.

Today Christianity stands in the selfsame position of peril which it finally succeeded in overcoming nine centuries ago. In the West, neo-Manicheism, boring from within in the guise of paganized Nazi Christianity, seeks to undermine Biblical religiosity. The officials of the German Nation publicly are making common cause with these new tendencies, advocating boldly the purging of Biblical elements from within Christianity. These manifestations express themselves in ruthless attacks upon synagogue and church alike.

In the East, Christianity is facing the threat of Islamic expansion in its attempt to overwhelm and dominate Palestine. This pan-Islamic drive expresses itself in the wholesale murder of innocent Jews engaged in tilling the soil in the land of their forefathers. Tomorrow it may well assume the form of massacres of devout Christians whose presence in the Holy Land is motivated solely by Christian religious devotion. Just as in the West the ruthless war against Judaism is but a smoke screen, the true objective of that war—the elimination of the Bible from the life of white man—so the attack of the forces of pan-Islam against the Jew in Palestine is but the signal for a war of revitalized Islam against both Biblical religions and its representatives. The pious Moslem hates Christian and Jew with equal fury, and if for the time being he appears content with making his attacks upon the latter it is only because he does not feel himself to be strong enough to move against the former as well.

Today the Christian Church is in duty bound to continue the great Christian historical traditions and struggles so as to preserve the spiritual life of western man. It cannot permit the monsters called race, blood, and soil, to overwhelm the soul and spirit which devout Christians have fostered and preserved throughout the centuries so as to overcome beastliness and to develop a serene spiritual happiness for man. Neither can the Christian Church permit the spring of its spiritual energies to pass under the control of hostile elements that seek to destroy it. This spring is Palestine, the scene of the Old and the New Testaments. The land in which

the psalmists have sung, the prophets have exhorted man to be good, and the Redeemer has preached the gospel of piety, goodness, humility, and justice, must continue to serve the Biblical religions as a source of inspiration.

It is with these larger considerations in mind, spelling destiny to the entire Christian and Jewish world, that I turn to you today, Mr. President. I urgently request that you make the most pressing representations to His Majesty's Government of the fact that the American people and its Government continue to look to it to carry into execution the letter and spirit of the Balfour Declaration. In that historic document His Majesty's Government has expressed its solemn pledge to establish a Jewish homeland in Palestine. Hence the White Paper of May 17, 1939, which attempts to abrogate that homeland, is as unacceptable to the American people and its Government as is the lawless conduct of the international treaty breakers in Czechoslovakia, Albania, and Manchuria.

America must not become a Hitlerland and Bibleland must not become Koranland.

With every good and kind wish, I am

Very sincerely yours,

WILLIAM I. SIROVICH.

The Pear and Apple Industry

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

ARTICLE BY DR. IRA D. CARDIFF, OF YAKIMA, WASH.

Mr. HILL. Mr. Speaker, I ask unanimous consent to extend my remarks and include therein an article by Dr. Ira D. Cardiff, of Yakima, Wash., which appeared in the Argonaut for April 7, 1939, and entitled "The Danger Confronting the Pear and Apple Industry."

Dr. Cardiff was one of the first to challenge, from a scientific standpoint, the Department of Agriculture's tolerances on fruit sprays. His extensive research makes his conclusions authoritative on this subject.

The apple industry in the State of Washington is a $35,000,000-a-year business. Some 10,000 growers are engaged in producing a third of the Nation's apples. But although our production is great and our fruit the best produced, we face two very difficult obstacles. One is transportation costs, which we must absorb since we are remote from the center of consumption. The other is the unwarranted cost, which is also reflected back and is taken out of the grower's pockets, resulting from the imposition of severe spray residue tolerances by the Department of Agriculture.

The net result is that our growers cannot continue long in the face of such circumstances. Relief must be given the fruit growers, but we do not ask that such relief be given us at the expense of public health.

In 1937 we were successful in securing appropriations for a thorough scientific study of the possible harm which might result from eating sprayed fruit. This study is being made by the Public Health Service. After a year's research the Public Health Service recommended raising the lead tolerance from 0.018 to 0.025 grains per pound on the basis of knowledge then acquired. We are hopeful that the inquiry will soon be completed and we have no fear that the result will be such that our growers may again wash their fruit on their own ranches.

The article is as follows:

[From the Argonaut of April 7, 1939]

THE DANGER CONFRONTING THE PEAR AND APPLE INDUSTRY

(By Ira D. Cardiff)

One of California's major agricultural industries is pear production. The State, in fact, ranks first in the production of this, one of our staple fruits.

The apple is also an important crop, though Washington holds first place as the apple-producing State. The value of these crops in the two States in question runs into many millions, and their production furnishes a livelihood for many thousands of families.

Not only are these crops of the greatest economic import to us but there are few foods more healthful. In fact, for the consuming public at large, especially those of moderate means, the apple is the one staple fruit. Dietitians, in the interest of public health, are constantly urging the use of more fruit. The apple, with its high vitamin content, its high content of pentosans and pectins, its superb keeping qualities, and its moderate cost, make it the ideal fruit for the poor man.

Therefore, the destruction of the pear and apple industry would not only be an economic disaster of the first order to California and Washington (likewise a calamity of more moderate proportions in many other States where these fruits form important crops), but would represent a still greater disaster to the health of the Nation as a whole.

But why raise the question of the destruction of these two industries? For the simple reason that drastic regulations by the United States Department of Agriculture in regard to spray residue on these fruits bids fair to do this very thing. It is impossible to produce these fruits without the use of arsenate of lead or similar sprays. In fact, the United States Department of Agriculture has recommended them to the growers for upward of half a century. Recently, however, this same Department has put into effect regulations so drastic that it becomes impossible to wash sufficiently to meet these regulations without greatly impairing the keeping qualities of the fruit.

Now, the fruit grower wants to sell clean and healthful fruit. To do otherwise would spell the ruin of his industry. He is willing to clean his fruit within reason. But to require him to reduce the amount of lead, arsenic, fluorin, zinc, and other so-called poisonous elements on pears and apples far below that permitted in other foods, places the grower of these fruits under an impossible handicap which in a very short time will destroy these industries.

The pear and apple growers have no quarrel with any honest and well-directed efforts to conserve the public health; but it must be pointed out that the Federal authorities have never been able to show any evidence of injury to anyone from the consumption of these residues on pears or apples. In fact, they have knowingly permitted the sale of one of our most popular baby foods carrying eight times the amount of fluorin that was permitted on the apple. They also have knowingly permitted the sale of many other foods carrying arsenic, 10 or 20 times as much as permitted on pears; and it is a well-established fact that most consumers get more lead from their ordinary drinking water than from pears or apples.

Physicians also prescribe lead and arsenic in such amounts that to equal them one would be obliged to consume several hundred apples or pears per day.

In view of this, the grower of these fruits naturally feels that he is the victim of unjust discrimination. He knows that he and his family, also his employees, have for years consumed these fruits unwashed, with absolutely no apparent injury. He knows of "health" waters from certain mineral springs which are extensively sold to the public, containing arsenic in several hundred times the amount he is permitted on his pears and apples. He is also aware of the fact that many of these proscribed elements are absolutely essential to life, and that recent researches have shown that lead is present in practically all food or drink.

The grower and the consumer, therefore, have a right to expect their servants in the Federal food department to apply a certain amount of reason and common sense in the regulation of such matters.

Aid to Dependent Children

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. D'ALESANDRO. Mr. Speaker, I wish to thank the membership of the Ways and Means Committee for reconsidering its action of May 19 in amending the Social Security Act to increase the Federal contribution to the aid to dependent children from one-third to one-half, which would make it uniform with the aid to the needy, blind, and the old-age assistance laws.

On May 30 I submitted to the Ways and Means Committee information which I received from J. Nelson Tribby, department adjutant of the American Legion, Department of Maryland, Inc., that there were over two and a half million children in the United States who are in need and on the waiting list for aid to dependent children. We know that half a million persons are being taken off active lists because of lack of money in the counties, making it impossible for those counties to pay their share of aid to dependent children. We know that in almost every State that present grants-in-aid

are being arbitrarily reduced for the same reason as is given in taking cases off the active lists.

I feel that the most important part of this program is the one that relates to child welfare in Maryland, which would mean an additional $400,000 or $500,000 per year to supplement the State funds that we have available. And instead of reducing the program, as we now have to do, especially in Baltimore city, where 500 or 600 cases will have to be closed for lack of funds, we would have enough money to continue the program and take care of most of the worthy cases.

Mr. J. Milton Patterson, executive secretary of the Board of State Aid and Charities of the State of Maryland, will verify that my remarks are the true facts of the conditions in the State of Maryland. I wish to again take this opportunity of congratulating the Ways and Means Committee for its good work toward a most humane cause. I urge that the House concur in the committee's report and vote for the passage of this amendment.

Citizens of the United States Should Hold the Jobs in Industry Which Now Belong to Aliens

---

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

Mr. RANDOLPH. Mr. Speaker, I desire at this time to call attention again to the problem which is created in this country by the employment of noncitizens in industry, business, and commerce. I addressed the House in connection with this situation on March 31, and at that time placed in the RECORD a copy of a letter I had sent to Mr. Howard Coonley, president of the National Association of Manufacturers, in which I urged his organization to impress the manufacturers of America with the necessity of employing American citizens and separating from their jobs those individuals who are not citizens of this country. I further called his attention to the action of John A. Roebling's Sons Co. in dismissing 100 alien workers and filling those positions with Americans.

FAIL TO TAKE ACTION

The suggestion which I made to Mr. Coonley was considered by the employment relations committee of the National Association of Manufacturers, and under date of May 5 I was advised by Noel Sargent, secretary, the action of that group. In his letter he stated:

> I wish to advise that our employment relations committee expressed its sympathetic interest in the proposal made by you, but it felt that it would be inappropriate at the present time for the association to urge its members to take a census of the employed and discharged noncitizens.

I quite naturally was disappointed that no affirmative action was taken, but I am hopeful that at a later date this organization and others will join in some such movement.

In connection with the problem of unemployment in this country I include at this point a part of an editorial written by Bernarr Macfadden and published in Liberty under date of May 20:

[From Liberty of May 20, 1939]

SHOULD NOT ROB CITIZENS

The great problem we are facing at the present time is the making of more jobs. But notwithstanding the unemployment emergency, we find a desire on the part of many of our officials to open our ports to an increased number of immigrants. This addition to our population should be denounced. Immigration should be stopped altogether.

Suppose these immigrants do secure jobs upon arrival. They put an American citizen out of a job—they make one job less for our own people.

If the father of a family was heavily in debt and had to provide for a number of children, and had to borrow money or accept charity to support them, would it be wisdom on his part to accept a few more dependents to add to his burdens?

Well, this accurately represents the situation that exists in this country at the present time. Here we are, with almost a third of our wage earners unemployed, billions required to keep people on the dole or in charity jobs, and what earthly reason have we for adding to our unemployment burdens by allowing immigrants to land on our shores? They are strangers and should be barred out absolutely. Why should we assume the responsibility of their support? Why should we rob our own citizens of employment?

In a recent speech in Congress, Senator REYNOLDS stated: "We have expended billions of dollars in an effort to provide employment for the unfortunate men and women. Unemployment, therefore, is indeed a mammoth problem, and our huge unemployment record exists despite the fact that 3,000,000 of our people are on the relief rolls and that 4,000,000 people in the United States are working either for the Government of the United States or for the respective State governments. The statement has been made that 80 percent of all the unemployed in the entire world are to be found in the confines of the United States."

Of course, Senator REYNOLDS is branded as a Fascist by the foreign recipients of our beneficence; but if fighting for Americanism of the Washington and Lincoln type subjects him to this libel, he "can take it." He has apparently recognized the deplorable need of protecting our own home folks. When foreigners are given jobs and native-born American citizens are denied them, this is indeed cause for caustic criticism. As long as there is a good American citizen on the unemployed list there is no earthly reason why we should be accepting prospective job-seeking citizens from other countries. We should protect our own homes first of all, and after that duty has been properly assumed humanitarian motives can rightly be encouraged.

I include also the following Associated Press dispatch and articles appearing in the New York Times.

GENERAL MOTORS OUSTING ALIENS NOT FILING PAPERS

NEW YORK, April 27.—General Motors Corporation today announced that division managers and department heads have started checking records of employees to determine who are not United States citizens.

Those who are aliens, a spokesman said, are being assisted in getting their naturalization papers. Those who refuse to take out papers are being discharged.

A canvass showed only a fraction of 1 percent of its employees are aliens, the company said.

[From the New York Times]

ALIEN DISMISSALS LAID TO WARCRAFT PLANS AS GENERAL MOTORS OUSTS 125 OF 3,000 MEN

NORTH TARRYTOWN, N. Y., April 29.—Reports that the local Chevrolet and Fisher Body plants of the General Motors Corporation would be used for the production of Government aircraft equipment were current here this week-end as the factories continued to discharge alien employees.

Although General Motors officials in New York and Detroit declared that it had been the company's policy since 1932 to dismiss workers who declined to take out naturalization papers, no explanation was forthcoming for the delay in putting the policy into practice here.

Joseph Galgano, financial secretary of Local 118 of the United Automobile Workers of America, disclosed that the War Department, as part of its industrial mobilization campaign, had made a secret survey of facilities in the two plants. The union official said that the machinery in the factories and their accessibility to the main line of the New York Central Railroad and the Hudson River, made them well-suited to the manufacture of military equipment, especially aircraft engines.

If any aircraft accessories were made there, the company would have to get rid of all employees without citizenship papers, legal experts in Washington declared. The Air Corps Act of July 2, 1926, provides that "no aliens employed by a contractor for furnishing or constructing aircraft or aircraft parts or aeronautical accessories for the United States shall be permitted to have access to the plans or specifications or the work under construction, or to participate in the contract trials without the written consent beforehand of the secretary of the department concerned."

The War Department said this rule was being rigidly enforced in all contracts for planes and aircraft accessories, but that no pressure of any kind was being exerted against aliens engaged in the production of other war materials.

The Chevrolet plant at North Tarrytown is at work on a special type of truck for the Army, and an Army officer visits the factory every workday to inspect the product.

Mr. Galgano estimated that 175 of the 3,000 persons employed by General Motors at the two plants had been dropped in the last month for the lack of first citizenship papers. He said the company had encouraged men for several years to apply for naturalization but that no one ever had been discharged in the past for failure to comply. The union representative made clear that his organization was not taking any stand against the dismissals.

[From the New York Times]

ALIENS SEEN ADDING TO JOB PROBLEMS—THOSE IN UNITED STATES ILLEGALLY KEEP CITIZENS FROM PROCURING WORK, SOMERVELL HEARS—PROPOSED BAN BACKED

Mr. Rudolph Reimer, commissioner of immigration and naturalization at Ellis Island, declared yesterday in a letter to Lt. Col. Brechon B. Somervell, local Works Progress administrator, that if

the legislature passed a certain law it would be a misdemeanor to employ any person who was in the United States illegally.

The letter was sent by Mr. Reimer in his personal capacity and not as a Federal official. It pointed out that a bill prohibiting the employment of aliens here illegally had been approved by the assembly and was now awaiting action in the senate at Albany.

"Since we require a native-born child to produce working papers before the employer is permitted to place the native-born child on the pay roll it is not unreasonable to require the alien to show affirmatively that he is not in our country illegally" Mr. Reimer said. "I am convinced that the people of New York State want the jobs in our State for those who are legally here or who are its citizens."

The impossibility of patrolling adequately the Canadian and Mexican borders and the Atlantic and Pacific Oceans and the Gulf of Mexico was cited by Mr. Reimer in support of his contention that "many thousands" had come into the country illegally and now held jobs here.

"Judging from the inquiries made at Ellis Island for advice how to purge the alien of illegal entry the statement that there are many thousands employed is not an exaggeration" Mr. Reimer told Colonel Somervell. "This is further evidenced by the fact that there are 12,664 visitors now in the United States whose departure our department at Ellis Island has been unable to verify. No one knows the exact number."

Pensions For the Aged

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. LARRABEE. Mr. Speaker, the principle of Government assistance to the aged and needy of our country is wise and just—and is here to stay. However, this function of government, though almost universally approved by our people, may be retarded a long time through the wanton mishandling of the problem of self-serving demagogues, striving to keep the final solution hanging in the balance and thus preserve benefits which they have been reaping since 1934.

The popular appeal of "Pensions for the aged" has been a gold mine for quick-witted promoters seeking, primarily, to enrich their own coffers and no one would be more disappointed than they should the Congress enact a Federal pension plan, thereby curtailing their revenue derived from the donations of trusting aged people to help the cause.

The Social Security Act, enacted in 1935, was hailed as the first step in the march of social progress toward the goal of security for the aged and needy. Recognizing the right of the American people to have security and comfort for those who are no longer able to bear the brunt of modern industrial life, the Congress, under the leadership of President Roosevelt, enacted into law the Social Security Act which was aimed to relieve the fear of destitution and misery in old age.

It is generally conceded that the benefits provided under the act are inadequate and while it is a step in the right direction, the act should be liberalized to provide ample benefits to permit those who have, through no fault of their own, been retired from industrial life to live out their declining years in peace and comfort.

I have long been an advocate of adequate assistance to the aged and needy, and this is borne out by my record of sponsorship in 1923 of the first old-age pension bill ever to be introduced in the Indiana State Legislature.

When the present Social Security Act was under consideration in Congress I supported and worked for amendments which would have raised the amount of assistance to $45 monthly. This amendment, advocated by myself and others in the House of Representatives, failed of enactment when the act was finally passed. Since that time I have often declared myself in favor of benefits more adequate than those provided under the present Social Security Act.

It has long been my view that the Federal Government should inaugurate a national system of old-age security, the benefits to be paid directly out of the Federal Treasury, and that such plan should be financed on a pay-as-you-go basis.

However, I cannot bring myself to believe in or lend my support to any measure, bill, or plan which leads the aged people of our country to believe that they are to be provided with incomes greater than they have ever enjoyed; incomes which are not possible to the great majority of our people not eligible for pensions; incomes which they must promptly spend before receiving another check.

I do not believe in placing an unbearable tax burden on one very large group for the questionable benefit of another comparatively small group of our citizens.

When I say the aged are being misled by false and glowing promises I refer to those who, under the guise of being friends of the aged, have been collecting dimes and quarters from aged widows and unemployed for the past 5 years, holding out as the promised reward a $200-a-month "bale of hay" which they hope will continue to attract them but never be reached.

After wasting $4,000,000 wrung from the needy old people of America by promises which they knew could never be fulfilled, and by holding out hope which they counted on to continue indefinitely, I believe the time has come to call a halt to such nefarious practices.

It being generally agreed that pensions for the aged are a permanent necessity in this country, let us enact a sane, sensible pension law which will provide a decent, comfortable existence to those no longer able to work. Let us pay these benefits directly out of the Federal Treasury and not leave the problem to 48 individual States to cope with. It is a national problem and should be dealt with by the Federal Government.

Land-Utilization Project at Minden, La.

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MINDEN, LA.

Mr. BROOKS. Mr. Speaker, in connection with my extension of remarks I present a resolution adopted by the City Council of the City of Minden, La., in reference to the development of the land-utilization project of the Soil Conservation Service, located north of Minden in Webster Parish, La.

RESOLUTION PERTAINING TO LAND-UTILIZATION PROJECT

Whereas it has become known to the citizens generally, and to the City Council of Minden, Webster Parish, La., through the Weekly News Letter released on May 27, 1939, under the signature of the Honorable OVERTON BROOKS, Member of Congress, Fourth Louisiana District, that it has been suggested that the land-utilization project in northwest Louisiana, located in Webster Parish, could be used, very properly, as a farm school; that arrangements be worked out with the extension department of the State of Louisiana or with the State University; that this large tract of land could be used once each year for the purpose of giving short farm courses to all interested citizens; that such citizens could be invited to attend this course and take part in the actual work being done on the farm; that said Hon. OVERTON BROOKS, Member of Congress, desires to hear from the people of his district as to the feasibility of such a project; and

Whereas the City Council of the City of Minden, taking cognizance of said News Letter and the desire of the Honorable Congressman to know the reaction of the people of this district to such a proposal have prepared and passed a resolution declaring the attitude of the members of the city council toward the proposed project; and

Whereas that such a practical school for the use of adult and youthful farmers would be of benefit and would prove of value to the State, parish, and farmers of this northwest section of Louisiana; that it would be of value to farmers in being shown the right and proper methods of preparing the land for cultivation, for a

practical knowledge of forestry, in taking care of and feeding livestock, and learning the scientific methods of testing seeds and fertilizers; and

Whereas the cultivation and caring for old lands and soils is a new problem to the farmers of this area, accustomed as they have been to cultivating new ground to the neglect of the old; and

Whereas the activities of the Soil Conservation Service, the Land Utilization Service, and the farm demonstration agents have proved of uncounted value to the farmers as well as to all other citizens of the State; and

Whereas if such farmers could be given an opportunity to work for a short period of time each year under the guidance and direction of scientifically trained men, in such farm care and cultivation methods as have proved best suited for this area by science and experiment; that it would be of considerable value in leading the farmer into these new ways by the actual doing of such work as the farmer would be most interested in doing; that it is our belief that such a project would be of great value to all farmers, to the parish and State; and therefore be it

Resolved by the City Council of the City of Minden in regular session, That, the premises considered, we recommend to the leaders of the United States Soil Conservation Service and the State department of agriculture that they make such provisions as they shall deem wise and practical for the making of the proper use of such lands as are under the control of the Soil Conservation Service in Webster Parish; and be it further

Resolved, That the City Council of Minden offer its support and cooperation to the Soil Conservation Service and to the State department of agriculture in perfecting the uses to which the said land projects shall be put; that it is the opinion of the said city council that a practical use of the lands on the said land-utilization project as a demonstration to farmers might prove of great value, especially wherein the farmers would take active part in such work under the type of guidance which has been given through the Soil Conservation Service, the State Agriculture College, and Farm Extension; and be it further

Resolved, That the land-utilization project could be made into a gathering point for such organizations as the various high-school clubs future farmers' and adult farmers' organizations; and be it further

Resolved, That the City Council of Minden expresses its thanks to the Soil Conservation Service, to the Agricultural Departments of the Federal and State Governments for the good work done by such agencies in the revolutionary services rendered to the benefit of this parish, State, and city, and that at all times the members of the city government of Minden, Webster Parish, La., offers its full and complete cooperation to such agencies as have been named above; and be it further

Resolved, That this resolution be engrossed in the minutes of the council and a true copy thereof be mailed to Hon. OVERTON BROOKS, Member of Congress.

Thus done, read, and passed by unanimous vote in special regular session of the City Council of the City of Minden on this 5th day of June 1939.

DAVID W. THOMAS,
Mayor of Minden.
LEON W. ADKINS,
Secretary of Council.

I certify that the above resolution is a true copy of the resolution passed by the City Council of Minden, La., on June 5, 1939.

LEON W. ADKINS,
Secretary of Council.

National Youth Administration

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 10, 1939

TELEGRAM FROM THE PRESIDENT OF LAFAYETTE COLLEGE

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received by me from the president of Lafayette College:

EASTON, PA., *June 8, 1939.*

Hon. FRANCIS E. WALTER,
House of Representatives, Washington, D. C.:

Understand move under way to reduce recommended appropriation to National Youth Administration for year beginning July 1 by $50,000,000. May I urge you most strongly to oppose any reduction? This fund has been one of the best administered funds in the national administration and has been of tremendous benefit and help to both public and private institutions throughout the Nation. Any reduction would seriously jeopardize the education, job-training, and social-adjustment aid to nearly 50,000 American youths now in the program. Your strong resistance to any reduction move will vitally assist in building the youth of the future.

W. M. LEWIS,
Lafayette College.

Puerto Rico

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 10, 1939

STATEMENT BY VINCENTE GEIGEL-POLANCO, MEMBER OF THE ECONOMIC DELEGATION OF PUERTO RICO

Mr. MARCANTONIO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by Vincente Geigel-Polanco, member of the economic delegation of Puerto Rico:

To the Honorable FRANKLIN D. ROOSEVELT,
President of the United States of America:

The economic convention of Puerto Rico, constituted by accredited delegations representing all fields of human endeavor in this island—agriculture, industry, commerce, banking, labor, professions, and civic, social, economic, fraternal, and cultural organizations—passed on March 12, 1939, a resolution asserting that (1) the fact that the political status of Puerto Rico has not been defined as yet creates a state of restlessness and uncertainty which injures the best interests of the island, hinders its economic development and embarrasses the harmonious coordination of our relations with the United States; (2) that as long as this anomalous situation prevails, it will be impossible to formulate adequate plans of economic reconstruction for the peculiar needs of our people; and (3) that exercising those rights emanating from our condition of American citizens—especially the right of petition guaranteed and consecrated by the Constitution of the United States—we should request action from Congress authorizing the people of Puerto Rico to decide its political status according to the principle of self-determination.

In view thereof, the convention resolved to submit a memorandum to the insular legislative assembly asking that body to petition from Congress proper authorization so that the people of Puerto Rico can proceed to decide its permanent political status under said principle of self-determination. Similarly, the convention gave instructions to the executors of its resolutions that they should, in the course of their action before the Federal authorities, emphasize and make clear the expressed criterion, and that they should pursue suitable activities to have same receive proper attention, and to obtain, with the urgency called for by the situation, redress for the grievance it points out.

In compliance to this mandate, as a member of the economic delegation of Puerto Rico I have the honor to submit the following facts to the judicious consideration of Your Excellency:

HISTORICAL BACKGROUND

The island of Puerto Rico, one of the Greater Antilles, was discovered by Columbus in the year 1493. The first Puerto Rican settlement was founded in 1508, a hundred years before the establishment of Jamestown in Virginia. Spain settled and colonized the island, transplanting and adapting to the Antillean environment the best institutions of Spanish culture. The formative process of the people of Puerto Rico took place during the sixteenth, seventeenth, eighteenth, and nineteenth centuries. The first 300 years covered the necessary stages for the development of the population, the administrative organization of the different towns, and the initial promotion of the material resources. At the beginning of the nineteenth century the people of Puerto Rico had already attained its own peculiar characteristics, a sufficiently defined personality and a clear concept of social justice. All through that century Puerto Rico kept on laying firmer foundations for its personality and developing a culture of strong vitalities.

As a Province of the Spanish Crown, we enjoyed wide representation in the National Parliament on the same basis of equality as the Spanish Provinces of the Peninsula. On November 25, 1897, the Spanish Government granted Puerto Rico the autonomy chart acknowledging the sovereignty of our people to such a substantial degree that it could enter into trade agreements with other nations. The Autonomy Chart established a government of the parliamentary type. The legislative branch was composed of a chamber of representatives and a council of administration empowered to legislate on all local matters including administrative organization, public credit, banking and monetary system, and with full authority to dictate its own tariffs. The executive power was

vested in a governor general, assisted by a cabinet composed of five secretaries—grace, justice, and interior, finance, public education, public works, and posts and telegraphs, and agriculture, industry, and commerce—all of them Puerto Ricans and endowed with such powers that no executive order of the governor could be carried out unless it was previously countersigned by the corresponding secretary.

In 1898 Puerto Rico had a homogenous population of approximately a million inhabitants, a well-defined historical personality, a common language—Spanish—and a solid culture related to the purest Greco-Latin traditions. The country was enjoying an autonomous and responsible government.

AMERICAN OCCUPATION

It was then that the Spanish-American War took place. Puerto Rico was not responsible for that armed conflict, and neither did it have any interference in it nor was it a conditioning factor thereof. Nevertheless, on July 25, 1898, United States military forces occupied the island. In a proclamation addressed to the people of Puerto Rico on that occasion, Gen. Nelson A. Miles, commander of the forces of occupation, said as follows: "In the prosecution of the war against the Kingdom of Spain by the people of the United States in the cause of liberty, justice, and humanity, its military forces have come to occupy the island of Puerto Rico. They come bearing the banner of freedom. * * * They bring you the fostering arm of a nation of free people, whose greatest power is in justice and humanity to all those living within its fold. * * * We have not come to make war upon the people of a country that for centuries has been oppressed, but, on the contrary, to bring you protection, not only to yourselves but to your property, to promote your prosperity, and to bestow upon you the immunities and blessings of the liberal institutions of our Government."

In the peace conferences which followed the war operations the Government of the United States demanded the cession of the island of Puerto Rico. By the treaty of peace signed at Paris December 10, 1898, the island was ceded accordingly. Article IX of the treaty provides that "the civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress." As an explanation to this article the American commissioners, in their memorandum of December 9, 1898, made the following statement: "As regards the political status and civil rights of the native inhabitants, these were reserved to Congress, which would enact laws for the government of territories ceded to the United States, this being but a confirmation of the right of the soverign power to leave to the new government the establishment of these important relations. The Congress of a nation which never enacted a law oppressive or detrimental to the rights of residents within its dominions and whose laws guarantee the greatest liberty compatible with the conservation of property, surely can be trusted not to depart from its well-established practice in dealing with the inhabitants of these islands."

PRESENT STATUS OF PUERTO RICO

After a period of military rule the United States Congress passed the Foraker Act on April 12, 1900, establishing a civil government in Puerto Rico. This law declared the inhabitants of the island "citizens of Puerto Rico," and as such entitled to the protection of the United States.

On March 2, 1917, Congress passed the Jones Act which, slightly amended, is still in force. The new law created a legislative assembly composed of a house of representatives and a senate, both elected by popular vote and empowered to legislate on some local matters but subject in its action to the veto power of the Governor of Puerto Rico, the President of the United States, and Congress. The President appoints the Governor, the attorney general, the commissioner of education, the auditor, and the judges of the Supreme Court of Puerto Rico. This act declared the citizens of Puerto Rico citizens of the United States.

The political status of Puerto Rico has always been ambiguous. Certain Supreme Court decisions have characterized the island as an "unincorporated" Territory in contrast to Hawaii and Alaska that are "incorporated." The extent to which the Constitution of the United States applies to Puerto Rico has never been specifically delimited. Under the present status the United States Congress exercises full powers to pass upon all matters, both internal and external, affecting Puerto Rico. Our people entirely lack authority to face and solve their fundamental problems.

In the economic sphere we were deprived of the autonomy that in tariff matters we enjoyed in 1898; the free exchange of goods was introduced in our trade relations with the United States; all American tariffs were made extensive to cover our trade with other countries and we were included in the United States coastwise shipping system, which forces us to depend on the more expensive services of the American merchant marine.

SOME OF THE EFFECTS OF THE PRESENT STATUS ON THE ECONOMY OF PUERTO RICO

The present political status has affected the Puerto Rican economy in the most disadvantageous and harmful way. The whole system, including the implications of the tariff has gradually built up a type of commercial agriculture exclusively suitable for exportation which, by seriously curtailing the subsistence farming activities indispensable to feed our people, compels us to import almost every article of consumption. Import duties imposed on commodities generally consumed by most people are so high that they create an unsurmountable barrier for our commercial exchange with other nations. Instead of simply regulating commerce, the American tariffs when applied to this island shut out all foreign products that could be obtained elsewhere to our economic advantage. We are thus forcibly obliged to make practically all our purchases in the North American market. From 90 to 95 percent of our outside commerce is carried on with the United States.

One of the most noticeable effects of the tariff in Puerto Rico is an exceedingly high cost of living. Rice, wheat, codfish, beans, olive oil, cotton fabrics, and a hundred more items that we must import fall under the prevailing rates of tariff protection. That means that we have no choice but to buy those commodities in the United States although other countries may have them at more convenient prices for us. Let us see just one example of how the American tariffs work on this island. In the case of rice, subject to an import duty of 2½ cents per pound, we pay every year nearly $2,000,000 in excess to the amount that we would have to pay in any other market. This figure does not include the overcharge of the transportation in American vessels. About 17 commodities comprising 65 percent of all food consumed in the island cost us from 8 to 14 percent higher than what they cost in the city of New York. Not a single commodity of general consumption in Puerto Rico appears in the free list.

However, should the effects of the tariff end with the increase in prices and the cost of living as its only consequence, our problem would not acquire such threatening aspect. But besides, it is a fact that due to our peculiar conditions the tariff does not protect the industrial development of the island. We encounter a state of things which rather frustrates the initiatives of an industrious people such as ours and renders practically void any attempt of industrialization with Puerto Rican capital due to the absence of adequate tariff protection for our own producer who cannot stand the competition of the American manufactures. Consequently we are unable to create new sources of employment to meet our serious unemployment problem. It is undeniable that a tariff devised to give generous protection to a country of such powerful agricultural and industrial activities as the United States cannot be wisely applied to a small and almost exclusively agricultural country mostly made up by consumers, suffering an economy of the colonial type, subject to outside capital, as Puerto Rico, without incurring not simply in a mere absurdity of economics, but also in the annihilation of the local sources of production and in a precarious impoverishment of the country.

Furthermore the tariff is greatly responsible for the large-scale land tenure and the absentee ownership that persist in the island.

This absurd economic regime—a direct outgrowth of the system of government in force—has retarded the development of the Puerto Rican industry; it has delayed the promotion of the authentic wealth of the country; it has obstructed our commerce with unnecessary restrictions and limitations; it has lessened our opportunities of employment to a most perilous minimum; it has contributed to increase our taxation in a way injurious to the insular economy; it has taken away from us the sources of income which could be derived from our own customs directed by local laws and local convenience, and therefore creates for our Treasury a state of perpetual neediness and scantiness impelling it to almost exhaust its borrowing capacity in a fruitless effort to take care of the public services to a more or less fair degree; it has established such an economic structure that all sorts of hardships, burdens, and disadvantages weigh on the Puerto Rican consumers. Amid these circumstances it is just natural that our economy should have suffered a gradual process of decline and impoverishment, and today it is on the verge of collapse.

In recent years the situation has turned itself even worse and the present status has shown to a still greater extent how it chokes and annihilates whatever is left of our economic life. The agricultural-adjustment program imposed substantial sacrifices from Puerto Rico although we do not share its benefits on the same basis as the continental areas, neither has the reconstruction projects been extended to the island in the same sense of generosity and justice that moves them in the States. Under the quota system for the production of sugar—the most important and basic local industry—Puerto Rico has suffered a greater reduction than any of the domestic areas. Besides injuring the growers and other producers, this curtailment has considerably diminished the already meager chances of employment. Instead of raising the quotas to reasonable standards, new decreases have taken place, and as a climax to all arbitrary acts the Sugar Act of 1937 places Puerto Rico in the category of foreign zones as regards to the importation of refined sugar.

In all those aspects in which the tariff really protects some of our products we find that favorable effects are being virtually annulled by the agricultural adjustment policy and especially by the trade agreements which displace us from the American market through the advantages accorded to countries sending to the United States the same commodities that we produce.

We face, indeed, a very critical situation. On one side we are forced to buy in the American market all we consume, and on the other we are not allowed to produce as much as our resources would permit under normal conditions. And then, after being reduced to a single market and to a very limited production, still we find the above-mentioned obstacles in our way when marketing our products. It is a situation that necessarily ruins our economy and plunges our people into despair.

We are dispossessed of any power to protect ourselves from said circumstances, to work for a proper solution, or to chart our economic life in accordance to the potentialities, means, and wealth of the island. Hence our productive possibilities tend to vanish, our resources are coming to naught, and our people are getting poorer and poorer.

An unavoidable state of profound collective restlessness and discontent arises from those conditions. It is that our people cannot willingly accept its own destruction. We firmly believe that we also have a right to the enjoyment of life, liberty, justice, and happiness. Puerto Rico longs for the power to promote its production, raise the standards of living and the working conditions of the laboring classes, introduce policies of true social justice, insure the well-being of all its citizens, and organize itself under a democratic form of government.

But as long as this anomalous situation resulting from our undefined political status prevails it will be absolutely impossible to draw up a program for the economic reconstruction according to the peculiar needs of the island, because we lack the indispensable authority to trace that program and because we have not been given the opportunity to decide and direct our destiny through a democratic procedure.

No step has been taken by any of the Federal administrations to place the island in condition to clarify its permanent political status. Up to now, and during 40 years of American rule, the people of Puerto Rico have been living aimlessly, without a chance to determine the course of its aspirations. The undefined status has prevented the island from the proper orientation of its economic structure, its school system, and its normal life as a civilized community. The absurdity of the situation has maintained in us a feeling of anxiety as to where direct our future; it has provoked the present social crisis, the economic chaos, and the inability of the island to utilize its resources to the benefit of its needy classes; it has carried us to waste our efforts, our energies, and our millions of dollars in keeping an educational system which lacks a definite purpose; and it has dragged the people to the present degree of uneasiness and uncertainty so damaging to its progressive evolution and so detrimental to the development of a good citizenship.

It is therefore most urgent and undeferable that this colonial system be replaced by a system of government responsible to the people of Puerto Rico. To attain this change it is indispensable that Congress should authorize Puerto Ricans to decide the permanent political status of the island in accordance to the principle of self-determination.

The right of our people to decide its own political status rests on the natural right of every civilized community to rule its own life. From the Puerto Rican point of view the urgency to decide the final political status is based on the fact that the present system fails to provide the permanent guaranties that must be had for the progressive development of the economy, culture, and welfare of the people.

Besides the arguments that could be advanced by Puerto Rico asking for authorization to decide its political status, there are from the American point of view itself additional and very powerful reasons strengthening our petition, to wit:

That the system of government which prevail in the island does not derive its powers from the consent of the governed and therefore runs contrary to the Constitution and the democratic institutions of the United States.

That the United States is responsible for the economic chaos existing in Puerto Rico as a consequence of the actual governmental system, and that it behooves Congress and the Federal administration to free the island from the system producing that chaos not only for the good of the national prestige but also as a protective measure for American taxpayers who are suffering, in part, the effects of the economic chaos of Puerto Rico.

That the maintenance and extension of the present system of government, or of any other system not deriving its powers from the people of Puerto Rico, do not satisfy the moral pledges and legal commitments incurred before the world by the United States in the act of occupation of the island.

That the continuation of such colonial type of government imposed by the United States on a civilized country of the Western Hemisphere—a sister country of the Spanish-American group of nations and united to it by the bonds of race, tradition, history, language, and culture—is in opposition to the basic postulates of Pan Americanism, impairs the moral principles of the good-neighbor policy, and hampers the international position of the United States as a democratic power.

That an early definition of the Puerto Rican political status will effectively contribute to encourage better economic relations and to bring a closer spiritual understanding between the United States and Puerto Rico.

That as a vital part of the national-defense program—in which the strategic position of the island performs such an important role according to expert opinion—it is essential that the United States should secure the sincere cooperation and dependable loyalty of Puerto Rico through the happiness and welfare of the people.

That in the light of American history, precedents, and free institutions of the United States it is evident that the only democratic way to solve the problem of Puerto Rico is by an authorization from Congress allowing the people of the island to decide its political status in accordance to the principle of self-determination.

Pursuant to the resolution passed by the economic convention of Puerto Rico, this delegate respectfully petitions Your Excellency to recommend to Congress proper action, so that without any further delay the people of Puerto Rico may be able to decide in a democratic way its final form of government.

The situation that I have stated in behalf of the people of Puerto Rico involves a problem of vital importance to the life, liberty, justice, and happiness of 2,000,000 citizens, who hereby place their fate in your hands, as it is up to Your Excellency, as President and champion of democracy, to lend us your valuable assistance in the solution of this problem.

Respectfully submitted.

VICENTE GEIGEL-POLANCO,
Member of the Economic Delegation of Puerto Rico.

James Hamilton Lewis

MEMORIAL ADDRESS
OF
HON. CHARLES KRAMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. KRAMER. Mr. Speaker, we bowed our heads in sorrow at the knowledge that the grim reaper had summoned, without previous warning, our beloved friend, Senator J. HAMILTON LEWIS. A rare and radiant personality passed on and in our hearts there is left a distinct void. Father Time, when calling the roll, is no respecter of ability or character.

To have known Senator LEWIS was to have loved him. It was my privilege to become personally acquainted with him many years ago when he first moved to Chicago to make his residence. Chicago was my home at the time, and as a young rookie in the Democratic Party I was assigned to the pleasant duty of transporting Mr. LEWIS during many campaigns. The successful political careers of many public figures in Chicago is directly attributable to the scholarly brilliance, the sparkling wit, and the eloquent oratory of "HAM," as he was affectionately known.

Upon my election to Congress I was privileged to actively renew my friendship with Mr. LEWIS—a friendship which had commenced many years before but which had ceased to become active when I moved to California for residence.

The story of Mr. LEWIS' life is an interesting one, and success came to him only after many years of struggle and adversity. Perhaps it was adversity that created in him such a complete understanding of humanity. Perhaps it was his understanding of humanity that molded his character into the noble gentleman that was to become a national figure—one whose name was familiar in every household.

Senator LEWIS was one of the most colorful figures of our time. He was noted for his courtly manner, for his idiosyncracies, for his enviable sense of humor, for his amazing gift of fluent oratory, and for his complete genuineness, which endeared him to the Nation. Many amusing stories have often been told of the Senator, each one of which has the more stronger endeared him to our memory, but beneath the veneer of courtly manners and complete mastery of discourse and rhetoric there was rugged grain, shrewd common sense, and political skill. He was distinctly an individual—a magnetic personality. He had a kindly smile, a sincere handclasp, and his regard for the feelings of others stamped him as a gentleman.

Mr. LEWIS was indeed a brilliant man, but most of all he was a kindly man—one who had time and patience for everyone, including the most humble. I knew him in both public and private life. He has answered the call of Providence, his soul is at rest, and with reverence I pay my humble tribute to the memory of a great man.

The Virgin Islands of the United States of America

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

EDITORIAL FROM THE ST. THOMAS (V. I.) DAILY NEWS

Mr. CRAWFORD. Mr. Speaker, it is too easy a matter for the continental United States to overlook most serious problems which exist in our offshore area where citizens of the United States reside and who are entirely helpless in a way by reason of the fact that legislation which provides for their form of government is dependent upon the action of the Congress.

Many of these people are subjected to the status of "reliefers" very largely because we do not approach the solution of their problems in a constructive manner. For Congress to make appropriations of money now and then and have the funds forwarded to these areas and assume that such a remittance is all that is necessary can often prove more damaging than helpful.

In the case of the Virgin Islanders, I personally feel we have been very negligent in the performance of our duties and obligations which we assumed when we acquired the islands from the Danish Government and thereby brought the islanders under the complete jurisdiction of the United States.

How keenly the people of the Virgin Islands feel their misfortune at not having a full-time representative here in the Capitol of their Government is well expressed in an editorial appearing on June 1, 1939, in the Daily News, a newspaper published in St. Thomas, V. I. Under leave to extend my remarks, I submit that editorial for the consideration of Members of the House.

[From the St. Thomas (V. I.) Daily News]

It is difficult for Virgin Islanders to understand why the American people balk at giving them fair treatment, and at the same time upbraid them for their poverty, when Congress has not taken the necessary steps to improve conditions in the islands by allowing the Virgin Islands to have the benefit payments under the Sugar Act of 1937. This unfair discrimination, which is applied only against the poverty-stricken islands, of all the sugar areas, also includes a "unique export tax" of $6 per ton on all sugar sent to the United States.

"Is it because we have no powerful lobby in Congress that we cannot get justice?" ask Virgin Islanders. Health, education, tourist development, housing, and farm relief suffer through this discriminatory holding back of money actually earned by and due to the Virgin Islands.

These new possessions of the United States have been given some charity through the years, but now that they are learning to become self-dependent they want to assume their true economic status under the terms given Puerto Rico and the Philippines. If the islands are to improve at all, or even to exist, they must get what is due to them. Government by neglect is worse than misrule because it is more subtly bad. The United States cannot continue to withdraw all Federal deficiency appropriations without giving the islands what is their own property. It is like offering a sick man a pair of crutches and then cutting off his legs because he won't walk faster. The irony of it becomes more evident when even the crutches are taken away.

Most of the misfortunes of the Virgin Islands come because the people have no representatives in Washington the year round. They depend upon the tender mercies of the American press to awaken sentiment in their favor and get Congress to take action on the petition presented by the special delegates from the municipal councils in the islands. This year's delegation has had a terrible task; whether or not it will accomplish much is left to the sense of fair play and consideration for subject peoples which Americans are supposed to possess.

The Farmer Took Chain-Store Bait

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

EDITORIAL FROM THE UNIONIST AND PUBLIC FORUM, SIOUX CITY, IOWA

Mr. HARRINGTON. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein an editorial from the Unionist and Public Forum, published by Wallace M. Short, in Sioux City, Iowa. The chain-store tax bill referred to in this editorial is one sponsored and introduced by myself while a member of the Iowa State Senate.

[From the Unionist and Public Forum, Sioux City, Iowa]

THE FARMER TOOK CHAIN-STORE BAIT

A farmer of northern Iowa decided he couldn't save his farm home by growing corn. Being a resourceful and enterprising fellow, he determined to turn his farm into a pickle factory, producing the raw material and doing the processing on his own acres.

It worked. He produced a good article and built up a market for it, and seemed to be on the road to a modest success.

Then came along the agent of the chain-store system—"to help him." The chain would take off the farmer's hands the marketing problem, pay him a better price, and the farmer could devote all his efforts to the production end.

So the chain took the entire crop of pickles, and along with the crop took the trade the farmer had developed. It seemed to work well for a while.

But it happened that this farmer was also a State senator, and in 1935 there was a chain-store tax bill before the legislature, and the thousand-dollar-a-month chain lawyers were on hand. One of these chain-store agents took the farmer senator aside and told him how he must vote.

The farmer right there discovered that when he sold his pickle crop and his trade territory to the chain system, he sold himself into the hands of a ruthless master—his trade territory was gone and also his right to do his own thinking. He told the chain agent that he reserved the right to vote according to his own conscience—and he voted for the chain-store tax.

Right there the chain system dropped the farmer; it now had the trade the farmer had built up. Now the farmer has his pickles but no market.

This goes for any individual and for any community that sells himself or itself into the hands of the foreign-owned system.

Once in the power of the system, it will pay what it pleases and demand the right to tell its victim what he must think and how he must act.

The chain builds up no community, initiates no new enterprise. Its business is to come in after the community and the enterprise have been built by men of initiative and enterprise and pick the bones of the individual or the community and ship the profit—the circulating medium of the community—straight down to the coffers of concentrated and stagnant wealth in the eastern money centers.

That is the way the concentrated reservoirs of stagnant wealth are created. It is one main reason our Iowa communities are going on the rocks.

William Ben Cravens

MEMORIAL ADDRESS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. KITCHENS. Mr. Speaker, this memorial service in the House of Representatives in commemoration of the life and

services of our departed colleagues, where they labored so long and faithfully, is most befitting and proper. The beautiful flowers, the lilies and evergreens, that bank the Speaker's rostrum and fill the Well of the House show in a small way our respect and esteem.

We have been listening to the United States Marine Band orchestra in a prelude render most sacred selections admonishing us of our mortality and of the sacredness and immortality of the soul.

At high noon today the Congress assembled in memory of, and as a sincere tribute to, those of us whose spirits have passed into eternity, leaving to us and posterity only memories and the written record of their earthly sojourn.

We listened to our Chaplain, Dr. James Shera Montgomery, and to the inspiring, living song of truth rendered by Mr. John Carter in the words "I Know That My Redeemer Liveth." We listened to the Temple Quartet sing so beautifully and devotedly "The Lord Is My Shepherd."

We have heard the Clerk of the House of Representatives solemnly call the roll of our departed colleagues, separated from us since last Memorial Day, and there was no reply; only the deepest of silence. We heard him call the name of Hon. Royal Samuel Copeland, Senator, of New York; Hon. James Hamilton Lewis, Senator, of Illinois; Hon. Charles J. Colden, Member from California; Hon. Allard Henry Gasque, Member from South Carolina; Hon. Robert Low Bacon, Member from New York; Hon. Joseph Boylan, Member from New York; Hon. Stephen Warfield Gambrill, Member from Maryland; Hon. William Ben Cravens, Member from Arkansas; Hon. John Burrwood Daly, Member from Pennsylvania; and Hon. Clarence Wyly Turner, Member from Tennessee.

None, of course, responded here, because their names are now on another roll, and they henceforth will answer the call of a power more omnipotent than this body, as they recently did when summoned from amongst us.

After the roll was called, all Members remained in devotional silence after which the Temple Quartet sang another song, that very beautiful, appropriate, and comforting song, "Rest in Peace."

We listened to the eloquent and inspiring address of Hon. THOMAS A. JENKINS, of Ohio, then to another beautiful song, "A Spirit Flower," by Mr. John Carter, and then to the eloquent and able address of Hon. JAMES P. MCGRANERY, of Pennsylvania, followed by the Temple Quartet rendering another appropriate and comforting song entitled "The Strife Is O'er."

Afterward we listened to taps rendered by one of the buglers of our Army service, and which so often many of us have heard in peace as well as in war, in life for the living as for the dead, to signal that the light of life in our departed colleagues has been extinguished and shall shine no more, and that they have retired in silence everlasting. Our chaplain will in a few moments speak the benediction, and to our departed comrades say the last farewell.

Mr. Speaker, I rise to recount in my humble way and in a few words something of the life and services of Hon. BEN CRAVENS, of Arkansas, one of the names on the roll and called without response.

He departed this life here in the Capital City, January 13, 1939. He represented the Fourth District of Arkansas, a tier of counties along the border of the State of Oklahoma. BEN CRAVENS was born January 17, 1872, at Fort Smith, Ark., a city that was built upon the western frontier of this country when the people along the eastern coast line and elsewhere were advancing westward. He was of the pioneers who settled the city of Fort Smith, and came of one of the well-known families of our State. He was married at the place of his birth, and leaves today his widow and two children to mourn his untimely passing. He was a graduate of the law school of the University of Missouri, and practiced his profession in Fort Smith. He served as city attorney of Fort Smith for two terms, was district attorney for three terms, and without opposition was elected to the Sixtieth Congress for the term beginning March 4, 1907. He was re-elected to the Sixty-first and Sixty-second Congresses when afterwards he voluntarily retired.

After 20 years, again he was solicited to be a candidate for Congress, and, without opposition, was elected to the Seventy-third, Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses. In the last campaign he was physically indisposed, unable to leave his home city, but overwhelmingly was reelected.

Mr. Speaker, BEN CRAVENS served in the Sixtieth Congress with other able men from Arkansas. There were Hon. Robert Bruce Macon, Hon. William A. Oldfield, Hon. Charles Floyd, Hon. Charles Chester Reid, Hon. Joseph Taylor Robinson, and Hon. Robert Minor Wallace, all of whom left the imprint of their work in the records of the American Congress. At that time there served in the Senate Hon. James P. Clarke, President pro tempore, and a leader in the Senate and a former Governor of Arkansas. There also served Hon. Jeff Davis, three times Governor of Arkansas.

Mr. Speaker, BEN CRAVENS was an unobtrusive man. He did not seek publicity for publicity's sake. He was frank, honest, and sincere in everything he said or did. His time was assiduously and quietly employed in the work of his office and in the discharge of his part of the legislative business, and was particularly concerned in every matter pertaining to, or in anywise affecting, his district and State. He was not influenced by group or other pressure, and exercised his own judgment after thoughtful, careful study and consideration, regardless of the consequences politically. His sentiments and opinions were voiced courageously with the public interest foremost in mind.

BEN CRAVENS had faith and confidence in the good judgment, intelligence, and common sense of the common man, and the common man had great faith and trust in the intelligence and good judgment of the one about whom I am now speaking. He was dean in the Congress of the Arkansas delegation at the time of his death. The service in Congress of the rest of us from Arkansas has been of short duration, but each of us owes a debt of gratitude to our departed colleague for his many courtesies and the considerate attention shown us, as well as for his wise counsel. He was at all times ready and willing to consult with, advise, and assist us.

Mr. Speaker, I was honored by being selected as one of the Members to accompany the remains of our departed colleague to his native home and city of Fort Smith. Upon arrival at our destination, we found not only the many friends of his home but many from over his district and our State present to render a last sad tribute to his life and remains. The funeral services were held in his home. The streets and walks were filled and lined with many hundreds of his friends who could not enter, and the flowers filled the room and the home with their sweetness and messages of love, esteem, respect, and admiration for our departed colleague. At the grave we consigned his body to the tomb, full well knowing that—

> Dust thou art to dust returneth,
> Was not spoken of the soul.

I trust, Mr. Speaker, the grief of his beloved wife, splendid son and fine daughter, as well as the sorrow of his many friends, will be partially appeased and softened by the modest pride, which they may justly take, in the memory of a husband, father, and friend, who was so beloved, and always so devoted to the upright, real, honorable, and straightforward things of life.

Mr. Speaker, Hon. BEN CRAVENS made no pretentions. He was what he was. It can well be said of him that he was a—

> Statesman, yet a friend of truth. Of soul sincere,
> In action faithful, and in honor clear;
> Who broke no promise, served no private ends.

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. CHARLES KRAMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. KRAMER. Mr. Speaker, it is a solemn occasion to assemble in tribute to the memory of our departed colleagues and to eulogize and scatter a few flowers on the pathway of memory.

We bow in humble submission to the majesty of death, and we genuinely mourned when the grim messenger called to our Father's house our beloved colleague CHALES J. COLDEN. Charlie was a man of ability and honor, and he gave his health in the service of his congressional district. He received earthly honors in his election to Congress, but he has been beckoned to a greater reward than that conceived for him by his fellow men.

Charlie was a devoted husband, a fine father, and a true and faithful friend. These are simple titles, yet are they not the grandest titles a man can have?

It was my privilege and pleasure to make the acquaintance of Charlie shortly after our mutual election to Congress in 1933, and I valued his friendship highly. To us mortals it seems that the link of human friendship is broken all too soon, and on April 15, 1938, our Father called Charlie up the golden stairway to his heavenly reward. His earthly work had been well done.

Charlie was genuine. There was no affectation in his speech, in his manner, nor in his efforts to serve his people well. As we turn back the pages of memory, in fancy we see him and other departed colleagues as we knew them in the days of their health and strength, which they gave in full measure in the performance of their duties.

Death is universal and we all must some day answer its summons. There will be no earthly things to stimulate or depress us, and how insignificant then will seem our earthly accomplishments. Our faith in immortality tells us that we shall some day meet again, and when I last look upon the pallid face of departed colleagues, friends, and loved ones, I receive the sweet consolation that we shall some day meet again. Truly may it be said of CHARLES J. COLDEN:

He is not dead but sleeps;
Such souls forever live.

Stephen Warfield Gambrill

MEMORIAL ADDRESS
OF
HON. LANSDALE G. SASSCER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. STEPHEN WARFIELD GAMBRILL, late a Representative from the State of Maryland

Mr. SASSCER. Mr. Speaker, we gather to pay our respects to the life and memory of your late colleague and my predecessor of the Fifth Congressional District of Maryland, the Honorable STEPHEN WARFIELD GAMBRILL.

Born and raised among the beautiful hills of Howard County, he was from a family long prominent in the official life of our State. He inherited from distinguished statesmen, whose services to Maryland are traditional, an interest in public and civic affairs and an affection for and loyalty to its people.

My colleagues of the Maryland delegation have called attention to his distinguished service since entering the Congress of the United States. I shall therefore reach back to my association with him in the Senate of Maryland before he entered this body. There I saw him come to the State senate from the floor leadership of the house of delegates where, in the prime of life and fullness of his physical strength, and amid the confidence of friends and admirers, he was the radiantly outstanding member of that session—a debater of tremendous force and a man of undaunted courage. After he entered into the Maryland Senate I became more closely associated with him, and there we formed a personal and political friendship which lasted down through the years until death removed from the Fifth Congressional District of Maryland an able and valued public servant and took from me a close and honored friend.

To one who knew him during his service at Annapolis there arises visions of his enthusiasm, force, sound judgment, and prudent counsel. Vigorous energy and tenacity of purpose so distinguished him in the midday of his life that he was soon called to represent his people in the Congress. His services here have been replete with self-sacrifice and accomplishments, and even when his health and strength began to yield his desire to meet the obligations which devolved upon him was such that his undaunted spirit kept him performing his public duties with courage and fidelity to the end.

When we contemplate the strong points that stood out so prominently in his character it can well be said: Peace and rest to his soul and honor to his memory.

More New Frontiers of Science—Scientific Inventions and Processes and Some of Their Social and Economic Effects

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 10, 1939

RADIO ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, JUNE 9, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following radio speech which I delivered over the national network of the Mutual Broadcasting System from station WOL, Washington, D. C., on Friday evening, June 9, 1939:

Friends of the radio audience, I am again grateful to the Mutual network for making it possible for me to address you this evening. In this continuation of my discussion of the effects of invention and science upon the social and economic fabric of our society, I desire to point out that the monotonous jobs displaced by machines in the past have been those that could be entirely controlled by other perceiving senses than seeing. Machines could duplicate man's power to feel form, size, weight, temperature, pressure, etc., but no machine could see. A host of simple jobs that required seeing, still have to be done by men instead of machines, however monotonous. Therefore, the development of a device which can see, namely, the photoelectric cell, carries with it a vast range of future economic effects. The photoelectric cell is doing an increasing number of tasks better than the most keen-eyed, skillful, faithful, and tireless workman. And it brings electrical action on what it sees, instantly, at any distance, and 24 hours a day if desired. The photoelectric cell has been set already to a remarkable variety of tasks. It makes a particularly good combination with the vacuum tube and various automatic registering and controlling devices, making possible continuous operation and

distant control. It seems reasonable to expect a rapid and wide application of this mechanism, with the result of ending many a dull job, speeding manufacture, improving quality, and encouraging multiple shifts and processes.

Not only can machines see, they can also hear. The implications of the televox and acoustical equipment, which might be called the electric ear are, however, probably much less varied and important than those of the photoelectric cell. Moreover, much of the acoustical development is too near the laboratory to justify one's forecasting effects with the same confidence as in the case of the electric eye. Yet the new principle is a dramatic one. Sounds can be sifted out and selectively heard by novel devices, so that a door has been fitted to open only to the words "open sesame," and machinery to stop on "hearing" the cry "Help." Televox exemplifies another idea likely to have extension, that of using ordinary telephone lines to convey sounds which can actuate distant mechanisms.

It seems likely that such electrical ears and voices frequently will fit well into such complexes as have been indicated for the electric eye. They will save employment of observers at scattered posts and listen for particular sounds which indicate how a process is going, or for sound signals. They will actuate appropriate controls, promote safety, give directions, and perhaps even distinguish individuals—accomplishments all demonstrated today. Again, there should result much reduction of monotous jobs, and increased demand for electricians, inspectors, and skilled mechanics instead of mere operatives.

Timing devices increasingly used, the prerecording oscillograph, and numerous other machines can almost parallel powers of the human mind. It appears that no limit can be set to the work which might be taken over by machinery, although the rule holds that it is the most simple and most monotonous tasks, whether physical or mental, that are the most readily replaceable through invention. While such tasks are being mechanized, new monotonous tasks are being created through subdivision of old jobs whose product has become available for larger-scale production.

A socially important influence of the increased use of electricity, especially as power plants tend to be concentrated into great generating stations often outside the city, is to reduce the sooty smoke in cities. The sulphur dioxide in coal smoke, however, which eats impartially clothes and paper, throats, buildings, and vegetation, is not removed by the better burning in large furnaces, but only by costly smoke purification or removal of the plant. Numerous remedies, especially the fast growing domestic mechanical stoker, are available to reduce greatly the various evils of smoke, but require social enforcement. For smoke always hurts the community more than it hurts the owner of the chimney.

Among important technological improvements in the manufacturing processes are those which alter the working conditions of labor, although they may or may not replace labor. Two examples of such developments which have implications for the future are inventions pertaining to lighting and air conditioning in factories. The increasing efficiency and economy of artificial light encourage the trend toward the use of night shifts—a trend which, of course, was interrupted during the depression. Transportation, printing, mining, and chemical and metallurgical works have long used multiple shifts. The stream of new mechanical inventions, which hasten the obsolescence of machinery in manufacturing generally, encourages more intensive working than before in order to wear out equipment before it is obsolete.

Air conditioning, which was first applied in factories for the benefit of the goods, is likely to be extended gradually as it becomes cheaper and as more thought is given to the efficiency and comfort of the worker. With air conditioning also will come better insulation against noise.

The immediate developments in commercial aviation are likely to be stupendous. Pan-American Airways are inaugurating regular plane service between the United States and Europe. Two round trips weekly between England and America are planned at first, and within a year two round trips a week between New York and Marseilles. The schedules promise 19-hour service between New York and London in the Boeing Stratoliner, a 200-mile-an-hour four-engined landplane, whose sealed cabin will allow not only stratosphere flight but will keep the plane afloat in the event of a forced landing at sea.

New York-London service by the northern route in the Boeing clipper will take 24½ hours. The return trip will take slightly longer because of the prevailing winds. It will be flown over the northern route, via Newfoundland and Ireland, only during the summer months. The southern route, via the Azores and Lisbon to Marseilles in the summer and to London as well in the winter, will take 43 hours.

But the social and economic changes to follow the shrinking of the globe by long-distance aviation are, in some respects, less significant than the changes in habits of life which would result if the promises of steep-flight aircraft come to realization. Expert opinion is divided; every word here stated about such craft as the helicopter and the autogiro must be accepted with the reservation that many years may elapse before the technical problems, such as that of providing adequate forward speed, have been solved. Yet the winged horse which could leap into the air, soar or hover in the skies, and drop gently to a constricted landing spot, is no chimera—experimentally, at least, it has arrived. The familiar autogiro has recently been developed on an experimental basis for a take-off with no run at all. The helicopter, which screws itself into the air, first sketched by Leonardo da Vinci, has been made to rise and fly about under control, although its flight is as yet only a crude beginning. And there are other types, for example, the vertaplane, which is a biplane whose upper wing is rotated for reconnoitering and landing but fixed for efficient ordinary flight. It has been flown experimentally in both forms.

While private planes within another decade probably will be used by the ten thousands, more time doubtless will elapse before they become serious competitors to the private automobile. The steep-flight principle, with its adaptation to landing on one's own office roof, back yard, or favored spot for recreation, and with its relative safety, may some day provide the most popular aircraft for amateurs. Types of autogiro or airplane already demonstrated, which can land on any usable field, fold up like a beetle, and proceed along the highways like an automobile, to be housed in the home garage, have intriguing recreation possibilities.

The lighting of highways with sodium or high-pressure mercury lamps, if it proves extensively feasible, not only would help safety and provide 24-hour capacity for highways, but also would fit in with a rural electrification program, since the same costly line can serve the highway and the adjacent rural areas.

In the railways we find a vast industry that lagged in applying new technological aids, but is now making striking moves to match its competitors. Bus coordination, motor-rail cars for local service, faster expresses, electrification of the few most-used lines, and the introduction of new luxuries will help the fast traffic. Electrification and dieselization of terminal traffic are making cities less smoky and noisy, and may tend, as in New York, to bring leading business districts nearer to the railway station. Faster and much longer runs by all kinds of locomotives tend to undermine the division point type of town.

Ocean ships will be safer through perfection of many minor inventions for fire protection, echo sounding, and so forth, and especially through means for overcoming fog, the principal source of the remaining marine disasters. Seventeen of the twenty-five different remedies against fog listed for aircraft are applicable, with modifications, to ships. Usually they are easier to use afloat, since the ships can contain, pay for, and take time to use more apparatus. Particularly promising, and perhaps some day needing legislative enforcement, are the uses of infrared light, with the electron telescope, for sighting through fog the sun, the signal lights and hot funnels of an approaching ship, and lights or special signals from lighthouses. Lighthouses and foghorn stations may eventually be transformed into radio, infrared, and underwater-sound stations.

A major social significance of all inventions for travel and fast transport is that they also serve for communication. The people who travel, as tourists, businessmen, and immigrants, carry the ideas of one region to another. Swift movement of goods is commonly of letters, printed ideas, examples of art, or highly manufactured goods which serve often as samples or suggestions. National business and political organization, as against local and State, with the accompaniment of national ways of thinking, are built up by every improvement of long-distance transport and communication.

We have here in America sufficient natural resources, raw materials, electrical power, inventive genius, skilled labor, and everything that is required to build the grandest civilization in human history and make it possible and certain for every man, woman, and child to live in comfort, even in luxury, and enjoy abundant prosperity, security, and happiness. Any person of average intelligence who will make only a cursory study of present technological trends and their social implications will be forced to the conclusion that the scientists and engineers are absolutely correct in their contention that we in America stand upon the threshold of the greatest era of social and economic development and progress ever experienced by mankind. If we apply the new secrets, formulas, and processes of modern science and chemistry in the manufacture of goods and the production of foodstuffs, we can give immediate employment to every idle person in the country and keep them steadily employed for decades to rebuild America by introducing the latest approved scientific methods in our industrial and agricultural structure.

Thank you and good night.

Annual Convention of Utah Chapter, National Association of Postmasters

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 22, 1939

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Postmaster General Farley at the annual convention of the Utah Chapter of the National Association of Postmasters, held at Salt Lake City, Utah, Monday evening, May 22, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure for me to attend meetings of postal people, and I appreciate the opportunity of being with the postmasters of Utah this evening.

It has been my policy as Postmaster General to provide the maximum service consistent with reasonable expectation of the patrons at the minimum cost. I do not believe that the Department should be conducted for profit. Its principal purpose is to serve the people efficiently, but it should be managed in a businesslike way and should not be run at a loss. In carrying out those policies I have had the wholehearted support of postmasters everywhere, for which I am deeply grateful. You men and women who have been selected for these important places stand well in your communities. You were appointed by the President and, as stated in your commission, he reposes special trust and confidence in your intelligence, diligence, and discretion. And I can say to you that neither the President nor I have had cause for regretting the confidence reposed in you. We have a fine group of postmasters who, with but few exceptions, are giving close personal attention to their duties.

The management of the Postal Service requires great resourcefulness, for it is a complicated business upon which business, prosperity, and social happiness of the public is dependent to a large extent. It is a most interesting service; bigger than any individual in it; bigger than the Postmaster General and all of his staff, and all of the postmasters. Neither you nor I nor anyone else connected with it has a right to impede its progress. It does not belong to us. We are fortunate in being temporarily placed in charge of its management and operation. I say temporarily because no matter how long we stay our service will constitute only a fractional part of the life and history of this fine communication system.

No one can learn all there is to be known about the Postal Service in 4 years, 8 years, 12 years—as a matter of fact, I doubt very much that any of the postal experts who have been associated with it throughout their adult lives would claim that they have mastered all of the complex details. I do not feel, however, that either you or I should be so greatly concerned about that particular phase of the problem. The Department itself, and practically every local post-office organization of any size finds available in its personnel many men and women of long experience, experts in all of its branches—not any one individual who has complete and full knowledge, but many individuals whose cumulative knowledge and coordinated experiences under sensible and efficient leadership, give us an organization fully able to cope with any problem presented.

The important thing for the postmaster to remember is that he is the manager of the postal establishment in his community. In the smaller offices he must apply himself industriously to the task of quickly acquiring a considerable knowledge, as he is called upon to actually perform a good portion of the day's work in the actual handling of the mails. But regardless of the size of the post office and regardless of its class, from the small office located at the crossroads in a sparsely settled section, to the largest office in the Nation, the postmaster is an important official.

The Postal Service is a friendly organization. Notwithstanding the development of machinery and modern facilities to assist in the transportation of mail matter, we still depend and always will depend on the loyal, intelligent service of human beings to do the real work of distributing the mail and delivering the mail. Postal employees are honest, intelligent, and patriotic. When they are called upon to render a public service they respond with enthusiasm.

Experiences of the past few years show that when there is a real job to be done affecting all our citizens, the post office is asked to share in the task. I am sure that you recall with interest the handling of the bonus bonds, the registration of workers under the Social Security Act, and the census of the unemployed; and, last but not least, our continued activity in the sale of savings bonds for the Treasury. We appreciate the high regard in which we are held by the President, the Congress, and citizens generally. We are always glad to assume the task assigned to us, and, thanks to you good people in the field service, we always complete those tasks quickly and cheerfully.

It would be ridiculous for anyone to say that this fine spirit of cooperation and loyalty to the public has existed only under this administration. As a matter of fact, I know that it has always existed in the Postal Service. I also know and am pleased to say that the policies adopted by this administration have done much to encourage this spirit of loyalty and to continue and enhance the good will existing between the management and the personnel. Obviously, service to the public is of paramount importance. That is our first objective and, in fact, our first duty. We are obliged to do our work quickly and efficiently. Business and industry depend on us for that, and every citizen in America should have full confidence in our ability to transmit their messages expeditiously and with safety; but our responsibility does not end there. The management also has an obligation to the rank and file.

It is our duty to see that the rights of the employees are protected, that the men and women who have come into this Department to take up their careers, to make this their life work, shall have the full fruits of their labors. It is our job to see that they are properly rewarded for meritorious service. That is good business and good, common sense. I think postal people should be happy. They are well treated, and as long as I am Postmaster General it is my purpose to do everything within my power to protect your interests and the interest of everyone connected with this great organization. Under this administration we have secured legislation calculated to insure life tenure for postmasters who render satisfactory service, which is further evidence of the desire of this administration to improve the public service and reward merit.

We have not only devoted our attention to an improved service and to protecting the rights of the employees, but we have also given a great deal of attention to the most important matter of protecting the pocketbooks of the taxpayers. I said a few moments ago that we should render good service at the minimum of cost, and that the Postal Establishment should not be operated at a loss. That is a policy that I adopted and made known to my executive staff soon after I was appointed Postmaster General, and we have rigidly adhered to that policy. Early in this administration surveys convinced us that the 3-cent letter rate for local delivery was a higher rate than the traffic could fairly be expected to bear. In other words, our studies convinced us that a 2-cent charge on letters deposited locally for local delivery, on which there was no transportation charge other than local vehicle transportation, was equitable, both to the users of the service and to the Department. Therefore, we recommended the reduction in that rate from 3 cents to 2 cents.

Similar studies applied to the handling of letters for out-of-town delivery convinced us with equal force that considering all handling charges, including transportation, a 3-cent charge for this service was eminently fair and just, both to the user and to the Department. For that reason I have consistently recommended that the 3-cent postage rate for out-of-town letters and first-class matter be continued until such time as the Department might increase its volume or find other sources of revenue that would make up for the loss sustained from a further reduction in first-class postage rates. The important matters for consideration in arriving at this conclusion are—first—that the 3-cent rate is a nominal charge, in fact ridiculously low when compared with the service rendered. Second—that by charging this rate the management of the Postal Service can live within its budget for that part of its service which it renders for hire and still provide good working conditions and good pay for its employees. Third—that regardless of the opinions that anyone may hold on the subject, the fact remains that if the first-class letter rate for out-of-town mailings should be reduced at this time a deficit of considerable size would result, and this deficit would be paid out of the general funds of the Treasury, which funds are supplied by the taxpayers.

Business is better and I am convinced that it will continue to get better in commerce and industry. Of course, increased business and increased revenues that come to the postal service involve increased expenditures, principally in wages, but under careful management and with steady improvement in methods and facilities, and with increased production on the part of our employees, which I am happy to say they are giving us in generous measure, and with the present 3-cent letter rate in effect, we are able to devote to improvements in service a part of the increased revenues. For example: in the extension of air mail across the Atlantic to Europe.

As you know, Congress, and not the Postmaster General, fixes the rates of postage. You may be assured, and the public may be assured, that I shall make no recommendations to the Congress with respect to postage rates until I am doubly sure that such recommendations are based on a careful study which has given proper weight to the interest of all concerned. I have recently recommended to the Congress a continuance of the 3-cent letter rate for out-of-town first-class matter, and I am confident that the recommendation will be approved.

To sum it all up, under the present first-class rate those who use the Postal Service pay for its maintenance, and I am quite sure that an overwhelming majority of the people favor its continuance on that basis.

In conclusion, may I say again that I appreciate the opportunity for this visit with you, and bespeak your continued cooperation in the further development of the United States Postal Service.

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, JUNE 10, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on June

10, by the junior Senator for North Carolina [Mr. REYNOLDS] on the subject of foreign affairs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of my radio audience, tonight the eyes of the world are on the United States. People of all nations see our country as the last stronghold of free democracy. It is a democracy born in bloodshed and starvation. It was nurtured on stanch ideals of free men whose first thought was principles. It has stood the test of time. It has been rocked by the storms of depression and disaster. But our foundation is firm. As a result we have come nearer to that utopia of good government, free action, and free thinking than any other people on the face of the globe.

I speak to you tonight as one vitally interested in preserving what we have built. It is my one and only interest. I address you in a spirit of gratitude for what my country has given me. I speak in appreciation for the opportunities I have been afforded. Thus it is only natural, being devoted to my country, that I should speak in defense of its ideals and its institutions—those things which have made it possible for America to move onward and upward. We should all be proud of the progress we have made while empires all around us are tottering and crashing.

It is true that I espouse a cause—the cause of honest Americanism. I have consistently over a period of many years—long before I entered the Senate—espoused this cause. In doing so I have incurred the wrath of many. I know the censure of those who advocate policies contrary to American principles. I have felt the ill will of those who sow the seeds of foreign propaganda. I have been urged to let things rock along with the hope that time would bring about improvement. Needless to say, no other course but the one I am following represents true patriotism.

Many years before I entered the United States Senate I became convinced that there was a vital need for the adoption of certain Federal policies. What are these deep, dark things I advocate?

I advocate that we keep America out of war.

I favor the registration and fingerprinting of all aliens—foreign-born who have not declared their intention to become American citizens.

I urge that all immigration be stopped for the next 10 years. In other words, the closing of all border gates to foreign hordes until such time as we can feed and clothe and provide jobs for our own people.

I seek the deportation of all criminal and undesirable aliens, those who by acts of their own have sacrificed the right to live in our country.

I want to see banished all foreign "isms"—groups which seek to undermine, create disrespect for, and throw rocks at everything we hold sacred and which we have allowed them the privilege to enjoy.

These things I have enumerated are the basic principles of the cause for which I am carrying the banner. As a result, I am accused of being pro-Hitler and pro-everything. But I say quite frankly and quite earnestly that if Hitler, Mussolini, or any other dictator or potentate, can find comfort in the objectives of Americanism I seek, they are welcome to that comfort.

Shortly after the World War, former President Hoover, while serving as United States Food Commissioner, wrote a very graphic letter to President Wilson. It was perhaps the soundest suggestion he ever made in the interest of the American people. He warned the President that following the World War attempts would be made to involve the United States in every political intrigue in Europe. Mr. Hoover recommended that the United States get out of Europe "lock, stock, and barrel," and leave foreign powers alone to carry out their international intrigues.

Unfortunately the advice of Mr. Hoover went unheeded. But the 20 years which have passed since have proven that his suggestions should have been faithfully followed.

The very basis of my program and my cause is to keep America out of war. We can do this only by attending to our own knitting.

I say let's solve American problems first, provide employment for our own people, and assure a future for our own children first. Then when we have done this in the American way we may be in a position to help police the world. I doubt it. But I say in all candor let's straighten up our own living room before we go out to help the neighbors. We've got a mighty big job to do right here at home.

I believe in the good-neighbor policy. I believe in it very firmly. But I do not believe that good neighbors are those who are eternally borrowing your sugar, your clothes, and your lawn mower—never returning anything—and will slander and abuse you when you have nothing more to lend or give.

Only recently it was charged on the floor of the House that the Latin-American countries are trying to blackmail the United States by using foreign concessions as a threat in securing what they want. I am not convinced that the charge is true. Yet if it is true, then we are correct in applying the term "larceny" to what European powers have done in their monetary transactions with America.

I remarked that I have been severely censured for the policies I advocate. I welcome this censure. In fact, I am proud to be censured or even condemned because I dare to speak out in defense of American ideals and institutions rather than to couch my language in meaningless political phrases.

It is, of course, sometimes difficult to stand up and fight for a cause you believe to be right. It would be easier to sit idly by and hope. Too many people today are merely hoping. But I have never been one to seek ease and rest when it comes at the price of abandoning a course which I have charted.

It is only necessary to read the daily press to see the seeds of discord and propaganda which are threatening everything America represents. They are the real threats to our democratic system. It is unfortunate that we in America have always subjected to ridicule and criticism those who have dared to steer a course away from that which has been accepted. Throughout history, from the days of Columbus to the days of Patrick Henry and since, we have termed as ill-advised those who have sought to change things which should be changed.

You may ask what is my objective—what I am seeking. My answer is, Not anything for myself. I am convinced that our immigration policies, our readiness to jump at the whims of foreign potentates, and our failure to protect American jobs for American citizens represent basic causes for the economic conditions confronting us today. The cause I advocate is not new so far as I am concerned. I sponsored it as one of the first things I did when I entered the Senate. Since that time I have gone before the voters in my State of North Carolina for reelection, and they had the opportunity to approve or reject everything I represent. I assume, of course, that my reelection meant approval.

It is fortunate for the future of America that we have the radio. It enables men, women, and children everywhere to gain first-hand information. It gives people an opportunity to hear both sides of every question without bias or color. It is beyond possibility for those in charge of radio to transmit to listeners anything but what a speaker says.

Unfortunately, this is not true of some other channels of public information. These have allowed a few to distort facts, misinterpret statements, dodge real issues, and give their own views and ideas as the thoughts of others. I need only refer to an article in a national magazine this week written by an able secretary of the President of the United States to offer proof of the influence and effects of unwise propaganda and misinformation.

But I am an optimist by nature. I believe strongly and firmly in the principle that once the American people know the facts they will find their own way. I am only concerned that they get the facts.

At this season of the year many millions of fine young Americans are graduating from high schools and colleges. They are ready to face the almost hopeless quest for jobs. I say this, not to discourage them but simply to state the facts. Surely it is not patriotic for us to attempt to provide jobs for foreigners when we do not have them for our own American youth.

America is very prone to emotionalism. A band and a loud-voiced speaker can start a parade in behalf of anything. I have queried members of groups which have come to Washington seeking specific things, only to find that many of them did not know what they came for, but simply had a chance for a free ride. So long as groups of doubtful vintage are allowed to persist in unpatriotic activities, the American people will be taken for a ride.

There are some who differ with me because I am opposed to allowing admission to the United States of 20,000 refugee children from Germany. I would oppose this measure just as strongly if the refugee children came from Sweden, Iceland, Finland, France, or England. My opposition is not due to lack of sympathy for these refugees. I wish that America could offer them refuge. I wish it were in my power to take care of them financially through my own resources.

My heart bleeds for them. Yet if allowed to come to the United States, 10 years from now they will be in competition with 20,000 American children in a search for employment which we do not have to offer now to our own.

If we were on the way to giving jobs to the 12,000,000 now unemployed, with reason to expect that 10 years from now they would have jobs, I would be entirely sympathetic to helping youngsters from abroad. I would much prefer to see these children coming in and growing up in the American way than to continue the coddling of criminal aliens who by all reason and law should now be on the high seas headed east.

In my brief talk tonight I have tried to leave with you some basic thoughts which I believe to be in the best interest of America. I would like to repeat the principles I advocate:

I advocate that we keep America out of war.

I favor the registration and fingerprinting of all aliens—foreign-born who have not declared their intention to become American citizens.

I urge that all immigration be stopped for the next 10 years. In other words, the closing of all border gates to foreign hordes until such time as we can feed and clothe and provide jobs for our own people.

I seek the deportation of all criminal and undesirable aliens, those who by their own acts have sacrificed the right to live in our country.

In conclusion, I would like to ask earnest consideration of this program by every patriotic American. I know it will not have even a fair appraisal by those who seek only to gain by living here and give nothing in return. I would like to have you write to me, ROBERT R. REYNOLDS, United States Senator, at the Senate Office Building, here in Washington.

I will be happy to send you copies of my bills or a copy of this speech. I would like to have your help. I'd like for each one of you to write your Congressman and your two United States Senators, urging them to support my program, which program is dedicated to "our country, our citizens, first."

Apex Hosiery Case

EXTENSION OF REMARKS
OF
HON. LEWIS B. SCHWELLENBACH
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, June 12, 1939

LETTER FROM HON. GEORGE W. NORRIS, OF NEBRASKA

Mr. SCHWELLENBACH. Mr. President, there has occurred a widespread interest in the action brought by the Apex Hosiery Co. against the Philadelphia local of the Hosiery Union. This suit is brought under the treble-damages section of the Sherman Antitrust Act.

On May 19, 1939, the senior Senator from Nebraska [Mr. NORRIS] wrote to Mr. Gardner Jackson, of Labor's Non-Partisan League, a very interesting and informative letter concerning this action. I ask consent that it be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I have given consideration to your request that I give you a statement as to my opinion of the Apex Hosiery case, *Apex Hosiery Co. v. Leader et al.*

The decision in this case awarded treble damages amounting to $711,932.55 and costs, and, in addition thereto, an attorney's fee of $25,000, against the Philadelphia branch of the Hosiery Union. This case was the result of a strike occurring in May and June 1937, and the penalty of treble damages arises out of the application of the Sherman Antitrust Act to this strike by the court which held that the stoppage of production caused by the strike constituted a "conspiracy in restraint of trade" within the meaning of this act.

This strike was what is ordinarily known as a "sit-down" strike, and I desire to say at the beginning that I do not approve of the "sit-down" strike. I believe it is wrong and that it is an illegal way of seeking redress on the part of labor. However, it is perfectly plain that this decision, if allowed to stand, means the destruction and ruination of organized labor, and the nullification of all the laws and decisions of our courts that have upheld labor in its right to organize for collective bargaining and for its protection against organized monopoly.

Of course, it goes without saying that the decision would destroy the local union entirely. No local union could pay the immense amount of damages included in this judgment. While the damage to the local union is indefensible and means its total destruction, yet there is a greater damage than this involved in the case. All organizations of laboring men and women, all collective bargaining in all industries in all parts of the United States, would be injured and eventually destroyed, if this decision stands. The threat of being thus penalized for ordinary trade-union activities, not alone for strikes, but for any concerted action which might be construed as a "conspiracy in restraint of trade" would hang over the head of every American union, officials and members alike. This would paralyze collective bargaining and labor organizations throughout the entire country.

The damages awarded in this case were not compensation for the difference between a sit-down strike and an ordinary strike, but these damages were awarded because of the alleged restraint upon commerce. These imaginary damages would have been just the same, regardless of the kind of strike that occurred. We are thus clearly faced with a threat of the prevention of all those activities which are implied in collective bargaining. It follows, therefore, that there could be no collective bargaining without their being penalized to the extent of their total destruction. The decision is therefore not based upon the type of strike, nor upon the property damage. The company had remedies available under common law in the State courts to meet these problems.

The company began action in the Federal District Court of Eastern Pennsylvania for an injunction on the grounds that the strike constituted a violation of the Sherman Act. The Federal district court dismissed the bill. It found no violation of the Sherman Act.

The company, however, appealed to the Third Federal Circuit Court of Appeals and the circuit court reversed the district court and sustained the company's action. The strikers complied instantly with the order of the circuit court and left the plant. Less than a month later, in July 1937, the strike was settled and an agreement was entered into between the company and the union, which agreement has since been renewed, and the company is now operating under a contract with the union running until September 1, 1941.

The union, when this judgment was rendered, filed a petition for a writ of certiorari in the United States Supreme Court. In its reply the company asserted the case to be moot since the strikers had left the plant and the strike was settled. The Supreme Court, however, issued an order allowing the writ of certiorari, reversed the decree of the circuit court of appeals, and sent the case back to the district court with instructions to vacate the injunction and dismiss the bill of complaint. This action of the Supreme Court did not, according to the belief of the district court, remove the circuit-court decision as a binding precedent. Consequently, in the damage suit instituted shortly after the injunction proceedings began, the district court, charging the jury is accordance with the decision of the circuit court, stated that the very fact of the strike in the Apex plant raised a conclusive presumption of an intention to restrain commerce within the meaning of the Sherman Act. This left the jury with the single question as to whether the union authorized the strike and the amount of damage within the meaning of the Sherman Act. In the motion to set aside the judgment, the district court reiterated its former position that no violation of the Sherman Act had taken place, but that the court felt bound by the former decision of the Third Circuit Court of Appeals.

There is no doubt but that the Sherman Act was not intended to apply and cannot properly be applied to the activities of trade-unions. That point has been so clearly decided, not only by the Clayton Act, but also by subsequent court decisions, including the decisions of the Supreme Court, as to be beyond discussion or doubt.

But if there were still a possibility of holding trade-union activities to be a "conspiracy" within the meaning of the Sherman Act, it would seem that this legislation of the past several years would have ended that possibility. Congress has declared that not only do we not outlaw collective bargaining, but that, instead, we approve and desire to encourage such activities. The terms of the National Labor Relations Act in its declaration of policy are a full and unequivocal endorsement of labor unions and collective bargaining, and whatever lingering doubt there may be as to the intention of Congress to consider trade-union activities within the classification of "restraint of trade" within the meaning of the Sherman Act is completely removed by the declaration of policy in section 1 of the National Labor Relations Act.

In spite of that declaration of policy, a Federal court still finds it possible to hold that a strike is a "conspiracy in restraint of trade," and awards a staggering total of damages against a labor union for conducting such a strike.

Labor has the right to organize. It has been given encouragement by acts of Congress to so organize in order to meet organizations of monopolized capital. Strikes are undesirable. They are injurious both to labor and to capital, and to the public as well, but the right to strike is fundamental, and without this right labor unions have no way of enforcing their demands for living wages or for the improvement of their social and economic condition, and are absolutely helpless. Unions and such organizations, if this right cannot be preserved, had better dissolve at once. There is no way left for them to preserve their liberties and their rights as individuals, to have anything to say about their salaries, or to object effectively to any rule of organized wealth that affects their living conditions. They are driven into submission by economic conditions over which they have no control, and which drive them into submission regardless of any suffering to them or their families which may be entailed. Without the right to strike, labor is helpless.

Such judgments as that rendered in the Apex case would be a death blow to labor organizations. Such unjust judgments, punishable by unconscionable damages such as those assessed in the Apex case, mean the destruction of collective bargaining, and that means the end of peaceful adjustment of labor disputes.

I do not believe the Supreme Court can affirm this judgment. I do not have any doubt but that the Supreme Court will reverse it. It is unjust and it is contrary to the intention of all acts of Congress of recent years, and, likewise, reverses the practically unanimous decisions of all our courts in sustaining the right of labor to organize and, if necessary, to strike. I cannot conceive of any other outcome of this case when it reaches the Supreme Court.

Army Chief of Staff

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, June 12, 1939

LETTER BY MAJ. GEN. WILLIAM C. RIVERS

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter written by Maj. Gen. William C. Rivers to the editor of the New York Times and printed in that newspaper on Sunday, June 4, 1939.

There being no objection the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of June 4, 1939]

NOT ALL WEST POINTERS—SIX ARMY CHIEFS OF STAFF DID NOT ATTEND THE MILITARY ACADEMY

To the EDITOR OF THE NEW YORK TIMES:

The statement has been made that Brig. Gen. George C. Marshall, recently named Chief of Staff of the Army, is the only officer not a graduate of West Point who has ever been chosen for Chief of Staff with the exception of Gen. Leonard Wood.

The first three Chiefs of Staff were not West Point graduates—Generals S. B. M. Young, Adna R. Chaffee, and John C. Bates. They had as young men performed distinguished service in the Civil War. Major General Wotherspoon was a Chief of Staff who entered the Army from civil life. Therefore, including Generals Wood and Marshall, 6 of our 15 Chiefs of Staff were not trained at the United States Military Academy.

In attaining the rank of full general, General Marshall will pass over 30 or more brigadier generals and major generals. The Elihu Root bill creating the General Staff in 1903 was intended to encourage the selection of younger generals to head the Army. However, as a rule seniority has apparently governed the selections of the Chiefs of Staff. The average age of our 15 Chiefs of Staff is 59 years.

AVAILABLE OFFICERS OLDER

General Marshall, though he was far down the list when chosen, is 58. Brig. Gens. Hugh L. Scott and J. Franklin Bell were the only other Chiefs of Staff taken from the grade of brigadier. General Scott passed over 13 other generals. He was, however, 61 years old at the time. General Bell was 50, General Wood was 49 when he was selected and General MacArthur was 50.

There are at present no young generals available for appointment as Chief of Staff. The 20 major generals of the line in the last available Army list average 61 years; the 49 brigadiers of the line average 59.

The rear admirals are younger; they average about 57 years. The Navy has, however, a superior system of promotion. All the navies of the world and most of the armies save our own select the officers who are to be advanced to a higher grade. Our Army promotes the officers up to the grade of colonel by the routine plan of seniority—the man at the head of a list is advanced to the higher grade when a vacancy occurs. A relatively very small number of officers are denied promotion when they are found to be professionally or physically unfitted. Such men are retired.

Other important countries—19 of them—have an organization for their armed forces which is superior to our own. Each of these nations has a cabinet minister of defense. He controls, coordinates, and inspects the relative efficiency and progress of the three coequal armed branches—the navy, the air force, and the army.

SMALL INTEREST IN BILLS

Several bills have been introduced in Congress for such an organization of our own defense forces. These bills include provisions for a single and homogeneous air force, with its own rules for promotion, pay, and retirement, but they have evoked little interest.

There is a general idea that if war comes the President will control the armed services under some added war powers which Congress may grant. This means that, instead of planning for an efficient organization in peace, the matter will be attempted amid the tremendous confusion of preparations for war. Such vague and hazy notions will result in duplication, waste, and confusion, which could be avoided were the work to be started now.

WILLIAM C. RIVERS,
Major General, United States Army (retired).

NEW YORK, *June 1, 1939.*

The National Youth Administration

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

EDITORIALS FROM WEST VIRGINIA NEWSPAPERS

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD two able editorials which recently appeared in West Virginia newspapers. The first is from the Fairmont Times of Thursday morning, June 8, 1939, and is entitled "The Job N. Y. A. Is Doing." The second is from the Wheeling News-Register of June 8, 1939, and is entitled "Encouraging Youth."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fairmont Times of June 8, 1939]

THE JOB N. Y. A. IS DOING

The appearance here a few days ago of Aubrey Williams, N. Y. A. Administrator, directed some attention to the work being done by his organization in providing work for youths of high-school and college age, and for those who are out of school but without income or means of support.

Our communities have gained far more through the N. Y. A. program than have the youths who are a part of the program. Here in Marion County, at least, the young people have worked hard on public projects and accomplished much despite the fact that their pay has been almost niggardly.

To mention a few direct benefits we have received through the N. Y. A.—

The youth organization has built miles of sidewalks here in Fairmont and Marion County; it has helped build community centers and retaining walls on public construction projects; it has provided playgrounds for many of our schools, the Barrickville athletic field being an example; N. Y. A. now is beautifying the campus of State College; and it is operating the Fairmont City Library. In exchange, the boys and girls are getting slight financial compensation and a chance to learn. In this fiscal year N. Y. A. has involved 15,000 West Virginia youths. It has spent $1,580,000, or approximately $100 a person per year. No one will say that is being extravagant.

But the figure 15,000 doesn't represent nearly all the young men and young women who need to be helped. Glenn Callaghan, a former Marion Countian, who has proven himself an excellent State administrator, estimates there are 80,000 in West Virginia who are eligible for N. Y. A. aid, and that 45,000 of them are from families now earning less than a minimum security wage.

Yet, in view of all that needs to be done along this line, a Congress that seems to have some rather strange ideas about economy is threatening to pare a Presidential appropriation for N. Y. A. from $123,000,000 to $81,000,000.

The President's recommendation represents an increase over what N. Y. A. has had to work with this year; and while the sum he proposes still is far from adequate, it would be a step in the right direction. But if the sum is cut $42,000,000, as some solons propose, it is going to directly affect hundreds of thousands of youths who now are looking to the Federal Government to help them earn a few dollars and an education.

We think N. Y. A. represents one of the best efforts of the New Deal to date. It should be expanded rather than curtailed.

[From the Wheeling News-Register of June 8, 1939]

ENCOURAGING YOUTH

There are 4,000,000 youths in the Nation who are unemployed and 80,000 of them between the ages of 18 and 25 are in West Virginia.

President Roosevelt has requested Congress to appropriate $123,000,000 for the National Youth Administration the ensuing year.

If Congress approves that appropriation, it will give the N. Y. A. an opportunity to broaden its field in training the youth that is the future backbone of the Nation.

Three main features of the program include employment of youth out of school on work projects, resident training centers in which N. Y. A. attempts to ascertain the type of work for which youth is best suited, and student aid whereby needy high-school, college, and graduate students are enabled to continue in school.

Of all Government movements, none is more worth while than the Youth Administration. Every dollar spent in this direction will come back a hundredfold in keeping kindled the spirit and courage of our youth.

The N. Y. A. Slash

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

ARTICLE BY ERNEST LINDLEY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Post of yesterday, by Mr. Ernest Lindley, entitled "The N. Y. A. Slash."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of June 11, 1939]

THE N. Y. A. SLASH—THE PROBLEM OF UNEMPLOYED YOUTH

(By Ernest Lindley)

A House Subcommittee on Appropriations has been applying the meat ax to the National Youth Administration appropriation and the W. P. A. set-up for next year.

It has slashed more than one-third from the $123,000,000 which the President recommended for N. Y. A. next year. The sum of $81,000,000 has been agreed upon in the subcommittee. This is $6,000,000 more than N. Y. A. received for the current fiscal year, and, having won a small increase, the administration supporters in the subcommittee doubtless felt justified in promising—as they are reported to have done—not to challenge the subcommittee's report when it comes before the full Appropriations Committee.

It is an excellent testimonial to N. Y. A. that a subcommittee which is dominated by the idea of economy at any cost to the Nation, felt compelled to grant this small increase. But even the sum asked by the President was trifling in comparison with the need for the type of work done by N. Y. A.

More than one-third of the whole unemployment problem is among young people 16 to 24 years of age. In this age group are more than 21,000,000 people.

More than 5,000,000 are attending school and colleges.

More than 3,000,000—mostly girls—are at home or are not seeking work.

Almost 8,000,000 are privately employed.

But more than 4,000,000 who want work are totally unemployed by private industry, and 1,500,000 or more are employed only part time.

Millions of them are caught in idleness in a great gap between school and work. A large percentage of them are wholly lacking in vocational skills—including the domestic skills which were once taught in the home to young women in preparation for their careers as housewives and mothers.

The two main activities of N. Y. A. are to help young people to remain in high school and college through part-time jobs, and to provide part-time work and training for young people who have left school but have not found private employment. In this program N. Y. A. has worked in the closest collaboration with authorities and organizations of all types. The aid to college and high-school students is administered by the authorities in the individual colleges and high schools. The out-of-school work program has elicited cooperation from voluntary organizations, such as local businessmen's clubs as well as public agencies.

The cost has been incredibly small. On the work program for out-of-school youth, the over-all annual cost to the Federal Government has been about $233 per youth—less than one-fourth the cost of the C. C. C. To keep needy young people in high school, N. Y. A. has been expending about $40 a year per youth—usually just enough for carfare, books, and maybe a pair of shoes and a sweater. To enable young people to go to college, it has been spending about $105 per year per young person.

This tiny sum paid for work done has meant the difference between going to college and not going to college for 100,000 or more young people every year for almost 5 years. Among that 100,000 are many young people of exceptional talents, whose abilities might otherwise never have been developed. As a group the N. Y. A.-aided students in most institutions have made better records than the non-N. Y. A. students as a group.

It was the remarkable success of N. Y. A. in getting so much done with so little money in a field where the need is immense, that led the President to recommend that its appropriation for next year be increased. It was the only one of all the so-called relief agencies for which he requested a larger appropriation.

With $123,000,000 N. Y. A. could provide work, general education, and vocational experience for 800,000 youths at one time. Allowing for turn-over—for many youths move readily into jobs after receiving N. Y. A.-aided training—it probably could assist 1,200,000 or more young people during the fiscal year. It would reach perhaps one-third of those who could benefit from the N. Y. A. program.

The man who lets his machinery rust is considered a wastrel. But some Congressmen seem to think they are being thrifty when they allow the youth of the Nation to rust in idleness. Many of these young people have never learned how to work—much less learned any skills which will enable them to earn a decent living.

A reduction of one-third in the N. Y. A. appropriation is one of the most expensive cuts Congress can make.

For W. P. A. the President recommended a heavy reduction in appropriation for next year. As I write, the House subcommittee is reported to have approved the total of $1,477,000,000 for which he asked—but with a provision earmarking $125,000,000 of it for the Public Works Administration. This would reduce W. P. A. to $1,352,000,000. If that amount has to last a whole year, the average W. P. A. enrollment will have to be dropped to about 1,900,000—as against 3,000,000 last winter and about 2,500,000 at the present time. W. P. A. doesn't provide much employment for the unemployed in need of relief.

The House subcommittee is reported, however, to have concocted an extraordinary mixture of reforms for W. P. A. One of these would confine the W. P. A. work program to projects costing not more than $25,000. This would knock out about three-quarters of all the present W. P. A. projects and annihilate its construction program. It would condemn W. P. A. to the petty leaf-raking type of project—which for years W. P. A. has been struggling, with considerable success, to get away from. Even if the maximum were increased to $50,000 or $100,000, the result would be much better. The subcommittee also is reported to have agreed to put W. P. A. under a three-man board. Some kind of permanent advisory board or board of inspection can be justified. But a three-man board is no more efficient as an administrative body in the Government than in private business.

Some of the reforms which the House subcommittee is reported to look upon with favor may encounter less opposition. Much can be said for forcing everyone who has been on the W. P. A. rolls for a long period to take a vacation. Everything can be said in favor of the closest check on administrative costs. Much can be said for making every W. P. A. worker work 130 hours a month for a security wage. That is what the administration wanted in the first instance in 1935, but it gave way before the demands of union labor, first advanced through Congress, for the payment of prevailing hourly wage rates to skilled workers. As a result, a carpenter, or plumber, or other so-called skilled worker in the cities earns his W. P. A. payment in relatively few hours of work per week.

In several details the recommendations of the House subcommittee may not be as bad as the reports indicated. But enough has leaked out to justify thoroughly the President's decision to postpone his trip to the Pacific coast until what promises to be a glorious mess has been cleaned up as best it can be before July 1, when the money for the next fiscal year will be needed.

The Relief Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

June 12, 1939

Mr. VOORHIS of California. Mr. Speaker, in a short time the House will have under consideration the bill to provide for a work program for our unemployed people for next year for W. P. A., P. W. A., National Youth Administration, and for the program of farm rehabilitation. When that bill comes in here some Members will be greatly concerned about economy, the state of the Budget, and the restoration of business confidence which, they will tell us, can be accomplished by the rather strange method of shutting off the right to work of a considerable number of people and reducing the buying power of that many customers of business.

In line with this I want to analyze the "economy" record of this Congress.

(1) In January Congress appropriated only $725,000,000 for the continuance of W. P. A. instead of $875,000,000, as asked by the President on the basis of his findings of minimum needs of the unemployed. This meant consternation in 3,000,000 homes in America, for none of the families whose breadwinner was working for W. P. A. knew whether or not they would be the ones to be cut off. But they as well as others were assured that if only Congress would cut them off the W. P. A., business would promptly rehire them. Of course that just did not happen.

(2) Again, when it was obvious that a cut of $150,000,000 was just impossible, Congress added not the full $150,000,000 for W. P. A. but only $100,000,000 instead. This has meant that some 200,000 people have had to be cut off W. P. A. and forced back onto direct relief in every month since April 1. In California when the cut came in May it took just 10 days before 60 percent of all the people cut off W. P. A. were back on S. R. A. rolls in receipt of direct relief from the State.

(3) While this great "economy" effort was being made at the expense of our unemployed, what was happening in connection with other appropriation bills? Here is the record. The Agricultural Department appropriation was raised $271,359,356 above the Budget estimate; the Interior Department appropriation was raised $5,846,669 above the Budget estimate; War Department, military activities, $38,483,956; War Department, civil functions, $49,554,060; independent offices,

$98,124,901; and so on. The Navy Department received $773,049,151 which was $19,565,302 below the Budget figure but $146,897,047 more than was appropriated last year.

Many of these increases may have been justified. Indeed, I am strongly of the opinion that some of them were. But it will be hard for the unemployed people of America to understand why a Congress with a record of appropriations like this should suddenly become alarmed about the state of the Budget every time it is proposed to appropriate money to put them to work. It will be hard for the unemployed, our youth, our distressed farm families to see why all the burden of "economy" should be loaded upon the shoulders of those least able to bear it—through cuts in W. P. A., National Youth Administration, and farm-security appropriations.

And, indeed, it is hard for me to understand it, too. Furthermore, I am of the belief that there is a greater responsibility upon Congress to do justice to economically helpless people than there is in connection with any other group in all society. Nor do I believe that a Congress which has never yet made a single real attempt to correct such shortcomings and faults as may have existed or may now exist in the W. P. A. program has any moral right to pretend that denying several hundred thousand people the opportunity to work will accomplish anything at all in correcting those shortcomings and faults.

Why cause men, women, and children in families which have been trying to live on a W. P. A. wage, or young people trying to learn a trade and complete an education, or farm families about to be forced out onto the open road, to pay the penalty for things for which organizations, officials, local politicians, and even Members of Congress are responsible?

It is reported that the committee will recommend substantial cuts in the appropriations for Farm Security and National Youth Administration and that such amounts as are allowed for continuance of P. W. A. will be lifted out of the W. P. A. allotment. Farm Security has rehabilitated nearly half a million farm families at an average cost of $100 per year per family. National Youth has kept some 600,000 young people constructively busy at an annual cost of $115 each. "Economy" at the expense of either of these programs would seem short-sighted indeed—especially since there are an additional 400,000 farm families right now in desperate need of farm-security loans, and some additional hundreds of thousands of young people who have needed N. Y. A. training and jobs for a long time but who could not be carried by the program.

So far as W. P. A. and P. W. A. are concerned, they can, to some extent, be considered as complementary. But there are probably as many unemployed today as there were a year ago. And even the President's figure of $1,477,000,000 will provide for only 2,000,000 W. P. A. jobs, or 1,000,000 less than were provided during the current fiscal year. In addition, last year P. W. A. made loans and grants in the neighborhood of $1,000,000,000, whereas, according to reports, exactly nothing will be provided this year to correspond to that figure, since whatever P. W. A. is to get is to come out of W. P. A.'s allotment.

If we are pretending to meet human need in this country we should raise, not lower, the President's figure and provide a reasonable sum for P. W. A. in addition. What justification will be advanced for these proposed cuts I do not know. I only know that American citizens still need work and that it is essential that the total program be considered primarily from that standpoint. My own calculations from this standpoint indicate a need for 3,000,000 jobs.

So far as constructive proposals for improving the program are concerned, I made some such proposals to the committee myself, and I sincerely hope some measures of this sort can be taken.

In conclusion may I say that it will no more help business to reduce the number of its cash customers at this time than it would to raise the taxes levied against it.

Attitude of Milwaukee Association of Commerce Toward National Legislation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

STATEMENT BY MILWAUKEE ASSOCIATION OF COMMERCE

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement setting forth the position of the Milwaukee Association of Commerce in relation to national legislation now pending before the Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL LEGISLATION

Based upon the recommendation of our national affairs committee, the board of directors at its meeting May 23, 1939, took the following actions on legislation pending before Congress (these actions are in general accord with those of the United States Chamber of Commerce and the National Manufacturers Association):

1. WAGNER LABOR RELATIONS ACT

Favored structurally amending the Labor Relations Act—
(a) To preserve the right of free speech.
(b) To guarantee employees representation by secret ballot.
(c) To protect employees from coercion from any source.
(d) To abolish the closed shop.
(e) To provide for independent examiners to hold hearings for fact-finding purposes and that decisions of the Board be subject to judicial review.

2. SOCIAL SECURITY ACT

Favored changes in the Social Security Act to include—
(a) Substituting a pay-as-you-go system with a contingency reserve of moderate size for the present reserve plan.
(b) Opposition to an extension of the act to cover farm laborers and domestic servants.
(c) Revision to permit States to lower the tax where ample unemployment reserve funds are on hand.
(d) Opposition to any increase in Federal grants to States and giving any State more than its pro-rata share of Federal aid.
(e) Opposition to the proposed major increase in the health program estimated to cost an additional $850,000,000.

3. REVISION OF FEDERAL TAX LAWS

Favored revision of Federal tax laws to include—
(a) Removal of the remaining part of the tax on undistributed profits, with no increase in the income rate on corporations by reason of this removal;
(b) Suitable provision for business losses in 1 year to be allowed in following years as deductions from earnings in those years;
(c) Reduction in surtaxes on individual incomes for the double purpose of increasing revenues and giving incentive for new investments in private enterprise;
(d) More equitable treatment of capital gains and losses both for individuals and corporations;
(e) Elimination of all features of the Federal tax laws that are punitive in nature and that have any other purpose than the raising of revenues.

4. H. R. 3395—BUSINESS RESEARCH

Opposed this bill in view of the fact that the association advocates curtailment of government functions, reduction in expenditures, and lowering of taxes.

The United States Chamber of Commerce believes that other agencies than those proposed could do the work better and that at any rate no increased appropriations should be countenanced at this time.

5. STREAM-POLLUTION CONTROL

Favored State and local responsibility and action on intrastate waters with cooperation of adjoining States at interest in interstate waters, and with only the necessary leadership and support from the Federal Government to make stream-pollution control effective.

MILWAUKEE ASSOCIATION OF COMMERCE.

JUNE 5, 1939.

Foreign Affairs

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, June 12, 1939

TELEGRAM TO HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. MINTON. Mr. President, on behalf of the Senator from North Carolina [Mr. REYNOLDS], I ask unanimous consent to have printed in the Appendix of the RECORD a telegram to the Senator from North Carolina from Mr. O. G. Werner, of Dover, N. J., on the subject of foreign affairs.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

DOVER, N. J., *April 7, 1939.*

Senator ROBERT R. REYNOLDS:

Congratulate you upon your courageous examinations of the war propagandists appearing before your committee. We need men like you in our country; you have millions of Americans behind you. England, who proudly boasts the sun never sets on English soil, is the cause of all the unrest in the world. If any nation was ever an aggressor, she takes first prize. Remember the Boer War. All the countries she has stolen are trying to get free from her rule, because she milks them dry, and if she had the chance she would take our country, also. She has tried it on several occasions; she will suck us in again, reap the spoils, and refuse to pay what she owes us. I have traveled abroad many times commercially, not as a well-paid columnist who wants to sell America short. More power to you.

O. G. WERNER.

The Neutrality Camouflage

EXTENSION OF REMARKS
OF
HON. ANDREW C. SCHIFFLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

EDITORIAL FROM THE WHEELING (W. VA.) INTELLIGENCER

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wheeling Intelligencer, of Wheeling, W. Va.:

[From the Wheeling (W. Va.) Intelligencer of June 7, 1939]

THE NEUTRALITY CAMOUFLAGE

An analysis of the administration's new neutrality bill has come to this desk. It throws an entirely different light on the measure from that cast in original press reports.

From first accounts of the proposal, submitted to Congress the other day, this newspaper was led to believe that it established the principle of cash and carry in the sale of war munitions, and placed a ban on American travel in war zones. Upon this understanding, the Intelligencer voiced approval of the plan.

It develops, however, that in reality the measure is little more than a sweeping delegation to the President of power to conduct our foreign affairs to suit himself in relation to foreign wars. The President could take sides or not, as might seem desirable to him. In truth, the bill, if enacted in the form in which it has been presented to Congress, would come very close to giving the President a free hand in the shaping of foreign policy.

Here are a few examples:

The cash-and-carry restriction is applied to the sale of war materials, it is true, but with this significant qualification—"except in accordance with such rules and regulations as the President shall prescribe." In other words, it would be cash and carry only if the President said so.

Again:

American ships and citizens are barred from "areas of combat operations." But—the President could define these areas as he chose. Moreover, the restriction would operate, as with cash and carry, "except under such limitations and exceptions as the President shall prescribe."

American citizens could not travel on ships flying any belligerant flag "except in accordance with such rules and conditions as the President shall prescribe."

No loans to belligerents would be floated. But—the President could "exempt ordinary commercial credits and short-term obligations," which would provide all the leeway desired under sympathetic interpretation.

Provision is made against the unneutral use of American ports. However, all the provisions under this section are made contingent upon the President's initiative and decision.

In other words, this is not a neutrality bill at all, but a transfer to the President of the power to make foreign policy. It goes much further than the Pittman bill, which, at least, established cash and carry as a definite legal policy. Indeed, it makes that measure, which was objected to by supporters of the old Neutrality Act, a very strong document by comparison.

This newspaper could conceive of nothing more dangerous to American neutrality than to repose such broad discretion in the hands of a President, particularly a President like Mr. Roosevelt, who has demonstrated an impatience to thrust this country into the middle of foreign difficulties.

The old neutrality bill, weak as it was through reposing in the President the power to determine when a state of war exists, is infinitely to be preferred. Every other measure or suggestion thus far advanced, ranging from mandatory cash and carry to an outright embargo on both the sale and shipment of war supplies to belligerents, is to be preferred over this White House plan.

If the purpose of neutrality legislation is to keep this country out of war—and we can conceive of no other purpose it can have—enactment of this bill would be the worst possible step the country could take, in the judgment of this newspaper.

The Bloom Bill Is a Fake Neutrality Bill

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

STATEMENT BY HON. HAMILTON FISH, OF NEW YORK, AND ARTICLE FROM NEW YORK TIMES

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks, I include the following statement released by me to the newspapers today:

STATEMENT BY HON. HAMILTON FISH, OF NEW YORK, DENOUNCING THE FAKE BLOOM NEUTRALITY BILL

WASHINGTON, D. C., June 12, 1939.—The Bloom bill is a fake neutrality and actually an interventionist bill. It is a camouflaged aggressor nation bill, which will drag us into every world conflict. Section 3, empowering the President to establish combat areas, practically gives the President the war-making powers of the Congress. Under the Constitution the Congress has sole power to declare war. If the Bloom bill is enacted into law, the President will be given the widest discretionary power ever given any American to put us into foreign wars. The Bloom bill in the hands of President Roosevelt is an unneutrality act, and a snare and a delusion to involve us in war.

President Roosevelt has repeatedly said that if war breaks out in Europe it is virtually certain that we will participate. President Roosevelt is already unneutral and determined to put us in war to police and quarantine the world with American blood and treasure. A vote for the Bloom bill, with the known views of the President, is virtually empowering him to take us into war on the side of Great Britain in any war that might occur in the future. He may set up combat areas against Italy and Germany and permit unhampered trade with England, France, and Russia. A vote for the Bloom bill is not merely the surrender of the war-making powers of the Congress, but would virtually give the President the power to declare war himself.

In addition, the ban on the sale and shipment of arms, ammunition, and implements of war in the present Neutrality Act is wiped out, which means we will become the slaughterhouse and arsenal for warring nations for sake of blood money and war profits to kill people with whom we are at peace. And we still call ourselves a Christian nation.

I predict when the American people, who want to keep out of war find out what the Bloom bill does, public reaction will be such that it will have no chance of going through the Congress.

Methodists, Baptists, and other elements opposed to selling arms and ammunition to belligerent nations are against the Bloom bill. All internationalists, interventionists, and Communists, who want us to fight Germany and Japan for the benefit of Soviet Russia, are clamoring for the Bloom bill. On the other hand, all Americans who believe in our traditional policies of neutrality, peace, nonintervention, and no entangling alliances will oppose it every inch of the way. The loyal German element in the United States, amounting to one-fifth of our population, will naturally oppose it, as will the loyal Italian element among our population.

I welcome the issue, which is an American one, of keeping out of foreign wars, refusing to turn the war powers over to any President, and upholding the foreign policies of George Washington and of all our Presidents, based on neutrality, nonintervention, no entangling alliances, and peace.

I include herewith an article on the same subject from today's New York Times:

PRESIDENT FOR WAR, FISH CHARGES HERE—REPRESENTATIVE DECLARES HE IS DETERMINED TO LEAD US INTO IT IF FIGHTING STARTS ABROAD—ASSAILS NEUTRALITY BILL—SCORES LIFTING OF BAN ON ARMS SALES AND GRANTING OF "ONE-MAN POWER" TO ROOSEVELT

Representative HAMILTON FISH, charging President Roosevelt with a determination "to take this Nation into war if one breaks out in foreign lands," urged yesterday the defeat of the "dangerous and war-making" neutrality bill now pending in the House Committee on Foreign Affairs.

Mr. FISH, as chairman of the National Committee to Keep America Out of Foreign Wars, spoke at an antiwar rally held at Breinlinger's Park, 4018 Boston Road, the Bronx, under the auspices of the Bronx District Council of the Steuben Society of America and later repeated his address over radio station WNYC.

Pointing out that the pending neutrality bill would lift the present Neutrality Act's prohibition on sales of arms, ammunition, and implements of war to belligerent nations and would give the President a "one-man power" to determine the combat areas, Mr. FISH held that the measure, if enacted, would make this country "the potential slaughterhouse and arsenal for Great Britain and France" and would eventually "drag us into the next world war."

WARNS CONGRESS ON SURRENDER

"The far-reaching power granted in the proposed bill is equivalent to a surrender by the Congress of its constitutional right to declare war," Mr. FISH contended. "This is nothing more or less than a camouflaged aggressor-nation power which the President has been trying to obtain from Congress for the last 5 years."

Declaring that "it is none of our business what form of government exists in any foreign land," Mr. FISH, who is a member of the House Committee on Foreign Affairs, bitterly criticized the President, the State Department, and some United States Ambassadors for "attacking" certain foreign governments, holding that such actions would in the end seriously disrupt efforts for world peace.

Mr. FISH advanced the following 11-point program, which, he contended, would insure the Nation of peace:

"Enter into arbitration treaties with all nations, not to go to war except in self-defense.

"Reaffirm the right of Congress as the sole authority to make war and not permit Ambassadors like Mr. Bullitt (William C. Bullitt, Ambassador to France) sitting around tea tables to make war commitments for us.

OPPOSED TO POLICING THE WORLD

"Stop all efforts by the internationalists and interventionists in the administration to force America to join in policing and quarantining the world, to enter into collective alliances, to determine the aggressor nation—all of which lead directly to war.

"Adopt my proposed constitutional amendment to give the American people the right to vote whether our youth shall be drafted to fight in foreign lands outside of the American continent.

"Enact legislation to take the profit out of war.

"Reaffirm our traditional policy of neutrality, nonintervention, and peace.

"Urge a conference to limit naval and military armaments and to promote peace by arbitration and cooperation.

"Stop the shipment of arms, ammunition, and implements of war both in time of peace and of war.

"Urge adequate national defense to protect our own shores, maintain the Monroe Doctrine, and defend the right of American citizens throughout the world.

"Deport all alien agitators who seek to destroy our free institutions and give their jobs to loyal American citizens now walking the streets.

"Save America first, preserve the American system, and promote the welfare, happiness, and security of our people by keeping out of war and putting our own house in order and providing employment for our people."

Mr. FISH predicted that if the United States was involved in another world war our democratic and free institutions would be destroyed and the Nation would emerge from the war as "an autocratic and a Fascist or Communist nation."

Independence of the Philippines

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, June 12, 1939

ADDRESS BY SALVADOR ARANETA

Mr. GIBSON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address by Salvador Araneta before the convocation program at the University of Manila May 25, 1939, on the subject of complete independence for the Philippines.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I am happy to discuss with you this evening some of the weighty problems confronting our country.

I have my own convictions as to what would be the best and practicable solution of our future relations with the United States, both in economic and political matters. I trust you will not question or put in doubt my patriotism if my ideas do not coincide with yours.

One of my closest and dearest friends is Representative Miguel Cuenco. He is one of those who really, even today, believes that we should go ahead with the present independence program to completely sever our political ties with the United States in 1946. He also knows that I sincerely believe that such a program is too risky for our national salvation and for the ultimate ideal of complete sovereignty for our country, and yet we both respect our respective opposite views, and none of us has for a moment doubted each other's love for his country.

It is very gratifying that Assemblyman Carlos S. Tan, of Leyte, has had the courage recently to raise his voice in the national assembly openly advocating a realistic reexamination of the Philippine problem. Various other members of the national assembly have also publicly voiced their opinion in favor of a realistic reexamination. They are Assemblymen Saturnino Moldero, Hilario Abellana, Jose Ozamis, Juan Bocar, Bernardo L. Buenafe, Tomas S. Clemente, Tomas Oppus, Jose C. Zulueta, Mauro Versoza, Manuel A. Alzate, Pio V. Corpus, Sizomo Zaldivar, and Tomas Cabili.

I count myself among those who would see our country great, powerful, respected, and independent. This should be the ultimate vision of our people. It is my ultimate vision. Our whole purpose, our whole foreign policy, should be directed toward that end. I purposely said our foreign policy should be directed toward that end because, although it is not generally realized, I maintain that with the enactment of the Tydings-McDuffie law wherein the United States has solemnly promised us our independence in 1946, our national sovereignty is now fully recognized by the greatest and most honorable of all countries on earth and the recognition of these sovereign rights is no longer subject to any condition but simply to a mere suspensive period of which only 7 years remain.

With our rights of sovereignty thus recognized, it is not too early to discuss our future foreign policy. I submit that the foreign policy that we should adopt, more in consonance with a healthy and steady development of the real values that will insure the guaranty of our national existence, the happiness of our people, and the achievement of the social-justice program of President Quezon is a foreign policy of continuing for a longer period, indefinitely if you wish, but not binding ourselves permanently, our partnership, political and economic, with the United States.

Review mentally the different nations of the earth today and you will find that here in the Philippines we are exercising greater sovereign rights than many nominally independent countries. It is important that we should give greater weight to substance and less weight to mere appearances. Sovereignty rights may be classified into sovereignty rights on internal affairs and sovereignty rights on foreign affairs.

Today many nations are powerless to exercise their free will in foreign matters, and many of them are not even allowed to enjoy full liberty in their internal affairs. Our sovereignty rights on internal affairs are indeed very ample and great. The limitations to our internal sovereignty rights are very few and they are well defined and enumerated in the Tydings-McDuffie law, and I cannot see that any of these limitations may be considered prejudicial to our national welfare, especially if we ponder upon this problem with a judicial mind and realize that the benefits which we derive from the protection that the United States is giving us and the opportunity that she gives us in having access

to its big and rich market, greatly outweighs any small disadvantage that there might exist based on those few small limitations to our internal sovereignty rights. Let us be practical, my friends, and inquire if really we have any reason to complain under the present status. Is there anything that President Quezon or our Government would like to do to foster our well-being which she cannot do because of the limitations to our sovereignty under the present status? Would our people attain a higher standard of living and be happier if the United States should leave us to our fate and if we can pompously be called an independent country?

And I even maintain, that if we sever our political ties with the United States we shall then have less sovereignty rights both on foreign and internal affairs, the social justice program of the President will go to the winds and we shall run the risk of becoming the prey economically and politically of one of the many ambitious nations who are hungry for land.

The Versailles Treaty, at the end of the World War, initiated an era which was characterized by the creation of new small states and the spread of the idea of national economic protectionism, giving rise to the existence of many new political and economic units, many of them too small to survive the reaction that came thereafter. And with the progress of aviation and science the world is indeed becoming smaller and whether we like it or not the new world trends are toward the disappearance of the small political and economic units that constitute a barrier to the expansion of three nations who claim to have a greater share of our planet than what they have had heretofore, and there are no indications to the effect that the wave is receding. Confronted with this fact we must with foresight, wisdom, courage, and patriotism decide on our foreign policy. The United States in her generosity has given us ample and wide discretion to decide the foreign policy that we might wish to make on foreign affairs. I can hear voices saying that we should choose a foreign policy of isolation and friendship to all nations at the same time, thereby maintaining our independence from all foreign nations. My friends, this is illusory under the present world trends. We will have to trade, we will have to barter, and we must necessarily come under the sphere of influence of a big and powerful nation.

If that powerful nation is—as the United States—rich, has high moral principles, and believes in the principle of self-determination, we certainly would be very fortunate. If that foreign nation is poor in natural resources and burdened with a great population which she has to feed, then I cannot see how under such a sphere of influence our people will attain the blessings of contentment and security which she is now enjoying and the enjoyment of a more abundant life that has been promised them by our beloved President. It is therefore no wonder that recently Pedro Abad Santos, the Socialist leader, has come out openly stating that the mutuality of interest which exists between the United States and the Philippines should be the foundation of any lasting relationship between the two countries. He added that "we must strive to establish the closest ideological, cultural, and economic alliance with the American people on a basis of mutuality and fairness." And I fully agree with him when he said that "we must increase the market value of our country for American goods by raising the standard of living of the masses, and consequently their purchasing power. We must protect legitimate American interests as our own, against other foreign competing interests."

My friends, if we are conscious of world trends and conditions and are appreciative of the peace and opportunity for self-government that we now enjoy, we should realize that it is the protection and generosity of the United States that has made them possible.

Bluntly speaking, the issue that we have before us is not to decide whether or not to have independence. I am afraid we have no choice on the matter for many, many years to come. But we can decide between a partnership with a rich, benevolent, democratic and Christian Nation who has been generous to us politically and economically but who will insist in a well-defined agreement; or drift toward the domination of a proud race whose record past and present, speaks for herself, who can only offer us political puppets and "economic pauperism," to use the words of the Honorable Clare M. Recto, as president of the constitutional convention, and who may or may not require any document to legalize her domination so long as it is actually and substantially an accomplished fact.

I understand that there are those who believe that we are powerless to free ourselves from the orbit and influence of such a domination. They like to think of themselves as realists. I am one of those who are not defeatists. With the rapid progress of aviation world distances are becoming smaller and the world has ceased to be divided into continents. The attitude of the House of Representatives on the question of fortifying Guam does not represent the final policy of the United States in the Pacific. It does not mean that the United States has decided to abandon the Philippines to her fate.

The newspapers of the Scripps-Howard and Hearst organizations, as we all know, are not in favor of severing the political ties between the United States and the Philippines, and yet they were against the fortification of Guam and were very instrumental in obtaining the defeat of the measure. They believe that it was not Guam but the Philippines that should be fortified. Further, they thought that if we were to have our independence in 1946 there was no sense in fortifying Guam. In other words, Congress had wisely decided not to put the cart before the horse.

Independence to be lasting must be something more than a gift from the United States. The United States can only recognize our sovereignty rights; she has only waived her rights over our territory. She certainly will not protect us once we are independent. Hence independence is something that we have to gain and shall have to maintain with our own efforts and with our own strength. I submit that we should first be a strong and respected nation before we sever our ties from the only country on earth which will forever maintain and respect our right of self-determination. There are many major problems that we need to solve before we sever our ties with the United States. The retail trade problem and the Davao problem are two cancerous growths in our national organism that will spread and undermine our vitality with rapidly increasing progress, once the United States has left us to our fate.

Foreign penetration in our country will certainly take place, and the same will seriously undermine our sovereignty, which will be lost forever to us if our political emancipation comes before we are really prepared to survive and be masters of foreign penetration. Japan will try to convert the Philippines into her de facto colony. Actually not through a high commissioner but through an innocent-looking ambassador, Japan will exert full authority without any responsibility in the Philippines. If our political emancipation comes too soon, before we have had time to raise our tariff duties in preparation for the establishment of basic and important industries in the Philippines, Japan will not allow us to increase our tariff duties. This is what Japan has done in China. In 1933 China enacted a tariff law which was for the first time truly protectionist in nature. In a few months, after several incidents which showed that Japan was exerting all kinds of pressure, China was forced to revise its tariff act for the benefit of the industries of Japan. And again, if our independence comes before our public agricultural lands, mines, forests, and other natural resources are fully exploited by our nationals, Japan will certainly do everything in its power to amend the constitutional provision limiting to our nationals the exploitation of our natural resources, or else will convert the same into an unenforceable provision, and the case of Davao will repeat itself a thousand times!

A Japanese economic penetration throughout the whole line planned to the very last detail will take place. The laboring class will not be spared in this competition. With the important industries in the hands of Japanese, with our foreign commerce entirely controlled by Japan, with Japanese skilled labor controlling the key and best positions in our economic life, our laws will be dictated from Tokyo and we will be allowed to keep our apparent sovereignty as long as our national assembly continues acting as a mere rubber stamp of Japanese interest and welfare. The demands of the Japanese will increase every year in geometrical proportions, and sooner or later the country will produce leaders who will not countenance further intrusions against our national sovereignty, and the inevitable will come—an armed clash between the two countries, and we will then witness our subjugation by a country which does not believe in the doctrine of self-determination.

I wish to remind you that President Quezon himself, in his message before the national assembly in 1937, stated that "in the short span of 7 years the Filipino people can hardly do anything that would substantially change their present situation." He made that statement to reason out that if we are not prepared today to assume the responsibilities of an independent nation, we shall not be more prepared in 1946.

I believe that in the above statement President Quezon has underestimated the great and wonderful service that he is performing to our country, but at the same time I believe that great as the progress that I am sure we shall attain under his able leadership and up to 1946 if we remain under the protection of the United States till that time, we should not overestimate the strength and the preparation that we shall then command to assume the responsibilities of steering alone and by ourselves our foreign policy and of insuring our national security.

The forging of a sturdy and noble character is the cornerstone upon which we must base the solution of our national problems, which indeed are many, the solutions of which are a prerequisite to prepare us to live an independent existence thereby becoming a strong, powerful, and respected Nation. Only then shall we have earned our right to be a sovereign Nation, to be complete masters of our destiny, fully independent of all foreign influence that expressly or tacitly constitute a curtailment of our sovereignty, and enjoy forever for all generations the blessings of true liberty and prosperity for all. Before that time arrives, we should favor the next best choice compatible to our national ultimate destiny, a partnership in political and economic spheres, with the richest, most altruistic, and democratic nation on earth, the people and Government of the United States.

How to Help Small Businesses

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

EDITORIAL FROM THE PITTSBURGH PRESS OF JUNE 5, 1939

Mr. CORBETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Pittsburgh Press on Monday, June 5, 1939:

[From the Pittsburgh Press of June 5, 1939]

HOW TO HELP SMALL BUSINESS

Congress is seriously considering the Mead bill authorizing the R. F. C. to guarantee bank loans to small businesses.

Yet at the same time, despite the repeated requests of President Roosevelt, Congress is neglecting to act on the one measure most likely to contribute toward loosening up private credit for small-business enterprises. We refer, of course, to the President's request that Congress forbid future issuance of tax-exempt bonds—those rock-ribbed securities which offer such attractive investments to the very persons who can best afford to take the money risks that small-business activity entails.

Here is an example we have used before. We use it again because we think it tells a lot about why small-business operators have a hard time finding capital—

Businessman A wants to borrow $10,000.

Capitalist B has an idle $100,000 to lend or invest. But in considering any proposition B keeps in mind the fact that he pays taxes in the $150,000 bracket. B resides in New York so he pays both State and Federal income taxes in that bracket.

A goes to B and asks to borrow $100,000 at 6-percent interest. B takes out his pencil. Gross return, $6,000. State income tax (8 percent in B's bracket), $480, leaving $5,520. Federal income tax (64 percent in B's bracket), $3,532.80, leaving a net return of $1,987.20. So B says: "Nothing doing. Your proposition will yield me a net return of less than 2 percent. I'll not risk my $100,000 for that—not while I can go around the corner and pick up 3-percent tax-exempt public bonds, which will yield a return of $3,000, gross and net, and at no risk."

So A tries another tack. A says to B: "If you don't want to lend me the money, how about investing that $100,000 in the common stock of my company. I've got a good business; it will pay 10-percent dividends."

B takes out his pencil again. Gross dividends, $10,000. State income tax, $800, leaving $9,200. Federal income tax, $5,888, leaving a net of $3,312. "Still nothing doing," says B. "That tax-exempt bond will yield a net of $3,000, and your common stock promises only $312 more—and it's just a promise. I don't want to risk $100,000 capital just to try to get $312 more than I can get from a no-risk, no-tax bond. Go elsewhere for your money."

Elsewhere? A can't go to C, who has more idle money than B, but pays even higher taxes. For C is in the $1,000,000 bracket. C never looks twice at any private business proposition that promises a return of less than 16 percent, because he can get the same, yet on a no-risk 3-percent tax exempt.

And A can't go to the bank. The bank isn't interested, first, because A's proposition is too risky for depositors' money, and, second, because A wants a long-term loan. The bank deals primarily in short-term commercial loans, and call loans backed by liquid collateral. Any money not so employed, it keeps in the vaults or soaks away in more tax exempts.

So A winds up by going to the Government—through the Mead bill—asking that it persuade the bank to lend the money, first, by guaranteeing against risk of the loan, and, second, by removing the bank's inhibitions agaisnt long-term paper. That's a long way around for A to go to get the money he needs, and would make taxpayers take risks which tax-exempt investors refuse to take.

Wouldn't it be far better to stop the flow of tax-exempt bonds, and thereby end the special inducement which now causes B and C to refrain from lending money to A? Throughout our history, small business has been started by the B's and the C's taking risks to make profits. But the B's and the C's will take precious few risks lending money to the A's, so long as governments are in the market as large-scale borrowers and unfair competitors for the capital which A needs.

Hands Off, Bureaucrats

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

EDITORIAL FROM THE CHICAGO DAILY TRIBUNE OF JUNE 8, 1939

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of June 8, 1939:

[From the Chicago Daily Tribune of June 8, 1939]

HANDS OFF, BUREAUCRATS!

The American system of private enterprise has taken a terrific beating during the last 6 years. It is a bit groggy, but with eyes of hope on 1940 it is answering the bell for the last round with the New Deal. The railroad and air lines are giving particular evidence of this.

The principal airlines have pooled their resources with the Douglas Co. and after the expenditure of $2,000,000, 500,000 hours of engineering time, and another 100,000 hours in laboratory testing time, have brought forth the DC-4 with double the carrying capacity in passengers and freight of any plane heretofore constructed. Similar improved airplanes have inaugurated the trans-Atlantic service in the last few weeks.

The average speed of freight is now 61 percent higher than it was in 1920, and the Association of American Railroads has begun an extensive series of tests of freight equipment to increase vastly their speed and efficiency of operation.

Rail lines operating between New York and Chicago are on the verge of reducing their schedule to 14 hours.

Every day sees an announcement of the installation of latest, improved Diesel-electric locomotives on various roads throughout the country. New trains are being put in service to serve the public with the utmost in speed and comfort in transportation.

A number of western railroads have announced their intention of starting, on January 1, 1940, a new automobile-renting service which should enable them to win back the patronage of salesmen and others who must have an automobile to call on customers in cities and towns adjacent to cities.

Eastern railroads are considering a plan to increase their gross volume of passenger traffic by a reduction in coach fares.

These are all welcome indications that the inventive genius and pioneering spirit fostered by our republican form of government are still alive and vigorous. Let us hope that the Washington bureaucrats will exercise a self-imposed restraint of their meddlesome proclivities until all of these new developments have been given a thorough trial. The carriers, shippers, travelers, and the public in general will be greatly benefited if these private efforts to solve our transportation problems are unhampered by amateur tinkering in Washington.

Impressions of a Congressman on the Visit of King George and Queen Elizabeth to the Nation's Capital

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

Mr. WHITE of Idaho. Mr. Speaker, on a beautiful day in June when Washington with its trees, statues, and flowers was at its best, the reigning King and Queen of England made a democratic visit to the people of the United States and our National Capital.

In meeting the British sovereigns, it is difficult to realize that this youthful, unassuming couple are the exalted rulers of the vast British Empire.

Boyish, slender, tanned, and natural, the King, accompanied by Ambassador Lindsay, who towered a half head above him, as they strolled through the throng of people on the lawn of the British Embassy—and he was introduced here and there to someone known personally to the British Ambassador—might have been taken for a young man from some Western State being introduced to Washington for the first time. He was earnestly interested in the things that were told to him by those he met—mostly of their ancestral background and American development; and by his questions he indicated his interest in the subjects discussed, parting with a friendly grasp of a hand as firm as the palm of a westerner trained to work.

The Queen, a beautiful Scotch lass, was captivating as she passed through the crowd greeting those to whom she was introduced. She is genuinely pretty, with large blue eyes and a "peach blow" complexion touched to a vivid pink here and there on arms and cheeks by the prairie sun on the American trip. Hers is a natural complexion that brings to mind the saying of the poet, Joaquin Miller, that "the most beautiful women are to be found in the lower Columbia River region in our own America and the British Isles," explaining that the moist atmosphere of these regions is most conducive to beautiful complexions.

The Queen gives one the impression of a young matron from one of our American communities who would naturally be a popular leader in her social circle. The incident of having a cup of tea with the wife of the Vice President when the Queen returned to the terrace from the garden in advance of the King was one of the pretty little ceremonies of the party. Seated by Mrs. Garner, flanked by the social elect, including J. P. Morgan, the Aldriches, and other notables, tea was poured from a beautiful silver service by an attendant in royal livery. The Queen arose to greet her sovereign on his return, and just then the King graciously retrieved a glove dropped by one of the ladies, reminding one of the incident of Sir Walter Raleigh in reverse.

Everyone attending the garden party, which included many of the social, political, and administration leaders, and those mentioned as Presidential possibilities—to name—Jim Farley, Senator Vandenberg, Vice President Garner, Senator Taft, Secretary Wallace, Harry Hopkins, and a host of others, with the exception of Senator Clark of Missouri, who was absent, were warm in their expressions of cordiality and admiration of the royal couple, and all agreed that the Queen's pictures do not do justice to her beauty.

The leave taking was a confusion of attendants and lackeys gorgeously attired, plain American chauffeurs, State and city police who valiantly attempted, in response to calls on the sound amplifier, to unscramble the jumble of limousines, sedans, coupes, and plain taxicabs in starting the departing guests down Massachusetts Avenue flanked by the foreign legations and embassies, including the neighboring German Embassy, which had flung its swastika flag defiantly to the breeze.

Washington was active early on the following day in anticipation and preparation for the royal reception of the British King and Queen in the Capitol Building by the Members of Congress. The House of Representatives and Senate convened promptly at 10:30 o'clock and only Congressmen and Senators and those actually employed in the Capitol were admitted. The Members of the House marched in a body to the Capitol rotunda, where they were joined by the Senators to await the arrival of the royal couple. Banked on a stand to one side high above the heads of the assembled guests was every kind of picture-taking machine.

The King and Queen on their arrival took their places by the statue of Thomas Jefferson holding in his hand the unfurled scroll of the Declaration of Independence. Close by was the newly unveiled statue of Will Rogers with a half smile and quizzical look on his face; one wondered what Will would have had to say on this occasion, or Andrew Jackson, who made France pay up, as his bronzed image, severe in countenance, stood with steadfast gaze directly at the English couple, or what they thought if they recognized the statue of the hero of New Orleans.

Idaho had the distinction of being the first and last to shake hands with the King and Queen. Senator BORAH, dean of the Senate, came first, and Congressman WHITE contrived to be the last to wish them a pleasant trip home.

The visit of the English sovereigns was a pleasant episode in our foreign relations and brings to mind that this is the second time that British authority has come to Washington since the Nation's Capital has been established in the District of Columbia. While we have no record of the weather on that eventful day in 1814 when the people of the United States lost their Capitol Building, we know that our visitors made it "hot" for us; on this visit the sun made it hot for all of us, the first day of summer when collars wilted and organdies grew limp.

The picture in the morning paper of the King and Queen shaking hands with our soldiers in uniform may be significant in connection with the royal visit and may disclose the men they are really after. While we extend them a warm welcome and appreciate their good will and the friendship of the people throughout their far-flung dominions, we must firmly maintain our neutrality and let them and those responsible in their Government understand that our soldiers are for our own defense and protection and not for the glorification of empire.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

Mr. GILLIE. Mr. Speaker, the Townsend plan advocates in the Fourth Indiana District supported me in 1938 because I pledged to work for sound legislation to provide pensions for the needy aged on a pay-as-you-go basis. I was indeed grateful for this support, but I did not interpret it as a mandate for me to vote for any pension plan, regardless of its inequalities and imperfections.

Since June 1, when the House voted down H. R. 6466, which had been substituted for H. R. 2 at the last minute, there has been a general misunderstanding of my position on this matter. I wish to clear up this misunderstanding now by explaining why I could not, in good faith, support the revised Townsend measure.

My vote should not be construed as a vote against higher pensions for the aged. I know that our present laws are pitifully inadequate to care for our senior citizens as they should be cared for, and I shall continue to do everything in my power to assist in liberalizing those laws along sound and constructive lines.

The new Townsend bill, on which we were obliged to vote, was introduced in the House on May 23 without benefit of hearings. It was hastily thrown together and included many absurd provisions, such as the following:

> Throughout the act the present tense includes the past and future tenses, and the future the present. The masculine gender includes the feminine and neuter. The singular number includes the plural, and the plural the singular. Shall means must and is mandatory.

Just what this meant I do not know, but it was no more amazing than many other provisions of this measure. The House Ways and Means Committee might have eliminated these provisions, but it declined to do so, and the Rules Committee reported a "gag" rule, which meant that amendments were barred.

I think my Townsend friends were badly treated by being denied the usual privilege of perfecting their bill by

amendments. The entire aim of the Democratic leadership seemed to be to make the bill as obnoxious as possible to insure its defeat.

For example, the new measure provided that every worker, however needy he might be, must pay a 2-percent tax on his gross income if he earns $50 per month or more, and this would be true even if he had a dozen children to support. The very lowest-paid worker, struggling to live on starvation wages, would have had to contribute on the same basis as Henry Ford and J. P. Morgan.

This provision should have been amended, of course, to exempt the very low-paid workers.

The sales tax provided in the measure would fall most heavily on the poor and would surely meet with opposition from members of organized labor and others who are uncompromising in their attitude against consumption taxes.

Under the bill national banks were exempted, but State banks would have been taxed out of existence. Chambers of commerce were exempted, but labor organizations would have been taxed.

The bill was full of such contradictions and injustices, but the "gag" rule prohibited their elimination.

My most important reason for voting against H. R. 6466, however, was that it was highly deceptive. While holding out the alluring promise of a pension of $200 a month, the bill was so changed that it failed to provide the finances for a pension of more than a small fraction of that amount. I could not be a party to deceiving my elderly friends in such a cruel fashion.

In this regard, I would like to quote from a recent article by Maurice Early, Indiana political writer. Mr. Early wrote:

Townsendites who saw their bill go down to defeat in the National House lost only a crumb and not $200 a month. This can be demonstrated by the Indiana gross-income tax, which is almost identical with the tax plan the Townsend advocates sought to enact into law.

Rates in the Townsend bill were double those of the Indiana gross-income tax. Retail sales would be 2 percent, whereas the levy in Indiana is 1 percent. This State charges producers, manufacturers, and jobbers one-fourth of 1 percent of their gross receipts, whereas the Townsend bill would charge one-half of 1 percent.

Since the Indiana gross income tax raises slightly in excess of $20,000,000 a year, it is obvious that the Townsend tax proposal would not raise in excess of $50,000,000 in the State, probably much less.

Should all persons more than 60 years old in Indiana be granted $200 a month it would require in excess of $500,000,000 a year to pay Hoosier pensioners. But the bill voted down by Congress would have provided a tax income only one-tenth the amount needed. The Townsend bill limited the size of the pension to the proceeds of the tax plan.

From the Indiana experience with the tax system it appears certain that if the Townsend plan had been made a law, the elders would have been disappointed because their checks would have amounted to about $20 a month if there was a general application of the pension.

To make this point more clear, I have prepared a table which shows how much the Indiana gross-income tax has raised in the eight counties of my congressional district, together with the estimated amounts which would have to be raised in these same counties to pay pensions of $200 a month to all persons over 60 years of age.

These figures reveal that the people of my district would be required to pay 20 and 30 times as much to finance a $200-a-month-pension system than they now pay in Indiana gross-income taxes.

The Townsend plan—estimated additional tax burden necessary to pay maximum pensions of $200 per month to 8,000,000 and 10,000,000 persons based upon per capita cost computed on population of 130,000,000 [1]

MAXIMUM PENSION—$200

Pensioners	Annual cost	Per capita cost
8,000,000	$19,200,000,000	$147
10,000,000	24,000,000,000	184

[1] Based on figures provided by W. L. Price, member of staff of the Joint Committee on Internal Revenue Taxation.

Cost of Townsend plan in Fourth Indiana District

[On per capita basis—1930 population, 275,523]

County	Actual Indiana gross income-tax payments, 1937 [1]	Estimated additional cost, maximum of $200 per month [2]	
		8,000,000 pensioners	10,000,000 pensioners
Adams	$92,203	$2,933,679	$3,672,088
Allen	1,296,265	21,571,221	27,200,712
De Kalb	95,322	3,661,917	4,583,624
Wells	90,528	2,706,417	3,387,624
Lagrange	34,180	2,025,660	2,535,520
Whitley	58,387	2,341,857	2,931,304
Steuben	56,456	1,967,742	2,463,024
Noble	80,475	3,293,388	4,122,336
Total	1,803,816	40,501,881	50,896,232

[1] Figures provided by C. A. Jackson, director, Indiana Gross Income Tax Division.

[2] Estimated additional cost of paying pensions of $100 per month is one-half of above estimates—$50 per month, one-fourth of above estimates.

Mr. Speaker, if we had been permitted to amend H. R. 6466 and correct its imperfections, I could have voted for it in the best of faith, knowing that my elderly friends would not be duped. But since objectional features could not be eliminated, I was forced to oppose it in the best interests of my Townsend followers.

I am in entire sympathy with the objectives of old-age security and national recovery, and no one is more keenly anxious than I am to see that our worthy aged, who are poor through no fault of their own, are generously provided with the blessings of peace and security in their declining years.

I am convinced that a sound, workable pension bill will soon be introduced in Congress, in which case I will assist in bringing it to the floor and will work wholeheartedly for its passage.

The Townsend movement, which has much to commend it, deserves praise for arousing the country to the crying need for a more generous old-age pension system. The Social Security Act is certainly not the solution. Some more just, generous plan must and will be adopted.

Save the Wagner Act

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

RADIO ADDRESS BY REV. FATHER SEBASTIAN ERBACHER

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast at 5:30 p. m. Monday, May 22, 1939, over station WJR (Columbia Broadcasting System) by Rev. Father Sebastian Erbacher, president of Duns Scotus College, Detroit, Mich.:

The attitude of the Catholic Church toward labor unions was very well expressed by the Most Reverend Archbishop Mooney, of Detroit, at the close of the Catholic Conference on Industrial Problems, January 17 of this year, when he declared that "labor organization, sound and responsible organization on democratic principles, is not merely something which the Catholic Church accepts as an inevitable development of our industrial society, it is something which she wholeheartedly approves, something for which she has a definite set of moral principles, something for which her Popes have been crying for generations like a voice of a prophet in the wilderness of laissez faire, something which she earnestly commends to worker and management alike as a remedy for the evils of industrial life which press upon us and as a preventive for greater evils which threaten."

Pope Pius XI, developing the thought of Leo XIII, clearly pointed out the part that government must play in industrial relations. He said: "The duty of rulers is to protect the community and its various elements; in protecting the rights of individuals they must have special regard for the infirm and needy. 'For the richer class have many ways of shielding themselves and stand less in need of help from the state, whereas the mass of

the poor have no resources of their own to fall back upon and must chiefly depend upon the assistance of the state. And for this reason wage earners, since they mostly belong to that class, should be especially cared for and protected by the government.'" Pius XI severely condemned the action of those rulers of governments who, "while readily recognizing and patronizing similar corporations among other classes, with criminal injustice (they) denied the innate right of forming associations to those who needed them most for self-protection against oppression by the most powerful."

Therefore the National Labor Relations Act, or the Wagner Act, is, in its essential principles, in close conformity with the teaching of the Popes and the church.

The very heart of the Wagner Act is found in sections 7 and 8 of this law. According to section 7, employees "shall have the right to self-organization, to form, join, or assist labor organization; to bargain collectively through representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining or other mutual aid * * * or protection." Section 8 guarantees the effective exercise of this right by declaring what shall be considered an "unfair labor practice," such as "to interfere with, restrain, or coerce employees in the exercise of the rights guaranteed in section 7; by discrimination in regard to hire or tenure of employment or any term or condition of employment; to encourage or discourage membership in any labor organization." Finally, the Wagner Act provides for effective enforcement of the law by creating the National Labor Relations Board.

Whoever knows anything about the history of industrial relations in the United States must be convinced of the necessity of the Wagner Act. Although labor unions were never outlawed by statute, and although the Federal Government paid verbal homage to the workers' right to organize, nevertheless, in practice the laborers had to secure their rights through economic force. Two weeks ago Prof. Charles O. Gregory, of the University of Chicago, said before the Detroit Economic Club: "Before 1933, the attitude of the Government was definitely hostile to the union movement." The reports of the La Follette Civil Liberties Committee, a congressional committee of investigation, show how employers as a whole have been opposed to labor organizations, and what means they used to prevent the workers from exercising their natural right to form unions of their own choice. These reports are an incontestable proof that the Wagner Act was necessary and should by all means be preserved.

The present frantic opposition to the Wagner Act is not prompted by an unselfish desire to help the workingman. The substance of this law is so solid, and the gains made under this act are so considerable and worth while, that it would be an enormous loss to labor to meddle with it at this time. The law is not perfect, we admit; but what human law can be perfect? It is easy to understand why a new law, so contrary to ingrained prejudices of many employers, and so strongly in favor of the workers, should cause friction. To err is human, and therefore an occasional mistake of interpretation or in execution of the law will be excused by every reasonable person. Such errors can be remedied without amending the law. Had all employers honestly observed the law from the very beginning, and had they not sought to evade it; had they gladly accepted it and sincerely cooperated with the workers, who welcomed this legal protection of an innate right, I feel certain that many strikes would have been avoided and our industrial relations today would be far more friendly than they are.

Professor Frank Downing, of Fordham University, said: "The findings of the La Follette Committee on Civil Liberties prove that all the claims of the National Labor Relations Board are true. Industry as a whole is trying to sabotage the labor movement, and even the Board itself * * * The future of the Board and of the Wagner Act depends on the strength of the labor movement, and on the ability of labor to establish more harmonious relations within its own ranks."

Last year the President sent a commission to England to study industrial relations. Is it not very significant, that contrary to much editorial forecasting, this commission has not suggested any changes in the present labor legislation of the country? The report of this commission has emphasized that "peaceful relations are the result of strong and firmly established trade-unions * * *," and that "trade-unionism in a weak and struggling condition rather tends to increase the number and bitterness of industrial conflicts."

The New World, Catholic paper of the archdiocese of Chicago, discussing the autonomous vocational groups, suggested by Pius XI, said: "* * * we have seen legislation which strangely resembles the idealism of the Pope, the N. R. A., for instance, and the Wagner Act, which is perhaps the most decent piece of legislation we have seen in many a year."

When Msgr. John A. Ryan, of the Catholic University in Washington, vigorously pleaded for the national labor relations bill before it was enacted into a law of the land, he was certain that it would bring about the free exercise of the worker's right to organize and prevent employers from unjust interference with this right.

Shortly after the Supreme Court declared the Wagner Act constitutional, Msgr. Francis Haas, now head of the social service department of the Catholic University in Washington, said: "The decision is truly historic, as it marks a complete break in the traditional relation of government to industry. * * * The hope of workers in industry rests in their ability to deal on something like an equal basis with corporations. They can do this only when they can freely choose their own bargaining agents. The Supreme Court decision (on Monday) makes it clear that workers in most manufacturing industries are now free without fear of discrimination to exercise their rights. The decision is quite in accord with Catholic social teaching. * * * All should rejoice in the action of the Supreme Court."

Monsignor Haas told an audience in Springfield, Mass., early in this year: "In view of the fact that the law is designed to protect the natural right to organize, and, as Leo XIII insists, the Government must protect natural rights, not destroy them, Catholics in particular should rise to the defense of the law as a necessary use of Government power."

John Cort, executive secretary of the Association of Catholic Trade Unionists in New York City, sent a resolution to the Knights of Columbus, assembled in convention in Cincinnati, 1938, which reads in part as follows:

"Be it therefore resolved, That the Association of Catholic Trade Unionists draw the attention of the Knights of Columbus to the efforts of numerous reactionary groups which are endeavoring to hamper the work of the National Labor Relations Board, and to sabotage the Wagner Act through subtle and vicious propaganda, as recently uncovered by the La Follette Investigating Committee; and be it further

"Resolved, That the Association of Catholic Trade Unionists appeal to the Knights of Columbus to aid in combating the forces which menace not only peaceful settlement of industrial disputes, but also the natural right to free association and collective bargaining."

The Reverend Raymond McGowan, assistant director of the National Catholic Welfare Council, department of social action, writing of the Wagner Act, said: "But any modification now will probably weaken rather than strengthen the protection Government gives to the free right of labor to organize. Every proposed modification should have several fine combs run through it. Instead of changing the national law, similar laws should be passed in all the States to protect the people whom the Federal Government cannot help. The Wagner Act and the National Labor Relations Board protect a fundamental right of man. * * * Without the Wagner Act, millions would lack legal protection of a basic right. * * * The Wagner Act protects the unions. It does so quite well. Instead of tampering with it, it should be strengthened. It should have duplicates in all the States."

The Reverend Edmund Brock, in an article in the Christian Front, urged regarding the Wagner Act "that Catholics should create a 'no amendment' public opinion in order to safeguard one of the most important rights which the Government has only lately undertaken to safeguard."

The National Labor Relations Board, in a long report to the Senate Education and Labor Committee on proposed amendments to the Wagner Act, declared its "unequivocal belief" in the soundness of the act and affirmed that it is "vital to the interest of this country and its democratic institutions that those principles not be weakened or abandoned, but preserved and strengthened." Of the proposed amendments in general the Board states that they are "not only in conflict with the basic purposes of the act but would, taken singly or in combination, effectively nullify the rights of self-organization and collective bargaining which the act is designed to protect."

J. Warren Madden, chairman of the National Labor Relations Board, declared that Senator BURKE's amendments would "impose such severe restrictions upon employees and labor organizations as to restore in large part that inequality of legal rights and economic power which the act was intended to alleviate."

Regarding the proposals to make the act less "one-sided," to "equalize" it, to "prevent coercion from any source," Senator WAGNER says in the New York Times that they are "designed to destroy the equality of bargaining power that the Labor Act strives to make possible and to restore the gross inequality that existed when the isolated worker stacked his pitiful weakness against the gigantic strength of consolidated capital. Such proposals are a threat not only to every worker in America, but to every person in America who believes that the legitimate organization of labor represents a sound democratic principle in a modern industrial state."

The Nation Throws Light on the Oil Trust

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

EDITORIAL FROM THE NATION OF JUNE 3, 1939

Mr. COFFEE of Washington. Mr. Speaker, I have at various times brought to the attention of this House allegations of illegal monopoly in the oil industry.

I now bring to your attention an editorial which appeared in the June 3 issue of the Nation, a magazine dealing exclusively with current events and justly famed for its accuracy, integrity, intelligence, and fearlessness in portraying matters relating to the public interest.

It is of concern to Congress to note the statement in this editorial to the effect that as much can be learned of the ways of monopoly through the Borah-Gillette pipe-line divorce bill, S. 2181, now before the Senate Judiciary Committee, as will be learned from the volumes of testimony now piling up in the hearings before the Temporary National Economic Committee, hearings which are costing the taxpayers hundreds of thousands of dollars.

While it is my conviction that the "objective" studies of the Temporary National Economic Committee will in time prove well worth their cost in developing new and sounder theories of industrial economics, I wish to point out that what the Nation refers to as "an obscure bill now before the Senate Judiciary Committee," meaning the Borah-Gillette bill, has greater possibilities for not only disclosing unsound and illegal economic industrial practices than is superficially apparent.

We do not hesitate to appropriate millions of dollars for studies of adverse conditions now confronting our people; we do not hesitate to speak boldly and freely from this floor our conception of the dire need of economic reform.

We blaze forth like comets in our denunciation of those predatory interests who use every opportunity and every pretext to fatten their already swollen fortunes by running the juggernaut of big business over the helpless bodies of little business.

But when the opportunity is presented for bending our efforts for only a few brief moments in doing something which we know will be of immediate relief to little business, such as by supporting legislation as is proposed by the Borah-Gillette pipe-line divorce bill, then, when such opportunities present themselves, do we give it the attention deserved?

The answer to this question lies in the disposition by Congress of the bill in question.

In offering for the RECORD the editorial referred to, I do so with the profound hope that every representative of the people in this Congress will take the necessary time to read and thoroughly digest the accusations of the Nation against the reborn Oil Trust.

[From the Nation of June 3, 1939]

LIGHT ON THE OIL TRUST

We venture to say that as much could be learned about monopoly, its methods, its disguises, its phoenixlike ability to rise from the ashes of dissolution decrees, from an obscure bill now before the Senate Committee on the Judiciary as from the volumes of testimony piling up in the hearings of the Temporary National Economic Committee. The bill to which we refer, S. 2181, was introduced by Senators BORAH and GILLETTE. Its significance is not readily apparent, and it is unlikely that newspapers dependent on oil-company advertising will devote much space to explaining it. A bill to prohibit interstate common-carrier pipe lines from transporting commodities in which such carriers have any interest may seem of technical and minor importance. But it happens to strike at the heart of the new oil "Trust" which has been growing up in place of the old trust, smashed by court order in 1911. For control of the pipe lines, the arteries through which oil pours from the great producing fields to the seaboards, is today's equivalent of the elder Rockefeller's secret alliance with the railroads. The enormous profits of the pipe lines—they earn from 24 to 400 percent annually on net investment—have supplanted the rebates by which the creator of the Standard Oil Trust milked and undermined his independent competitors.

The Borah-Gillette bill was introduced because oil interests succeeded in forcing a similar clause out of the Wheeler-Truman bill. The smell of oil has always been strong in the lobbies in Washington, and the oil lobby has always succeeded in the past and may succeed again in protecting monopoly control of pipe lines from congressional attack. The first commercial oil pipe line of any importance was built in 1878 by independent western Pennsylvania oil producers in an attempt to escape the grip of the combination between the Pennsylvania Railroad and the Standard Oil Co., which was slowly forcing them out of business. Then, as now, control of transportation facilities meant control of the industry, and by 1883 Rockefeller succeeded in bringing this pipe line—the last hope the independents had to get their oil to market on fair terms—under his control. The pipe line assumed increasing importance in the minds of the oil monopolists as regulation of railroads made it more and more difficult to discriminate against the independent oil man. The antirebating provisions of the Elkins Act of 1903 and the 1911 decision by the Supreme Court upholding the trust-busting decree against the old Standard Oil Co. stimulated the construction of pipe lines. Control of the pipe line was used to squeeze out the independent as control of railroads serving the anthracite coal country was used against the independent mine owner.

The Hepburn Act in 1906 was an attempt to break up the coal-railroad combination. The original bill forbade a common carrier to convey commodities produced by a company owned by the carrier. In that form it would have applied to pipe lines as well as railroads. The oil lobby succeeded in changing the words common carrier" to "railroad" before the bill was passed. Today the 20 interlocking major oil companies own 97 percent of the oil pipe lines and determine the terms and rates on which oil is to be shipped to market.

Two figures tell what effect this has had on the independent oil producer. Twenty-five years ago the major companies produced no more than 20 percent of their own crude oil. Today they produce 60 percent. The combination that grew great on the supply of kerosene for lighting has now grown beyond anything the trust-busters dreamed of on the demand for gasoline to run the automobile and the airplane. In place of the trust we have interlocking financial controls and community of interest among 20 great companies taking 95 percent of the crude oil produced in this country. The economic power of this combine overawes the agencies of law enforcement. The antitrust laws could be used against the pipe-line monopoly. So could the antirebating provisions of the Interstate Commerce Act. Neither have been so used.

This is by no means merely an oil problem. It is also a railroad problem. And it is a coal problem. It is estimated that oil pipe lines drain half a billion dollars' worth of gross revenue from the railroads, enough to take most of them out of the red. But the economic power of the oil combine is great enough to muzzle the men who are responsible for the welfare of a $25,000,000,000 investment in railroads. The oil combine can threaten to divert freight unless the railroads behave. The combine's financiers can exert even more direct pressure. The Mellon and Du Pont interests are but two examples of family concerns powerful in oil and also powerful enough as industrial freight customers of the railroads to swing the big stick over them. Du Pont is Phillips Petroleum. It is also General Motors. A similar situation exists in coal. Competing fuels have eaten up 50 percent of the market for coal. Fuel oil is the chief competing fuel. Fuel oil constitutes 38 percent of the oil industry's output but provides only 12½ percent of its revenue. There is reasonable ground for suspicion that sale of fuel oil is being subsidized at the expense of the gasoline consumer. Millions of dollars invested in coal and several hundred thousand mine families are affected. Why doesn't the coal industry fight? But our first and their largest bituminous coal companies are controlled by Mellon, and Mellon is also Gulf Oil. The second largest coal company, now in bankruptcy, is controlled by Rockefeller dominated trustees, and Rockefeller is Standard Oil. Oil can actually be shipped more cheaply by rail than by pipe line, but the pipe line is necessary to maintenance of monopoly controls. The consumer foots the bill. Railroad workers and investors, mine workers and mine owners, also pay in lost wages and lost investment. Could there be a more dramatic example of the economic wastes and pervasive power that flow from uncontrolled monopoly?

Future Roads and Federal Road Legislation

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

ADDRESS BY HON. WILBURN CARTWRIGHT, OF OKLAHOMA

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I made at the annual convention of the American Association of State Highway Officials at Dallas, Tex., on December 5, 1938, on the subject Future Roads and Federal Road Legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been talking about good roads for a long time. I have had the good fortune to address highway-minded gatherings in various States of the Union. But I have never made a speech in a place that I considered more appropriate for this particular subject than right here in Dallas, Tex., the home of my good friend, the Honorable HATTON W. SUMNERS. I wish I had time today to

tell those of you who come from other States about the fine work that is being done for the cause of good roads by the Texas Good Roads Association. You who live here do not need to be told. And no group in the United States Congress has been more active in drafting and passing legislation for the improvement of our highway system than the delegation from the State of Texas. I wish especially to mention the good work of my colleague on the House Roads Committee, Congressman NAT PATTON, who comes from Crockett. On the Senate side, we have always been able to count on the wholehearted support of Senators TOM CONNALLY and MORRIS SHEPPARD. It is the memory of the fine help and cooperation received from Texans that makes me particularly pleased to be making this address in Texas today in the home State of my old friend, Gen. Robert Lee Bobbitt.

FEDERAL LEGISLATION 1934, 1936, 1938

Not since the passage of the act of 1921 has the Congress enacted such a constructive and far-reaching piece of legislation in the matter of building roads as that provided in the Hayden-Cartwright Act of 1934. In addition to liberal authorizations, it carried several amendments to the original highway act, as well as additions covering new subjects, making this legislation of very great importance in the future development of highways.

The Hayden-Cartwright Act of 1936 made the regular $125,000,000 authorization for primary roads for each of the fiscal years 1938 and 1939 and provided $25,000,000 for each year to be spent on secondary, farm-to-market, rural free delivery, and school-bus roads. There was also a provision of $50,000,000 a year for elimination of hazardous railroad grade crossings.

By including, for the first time, a provision for the improvement of farm-to-market roads, the Federal Government recognized the necessity for improving these feeder roads and an important precedent was established.

It is well known that the Federal Government owns lands of various kinds and character throughout the country, and in many cases it is necessary for roads to be built in these areas. The Hayden-Cartwright Acts also make provision for authorizations covering the roads and trails on Government lands, such as Indian reservations, national forests, national parks, etc.

In November of 1937 President Roosevelt called for a reduction in Federal highway spending and change in authorization and appropriation procedure. The special session of Congress last year failed to act on the President's request for cancelation of 1939 authorizations.

As required by the Hayden-Cartwright Act of 1936, on December 31 last, Secretary Wallace apportioned to the States the money authorized for 1939 Federal aid, totaling $195,000,000. However, at the direction of the President, he sent a letter to the Governor of each State requesting that no projects involving 1939 funds be submitted until Congress had had time to consider further the President's request for cancelation of the authorizations.

The President based the Federal Budget for the 1939 fiscal year on the assumption that Congress would comply with his recommendations for cancelation and reduction.

On January 6 of this year, I took the bull by the horns and introduced a bill, H. R. 8838, to provide for continuation of Federal highway aid without any reductions through the fiscal years 1940 and 1941.

That left it squarely up to the Congress as to whether or not Federal support for orderly highway growth would be continued in the United States. The House Roads Committee took that responsibility seriously and we had 3 weeks of public hearings, the longest in history on that kind of legislation. Very important testimony was heard from friends of good roads from all over the Nation. Representatives of every large organized group of our citizenship were invited to express their views frankly and freely.

Soon after the record of the hearings was printed the committee reported out the bill with the recommendation that it do pass. It did pass, by a unanimous vote and without important amendment in the House, but with some reductions in the Senate. The principles of the legislation, however, were kept intact, and a total of $357,500,000 of Federal funds was authorized for roads for the fiscal years 1940 and 1941. This was an important victory for roads.

My friends, Federal aid for highways is not a current expenditure, but rather an investment in a national capital asset. The use of this investment touches and enriches the lives of more American people than any other form of Federal expenditure.

Federal-aid highway funds are apportioned to the several States, not on the basis of political pulling and hauling but according to a mathematical yardstick that has been developed on the basis of population, area, and road mileage, the fairness of which has never been seriously questioned.

The granting of Federal aid to the States involves certain obligations on the States to so route their highways that they will be a part of our national systems. They must prepare plans and specifications that are in compliance with the highest standards of engineering, and see that those high standards are maintained, not only in the spending of the Federal funds but also in the expenditure of the State funds that have been put up to match the Federal funds. That has been an influence in raising the standards of engineering and the planning and location of roads in this country that cannot be overestimated.

These and many other advantages that result from Federal aid for highways are taken into consideration each time Congress considers a road bill.

DIVERSION OF HIGHWAY FUNDS

Election years like 1938 in which we do not elect a President are referred to by politicians and the press as "off years." To all of us who are interested in the improvement of America's highway system, however, 1938 was far from being an off year. The voters of California, Michigan, and New Hampshire made November 8, 1938, a "red-letter day" for members of the highway profession and industry, for the motorists of those three States and for good-roads enthusiasts everywhere. Legislators in those States were shown, once and for all, the determination of a road-minded public to keep highway funds for highway purposes. The overwhelming majorities with which the voters of California, Michigan, and New Hampshire passed antidiversion amendments to their State constitutions is especially gratifying to those of us who look forward to a day when every penny collected from highway users as such will be spent for good construction and improvement in every one of the 48 States.

New Hampshire voters showed their disapproval of diversion by a majority of 5 to 1; California, 2 to 1; and Michigan, 3 to 2. While a similar amendment was defeated in Alabama, the margin was so slight—only 4,000 votes—that its adoption at an early election is predicted.

Today, therefore, we can point with pride to seven States which have outlawed diversion through constitutional amendments. In addition to those which joined the good roads honor roll last election day, Missouri, Minnesota, Kansas, and Colorado were pioneers in this movement.

While we rejoice in these victories, however, we must not forget that there are still 41 States in the Union whose constitutions still permit diversion of highway funds to nonhighway uses. The general public cannot be expected to take the first step in remedying this situation. They will act only after they have been thoroughly awakened to the havoc that is being wrought by the misappropriation of highway funds. They must be shown conclusively that modern highway needs are so great that they demand the use of every cent collected in highway-user taxes. They must be awakened to the fact that these taxes are, in reality, money invested by the motorist in the highway system and that, when this money is not spent on highways, the motorist is being defrauded of his investment. That is our problem. It is the problem of every member of the American Association of State Highway Officials who knows intimately the highway needs of his own State and is, therefore, especially qualified to tell the public about these needs. Adoption of the three antidiversion amendments was due, in a large measure, to the well-organized educational campaigns conducted by such national highway organizations as the American Road Builders' Association and its affiliate State groups, and the consistent activity of the motorists' clubs. Adoption of similar amendments in other States will only be brought about by the continued and untiring work of highway-builder and highway-user groups throughout the Nation.

The Federal Government has taken steps to penalize States that misuse their highway funds. The Hayden-Cartwright Act of 1934 provides that States which engage in the practice shall be deprived of one-third of their Federal-aid money for highway construction. This provision has in many cases prevented States from practicing diversion and has assured the use of highway money for highway purposes.

Motorists throughout the 48 States are awakened to the evils of diversion as never before and they are beginning to fight to put amendments into their State constitutions to outlaw this indefensible practice.

The American Association of State Highway Officials, a national organization of men who conceive and build the highways, has for many years been in the battle against diversion and offering valuable cooperation in the fight for improvement of our highway system. It is through close cooperation and united effort on the part of highway users, highway builders, and State and Federal legislatures that we may expect to achieve more roads, better roads, and safer roads for the farmer and his city cousin, for the soldier and the civilian, and for everyone who uses our highways for business or for pleasure.

I believe that highways are the lifeblood of the people within the State. I intend to make it my business to help keep that lifeblood flowing freely, not only in Oklahoma but in order that Texas and other States may be able to reap the benefits they deserve from good roads—improved roads over which they can travel in safety.

SUPERHIGHWAYS

The outlawing of highway enemy No. 1 means that additional thousands of dollars will be reserved for use in the construction and improvement of roads. It means that when superhighways legislation comes up in the next Congress we will be better able to find ways and means to finance the construction of modern roads in the places where volume of traffic and high accident rates make such a step imperative.

During the past several Congresses bills have been introduced to provide a system of superhighways for the United States. Superhighways in this country have been looked upon by most people as a beautiful dream that would not come true for many years. The House Committee on Roads has looked more to building our primary highways and getting the farmers out of the mud before launching on such an ambitious scheme. Personally, I have been and am for superhighways as soon as we are ready. The House committee has had hearings and printed reports of testimony pro and con for distribution.

In the Hayden-Cartwright Act passed this year we provide: "The chief of the Bureau of Public Roads is hereby directed to investigate and make a report of his findings and recommend to the Congress not later than February 1, 1939, with respect to the feasibility of building, and cost of, superhighways not exceeding three in number, running in a general direction from the eastern to the western portion of the United States, and not exceeding three in number, running in a general direction from the northern to the southern portion of the United States, including the feasibility of a toll system on such roads."

This subject will be up in the next Congress and some definite action will probably be taken.

I was in Germany this summer and when I think of superhighways, I think of Germany, for, regardless of what we think of him as a man, we must give Fuehrer Hitler credit for building a system of superhighways in his country which are second to none in the world today. It is undoubtedly true that the construction of these highways was prompted by the same motives which are behind Germany's huge expenditures for armament and for the building up of her army to the limit of her manpower. The superhighways will become very important assets to that nation in the event of another war in Europe. In the meantime, however, they are providing the German people with innumerable peacetime commercial, industrial, social, and cultural benefits.

I think that the United States should have a highway system second to none. Our highway engineers such as Thomas H. MacDonald and Charles M. Upham have long served as teachers to road builders in other parts of the world. The safety features which are built into the German superhighways are, in fact, those which have long been recommended by American engineers. The world's best and most efficient road-building machinery and materials are manufactured in the United States. Our financial structure is certainly superior. It is, therefore, not an idle boast for us to say that we can do better anything that Germany can do well.

However, I do not advocate that we start immediately to construct a superhighway system like that in Germany. It would take many years to build a complete system which would link the entire country and cost billions, but we can begin now to design and lay out this system and to construct superhighways in those areas where traffic is heavy and congested. In this way we will be able to attain, in the next decade or so, the beginnings of a system of highways and superhighways which will be adequate for the needs of our country.

HIGHWAYS AND NATIONAL DEFENSE

Last summer I happened to be in Europe when the outbreak of another world war was narrowly avoided by European statesmen. We all hope that the future will see wars replaced by arbitration and battlefields by conference tables. The strength of this hope, however, is not sufficient basis for the scrapping of all our battleships and implements of protection. And we cannot discount the value of our highway system if this country should be invaded. Modern military equipment is becoming more motorized every day, and the increase in its motorization is also increasing the importance of highways to its transportation.

Our highway system is a vital part of our national defense. Without good roads under conditions of modern warfare, the United States would be seriously crippled in dealing with an enemy attack.

There is no question that our defense will have to be a mobile defense in the future. Defense, not only by guns on wheels to be placed at strategic points upon brief notice but manpower on wheels to be transported whenever and wherever needed.

The roads, first of all, will serve our everyday commercial needs, but no army and no navy can move without food and supplies. We must have roads to the farms where the food is produced and roads to the factories where the munitions and supplies are made. These, plus rapid means of transportation, will comprise the heart of successful national defense.

And remember this, the appropriation of Federal money for the construction of highways to provide adequate transportation facilities in the event of war has a signal advantage over appropriations for other forms of preparedness. If our hopes and prayers are rewarded and war never comes, much of our military equipment will never be used; the bulk of it will probably be scrapped, but the extreme value of our highways to everyone during peacetime cannot be questioned. The fact that a road was constructed primarily to facilitate the movement of war goods does not lessen its usefulness when the threat of war is over!

FUTURE HIGHWAYS

When we consider the changes that have been made in our roads during the past 20 years, it is reasonable to predict that even greater progress will be made in the next 20 years. Compared to the roads of a generation ago, modern highways are almost perfect. But compared to the roads of a generation hence, "you ain't seen nothing yet." These highways will be free ways, with intersections and grade crossing replaced by overpasses and underpasses. Longer sight distances will be provided by the leveling of hills and the straightening of sharp curves. Lanes will be at least 12 feet wide, with at least two paved lanes in each direction, and opposing streams of traffic separated by center parkways. Their surface will permit safe driving in all kinds of weather and illumination will eliminate the particular dangers of night-time driving.

CONCLUSION

I do not need to elaborate for the members of this group the benefits which result from good and safe highways. You are all familiar with the tremendous number of lives lost each year in highway accidents which are, directly or indirectly, caused by some fault of the highways. You know the value of the tourist trade to any State's annual income—and you know that this revenue is increased or decreased as vacationists are attracted to your State by good roads or driven away by poor ones. You understand the importance of good roads to the man whose business requires him to travel from town to town by motor. To reduce our discussion to simple arithmetic, we might say that good roads add to the comfort, subtract from the danger, divide the time and expense, and multiply the convenience and pleasure of everyone who travels over our highways, whether he is bound on a business trip or a vacation.

I thank you for this distinct privilege of talking to you, and I say again, in closing, that in the fight for good and safe roads, the American Association of State Highway Officials, under the exceedingly capable leadership of Secretary W. C. Markham and President C. H. Purcell has been a "good soldier" with an "effective weapon."

W. P. A.

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following questions and answers prepared by F. C. Harrington, the Administrator of the Works Progress Administration:

QUESTIONS AND ANSWERS ON THE WPA

1. What is the WPA? The Works Progress Administration is a Federal agency which cooperates with State and local governments in carrying out needed public improvements and services, in order to provide work and wages for the needy able-bodied unemployed. The local governments plan and sponsor the projects and the WPA helps to operate them.

2. What other Federal agencies provide emergency employment? The Civilian Conservation Corps (CCC); the National Youth Administration (NYA); the Public Works Administration (PWA); and those agencies which operate emergency projects in addition to their regular programs. (See question 66.)

3. Does the WPA give relief without work? No. Direct relief is provided by States and localities and is intended primarily for the care of unemployable people.

4. Why does the Federal Government give work to the able-bodied needy unemployed instead of direct relief? This policy was adopted in the conviction that work is better than direct relief because work preserves the skills and self-respect of the workers and makes them fit to return to private industry; because our communities are greatly in need of the public projects on which the unemployed are set to work; and because work projects bring a valuable return to the communities and the Nation for money expended in assisting the unemployed.

5. What is a WPA project? It is any useful public work on which the Federal Government and some tax-supported public body have agreed to cooperate, through the WPA, in order to provide work for the needy unemployed. The project is a community or State enterprise which the WPA helps to carry out; the completed project belongs to the community or State.

6. Are WPA projects planned locally or federally? Ninety-five percent of all WPA expenditures are for projects planned by such local sponsors as city councils, county commissioners, and boards of education, or State agencies. The Arts Projects of the WPA are chief among the few planned by the Federal Government.

7. What is the sponsor of a WPA project? The sponsor of a WPA project is a State, municipal, or other governmental agency which proposes that the WPA assist it in carrying out a local public improvement or public service. Plans and specifications for the work are submitted by the sponsor. The proposed work must be one which the sponsor has legal authority to do. Since the WPA must use its funds largely for wages, the sponsor must agree to provide most of the materials and equipment necessary. The sponsor's share of the total cost of a project is correspondingly larger when the local improvement desired by the community requires large quantities of material or equipment.

8. On what basis does the WPA approve a proposed project? There must be needy unemployed workers in the locality with the skills required for doing the work. The project must be on public property.[1] It must not be a part of the

[1] On private property only when rented or leased by a public agency; or when easements in the public interest have been secured by a public agency; or when a State or local government officially pronounces the work to be in the interest of public health and safety.

regular work of the sponsoring agency, such as should be wholly financed out of its own regular funds. And most of the Federal funds requested must be used for the wages of project workers.

9. Does work begin on a WPA project as soon as it is approved? Not necessarily. Communities are encouraged to maintain a reserve of approved projects so that there will be no delay in starting a new project when it is needed to provide employment.

10. What are the chief kinds of work done by the WPA? The proportions of WPA funds spent on different types of work up to December 1938 were as follows: Thirty-seven percent for highways, roads, and streets, of which a large proportion are farm-to-market and other secondary roads; 11 percent for parks, playgrounds, swimming pools, and other outdoor recreation facilities; 11 percent for education, library projects, statistical surveys, recreation, and other white-collar and professional projects; 10 percent for sewing and canning projects (the former employing more than half of all women WPA workers); 9 percent for construction and rehabilitation of public buildings—schools, hospitals, courthouses, recreation buildings, etc.; 9 percent for sewer systems and other public utilities; 4½ percent for conservation projects—forestation, erosion control, irrigation, and water control; 2½ percent for new municipal airports and the enlargement and improvement of old ones, and transportation and navigation projects; 2½ percent for sanitation projects, other than sewers, such as elimination of stream pollution and eradication of mosquitoes and other pests; 2 percent for the four arts projects—the Federal music project, the Federal art project, the Federal theater project, and the Federal writers project; 1½ percent for all other types of projects.

The WPA also does emergency work in times of flood, storm, and other disasters. It is able to supply a large force of workers quickly to meet an emergency. For the purpose of supplying such help, WPA projects are immediately closed in the disaster area, and the workers are made available for rescue and rehabilitation work. Although men perform most of the heavy or dangerous tasks, frequently many women WPA workers serve as emergency cooks, nurses, and helpers. Rescue work, the moving of families from danger, care for the homeless, the distribution of food and clothing, the restoration of roads, the repair of water mains and other public utilities, the removal of debris, and the work of restoring sanitary conditions—all these tasks fall largely on WPA workers. Recently in the New England storm disaster 100,000 WPA workers were immediately mobilized and thrown into the work of rescue, relief, and restoration. During and after the Mississippi-Ohio floods in 1937 the WPA gave the same kind of help to stricken communities.

WPA EMPLOYMENT

11. Who is eligible for WPA employment? Any American citizen, or other person owing allegiance to the United States, who is 18 years of age or older, able-bodied, unemployed, and currently certified as in need.

12. What agency certifies that a worker is in need? A local public-relief agency approved by the WPA, or, in lieu thereof, the local WPA.

13. Must an unemployed worker be a resident of a State or locality to be eligible for WPA employment there? State and local practice generally requires legal residence; the WPA itself makes no restrictions.

14. Are farmers eligible for WPA employment? Yes; and there are other Federal programs for the special benefit of farmers.

15. How many members of a family are eligible for WPA employment? Only one; usually the head of the family. The mother or a grown son or daughter is regarded as the economic head of the family if the father is unable to work.

16. If two families live together, is a member of each family eligible for WPA employment? Yes; if both families are in need and otherwise eligible.

17. How are workers assigned to WPA projects? The local public relief agency certifies to the WPA workers in need and eligible for WPA employment; and from this group of persons the WPA Division of Employment selects, according to their previous experience or training, the workers who can be placed at work on the various local projects. (See next question.)

18. Are workers assigned to WPA projects in any order of preference? Congress has directed that eligible war veterans must be given first preference in assignments.

19. Does the WPA ever employ project workers who have not been certified as in need? Yes. Noncertified workers with special skill or training necessary to the conduct of a project may be employed if qualified relief workers are not available. Such nonrelief workers are secured through the United States employment office in the State. At least 95 percent of all project workers, however, must be certified as in need of relief.

20. How many workers in all has the WPA employed? About 7,000,000 individuals at one time or another since the start of the program in 1935.

21. How many workers are employed at one time by the WPA? The number has fluctuated from as low as 1,450,000 in October 1937 to as high as 3,250,000 in November 1938. There were about 3,000,000 WPA workers in March 1939.

22. What percentage of WPA workers are men? Women? Men, 87 percent; women, 13 percent (December 1938).

23. What percentage of WPA workers are doing unskilled work? Other kinds of work? In December 1938:

	Percent
Unskilled	70
Semiskilled	13
Skilled	11
Professional and technical	3
Unclassified	3

24. Do WPA workers do the same kind of work they did in private industry? This is not always possible. An effort is made, insofar as this is consistent with prompt employment, to provide work at the worker's usual occupation or related work.

WAGES AND HOURS

25. What is the average WPA wage? The average monthly WPA wage is about $52.50. (See next question.)

26. Do all WPA workers receive the same monthly wage? No. The monthly earnings vary according to the degree of skill required by the job, and also according to the region and size of community in which the work is done. In large northern cities the wages run from $55 a month for unskilled work to $94 for professional and technical work, while in northern rural districts the range is from $40 to $60. In the South the range in large cities is from $40 to $79, in rural districts from $26 to $48.

27. Do WPA workers get the same wages as workers in private industry? They are paid at approximately the same rate per hour, but their monthly earnings are below the general level of private industry. (See questions 26 and 28.)

28. How many hours do WPA workers work? They average about 110 hours of work a month. Each employee works a sufficient number of hours each month (at the prevailing hourly rate for the occupation in the locality) to permit him to earn his monthly security wage. WPA workers are not permitted to work more than 8 hours in any day, 40 hours in any week, or 140 hours in any month, except to make up lost time or in emergencies involving the public welfare or the protection of work already done.

29. Can a WPA worker's job classification be changed? Yes; if on the basis of experience and ability he is qualified to do work in a different classification, and if such work is available.

30. Are WPA workers eligible for promotion? Yes. On the basis of occupational qualifications and ability they can be promoted to foreman, supervisor, or administrative employee, where such positions are available.

31. Do the families of WPA workers (like those on direct relief) receive food and supplies from the Surplus Commodities Corporation, or food canned on WPA canning projects and clothes made by WPA sewing projects? All such commodities are distributed through local relief agencies to families on direct relief; and it is the local relief agency, not the WPA, that decides whether these commodities shall be given also to the families of WPA workers.

32. Does the WPA provide for transportation to and from a project? WPA workers are expected to provide their own transportation within reasonable limits. However, transportation to a distant project is sometimes furnished by the WPA or by the project sponsor.

UNIONS

33. Are WPA workers permitted to join unions? Yes.

34. Is it necessary for a worker to belong to a union in order to get or hold a WPA job? No.

35. Are union organizational activities permitted among WPA workers? Yes. But such activities are not permitted on a project during working hours. Foremen and other WPA officials, although they may join unions, are not permitted to act as organizers at any time.

36. Have WPA workers the right to complain about wages, hours, or working conditions? Yes. A WPA worker has the right to bring such complaints to his foreman, and, if he is not satisfied, he may carry his complaint to the local WPA office, to the State administrator, and finally if necessary to the Washington office. WPA rules forbid any discrimination against complainants.

37. Can a union or any group of WPA workers send representatives to a WPA office to present grievances? Yes; and they have the right to choose any representatives they wish.

38. Can a WPA worker be discharged? Yes; he can be discharged for cause relating to his efficiency or integrity on the job. Also he can be terminated from project employment because of completion of work or shortage of funds.

SAFETY AND COMPENSATION

39. What provisions are made for the safety of WPA workers? It is the foreman's duty to maintain safe working conditions on a project. In addition, safety inspectors make regular inspections of all projects.

40. Is equipment provided to protect WPA workers from injury? Yes. Either the WPA or the sponsor of the project provides goggles, safety belts, lifelines, or whatever equipment is necessary to protect the workers against injuries. Also there is a first-aid kit available on every project.

41. How does the injury rate on WPA projects compare with the general rate of private industry? It is considerably lower.

42. Is a WPA worker entitled to compensation for injuries received on the job? Yes, and for illnesses resulting from such injuries.

43. What compensation does a WPA worker get for injuries received on his job? Beginning on the fourth day of his disability, he draws a compensation equal to two-thirds of his monthly wage but not exceeding $50 a month. The maximum amount allowed by the United States Employees' Compensation Commission for death or injury is $4,000, payable at a rate not to exceed $50 a month. In addition, he receives all necessary medical and hospital treatment.

ADMINISTRATION, SUPERVISION, AND FINANCES

44. Is WPA administration efficient? Impartial investigations have found it so. For example, after making a comprehensive survey of unemployment relief, the magazine Fortune reported that the WPA as an organization "functions with an efficiency of which any industrialist would be proud."

45. How are foremen and supervisors of WPA projects selected? Local WPA officials select all foremen; supervisors are selected by the local WPA except when they are provided by (and paid by) the project sponsors.

46. Must WPA supervisors and foremen be taken from the relief rolls? This is desirable but not required. However, the proportion of nonrelief employees to the total working force must not exceed 5 percent on any project, except where special exemptions have been authorized.

47. How are WPA funds apportioned among the States and communities? In accordance with the extent of need in each State and each community. Thus the amount of WPA money spent in States and communities does not depend on their area or population, but on the number of needy unemployed workers and on the wage levels in each.

48. How much of the cost of WPA projects is paid from Federal funds? The Federal Government pays almost all the labor costs of a project. The sponsor pays most of the costs of materials and equipment. During the last fiscal year sponsors' funds averaged about 20 percent of total project costs.

49. Just what is the Federal WPA dollar spent on? Out of each Federal dollar spent: 86 cents is used to pay project workers; 11 cents is used to pay for materials and equipment; 3 cents is used to pay for administrative costs.

50. Is there an independent accounting for WPA funds? Yes, by the United States Treasury Department, which also issues checks to WPA workers and purchases WPA materials.

POLITICS

51. Must a WPA worker support any political party in order to get or hold his job? No. To promise a WPA job for political reasons, or to deprive or threaten to deprive a WPA worker of his job for political reasons, is a felony.[2]

52. Is it permissible for WPA workers to be solicited for campaign contributions? No. Solicitation of campaign contributions from WPA workers is a felony.[2]

53. Can WPA employees run for political office? Project workers legally can; but supervisory and administrative employees are forbidden to run for political office or to act as campaign managers for political candidates. The law provides that any supervisory or administrative employee who uses his official position to influence an election shall be immediately dismissed.

PRIVATE INDUSTRY

54. Are any special arrangements made to help WPA workers get jobs in private industry? The United States Employment Service, with which all WPA workers are registered, seeks to keep informed of the needs of private employers, and makes constant efforts to place WPA workers in private jobs.

55. Is a WPA worker required to take a job in private industry if one is open to him? Yes; if it is work that he can do and if the employer offers the prevailing local wage and reasonable working conditions.

56. Can a WPA worker who has taken a private job get back on the WPA if he loses the job? Yes. If he loses the job through no fault of his own, and is still in need, he is entitled to reemployment.

WPA WORKERS

57. How long had WPA workers been employed at their trades in private industry? Ten years on the average.

58. How old are WPA workers? A survey in November 1937 showed these percentages: Nine percent under 25 years old; 23 percent between 25 and 34 years old; 25 percent between 35 and 44 years old; 24 percent between 45 and 54 years old; 16 percent between 55 and 64 years old; 3 percent 65 years of age or over. The WPA limits its employment almost entirely to the heads of families. Many needy younger workers are assisted by the NYA or the CCC rather than the WPA.

59. Are the same people employed continuously on WPA projects? Less than one-sixth of the 5,000,000 different persons who worked on WPA projects during the first 2 years of the program's operation were continuously employed by the WPA. Thousands of workers leave WPA projects for private employment every week; and at the same time other workers come on WPA projects who have lost their jobs in private industry and who are in need.

Even when unemployment is increasing for the Nation as a whole, some workers are able to find private jobs and leave WPA projects. However, when unemployment is increasing, the number who have to apply for WPA assistance is greater than the number leaving the projects. The opposite is the case when private employment is on the increase.

60. Do WPA workers refuse jobs in private industry in order to stay on the WPA pay rolls? Of the thousands of complaints that have been investigated, less than one-tenth of 1 percent have been found valid.

ACCOMPLISHMENTS

(The next three answers give only a partial account of WPA accomplishments. A complete inventory will be sent on request.)

61. What has the WPA accomplished in the way of public improvements? During the 3-year period ending July 1, 1938, the WPA's record of physical accomplishments includes:

Public buildings: Seventeen thousand five hundred and sixty-two new ones constructed, with improvements on 46,318 and additions to 1,663. These include schools and libraries, administrative and recreational buildings, hospitals and institutional buildings, fire houses, and armories.

Roads: Two hundred and seventy-nine thousand eight hundred and four miles of highways, roads, and streets newly built or improved. Most of this work was done on farm-to-market and other secondary roads.

Other road work: Thousands of miles of culverts, curbs, gutters, sidewalks, and paths built and repaired. Also 22,247 miles of new roadside drainage ditches, with 44,255 miles cleared or deepened.

Bridges: Twenty-nine thousand and eighty-four new ones and 23,521 improved.

Aviation facilities: Three hundred and fifty-seven airports and landing fields built or modernized; over 2,000,000 linear feet of landing runways built or improved.

Recreational areas and facilities: More than 15,000 parks, playgrounds, and athletic fields built or improved, as well as 11,600 swimming and wading pools, golf courses, tennis, handball and horseshoe courts, skating rinks, ski jumps and trails, outdoor theaters and bandshells.

Water systems: Six thousand and eighty-six miles of new water mains, aqueducts or distribution lines, with 2,204 miles renovated. Water connections totaling 349,000 were made or repaired.

Dams: Four thousand and ninety-one new storage dams, with 469 improved; 26,663 other new dams for erosion control and general conservation, with 365 of this type improved.

Sanitation: Eight thousand eight hundred and fifty-five miles of storm and sanitary sewers built, and 2,600 improved. Also 544 sewage-treatment plants, 1,159,000 sanitary toilets, and 5,639 septic tanks. Sewer connections totaling 250,000 were made or repaired.

Ground improvements: Nearly 42,000 acres of public grounds, other than parks, landscaped; nearly 18,500 miles of fence built or repaired.

62. What has the WPA done in the fields of education, the arts, and public recreation service? During the 3 years ending July 1, 1938:

Educational workers conducted more than 100,000 classes a month, attended by about 1,145,000 people. They have taught 1,200,000 people to read and write, assisted in the naturalization of aliens by providing education in the fundamentals of American citizenship, and furnished vocational education for unemployed men and women.

Library workers established more than 3,500 new branch libraries, more than 1,100 new traveling libraries, more than 4,500 reading rooms in existing libraries; cataloged 27,553,000 library books; renovated 56,191,000 books, most of them for schools and libraries.

Recreational workers operated more than 14,700 community centers and assisted more than 7,800 others; supervised recreational activities, mostly physical, totaling more than 16,320,000 participant hours in an average week.

The Federal art project conducted art classes with an average monthly attendance of about 60,000; operated civic art centers with aggregate attendance of 4,000,000; produced more than 234,000 art objects, including 96,602 drawings, easel paintings, murals, and sculptured works.

The Federal music project conducted music classes with an average monthly attendance (January to June 1938, inclusive) of 530,000 and gave an average of 4,400 musical performances per month with an average monthly attendance of over 3,000,000.

The Federal theater produced 1,813 plays, with an average (January to June 1938, inclusive) of 1,077 performances a month with average monthly attendance of 476,000.

The Federal writers' project, chiefly occupied in producing a series of guidebooks to the various States and localities of America, completed 293 books and pamphlets, of which 3,550,000 copies have been sold or otherwise distributed.

The Historic American Building Survey made measurements of 2,302 famous structures, 16,244 drawings, and 17,480 photographs, which will be preserved for future generations.

The historic records survey preserved thousands of valuable records from neglect, decay, and destruction.

Hundreds of research projects assisted various kinds of public work, ranging from traffic regulation to scientific experiment.

63. What other public services have WPA workers performed? During the 3-year period ending July 1, 1938:

Women on sewing projects made 181,209,000 garments and household articles for distribution through local public-relief agencies to needy families and public institutions.

Workers on canning and preserving projects prepared 48,061,000 pounds of food for distribution to needy families through local public-relief agencies.

Workers on school-lunch projects served 238,330,000 meals to undernourished children.

More than 15,000,000 needy adults and children were helped through medical, dental, and nursing services.

Housekeeping aides made over 7,000,000 visits in order to help out needy families.

WPA workers conducted 1,551 nursery-school units attended by nearly 44,000 children from needy families (up to November 1, 1938).

64. Has an independent appraisal of WPA work been made? Yes. Ten national organizations cooperated in making an independent

[2] Punishable by a fine of not more than $1,000 or a year's imprisonment, or both.

appraisal of WPA work.[3] In reply to a questionnaire sent out by these organizations, the officials of counties, cities, and towns in 42 States made some 8,000 reports appraising the works program in their communities. The reports were studied and summarized by impartial State committees of leading citizens. They expressed pride in the accomplishments of local WPA workers, and they declared that the WPA had been of immeasurable aid both to the communities and to the workers. Without exception, the summarizing reports of the State committees favor work relief over a dole.

Another special study was made, in several large cities, of the comparative efficiency of skilled building-trades workers on WPA projects. This study, made by trade-union representatives with the cooperation of the local WPA authorities, showed that over 90 percent of these skilled WPA workers performed adequate work in terms of the normal requirements of their crafts in private industry.

65. What do local officials think of the WPA? The United States Conference of Mayors, an organization composed of the mayors of 100 leading cities with a total population of some 25,000,000, has gone on record as follows:

"The integrity and permanent usefulness of the city projects which have been approved by the Federal Government need no apology from anyone. These are the cities' own projects. Honest and impartial analysis * * * will reveal that practically every project represents a useful, and in most cases a permanent, public improvement.

"Finally, it is apparent that the city officials of America will never consent to abandonment of the work principle in giving relief assistance. The dole, based upon idleness and groceries, has no place in our American scheme of society."

EMERGENCY EMPLOYMENT PROVIDED BY OTHER FEDERAL AGENCIES

66. What other Federal agencies provide emergency employment; and what is their relation to the WPA program? The Public Works Administration (PWA), because of the similarity of the initials, is sometimes confused with the WPA. The PWA is not primarily a work-relief agency; its principal objective is to stimulate reemployment, directly, through contractors carrying out PWA jobs, and indirectly through the stimulation of productive activity in heavy goods industries. PWA projects are restricted to construction activities. The PWA as such does not carry out the actual prosecution of projects (as does the WPA), but makes grants, sometimes supplemented by loans, to State and local governments, which in turn let contracts for the prosecution of the work under the general regulations of and subject to the approval of the Public Works Administration. The PWA regularly inspects the actual construction work as it is carried out. Under the act appropriating funds to the PWA for fiscal year 1939, need of relief is not a condition for employment on PWA jobs.

The CCC's special task is to help conserve and develop the Nation's parks, forests, and other natural resources; it provides employment and training in camps to about 300,000 workers, chiefly among unmarried youths from 17 to 23 years of age, but including also many war veterans.

The NYA provides part-time employment for needy students of both sexes, from 16 to 25 years of age, thus enabling many of them to continue their education. It also affords part-time employment through work projects to many young people between the ages of 18 and 25 who are not in school or college.

The Departments of Agriculture, Interior, Navy, War, and Treasury, and various other Government agencies, provide emergency employment by expanding the work which they ordinarily carry out under regular appropriations. Part of the work of certain agencies can be adapted readily to the employment of relief workers, with relatively small outlays for materials and equipment, and emergency projects of this nature are financed by the transfer of WPA funds. Other agencies are able to carry out projects of the heavy-construction type, on an expanded and emergency basis, and these projects are financed by the allocation of PWA funds, or by direct appropriations of an emergency nature. Some agencies, of course, operate emergency projects of both types.

Thus the War and Navy Departments employ relief workers to help construct and rehabilitate Army posts or navy yards; the United States Army Corps of Engineers is able to do more flood-control work and inland-waterway improvement; the Bureau of Public Roads allocates funds to States for the construction of more roads and the elimination of dangerous grade crossings; the Bureau of Entomology and Plant Quarantine conducts more extensive campaigns against plant diseases and insect pests; the United States Public Health Service carries on health projects and health surveys; and the Bureau of Reclamation conducts various irrigation projects—all either using workers from the relief rolls or providing jobs for other unemployed workers.

The WPA—besides cooperating with other Federal agencies in providing emergency employment—helps to operate about 35,000 local work projects all over the country. Its employment varies in inverse ratio with the level of private employment, having ranged from one and one-half millions in the fall of 1937 to three and one-fourth millions in the fall of 1938. It takes its workers almost entirely from the relief rolls; it employs many women as well as men; and its projects, while in the main devoted to such work as building roads and sewers, also include education, health, recreation, art, music, and other projects giving employment to trained professional and technical workers.

[3] The cooperating organizations were the American Engineering Council, the American Institute of Architects, the American Municipal Association, the American Public Welfare Association, the American Society of Planning Officials, the National Aeronautic Association, the National Educational Association (department of adult education), the National Recreation Association, the United States Bureau of Public Roads, and the United States Conference of Mayors.

Japan, Spain, Germany, England Absorb Trade Benefits Granted Filipinos by United States

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

ARTICLE BY PORFIRIO U. SEVILLA

Mr. ALEXANDER. Mr. Speaker, the Congress of the United States, through the Independence Act of 1934 has provided for the independence of the Philippines on July 4, 1946.

Attempts have been made by S. 1028 to emasculate that act so dear to the Philippine patriots. Largely through the efforts and zeal of Porfirio U. Sevilla, publisher of the Philippine-American Advocate, a young progressive leader and critic of Pacific affairs, including President Quezon's government of the Philippines, these attempts against Philippine independence have been defeated.

Herewith, with the consent of the House, I desire to publish in the RECORD the following statement of Publisher Sevilla showing why the Filipino leaders and people are defeated in their attempt to secure preferential trade relations with the United States as the benefits seem to be going to firms belonging to four foreign nations: Japan, Spain, England, and Germany. This information is in line with and supplements the facts disclosed in my own address in the House of Representatives this afternoon. Here is Publisher Sevilla's editorial:

[From the Philippine-American Advocate]

ALL LOCAL INDUSTRY AND BUSINESS IN THE PHILIPPINES IS OWNED AND CONTROLLED BY AGGRESSIVE FOREIGN CAPITAL—ALL AMERICA'S GENEROSITY IN THE ISLANDS IS QUICKLY GRABBED UP BY THE FOREIGNERS FAVORED AND PAMPERED BY PRESIDENT QUEZON—CONGRESS MUST STOP BEING "SANTA CLAUS"; STOP THE FILIPINO PEOPLE FROM BEING USED AS A DECOY TO PROTECT FOREIGN INVESTMENTS

(By Porfirio U. Sevilla)

Last year President Roosevelt created the Joint Preparatory Committee on Philippine Affairs to report on a ways and means to adjust and make secure the trade relations between the United States and the Philippines. This report was submitted to the President by the members respectively appointed by the two governments to study and make recommendations regarding Philippine-American trade relations in the future, and, in turn, President Roosevelt submitted the report to the United States Congress for congressional legislation and enactment.

We can now safely say that President Roosevelt is personally and officially interested in what is happening and what will happen in the Philippines after complete independence is granted to the people in 1946, as provided by the Tydings-McDuffie Act.

This American protectorate has, up to the present time, been used solely for the advantage of everyone except the Americans and Filipinos. Practically every foreign power has not only openly exploited the Filipino people but seized all financial and governmental assistance the United States has given to the islands.

Certain of these foreign powers have made the Philippines a virtual gold mine and a source of economic and financial stability for themselves. Some of these foreign powers have practically built their whole national financial security on the exploitation of the economic and financial situation of the Philippine people. Some of these powers have insidiously undermined the whole social structure and all the good the United States has done for the Filipinos by completely monopolizing all its industries.

Other powers have economically bled the Philippine Islands almost beyond repair. A foreign power has gone into the Philippines and completely absorbed one whole industry at a time. We will cite some examples of how an alien country has monopolized and now completely owns a particular industry to the absolute exclusion of every other nation. There is not one single Filipino

capitalist or industrialist strong enough to compete with these foreigners and foreign capital. For when a native Filipino seems to be making any headway at all in any industry, these foreign powers become so irate they conspire and gang together and financially ruin him. As a result, not a single native of the Philippines, not a true Filipino, has been able to successfully fight the collossal power exerted by financial groups of outside countries, who, in many instances, are using United States capital and credit for this very purpose.

The following is a partial list of leading industries and the particular countries that control them. It will show you how fully the Philippines are completely submerged by foreign capitalists. The following are specifically known instances of this invasion of the Philippines.

Firstly, Spanish interests in the Philippines are strategically invested in such a way as to dominate the sugar, cordage (manila rope), interisland shipping, insurance underwriting, lumber and mining industries, and all leading local trade. These various enterprises are owned and controlled by the Elizalde family. One of its members and former president of the Elizalde interests, Senor Joaquin "Mike" Elizalde, has recently been appointed by President Quezon as Philippine Resident Commissioner to Washington, over and against the plea of every true Filipino.

Andres Soriano's name throws fear into the heart of every small Filipino businessman and worker. Soriano, a foreign capitalist, is accepted as the Spanish banker and business colleague of Elizalde, and Elizalde knows that Soriano, his Spanish compatriot, will always protect Spanish interests regardless of whether the entire Filipino race and islands are destroyed. Andres Soriano is a close friend of President Quezon.

These two Spanish compatriots, in controlling these vast intermingling business enterprises, are naturally the uncrowned leaders in all social, economic, and political activities in the Philippines, and they let no one forget it.

Secondly, we have the Japanese interests. This merciless, aggressive Japanese penetration into the Philippines is connived at and abetted by certain Philippine lawmakers, lawyers, and public officials of the Quezon government in the Philippines, whom the Japanese, silently waiting for their chance, skillfully and cheaply hire, using them as their front to further entrench and expand Japanese enterprises, regardless of the cost or method.

We quote, herewith, from an article entitled "The Philippines—For Japan?" written by Robert Aura Smith, one of the foremost American newspaper correspondents in the Philippines and the Far East, and possibly one of the leading authorities on Philippine affairs on matters of political and economic conditions in the islands.

"Well, how will the Filipinos resist this invasion? The answer is simple: they can't and they won't. There need never be an issue. Incidents are expensive. A military expedition would be absurd. It might even provoke a war. Why send a battleship when a good-will cruise can be dispatched for a thousandth part of the cost? At the present time a Philippine-Japanese 'Friendly Society' has been formed, and its president, Maximo Kalaw, one of Quezon's stanch supporters and member of the national assembly, is reputedly the best economist in the islands and the former dean of the college of liberal arts of the University of the Philippines. Free lessons are being publicly offered in Manila and Filipino newspapermen are being taken freely on expenses-paid tours of Japan.

"At the present time, half of the arable land of the province of Davao is held by Japanese. Half of this, in turn, according to Quezon's own secretary of agriculture, is held illegally, in direct violation of the land-lease laws of the Philippines. Accordingly, early in 1936, President Quezon announced publicly that he was going to Davao to 'end this problem of illegal land leases, once and for all.' He got down there and was met by legal counsel for the Japanese companies. And the counsel was Pedro Sabido, former majority floor leader of the Philippine House and former member of enthusiastic independence missions. Quezon came back to Manila and announced blandly that there was 'no Davao problem.'

"It is manifestly ridiculous for General MacArthur to prepare the Filipinos to resist a Japanese army and to claim a practical invulnerability for them when the cost to Japan of sending three cruisers and a couple of regiments to the Philippines would put three-fourths of the total roster of the Philippine Assembly on the books of Mitsui, O. S. K., Furakwaa, and the other big Japanese credit-extending companies, as 'legal counsel' for the rest of their lives.

"This is not to say that the Filipinos are either traitors to their country or even more avaricious than many of their occidental cousins. But they have to live, and Japan will offer them cheap merchandise and a foreign market, provided she can name the terms."

Thirdly, we have the all-powerful English and Dutch financial combine represented by the Marsman interest, known as the English capitalists of the Filipinos. The unyielding Marsman interest is all over the Philippine, tenacious, and in every branch of correlated trade, such as real estate, gold mining, coconut oil, sugar, and rope. They have their branch office in Manila, but the executive force and directors of the corporation manage everything from London.

Fourthly, the Philippine government is now commencing to enter into trade relations with Germany. It has been publicly reported than Señor Manuel L. Quezon, President of the Commonwealth of the Philippines, during his last trip abroad in 1937, made attempts to see Chancelor Adolf Hitler, and while he was in Europe we do not know whether this meeting took place, but it is public knowledge that President Quezon was unable to see Chancelor Hitler for diplomatic reasons which would apply in Quezon making an attempt to personally see Chancelor Hitler, which, in turn, might tend to involve the sovereignty of the United States in matters of jurisdiction or in matters of foreign affairs.

However, it is understood that Mr. Quezon was able to see one of the important Under Secretaries of Commerce. And on his visit to this Under Secretary of Commerce, Mr. Quezon was escorted by a certain individual not connected with the German Government, but a spokesman representing aggressive German interests in the Philippines.

It is well known in the Philippines that these countries and interests completely control all the highly profitable industries. Should any of these financial interests care to come forth to dispute these statements, they will have a very able opponent who will stand alone and, unfailingly, prove that these intolerable conditions actually exist today.

It is also charged that the Filipino people are being used only as a tool to a means of security to further protect these foreign financial investments in the Philippines. It is a fact that the Filipino people do not get anything out of a more preferential trade from the American people under the existing conditions in the Philippines today, for their average pay is 30 to 50 centavos. On this they are expected to maintain a livelihood.

These powerful and gigantic financial groups are in the enviable position of being able to take advantage of the sensitive and complicated rate of exchange market that exists throughout the world, by getting good American dollars through the Philippines and changing it into their own rate of exchange and then selling back to the American consumers. So that, these foreign interests are not only getting the money from the American people through the Philippines; they, in turn, resell that same commodity to the United States, thereby receiving American money from both ends.

At no time will any of these foreign groups buy merchandise from the United States if the imposition of duty against importation of foreign merchandise in the Philippines is such that it would not be highly financial to their advantage.

The Filipinos believe and know that there is one way to quickly settle the entire question regarding Philippine-American trade relations, and that is, on the basis of trade reciprocity. We propose, however, that in order to achieve this, an unbiased American and Filipino committee be appointed by the President of the United States, and only with the consent of the United States Congress, entirely disregarding all of President Quezon's nominations of men to act on the Filipino side because of the fact that such men appointed by President Quezon, as a matter of public record and as a matter of financial affiliations, would be men representing only foreign capital investments in the Philippines.

CONGRESS ALONE

To this issue we have already set forth and described the financial alliances of the members of the Philippine committee group, which partly composes the Joint Preparatory Committee on Philippine Affairs created by President Roosevelt. Such charges have been read on the floor of the Senate and inserted into the CONGRESSIONAL RECORD of the United States Congress by United States Senator LYNN J. FRAZIER.

President Roosevelt desires, when the Philippines withdraws from the sovereignty of the United States in 1946, to extend trade relations from then until 1960. Trade relations to be extended an additional 14 years are of absolutely no use whatsoever to the Philippines, because the present government group will still be in power and do what they like with everything in the Philippines.

President Roosevelt's heroic efforts to free the Filipino people from deep despair and give them something to look forward to will undoubtedly go for naught under the present set-up and recommendations.

We know that when President Roosevelt created this committee, he did it with the fond hopes of a great emancipator, and we know he selected for the American group men whose integrity and ability are unquestionable and of the highest type, leaders with vast experience in public relations. We know these men were sincere in their efforts to give an unbiased report. But we definitely question, and any person will, how 40 years of work with a nation can be completely analyzed and grasped in the short period of about 6 weeks to 3 months the committee was in the Philippines. Their efforts were great, but no country or nation can be completely understood nor can its complicated system of government and trade relations be adequately analyzed in such a short period of time.

There is no doubt that President Quezon and his group fully realized this situation and naturally put the best foot forward on every occasion possible. Thus, we can see that the committee had no real opportunity under the existing conditions and for the short time allowed to get into the very depths of what is going on behind the scenes under the present administration.

There is no doubt that the foreign combines were tipped off beforehand that the American committee was coming to the islands, and each and every one of them ran to cover for the time being. The testimony which was secured and witnesses who appeared before the said committee, namely, those individuals working for the Government of the Philippines falsely branded as economic experts by President Quezon and his aides, represented a unit of the group behind the foreign banking combines.

KEEP THE PHILIPPINES

Local associations purporting to represent the Filipino economic conditions, were in actuality a camouflage for foreign investments. The following is a partial list of some of the many well-instructed witnesses who appeared before the Joint Preparatory Committee on Philippine Affairs. These same witnesses are fanatically devoted and loyal to Mr. Quezon's administration by virtue of their official connection with the government and other personal dealings with the President.

FALSE ECONOMIC EXPERTS

Such men as Arsenio Luz, director of the Philippine Carnival Association, and now managing director of an insurance association of the Philippines. Both these associations are quasi-government owned and controlled. It is natural his testimony would be biased, showing only one side of the picture.

Also such individuals as Rafael Alunan, formerly sugar administrator; former liaison officer between President Quezon and the National Assembly and now, a cabinet member of the Quezon government.

Placido Mapa, president of the Philippine Sugar Association, certainly could not honestly testify for the Filipino sugar growers, because, in reality, the ownership and investment in this association are solely owned and controlled by outside capital, such as the Spreckles, the Ehrmann, the Marsman, the Elizalde, the Osorio Bros. Every one of these interests is against any Filipino economic improvement. It is very evident the testimony from a source such as this would be solely in the interests and protection of foreign investments.

One must remember that this whole clique has lived in the islands. They understand the intricate workings from the ground up, and it is not possible that an American committee would be able to wade through the labyrinth of details and grasp the whole situation when they had to come up against people who were dyed-in-the-wool conspirators.

None of these gentlemen, purported to represent the Filipino economic interests, have been elected to any public office by the suffrage of the people. All their lives they have been tied up with the foreign financial interests dominating all the intercommerce in the Philippines.

We respectfully request and ask President Roosevelt in the light of all these many things, which are really only a small part of the actual conditions, to reconsider, to review again and ask whether or not this committee has given a report on which a definite stand could be taken at this time.

We feel sure, with his broad intimate knowledge of world relations and conditions today, that President Roosevelt would be rightfully justified in taking a different stand concerning the report of the Joint Preparatory Committee on Philippine Affairs.

The rack of desperation in which the Filipino people have been forced by foreign commercial giants leaves them with only one hope, and that is that the American people and the United States will show them the way to freedom for themselves and a country of their own, free from dictatorial groups.

It should be fresh in the minds of the American people the statement Señor Quezon made in 1937, while he was in the United States, regarding Philippine independence at an early date. He said, "It will make no difference. If the Filipino people can be free in 1946, there is no reason why they cannot be free in 1938 or '39. The same conditions will exist in 1946 as exist in 1938 or '39."

This childish impatience of Quezon should be taken into consideration. Should he be pampered and be given the Philippines free and independent today? Should the entire Philippine Islands, lock, stock, and barrel and the 16,000,000 persons, be given to Quezon today? Or shall we wait until 1946?

The report of the Joint Preparatory Committee on Philippine Affairs might have been greatly influenced by the political show put on by Quezon, and from the size of the show, the people wonder who is behind Quezon to make statements which certainly could never come from a man with any intelligence, and, least of all, from a man with any breadth of power great enough to govern a race of people.

Perhaps President Roosevelt and the committee have not realized what an unstable man President Quezon is. He has started this trouble pot aboiling, and now no one seems to know where anyone stands. He has tangled all the threads that tie and hold the Philippines together. Quezon has started all this trouble and perhaps it would be a good time for President Roosevelt, the Congress, and the American people to give Quezon what he wants.

We know it will be a terrible thing for the Filipino people, because probably there would be a Machado there the day afterward—machine guns and the screams of helpless women and children. But, maybe that is what Quezon wants. He has been playing with the government long enough. Maybe now he wants to play with human lives.

President Roosevelt, this looks like an excellent opportunity to give back to Quezon a taste of his own medicine in the form of freedom of the islands at once. The Tydings-McDuffie Act is a direct result of President Quezon's scheming and planning. He did not wait for the final results. He ran back to the Philippines. If there is any injustice in the act it is the immediate result of Quezon's judicial neglect.

When the act goes into effect in 1946 anything wrong with it will be of Quezon's doing, and if President Roosevelt extends trade relations beyond 1946, it will be an incentive to Quezon's lust for additional power, for the trade relations to be extended by the American people would certainly help Quezon to complete sovereignty, both economically and socially, over the Philippines.

We wish to high heaven that the Filipino people could find out today what kind of a leader they have so they would free themselves from Quezon's dogmatism. But, it is unfortunate that they will have to wait until 1946, when the Tydings-McDuffie Act becomes effective. Nevertheless, at that time they will see, in its true colors, and very bad colors, but they surely will see a horrible vision of modern corruption and greed backed and supported by foreign money interests.

Quezon is today a symbol of Machado. He is too old a man to change in his ways. He is lost, for he is too deep in the mire of corruption to free himself from the gentle but relentless iron grasp of foreign powers who are quickly and definitely consuming the whole Philippines.

Memorial Service of the United States Park Police

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

ADDRESS BY HON. A. LEONARD ALLEN, OF LOUISIANA, ON JUNE 11, 1939

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on June 11, 1939, on the occasion of the first memorial service held by the United States Park Police:

It is altogether fitting and proper that you have set apart this hour as a memorial service to honor the memory of your fellow officers who have departed this life. I greatly appreciate the honor that you have conferred upon me by extending your kind invitation to be with you in this, your first memorial service. And while we meet here to give thought to the lives and accomplishments of your honored dead, I trust that we shall not fail to take an inventory of our own lives and strive to attain in our lives the highest principles of Christian citizenship. Let us not make of this sacred service a formality, but may it result in a new awakening of our spiritual powers and a new realization of our responsibility to God and man to carry on according to the best traditions of our great American ideals and philosophies.

You who comprise the United States Park Police are members of an honorable organization running beyond the memory of living men. It occurs to me that there are two words that sum up your life activities—service and responsibility. Perhaps no other service in Washington requires more patience, more skill, more kindness, more humanity than yours. You serve in the heat, and in the cold; you meet the countless thousands from the nations of the world; you are asked questions all the day long; you are sometimes misunderstood and blamed and perhaps wrongfully accused, but through it all you must maintain your dignity, your self-control, and, figuratively speaking, turn the other cheek or go the second mile.

For, my friends, you are the representatives of a great arm of our Government. It is to you that our citizens far and near go for information; it is from your actions that they form an opinion of the courtesy and manhood exemplified by the Federal service; they rely on what you say, they place their confidence in you. To them your badge indicates that you are a friend, a counselor, one to be trusted, a servant, and above all a true gentleman. This places upon you a great responsibility. It is your obligation at all times to live up to these expectations. You are responsible to this Nation and to the humanity that pours through the gates of this great city. Truly yours is a noble calling. May I suggest to you that you look upon your work not as a job, but as a calling. You are in a position to do untold good. To your post perhaps may come a little child, an aged father or mother, or a wayward and lonely boy or girl, needing the hand of a friend. Yours is in part a divine responsibility, for you may whisper into these hearts the words of hope and cheer. A kindly word from you may change the course of a life. "A word fitly spoken is like apples of gold in pictures of silver."

Such was the service and responsibility of those whose chairs are empty this evening and in whose memory we meet. Their work is done, but the kindnesses shown, the service rendered, and the labor of love performed will live on and on. For service to humanity and to God are prompted by love, and love is eternal. I know in this age that we are often prone to discount the sentimental, to view the cold realities of history, and to regard only the material side of life, but show me a nation that leaves out of its thinking these concepts of service and I will show you a nation

that will not long stand. If you ask me about the future of America, I will answer that America will stand so long as she places the spiritual above the material.

These friends who served so nobly here may not have their names carved in any hall of fame, no cold and lifeless stone may record their deeds, but buried in the heart of a child there is the unforgettable act of kindness.

But, my friends, the greatest honor that we can show to our honored dead here this evening is not found in words of praise, although so worthily bestowed, but if we really love their memory and honor their deeds of heroism, sacrifice, and devotion to duty, there is no better way to show it than to resolve here and now that we will consecrate our lives to new and higher ideals of service, to a greater fulfillment of our own responsibility, and to the attainment of a more perfect life. Civilization rises on the experience of the past. Progress started by others is carried on by us. It is not so much the achievement of one particular period that counts, but the sum total of the continued onward and upward march of humanity that marks us as a great people.

Most of us are very ordinary people. Occasionally one rises to heights above his fellows, but I think it is the service rendered and the progress made by the average citizen that raises the level of the nation. We build permanently when each succeeding generation selected from its forebears only the best of the heritage bestowed. The thought was very forcibly put by John Ruskin when he said:

"When we build, let us think we build forever. Let it not be for present delight nor for present use alone. Let it be such work as our descendants will thank us for, and let us think, as we lay stone on stone, that a time is to come when those stones will be held sacred because our hands have touched them, and that men will say as they look upon the labor and wrought substance of them, 'See, this our fathers did for us.'"

Humanity cannot stand still. There is an inexorable law that talents unused will be taken from us. We must go upward or we will not hold the ground where we stand. We are told that one climbing to great heights is safest when he looks up, not down. As long as Simon Peter kept his eyes on the Saviour he could go forward. I once heard an old Negro woman make this statement: "There is no parking space on the road to Heaven." The more I thought of it, the more its truth burned into my soul. Goethe put it: "Nature knows no pause in progress and development, and attaches her curse on all inaction."

The great Henry Ward Beecher expressed the thought by saying: "We should so live and labor in our time that what came to us as seed may go to the next generation as blossom, and what came to us as blossom may go to them as fruit—that is what we mean by progress."

So, my friends, our effort to honor the dead here tonight will be all in vain unless we correctly evaluate and appraise their services and unless we read their contribution to the age in which they lived and unless we appropriate to ourselves and make a part of our lives the progressive principles upon which they stood and by which they were motivated.

I am not unmindful of the fact that men and nations sometimes seem to turn clearly from the course of progress, seem to turn their backs upon the best tradition of their elders, yea, seem to turn back the pages of history even to the days of paganism, and we are sometimes made to wonder after all if civilization is really making progress. When we see nations outlawing God and swinging entirely to the materialistic conception of life, when we see the struggle for existence crowding out the finer attributes of the human heart, I grant you that it is cause for very serious and sober thought. But I like to believe and I do believe that in the great processes of the ages these will prove only incidents and that after all the better nature of man will assert itself and he will resume his onward and upward march of progress to the goal set for him by the Master of all the universe. I refuse to accept a fatalistic view of events. I prefer to hold with Bulwer:

"Fate is not the ruler, but the servant of Providence."

Life, my friends, is a trust. The heritage handed down to us is not to keep, but to hand on. We owe it to our departed friends tonight to take up the task so nobly done by them, to pick up the mantles they worthily wore, and to transmit to our posterity not only the heritage we received but add our own contributions thereto. It is our responsibility to cultivate our moral natures, to improve our time, to see that our influence is exerted for the right. We should therefore regard life as a great privilege, but we should also realize that privileges carry corresponding responsibilities. We shall therefore be unfair and unfaithful to the trust imposed, yea, we will not truly honor the memory of our friends unless we see to it that their deeds live in us and are passed to those who come after us. Surely no less can be expected of us.

We have been talking largely of human achievements. But in an hour like this your minds turn to the question of immortality, and the question recurs to us that was asked by Job of old—"If a man die, shall he live again?" Is this the end and aim of life? Is this all there is to it? Does man, the highest of earthly creation, come into the world and spend a few brief years and pass on to nothingness? Are our labors and achievements inscribed only upon material elements contrived by man that at most can last for only a short span of time? Will man who is master of the beast in the field die as the members of the animal kingdom? Will he who thinks and reasons, who builds cities, who spans the oceans and sky, who preserves the human voice, who sends his message through limitless space, live no longer than the work of his own hands? Has he no attribute, no element, that will withstand the processes of decay?

Men in every clime, in every age, have pondered this question. It was uppermost in the minds of the cultured Egyptians and the philosophical Greeks and concerned even the most primitive man in the forest. Man has instinctively striven to look beyond. Hope wells universally in the human heart that after this brief life there will come a rest. Take that hope away from man and you destroy him.

The question of Job was answered emphatically 2,000 years ago. One came into the world and wrought among men and proved that "it is not all of death to die." The empty tomb was more eloquent and convincing than the thoughts and writings of all the ages. Yes; the fact of immortality was once and for all established.

So, my friends, on this memorial occasion, when you come to honor your dead, you come not with a forlorn hope, as did the ancients, but with a living, radiant hope, that transcends this present state, and you are able to say with Edward Markham:

"Let us not think of our departed dead
As caught and cumbered in these graves of earth;
But think of death as of another birth,
As a new freedom for the wings outspread,
A new adventure waiting on ahead,
As a new joy of more ethereal mirth,
As a new world with friends of nobler worth,
Where all may taste a more immortal bread."

I said in the beginning that this service ought to be the occasion of a reawakening, a reconsecration, of our spiritual side. Let us go from this hall with new hope, new faith, new courage. Let us resolve to put into life the best we have and the best will come back to us. I think I can do nothing better than to leave with you the immortal lines of William Cullen Bryant:

"So live that when thy summons comes to join
The innumerable caravan that moves
To that mysterious realm where each shall take
His chamber in the silent halls of death,
Thou go not like the quarry slave at night,
Scourged to his dungeon, but, sustained and soothed
By an unfaltering trust, approach thy grave
Like one who wraps the drapery of his couch
About him and lies down to pleasant dreams."

Some Facts About Youth

EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

LETTER FROM DR. CHARLES H. JUDD

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD a letter sent to me on the subject of Youth's Place in Our Economic System and supplementary material pertaining thereto.

WASHINGTON, D. C., *June 8, 1939.*

Hon. T. V. SMITH,
Representative at Large from Illinois, United States House of Representatives, Washington, D. C.

MY DEAR MR. SMITH: I recall the service which you rendered in behalf of the young people of Illinois on a number of occasions when you were in the senate of that State. I am venturing, therefore, to solicit your interest and cooperation, now that you are in Congress, in securing for the young people of the Nation an adjustment of their relations to the present-day social and economic situation, which it is quite impossible for them to secure without action of the Federal Government.

It is, unfortunately, very little understood by the people of this country that the youth of the Nation are finding it extraordinarily difficult—far more so than in former times—to get a start in life. For the past half century, and especially during the past 30 years, it has become increasingly difficult for young people to secure employment. Exclusion of young people from industrial opportunities began long before the depression. Social and industrial changes have gradually taken place since 1870 that have ultimately made it very difficult for the average young person to find a job. With the increase of older people in the population of this country, competition for places in industry has grown keener and keener, and young people have been gradually eliminated.

At the same time it has become impossible for young people to move west and find places to live and establish homes on the public domain which was once given away freely by the Federal

Government. The public domain is used up. The Federal Government can no longer provide for people without drawing on financial resources which are derived from taxation. This fact is very commonly overlooked by people who complain because of the increases in taxes. They do not realize that care of young people by the Government is not something new. It is regarded as burdensome now because the exploitation of land and national resources is no longer possible as it was in former times.

During the past 30 years young people have crowded into the public schools for the reason that there is nowhere else for them to go. A single fact showing the truth of this statement is that the number of pupils in American high schools is now 13 times as great as it was in 1900. The new pupil population in high schools has created problems of curriculum revision and of support which it has not been able to solve, especially in recent times when school budgets have been drastically reduced. The people of this country do not understand that the schools have been the chief agencies that have been relied on by the public to make up for the exclusion of young people from employment and from opportunities to move into unoccupied parts of the country.

With the onset of the depression the situation grew acute. The Federal Government found it necessary to inaugurate experiments in care of young people by opening C. C. C. camps and distributing aid through the National Youth Administration to students in high schools and colleges and on work projects. The measures adopted by the Federal Government have helped to solve the urgent problems of a great many young people, but only a fraction of the youth in need of help have been reached. There are now at least 4,000,000 young people out of school and out of employment.

It seems easy to get the attention of legislatures and of the Congress for veterans, farmers, and old people. The young people of the country, who are unorganized and too young to vote, are seriously neglected. It may be well to start a movement to give young people 18 years of age the right to vote. It is certainly not out of place to call attention in very vigorous terms to the rights of young people to proper recognition in the social and political life of the United States.

I appeal to you to give serious consideration to the problems of youth. I hope you will be willing to use your influence to secure recognition of the importance of arriving at a solution of the problems which I have briefly reviewed. Young people, and those who represent their interests, are not asking for charity or relief; they are asking that young people be given an opportunity to contribute to the public good and to establish themselves as productive citizens. I believe that the voice of young people will shortly be heard. If you, and others in influential positions, will help young people to secure their rights, they can become powerful influences for the upbuilding of national life. It is, I believe, unnecessary to do more than make a clear statement of the situation in order to impress everyone with its urgency. Will you not speak and otherwise help to bring about effective action in behalf of young people?

Very sincerely yours,

CHARLES H. JUDD.

P. S.—I append hereto some data bearing concretely upon Federal appropriations for alleviating the present lot of American youth.—C. H. J.

THE NATIONAL YOUTH ADMINISTRATION BUDGET

YOUTHS 16 TO 24 YEARS OF AGE IN THE UNITED STATES

Total population in this age group is 21,000,000—5,000,000 are in schools and colleges; 7,000,000 are employed; 3,000,000 are in the home or not available for gainful work; 1,700,000 are partially employed; 4,300,000 are totally unemployed. Thus 6,000,000 young people are totally unemployed or partially employed.

Each year 200,000 more rural youths are coming of age than there are farm jobs available, and another 250,000 more urban youths are coming of age than there are jobs available—a net increase of 450,000 youths each year are adding pressure on the labor market.

The N. Y. A., by employing youths on public projects and extending educational opportunities to the underprivileged, has materially helped to reduce pressure on the labor market and competition for adult jobs.

REASONS FOR REQUEST FOR INCREASE IN APPROPRIATION FROM $75,000,000 TO $123,000,000

The current need for work and training among young people has not decreased, but remains dangerously acute. This vast "lost generation" which fluctuates between four and six million young people needs work experience, guidance, and education. They are practically disowned by industry, by our educational system, and by society. Idleness, ignorance, and the wasted energy of young people constitute a menace to our society and to our democratic institutions. The morale of young people has been adversely affected during the past 8 years. By providing youth with an articulate agency for the expression of their needs and a focal point of direct action, the Youth Administration has helped in part to meet this problem. There is no criticism of the National Youth Administration as to inadequacy of function so much as there is criticism of limitations of application. In other words, the types of programs which N. Y. A. operates are approved of specifically and in general, but there is criticism that N. Y. A. cannot assist more young people because of limited funds. The N. Y. A. has provided youth with facilities for education, work experience, practical guidance, and placement in private employment effectively and economically.

An increase in the N. Y. A. appropriation to $123,000,000 would give another 200,000 young people an education, work experience, and training; and in the next year 800,000 would be kept busy and their capacity to do constructive work would not be allowed to degenerate. Unemployment tends to produce unemployability, and youth are eager and capable for work. In addition, the N. Y. A. can reasonably place 200,000 youth in private jobs next year. Thus at least 1,000,000 young people will be kept conditioned by the more normal experience of work and education rather than the experience of idleness and hopelessness.

PLANS FOR THE N. Y. A. PROGRAM NEXT YEAR

1. To provide part-time work and educational opportunities to 460,000 needy young people to assist them in continuing in schools, colleges, and universities, an increase of 83,000 over this year.

2. To provide work experience and training on public projects to 350,000 out-of-school unemployed young people, an increase of 120,000 over this year's average employment.

3. A sane and moderate program of youth services to provide the young people on N. Y. A. projects with guidance and counseling services and occupational information; related training which will give the elementary essentials necessary to intelligent job performances; medical examinations and, wherever possible, to arrange through cooperative means, medical treatment; and recreational opportunities to N. Y. A. youth on resident projects.

4. Independent assumption of administrative functions previously performed by the W. P. A. due to the legal separation of the N. Y. A. from the W. P. A. by the reorganization plan No. I, which places the N. Y. A. in the Security Agency and the W. P. A. in the Federal Works Agency. The functions which the N. Y. A. must assume are finance, statistics, and employment. The latter function pertains to the maintenance of relations with public-welfare agencies, placement interviews, assignment to projects, and the maintenance of records pertaining to these operations throughout the country. These three functions will require as a minimum 1,474 employees and will, as a consequence, increase general administrative costs.

THE NATIONAL YOUTH ADMINISTRATION PROGRAM

1. Currently 378,000 are employed on the student-aid program, 235,000 on the works program, or a total of 613,000.

2. The payment to young people is on the basis of actual work performed, and averages $6.45 a month in the student-aid program and $18.89 a month on the works program.

3. The annual cost per youth to the N. Y. A. is extremely low. It averages $58.50 on the student-aid program to keep a young person in school or college for a year. On the works program the average annual cost is $233 per youth to bring him through actual work and training to the possession of a background of work experience and subsequent skills which enable him to obtain employment. For the annual cost of approximately $123, over 600,000 young people have been given educational and work experience which otherwise would have been in large part denied them.

4. The N. Y. A. project program does not encourage Government paternalism but urges young people to try for other avenues of experience. Thus about 10 percent of its project youth leave each month for private jobs, or to some other form of self-support, or to go back to school. This project turn-over demonstrates a healthy reaction on the part of both the supervisors and the youth.

5. The student-aid program reaches into all but 17 of the 3,071 counties in the United States; the works program operates projects in 2,777 counties, a complete integration into the urban and rural life of the Nation.

6. The N. Y. A. reaches young people from the low-income families as is shown by the fact that N. Y. A. students come from families with a median income of $667. N. Y. A. project workers came from relief families. More than half have never had jobs before, and only one-fourth of them have had the opportunity to finish high school.

7. In the student-aid program—N. Y. A. students have demonstrated that they can work for an education and at the same time maintain satisfactory scholarship. They are on the whole equal to, if not superior, to the average student in scholastic achievement. Therefore, the N. Y. A. has not only extended educational opportunities but has uncovered a reservoir of competent youth.

8. Local sponsorship of N. Y. A. work projects has resulted in $18,000,000 of contributions, or 13 percent of all funds expended on work projects for youth.

9. The N. Y. A. and its 3,000 advisory committees have shown the advantage of united effort. Concerted action has convinced many local communities that it is possible to employ, train, and direct their youth.

ADMINISTRATIVE POLICY

A system of decentralized control has resulted in the successful cooperation of a Federal agency with private as well as public agencies.

This decentralized plan has had a significant bearing in educational matters. By assisting the individual rather than the institutions or agencies, the implications of interference with the authority of local units have been avoided.

There has been practically no public criticism of the N. Y. A., its purpose, its operations, or its administrative policies.

The N. Y. A. Slash

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

ARTICLE BY ERNEST LINDLEY

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I present a very timely and interesting discussion of the National Youth Administration by Ernest Lindley, published in the Washington Post for Sunday, June 11, 1939. The article follows:

[From the Washington Post of June 11, 1939]

THE N. Y. A. SLASH

(By Ernest Lindley)

THE PROBLEM OF UNEMPLOYED YOUTH

A House Subcommittee on Appropriations has been applying the meat ax to the National Youth Administration appropriation and the W. P. A. set-up for next year.

It has slashed more than one-third from the $123,000,000 which the President recommended for N. Y. A. next year. The sum of $81,000,000 has been agreed upon in the subcommittee. This is 6,000,000 more than N. Y. A. received for the current fiscal year, and, having won a small increase, the administration supporters in the subcommittee doubtless felt justified in promising—as they are reported to have done—not to challenge the subcommittee's report when it comes before the full Appropriations Committee.

It is an excellent testimonial to N. Y. A. that a subcommittee which is dominated by the idea of economy at any cost to the Nation, felt compelled to grant this small increase. But even the sum asked by the President was trifling in comparison with the need for the type of work done by N. Y. A.

More than one-third of the whole unemployment problem is among young people 16 to 24 years of age. In this age group are more than 21,000,000 people.

More than 5,000,000 are attending school and colleges.

More than 3,000,000—mostly girls—are at home or are not seeking work.

Almost 8,000,000 are privately employed.

But more than 4,000,000 who want work are totally unemployed by private industry and 1,500,000 or more are employed only part time.

Millions of them are caught in idleness in a great gap between school and work. A large percentage of them are wholly lacking in vocational skills—including the domestic skills which were once taught in the home to young women in preparation for their careers as housewives and mothers.

The two main activities of N. Y. A. are to help young people to remain in high school and college, through part-time jobs, and to provide part-time work and training for young people who have left school but have not found private employment. In this program, N. Y. A. has worked in the closest collaboration with authorities and organizations of all types. The aid to college and high-school students is administered by the authorities in the individual colleges and high schools. The out-of-school work program has elicited cooperation from voluntary organizatons such as local businessmen's clubs as well as public agencies.

The cost has been incredibly small. On the work program for out-of-school youth the over-all annual cost to the Federal Government has been about $233 per youth—less than one-fourth the cost of the C. C. C. To keep needy young people in high school, N. Y. A. has been expending about $40 a year per youth—usually just enough for carfare, books, and maybe a pair of shoes and a sweater. To enable young people to go to college it has been spending about $105 per year per young person.

This tiny sum, paid for work done, has meant the difference between going to college and not going to college for 100,000 or more young people every year for almost 5 years. Among that 100,000 are many young people of exceptional talents whose abilities might otherwise never have been developed. As a group, the N. Y. A.-aided students in most institutions have made better records than the non-N. Y. A. students as a group.

It was the remarkable success of N. Y. A. in getting so much done with so little money in a field where the need is immense that led the President to recommend that its appropriation for next year be increased. It was the only one of all the so-called relief agencies for which he requested a larger appropriation.

With $123,000,000, N. Y. A. could provide work, general education, and vocational experience for 800,000 youths at one time. Allowing for turn-over—for many youths move readily into jobs after receiving N. Y. A.-aided training—it probably could assist 1,200,000 or more young people during the fiscal year. It would reach perhaps one-third of those who could benefit from the N. Y. A. program.

The man who lets his machinery rust is considered a wastrel. But some Congressmen seem to think they are being thrifty when they allow the youth of the Nation to rust in idleness. Many of these young people have never learned how to work, much less learned any skills which will enable them to earn a decent living.

A reduction of one-third in the N. Y. A. appropriation is one of the most expensive cuts Congress can make.

For W. P. A. the President recommended a heavy reduction in appropriation for next year. As I write the House subcommittee is reported to have approved the total of $1,477,000,000 for which he asked—but with a provision earmarking $125,000,000 of it for the Public Works Administration. This would reduce W. P. A. to $1,352,000,000. If that amount has to last a whole year, the average W. P. A. enrollment will have to be dropped to about 1,900,000, as against 3,000,000 last winter and about 2,500,000 at the present time. W. P. A. doesn't provide much employment for the unemployed in need of relief.

The House subcommittee is reported, however, to have concocted an extraordinary mixture of reforms for W. P. A. One of these would confine the W. P. A. work program to projects costing not more than $25,000. This would knock out about three-quarters of all the present W. P. A. projects and annihilate its construction program. It would condemn W. P. A. to the petty leaf-raking type of project, which for years W. P. A. has been struggling, with considerable success, to get away from. Even if the maximum were increased to $50,000 or $100,000, the result would be much better.

The subcommittee also is reported to have agreed to put W. P. A. under a three-man board. Some kind of permanent advisory board or board of inspection can be justified. But a three-man board is no more efficient as an administrative body in the Government than in private business.

Some of the reforms which the House subcommittee is reported to look upon with favor may encounter less opposition. Much can be said for forcing everyone who has been on the W. P. A. rolls for a long period to take a "vacation." Everything can be said in favor of the closest check on administrative costs. Much can be said for making every W. P. A. worker work 130 hours a month for a security wage. That is what the administration wanted in the first instance in 1935—but it gave way before the demands of union labor, first advanced through Congress, for the payment of prevailing hourly wage rates to skilled workers. As a result a carpenter, or plumber, or other so-called skilled worker in the cities earns his W. P. A. payment in relatively few hours of work per week.

In several details the recommendations of the House subcommittee may not be as bad as the reports indicated. But enough has leaked out to justify thoroughly the President's decision to postpone his trip to the Pacific coast until what promises to be a glorious mess has been cleaned up as best it can be before July 1, when the money for the next fiscal year will be needed.

Pound-Foolish Economy and the Federal Works Program

EXTENSION OF REMARKS
OF
HON. ABE MURDOCK
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

Mr. MURDOCK of Utah. Mr. Speaker, probably no other public endeavor in history has been subjected to so much maliciously false criticism as the works program of the present administration. Certainly no other issue of modern times has been discussed with so little understanding, slandered so groundlessly, misrepresented so viciously. You have only to make a trip across the country, or, for that matter, survey the projects in your own State, to discover that our works program has rebuilt America, has cleaned it up, made it sanitary, beautified it, and made of it a more appropriate place for a free people to inhabit.

From one end of the country to the other, roaring cities, tiny villages, and the broad expanses of the country districts, reveal countless monuments to the vision, the courage, the noble purposes, and the powers of accomplishment of the American people when they are organized for action. Roads, paved streets, school buildings, civic halls, sewers, waterworks systems, reservoirs, and irrigation systems disclose the birth of a new civic consciousness, a new and nobler conception of democratic functions. Reclamation projects, reforestation, flood-control projects, erosion-control projects, river and harbor improvements reveal that Americans have resolved to live better, safer, and richer lives.

Much has been said of wasteful projects. I am, of course, unable to speak for any State but Utah. I have, however, carefully studied the public-works program in Utah; I have inspected projects; I have talked with the laborers and supervisors; I have discussed the projects with the local people who sponsored them and will benefit from them. Notwithstanding the hurricane of shoddy talk, talk of "boondoggling," of digging holes to fill them, and so forth, I challenge the critics to point to a single project in the State of Utah which has not been intelligently sponsored, conscientiously undertaken, and efficiently constructed.

In the country towns of my district we now have waterworks systems where formerly we had insanitary wells, we now have sewers where we formerly had cesspools; we now have comfortable and healthful school buildings where formerly our students were improperly housed; we now have beautiful auditoriums where formerly we had no adequate meeting places; we now have gymnasiums where formerly our children played basketball on vacant lots; we have good roads where formerly we had impassable trails; we have well-kept forests where formerly we had inaccessible wilderness. My people are thankful that the present administration has shown them the way to help themselves, to improve their homes, their schools, their towns and cities. I defy the critics to point to a single project in my district which will not repay a thousandfold the money that has been spent upon it. And yet when we measure the civic improvements and benefits produced by the works program we have not even touched its main purposes and accomplishments.

Through W. P. A., P. W. A., and C. C. C., and other agencies, we have provided the unemployed with jobs, with income, and with encouragement. The men and women who have built these roads, these school buildings, these sewers, and auditoriums, would otherwise have gone hungry and suffered the incalculable misery which inevitably comes with enforced idleness. In place of armies of unemployed, the administration has created armies of workers engaged in improving America. With these facts confronting us on every hand, it is incredible that this Congress should have persisted in its refusal to provide adequate funds for continuation of the works program. I know how the people of my district are suffering because the Congress did not heed the warning of the President. I thank God that I cast my votes in favor of continuation of the works program and adequate appropriations to meet the needs of the unemployed.

In the past few weeks I have received letters from almost every community in my district describing the consequences of the reduction in the relief appropriation. In an effort to get a true picture of conditions at home, I requested the State administrator of W. P. A., Hon. Darrell J. Greenwell, to advise me as to the status of the program and his plans for the future. By consent I desire to insert his reply. It is an intelligent and informed discussion of the needs of at least one great State. I recommend that the Members of Congress read it and see how it applies to the conditions in their own State.

UTAH WORKS PROGRESS ADMINISTRATION,
Salt Lake City, Utah, May 26, 1939.

Hon. ABE MURDOCK,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: With reference to your letter of May 22, I can say that the shower of letters you have received about lay-offs in Utah is not surprising. These people look upon you as a friend, and they need friends.

We have had to lay off about 2,500 persons from W. P. A. jobs. Nearly every one of these persons is needy. They have had to scramble in the open labor market for jobs—and jobs are mighty scarce. They are competing for jobs with about 1,900 other needy employable persons who are receiving small assistance from the welfare department. They are also competing for jobs with thousands of other unemployed registered at the State employment service. This latter group, however, while unemployed, have not reached the point where they have to go on relief.

In addition to the letters you have received about lay-offs, which is a real condition, you probably have received complaints about pay-roll adjustments in Utah. We have had to change pay-roll dates. These changes have upset the workers, who believe the adjustments will cause them to suffer a wage cut in May. We seem unable to convince them that the pushing forward of a pay-day date does not necessarily mean a monthly wage cut. But it is difficult to convince them. They charge that this is an "economy bloc" plot. But this fear will vanish when June rolls around and the workers learn that they haven't suffered.

The most cheerful thing that has happened lately is the announcement that we shall not have to make forced lay-offs in June. We can employ as many in June as in May, namely, 10,350 persons.

Another cheerful item is the reopening of the Park City mines, but as yet the mines have only taken about 75 from our Summit County W. P. A. projects.

There has developed within the last 2 weeks considerable seasonal employment, such as work in the beet fields, and there will be considerable berry picking, etc., but these jobs are going mainly to the boys and girls out of school for vacations. It seems to me we have a grave and long-time problem in what to do with the great unskilled group which makes up 65 percent of our W. P. A. work load. Mechanization of industry, including agriculture and road building, and the refusal of the larger employers to take on new men over 40 years of age have conspired to put the laborer in a pretty tough position.

There are large-scale operations for these people, such as I described in a recent letter, including conservation, etc. There is plenty of work for them to do on the types of W. P. A. projects we have been operating for 4 years. In fact, we have projects right now for more than a year's work. The problem is to get funds to employ all who need jobs at useful work.

You ask as to how the refusal of Congress to appropriate the amount recommended by the President will affect our people.

Well, we have laid off 2,500 persons, and you have felt the reaction away back in Washington. Imagine what appeals and pressure we have felt in the W. P. A. offices and welfare department offices. As I understand it, the President is asking for enough money to employ on W. P. A. an average of 2,000,000 persons in the fiscal year. Our average this year, I believe, has been 3,000,000 persons. It looks to me, then, that if Congress gives the President all he asks for, we can have only two-thirds as many persons on W. P. A. in the year to come as in the present year. Our average Utah employment was around 12,000. Two-thirds of that would be 8,000 as average employment after July 1. We have 10,350 employed now. So if the President gets all he asks for, we should still have to fire about 2,000 persons. If Congress gives him less, we shall have to fire more.

I do not know where we can find jobs for those needy persons we have laid off, let alone jobs for the others we probably shall have to release.

This is not a very cheerful picture, but I believe it is correct. However, I am pretty close to the relief or dark side of the situation. On the other hand, I believe two-thirds of the people in Utah are doing as well or better than ever before.

Please call upon me at any time for any information I can furnish.

Sincerely,

DARRELL J. GREENWELL,
State Administrator.

A Voter's Observations on Current Problems

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein a letter written by a valued constituent, the contents of which are self-explanatory. I am very proud, Mr. Speaker, of the high average intelligence of my constituents and of the uniform liberalism characterizing the viewpoint of the majority of the good folks who reside in that Providence-favored area known as the Puget Sound country. I am particularly appreciative of the writer's commendation of my H. R. 3121, known as the natural-resources bill.

The letter is as follows:

EATONVILLE, WASH., *April 16, 1939.*

Hon. JOHN M. COFFEE,
Member of Congress, Washington, D. C.

DEAR MR. COFFEE: Undoubtedly, conditions in Europe and elsewhere, with the bearing they have on our own country's welfare, constitute the most serious problem of the many that face America today.

It seems to me—and I am not alone in that belief—that President Roosevelt's courageous stand in opposition to dictatorial trends and aggressions is the most hopeful development of recent years. He supplies a leadership, rather tardily, perhaps, sadly needed in a world that is but a ghastly caricature of that "commonwealth of nations, peaceful living and serene," visioned in the minds and hearts of common folk since history first began.

The same conservative gentlemen who, for political effect, perhaps, loudly decry the President's utterances in opposition to fascist aggression, nonetheless enthusiastically vote for the expenditure of billions for men and equipment to eke out our national defense. A necessary expenditure, they say, and perhaps it is so.

I maintain however that high explosive and steel is not the only factor in the war that is now going on and must forever continue. It is a war of clashing economies and of ideals diametrically opposed. In that struggle there can be no retreat and no quarter.

Democracy can best state its case through utterances of its leaders. As the greatest and oldest democracy America has a right to be heard and who is better qualified to speak than our great President? We know what tremendous energy is being centered on the effort to implant on this hemisphere the ideologies and doctrines of oppressor nations in which the State has ceased to be the servant of the individual; in which instead the individual is not merely the servant but the abject slave of a state clutched in the iron grip of a dictator whose power is absolute.

To make America's voice heard in opposition to such encroachment of hostile power is not incitement to war. It is nothing else than elementary self-defense and should be recognized as such. It is so recognized I believe save only by those hide-bound isolationists who for political advantage continue their yapping at the President's heels as might a Pekingese before the cage of a lion.

Building up world sentiment, as the President is trying to do, against aggressors who know and use only the tactics of an Attila or a Tamerlane in their wanton gobbling up of small nations, seems to me fully as effective a method of defense as merely sitting tight behind the sights of machine guns. And it is likely to be much less prodigal, in the long run, of American lives and American treasure and resources.

I also wish to register hearty agreement with any and all attempts in the Congress to extend the principle of public ownership of utilities, and especially of utilities by nature monopolistic. One such attempt, and a worthy one, is House bill 3121, introduced by yourself, seeking as it does, to eliminate the wastes of useless duplication and competition in the coal, oil, electrical, and natural-gas industries.

None of these industries can be economically operated on a competitive basis, and this fact automatically takes them out of the field in which private capital should hold control, for it postulates that such industries must operate (1) wastefully under competitive conditions, or (2) efficiently as a monopoly. And as to private monopolies, I will only say that we know all too well how private capital turns such efficiency, gained by monopolistic control, to its own advantage instead of to the advantage of the people.

I am not one of those who hold to private exploitation of our natural resources as being in the nature of an inalienable right, allowing those who, as we know, often obtained their control by definitely questionable methods, to retain that control indefinitely.

These resources are being recklessly used up and, to a large extent, wasted. Efforts at coordination or control meet with obstacles in the form of conflicting State laws, and regulation by Government has in nearly all cases proven ineffective. I can see no solution likely to be of permanent value save only in public ownership, nor can I see any reason why the people should longer continue paying tribute in the form of high prices and wasted assets. Brought down to fundamentals, the situation with regard to these utilities is only a refinement of methods used by feudal lords in medieval Germany, who seized certain islands in the Rhine and exacted tribute from every vessel that passed. The river was an artery of traffic, a utility, if you please, which had cost the robber barons nothing, but the barons had control, and the people must use it. Therefore the people paid.

It is so today. The methods are more devious, but the principle is the same.

Hoping for the success of H. R. 3121, I remain,

Sincerely,

The Royal Visit

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

EDITORIAL BY WILLIAM ALLEN WHITE

Mr. LAMBERTSON. Mr. Speaker, under unanimous consent to extend, I am privileged to reprint an editorial from the Emporia (Kans.) Gazette of June 9 the words of America's best-known editor and Kansas' most distinguished citizen, William Allen White, on the royal visit, as follows:

[From the Emporia (Kans.) Gazette of June 9, 1939]

THE ROYAL VISIT

The visit of the King and Queen of England to America of course was not a casual, back fence, neighborly call. They didn't just run in on their way somewhere to get a square meal and see the Roosevelt children. Royal visits are never casual. Unquestionably, the purpose of the visit of the King and Queen was a high and honorable one: to cement the friendship closer between England and the United States. This is no sinister motive.

However, it is doubtful if the visit accomplished much. The breakage was too heavy for one thing. By breakage, we mean heart breakage of envious people who didn't get what they regarded as their social dues, and a lot of those envious people are high placed, who if they are envious are mean, and if they are mean they will bide their time and hit back. For another thing, America is deeply suspicious these days of any attempt to lure this country into any kind of alliance with any other nation. The Tory government of England has been so conspicuously greedy and selfish for England's own power and nothing else, that people of the United States distrust any gesture on the part of any British official. This obvious gesture of the royal visit will breed suspicion rather than achieve friends.

America was tremendously disheartened and disappointed at Prime Minister Chamberlain's Munich "appeasement." Before that America was unhappy about the obvious alliance between Franco and the British tories. And even before that, Great Britain's policy toward Mussolini in Ethiopia was a sad revelation of opportunist British diplomacy. Upon all this, going back 7 or 8 years to 1932 when America tried to stop Japan in the first excursion into Manchukuo; and Great Britain coldly refused diplomatic cooperation—then came the revealing sense to the United States that Great Britain's tories were playing with the tories of the world, the tories who were about to take charge of Germany, who were about to throttle Spain, who were in charge in Italy.

Great Britain is as much responsible for the rape of Central Europe and the conquest of Ethiopia and the Fascist Government in Spain as either Hitler or Mussolini. The difference is that Great Britain has been pie-faced and unctuous as she watched the world go totalitarian. The interest of the present Government of Great Britain in democracy is entirely academic. It is put on for show-window dressing.

So the presence of the King and Queen here will achieve little real good. The King and Queen are gracious, pleasant, kindly, intelligent people. They are doing all they can. Obviously they are not here because they want to be. They are a couple of lay figures of state on casters, being moved around by the British Government to make friends for a tory cabinet which is in sad trouble standing in grave danger and the need of prayer. No one can question the entirely proper conduct of the royal pair. No one can doubt they are doing their dear and dead level best. But the signs are not right.

Alas, but England cannot recover "face" in the United States through the benign and charming presence of her democratic King and his lovely Queen. The day has passed when that sort of thing might be accomplished in a democratic world.

The cosmic camera records America's thumbs down!

The Federal Trade Commission Investigation of the Fair Trade Laws

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

Mr. PATMAN. Mr. Speaker, the Federal Trade Commission, under a recent resolution, has begun a study of the Fair Trade Acts of the 44 States. Based on the history of other similar investigations, this study will not be completed for at least 2 or 3 years.

A great deal of question has been raised as to the qualifications of the Federal Trade Commission to conduct an impartial study of these laws which have swept the country during the past 5 years. From time to time the Federal Trade Commission, in official statements as well as statements by individual members and high officials in the Commission, has vigorously opposed this type of legislation. These statements have been made admittedly without factual support and the only basis for them has been the fear that the potential damage to consumers might be greater than the advantage to retail distribution which flows from the elimination of predatory price cutting and loss-leader selling.

I, for one, as a result of these statements, greatly fear that it will be impossible for the Commission to conduct this

investigation along fair and impartial lines. It will only be human for those in authority in the Commission to devise the mechanics of the investigation in such a way as to substantiate and justify the premature position already taken.

PRICE CUTTING MOST POTENT WEAPON OF MONOPOLY

The fair-trade laws represent a constitutional approach that has been devised to cure the recognized evils of predatory price cutting and loss leader selling which is the most potent weapon of monopoly. The full long-range effect of these laws cannot be accurately determined until sufficient experience has been had under them. If these laws are inimical to the general welfare of the public, they will be repealed.

This legislation has the unanimous support of small men in retail distribution the country over. They feel that the protection afforded by this legislation is essential for their survival against the competition of their powerful large-scale competitors and to properly protect the public against monopoly.

CORRECT INFORMATION SOUGHT

It is true that this law is considered an economic reform. However, it has been given the approval of the duly elected representatives—State and National—of over 100,000,000 citizens of the United States residing in 44 States. It has been carried through the Supreme Court of the United States and received a favorable opinion. Therefore, the people of the Nation deserve to receive a fair and impartial report from any investigation, which may be made from the effects of this legislation. Members of Congress and members of the State legislatures desire correct information upon which they can rely in passing upon this type of legislation in the future. If the law is wrong and against the public interest, they want to know it. If it is shown by a fair and impartial investigation that this law is against the public interest, I am sure that it would be repealed promptly.

H. R. 3838, THE DISTRICT OF COLUMBIA FAIR-TRADE BILL

First. This legislation is similar to that which is now in effect in 44 States, Hawaii, and Puerto Rico, every State in the Union save Vermont, Delaware, Missouri, and Texas. It is exactly the same as the Maryland law. No State fair-trade act has ever been repealed.

Second. An exactly similar bill passed the House of Representatives during the Seventy-fifth Congress.

Third. This legislation has but one purpose, namely, to permit manufacturers of products bearing their trade-mark, brand, or name to contract with their retail distributor as to a minimum resale price.

Fourth. Agreements or contracts between manufacturers or between wholesalers or between retailers are expressly prohibited by the act.

Fifth. Only products which are in free and open competition with products of the same general class produced by others are eligible to be the subject of contract under this act.

Sixth. These laws are permissive only; no manufacturer, wholesaler, or retailer is required to become a party to these contracts. The remedies under this act are purely civil in character.

Seventh. This legislation is expressly designed to protect small business from predatory loss leader below cost selling and has the support of small business generally in the United States.

Eighth. The Supreme Court of the United States, in a unanimous opinion, upholding its constitutionality delivered by Justice Sutherland in 1936, declared this legislation was not price fixing.

Ninth. All the States surrounding the District of Columbia have this legislation. This reason alone is usually considered sufficient for the enactment of similar legislation in the District of Columbia.

The June 1, 1939, issue of the National Association of Retail Druggists' Journal contains an interesting editorial on this subject that was written by Mr. John W. Dargavel, executive secretary of that association. It is as follows:

THE NATION NEEDS THE WHOLE TRUTH ABOUT FAIR TRADE

Druggists of the Nation will watch with a great deal of interest the investigation of fair trade which is now being pursued by the Federal Trade Commission through its Economic Division. Particularly, the druggists will be alert to observe the degree of impartiality which the Commission will maintain.

In many ways, the Federal Trade Commission is a body which should be very competent to conduct a survey of this character, and of so much importance to the citizens of the Nation.

But, in undertaking this survey, the Commission has placed itself in a peculiar position. Quasi judicial in the scope of its activities, the Commission and the judiciary have much in common. Yet no conscientious judge would undertake to render a decision on a case in which he had already given an opinion. It is the custom of lawyers, having been elevated to the bench where they are called upon to review a case in which they previously have participated, to voluntarily disqualify themselves.

Despite the fact that the Commission should be expected to conduct this survey with impartiality, can this quasi-judicial body, turned prosecutor and detective, completely erase from its composite mind the preformed opinions which it has so positively expressed upon a number of occasions—admittedly without facts to substantiate the opinions?

No one would welcome more warmly a fair and impartial study of fair trade than the druggists of this country and the organizations which represent them. We sincerely believe in fair trade; we are sure that an unprejudiced investigation will reveal it to be of great and lasting benefit to the public. If it is found to be so, then the Federal Trade Commission and every branch of Government and every honest business organization should acknowledge it to be a needed social and economic reform deserving of approbation and support. On the other hand, if fair trade is found, after an impartial investigation, to be against the best interests of the people, it has no reason for longer life.

It must be admitted generally that no comprehensive study of fair trade has yet been made. Local studies have been announced; the Druggists Research Bureau is now tabulating the findings in its first study, the results of which will not be available for some time. The Federal Trade Commission admits that it has no conclusive facts before it at present.

But this has not prevented some members of the Commission and leading members of its staff from expressing prejudicial views against fair-trade legislation; nor has it prevented the Commission from issuing official statements against fair trade. In a recent report, in which it expressed statements generally disapproving, the worst indictment which it could make was that the potential damages to the consumer might be of greater importance than the advantage to manufacturers and retailers.

Not only has the Commission expressed itself freely, albeit not factually, regarding fair trade—the Commission's attitude has resulted in a widespread opinion among those in position to observe closely the developments on Capitol Hill that the decision as to the result of the study may have been made in advance and that there is a likelihood that the mechanics of the study may be directed so as to produce that result.

It is to be sincerely hoped that this will not be the case. It is to be hoped that the Commission will recognize the grave responsibility which it has assumed, will really seek the facts and announce them impartially, rather than to seek verification of a predetermined assumption.

The taxpayers of the Nation have laid out a large sum of money to make possible this survey. Every druggist and drug organization in this country should cooperate in every way possible with the Commission to bring to light the facts. The people need it. The consumers who depend upon these retailers for their sources of supply deserve it. But these consumers will be the victims of a colossal travesty if anything but the strictest impartiality is allowed to rule the conduct of this investigation.

The Federal Trade Commission, having expressed itself concerning this legislation before seeking the facts, instead of after, certainly will have to lean backward in its endeavor to be impartial if it is to do the right and proper thing by the people whom it serves.

Predatory price cutting and loss-leader selling are two business methods which the Commission itself has always condemned. Fair-trade legislation is directly aimed at these two trade evils, and thus far is the only constitutional method which has been devised to curb them. The Commission runs a serious risk of placing itself in a paradoxical position when it voices disapproval of the only remedy thus far devised for the recognized ill.

Should the Commission decide to turn thumbs down on fair-trade legislation, then indeed we hope that it will have ready for immediate application an alternative remedy for the business evils which have been so roundly condemned—else the Commission will find chaos rampant in the distributional field, and the small businesses which form the foundation of the Nation headed for oblivion.

In our opinion, end of the fair-trade laws could have but one result—granting of unlimited license to the forces in the production and distribution fields which are aimed at monopoly. Unfettered by fair-trade laws, they might resume the rape which was under way a few years ago and pillage the small businesses of the Nation, and with them, the small communities. Then the consumers, today so pitied by professional weepers, would indeed find themselves the victims of greed and grasping—and the Federal

Trade Commission, were dictatorial monopolists to condone its continued existence, would have a far harder task to preserve fair-business principles than it has now, with logical laws for their control.

As I have stated, it is my sincere hope, and that of every independent druggist in this country, that the Commission fully realizes its grave responsibility in this investigation, and will exercise its utmost ability to preserve fairness and impartiality in its methods and its reports. Properly safeguarded, the Commission's investigations will be deserving of the fullest cooperation of all who are interested in fair trade, and its findings will be of the greatest importance to the Nation. Without these safeguards, its report not only will be without value, but will be a discredit to a governmental bureau that has been of great value to the Nation it was designed to serve.

The truth of the situation is bound to come out in the long run. Let us hope that the Federal Trade Commission will bring it forth.

James Hamilton Lewis

MEMORIAL ADDRESS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. DICKSTEIN. Mr. Speaker, to the world at large Senator LEWIS was known as the gentleman and handsome Beau Brummel. To us in the House of Representatives he was known as a hard-working and devoted public servant.

Senator LEWIS died in the fullness of his power and in the vigor of his manhood on April 9, 1939. Death came unexpectedly and while the Senator was in the midst of his public activities. His loss is so recent that it is hard for us to believe that this genial personality is no longer with us.

There is not a person in the city of Washington, no matter how humble his calling, who did not know Senator LEWIS by sight, and scores of men knew him intimately. Thousands knew him for his public work.

There is no place in which friendships are more readily formed than among Members of our Congress, and whether one belongs to the House or to the Senate, a Member of Congress is a friend of every other Member of Congress. It was my great privilege to have known Senator LEWIS intimately and to have been able to count him among my friends, and to feel that in Senator LEWIS one could always find a warm-hearted public servant ever eager to listen to the woes of his constituents and to the pleas made on behalf of those underprivileged who occasionally come to our legislative body pleading for assistance.

No cause however trivial, if there was an opportunity of giving help to one who needed help, was alien to the Senator. I am sure that I voice the sentiment of everyone in the House when I give expression to my feeling that the death of the Senator from Illinois will ever be a loss from which there cannot be any compensation.

Royal S. Copeland

MEMORIAL ADDRESS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. DICKSTEIN. Mr. Speaker, the sudden and unexpected passing of the senior Senator from New York, which occurred on June 17, 1938, was a blow from which his friends and colleagues will not be able to recover.

He who was always ready to administer to his colleagues when infirmity struck was to succumb himself to the grim reaper.

The senior Senator from New York lived not one but literally two full lives during his span of three score and ten. He was a native of Michigan and spent half of his life in that State, having been a practicing physician and later on mayor of Ann Arbor.

The second half of his life belongs to the State of New York. In 1916 Mayor Hylan chose him to be health commissioner for the State of New York, and his record in that office was so conspicuous that he became not only city- and State-wide but a Nation-wide figure. In 1922 the voters of the State of New York elected him to represent them in the Senate of the United States.

Senator COPELAND'S work was so brilliant and his ability so marked that just before his death he was drafted for a nomination as mayor of the city of New York, and who knows but even greater honors might have been in store for him had not death intervened to remove him from this earthly scene?

We mourn his loss as that of a true and devoted servant, a real American, a beautiful personality, a charming friend and companion, and above all a man who had the stamp of greatness upon him.

John J. Boylan

MEMORIAL ADDRESS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. DICKSTEIN. Mr. Speaker, Hon. JOHN J. BOYLAN, Representative in Congress from the Fifteenth District of the State of New York, was one of the most likable and brilliant Members of the House.

His genial manner and his sympathetic understanding of our everyday problems made him a beloved character in the House of Representatives. He was never too busy to counsel with his colleagues regarding any problem or legislative proposal they wished to discuss with him. His popularity was well deserved.

His interesting and active career included membership in the Assembly of the State of New York from 1910 through 1912, and in the Senate of the State of New York from 1913 through 1922. He was elected Representative in Congress, serving in the Sixty-eighth, Sixty-ninth, Seventieth, Seventy-first, Seventy-second, Seventy-third, Seventy-fourth, and Seventy-fifth Congresses, his death occurring on October 6, 1938.

This is an impressive record of private and political activities which won for him the friendship, loyalty, and confidence of everyone who learned to know him through the years of his useful and active life.

As my colleague in the House and one of our membership in the Assembly of the State of New York he was actively engaged at all times in the faithful discharge of his duties, and his untiring efforts in behalf of the district he had the honor to represent is well shown by the record he made in Congress.

He served with distinction as a member of the important Committee on Appropriations of the House of Representatives. His congressional district, the Fifteenth New York, which he so ably represented, has lost an able Representative and an outstanding statesman.

Commencement Exercises at Duquesne University, Pittsburgh, Pa.

EXTENSION OF REMARKS
OF
HON. BENNETT CHAMP CLARK
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, June 13, 1939

ADDRESS BY HON. JOHN H. OVERTON, OF LOUISIANA

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Louisiana [Mr. OVERTON] at the commencement exercises of Duquesne University, at Pittsburgh, Pa., on Wednesday, June 7, 1939, on which occasion the degree of doctor of laws was conferred upon the Senator from Louisiana by the university.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEUTRALITY

Tonight I shall speak to you upon the subject of neutrality, which, fairly adopted and honestly applied as a national policy, will have the effect, as far as humanly possible, of nonparticipation by the United States in any foreign war wherein no American state is involved.

Recent events abroad, such as the absorption of Austria, the dismemberment of Czechoslovakia, the overthrow of the Albanian Government, the meeting at Munich, the territorial demands of Italy against France, the precarious status of the Free City of Danzig, the feverish efforts of European democracies to encircle Germany and Italy through compacts with neighboring states, the Sino-Japanese undeclared war, and the warnings of the President of the United States that a major conflict might be impending, are causing the American people to consider more seriously than ever before the course that our Nation shall pursue in the event of another great catastrophe abroad.

* * * * * * *

Happily, within the last few weeks the shadow of war has lessened; but the necessity for a general and definite declaration by Congress of the rules of neutrality that shall govern us has not diminished. Indeed, it is in times of peace that we should prepare not only for war but for the avoidance of war.

It is difficult to conceive of any public question that more vitally affects you, the men and women of this graduating class, because you—and all of your generation now entering upon the threshold of your careers—will have to bear the brunt and be the greatest sufferers in the event of our country becoming involved in another great holocaust. Furthermore, and as surely as I stand before you tonight, the entrance of the United States into another European conflict would mean another world war, and a world war with modern engines of destruction and the unsparing savage cruelty of modern warfare will result in a retrogression of civilization and the probable substitution in these United States of a dictatorship for our republican form of government. Whoever of us cherishes this civilization, whoever reveres our traditions and our institutions, whoever holds dear American liberty, freedom of religion and speech and equality of opportunity, whoever loves humanity should himself fight like a soldier against their greatest enemy—modern warfare.

Why should we become involved in another European strife? Let me ask you this question:

"Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humor, or caprice?"

That, ladies and gentlemen, is the question verbatim that the Father of his Country propounded to the American people in his Farewell Address; and what Washington said is as true in 1939 as it was in 1796. Such also was the view of John Adams. And it was the view of Thomas Jefferson when, addressing the Congress in 1803, he declared:

"Separated by a wide ocean from the nations of Europe and from the political interest which entangle them together, with productions and wants which render our commerce and friendship useful to them and theirs to us, it cannot be the interest of any to assail us, nor ours to disturb them. We should be most unwise, indeed, were we to cast away the singular blessings of the position in which nature has placed us, the opportunity she has endowed us with of pursuing, at a distance from foreign contentions, the paths of industry, peace, and happiness, of cultivating general friendship and of bringing collisions of interest to the umpirage of reason rather than of force."

For over a century and a quarter, we followed the policy advocated and adhered to by our greatest statesmen from Washington to Wilson. We departed from it in 1917 to enter upon a "holy crusade" to end all wars, to protect the rights of all nations—great and small—and to make the world safe for democracy. We attained none of these ideals. We spent $41,765,000,000. We sacrificed the lives of over 100,000 of the flower of our young manhood. We have filled our veterans' hospitals with thousands of others, maimed, diseased, mentally incompetent. The chief legacy of this great misadventure has been an accumulated and dishonored foreign debt, owing to us by the countries of Europe, of more than $13,000,000,000, and an 11-year depression with its problems of unemployment, unbalanced Budget, and a rapidly mounting national debt of over $40,000,000,000.

We are told that our participation in the 1914–18 holocaust was inescapable and that even more unavoidable will be our entrance into another European embroglio. But let us remember that Norway, Sweden, Denmark, Holland, Switzerland, and Spain, located upon the very edge and brink of battlefields, and weaker States than ours, maintained their neutrality.

Three things are necessary to keep us out of foreign wars: (1) A sound foreign policy; (2) an impregnable national defense; and (3) a policy of strict neutrality.

The President is vested with the authority to negotiate treaties and to nominate the officials of our Foreign Service, all subject to the ratification or confirmation by the Senate. Hence the shaping of our foreign policy may be said to be predominantly a function of the Chief Executive. But the Congress—and the Congress alone—is authorized to regulate commerce with foreign nations, to raise and support armies, to provide and maintain a navy, to declare war, and to provide for the common defense. And Congress only is clothed with the authority to establish and ordain our policy of neutrality.

Impartiality is the soul and essence of neutrality. It seems to me that we should, in advance of another European war, prescribe as clearly and definitely as possible the rules of our neutrality. We cannot improvise such a policy in the midst of conflict, for neutrality legislation should be enacted in the cold light of reason, free from the sympathies, the hatreds, the interests, and the partisanships engendered by war. We should let the world know in advance of combat what our policy is, and we should not undertake to change the rules in the midst of the game.

There are those of our citizens who declare that we should not remain neutral in the controversy that is presently dividing Europe into two armed camps and that we should aline ourselves with the democracies and against the Rome-Berlin axis. You and I and the large majority of the citizens of this great democratic Nation may naturally and profoundly sympathize with all peace-loving democracies and entertain a feeling of antagonism toward totalitarian and aggressor nations. But we cannot overlook the fact that true neutrality recognizes the inherent right of each state to determine its own form of government. We cannot overlook the fact that the European democracies are preparing for the threatened international duel by seeking a military pact with one of the most undemocratic and despotic governments in the galaxy of the nations; and, while I am for the most part of English descent and proud of my lineage, I cannot deny that Britain owes her present great power largely to a policy of aggression and conquest.

None of us can forget that our heroic effort barely 20 years ago to aid the cause of world democracy ended in the greed and avarice that, like ghouls, sat at the council table at Versailles. And we know that one of these so-called European democracies has lately surrendered itself to a virtual dictatorship; and who, may I ask, can safely predict what changes in form of government the next few years may encompass in the national life of any world power?

Motivated, and for the most part sincerely and honestly so, by love of democracy, hatred of despotism, and fear that the aggressive policies of the axis states may endanger the safety of the American people, certain extreme internationalists would make of our Nation an immediate partisan and precipitate it into the vortex of the next European massacre—even before a gun is fired or a bomb is dropped. I cannot emphasize too strongly my personal view that we are in more acute danger of having our own democracy merged into a home-made dictatorship as the consequence of becoming involved in a world conflict, than ever our becoming subject to the yoke of foreign conquest and domination.

It is further proposed, notably in the amendment of Senator THOMAS of Utah to the present Neutrality Act, that a large discretion be entrusted to the President in regulating our trade and commerce with belligerents and in determining, in conjunction with Congress, what nations are to be considered as treaty violators and aggressors. There is not a semblance of neutrality in such a policy. Discriminatory regulations of export prescribed in the midst of war are, in themselves, provocative of hostility. To select the aggressor nation, and to penalize it with the imposition of sanctions and otherwise is in itself an unfriendly act and one that might lead to war. There is no obligation devolving upon the United States to sit in judgment upon the merits and demerits of Old World rivalries and animosities. There is neither just cause nor necessity for Uncle Sam to act as a world policeman. Standing before you as a Democrat, with a Democratic President occupying the White House, I do not hesitate to declare it is my well-considered judgment that our Constitution properly lodges the war-making power in the Congress of the United States and that as little discretion as possible should be given our Chief Executive, regardless of who he may be, to commit us to policies of either hostility or favoritism toward any belligerent state. "Measures short of war," however well intended, are well calculated to lead us into actual conflict.

If we are to avoid involvement in future wars, it is not sufficient to remain neutral, but, being neutral, we should also remove as far as possible those causes which led to our being forced into the World War. The chief aim and purpose of neutrality legislation should be to maintain our peaceful relationships with all nations. We should surrender many of our so-called neutral rights to the cause of peace. We should not, as a nation or as citizens, finance any belligerent in the prosecution of war, or else we may be unable to resist the pressure of international bankers and financial interests to protect with arms their foreign investments. We should, both as a moral duty and a pacific policy, prohibit the transportation of lethal weapons to belligerents and modify substantially our ancient conception of our neutral rights to the freedom of the seas.

There is, to be sure, no neutrality or other legislation or foreign policy, that can give us 100 percent guaranty against the eventuality of war. We can, however, lessen materially the chances of conflict by our adherence to the following program and formula of neutrality legislation.

Our neutrality legislation should provide that a state of war exists when so declared by any foreign belligerent, or when the President or the Congress finds an undeclared state of war to exist between two or more foreign States, or whenever the President or the Congress finds a state of civil strife to exist in a foreign state.

Our neutrality legislation should declare an absolute embargo on exportation of arms, munitions, and implements of war to belligerents, or to a state engaged in civil strife, or to a neutral state for the use of a belligerent; and it should prohibit the exportation of other goods to a belligerent until the title thereto has been transferred to foreign interests and all domestic title has been divested, under what is known as the cash-and-carry plan.

Our neutrality legislation should prohibit American vessels carrying goods and passengers to belligerents and carrying arms, munitions, and the implements of war to any belligerent state or to a state wherein civil strife has been found to exist.

Such legislation should prohibit the financing of any belligerent state or the purchase of its securities, bonds, or obligations by any person within the United States with the exception of ordinary commercial credit and short-time obligations, including no solicitation of funds for or on behalf of a belligerent.

Such legislation should provide for the registration and licensing of persons engaged in the United States in the business of exporting, manufacturing, or importing the munitions of war under the supervision of a national munitions-control board, as the present law now provides. It should exempt from its provisions only an American republic engaged in war with a foreign state.

If we adhere to these rules and principles of neutrality, we shall go far toward immunizing ourselves from foreign conflict. They require some sacrifices on our part, but none in comparison to the sacrifices which modernized carnage entail.

But neutrality alone is insufficient to grant us the safety for which we hope and pray. The history of the world, including current events, warns us that it is the weakness of a state or nation that often invites aggression, absorption, or conquest. We should associate with a policy of strict neutrality a program of adequate national defense. We must be able, at all times, to defend our own neutrality against the world. Paradoxical as it may seem, neutrality and national defense are the twin sisters of peace.

* * * * * * *

The prudent rule of national conduct for us to follow is epitomized in the advice of Polonius to his son Laertes:

"* * * Beware
Of entrance to a quarrel, but, being in,
Bear't that the opposed may beware of thee."

Or, in the language of the late President Theodore Roosevelt: "Speak softly, and carry a big stick."

And, in conclusion, may I not, in this presence, and as the honored guest of a university conducted by fathers who are disciples of the Prince of Peace, pay reverent tribute to His Holiness Pope Pius XII for his efforts to obtain a peace conference among the discordant and distracted nations of Europe and to bring to reality the divine message that heralded the birth of our blessed Saviour: "Peace on earth, good will toward men."

The Future of the American Farmer

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 13, 1939

RADIO ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an exceptionally able address delivered over a Nation-wide hook-up by the senior Senator from Illinois [Mr. LUCAS] on the subject of The Future of the American Farmer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As the guest speaker of the Star Radio Forum, I express my appreciation for the opportunity to discuss briefly some thoughts I have with respect to the future of the American farmer.

I am not a prophet or a son of a prophet; yet I have no hesitancy in speculating with a certain degree of boldness on future agricultural trends. My reason for taking this leap in the dark is based primarily upon the fact that I was born and reared on a farm. I am the owner of farm lands in Mason County, Ill.; and during my tenure of office in the House of Representatives and the United States Senate, I have had the privilege and honor of serving as a member of the Committee on Agriculture.

No one doubts that the farmer's problems are strongly associated with the conservation of the soil and the conservation of human life. Man's ingenuity and industry are ever striving in this modern age to make his position in society more secure and contented without doing extreme violence to the position of his neighbor. And so any conjecture upon the future of this important subject has for its genesis a note of optimism which is based upon the facts of yesterday.

This Nation, my friends, was founded in and based upon an economy strictly agrarian in its nature. The Constitution, the Bill of Rights, the system of checks and balances which characterize our democracy all were conceived at a time when the only problem which confronted agriculture was that of providing enough farm produce to sustain a rapidly growing population. So, for many generations the opportunities of farming and the rewards it extended to hard work and honest service fulfilled the requirements of individual enterprise which had become the ideal of American life. Farming was really not an industry; it was a way of life—one might well say that in those days it was the way of life.

As the pioneers pushed westward, they opened the fertile plains of Illinois, the level prairies of Kansas and the Dakotas. The soil and climate of Wisconsin and Minnesota were found ideal for dairy farming. The broad expanses of Texas and Arkansas were found adaptable to the production of more cotton. Livestock roamed endless pastures of waving grass. Cattle and sheep and hogs were raised in ever-increasing quantities, and there developed huge livestock markets at such centers as Chicago and Kansas City to supply the Nation's need for meat products. The corn that flourished on the plains of Illinois and Iowa not only provided food for our people and raw material for manufacture but a great deal of it, as well, was converted into feed for livestock en route to market.

Moreover, the rich productivity of American farm land left enough over to sell to our foreign neighbors, and this produce, bettered by the native ingenuity of American farmers, was welcomed in lands across the sea. Our cotton and wheat found a ready outlet in nations where either there was insufficient farm land or where the farm land available had been exhausted of its fertility through centuries of use.

The American farmer was happy. He looked forward in high hope that each new season would bring forth good weather and bountiful crops, all of which in almost every year was tantamount to financial success.

And then one day something happened to the economic law of supply and demand. We were suddenly confronted with good weather and billions of acres producing unmarketable surpluses which drove the price of basic commodities to the floor level of ruin. The more the farmer produced the less he could sell, and the nearer he came to entering the doors of bankruptcy. It was indeed a sad and dejected picture. What a paradox to find that in this great country we have sufficient natural resources, when effectively used, to feed and clothe almost half the people of the world, yet when we overproduce the farmer goes broke and the economy of all groups is so disturbed that we find millions upon millions of our own people without adequate purchasing power to aid in the distribution of the huge surplus which gluts our markets.

And while this condition has been with us for nigh on to two decades, we have as yet not found the answer. No statesman or economist to date has devised a remedy for this strange and unnatural economic situation. So, during the interim the Congress of the United States has been called upon by leaders of agricultural thought to stem this economic tide through legislative action.

During the past 20 years Democratic and Republican Members of the Congress representing agricultural districts and States have attempted to control the chronic surpluses of basic commodities through adequate legislation. However, they were rebuffed by Republican Presidential vetoes on two different occasions and pushed rudely aside in 1936 when the Supreme Court invalidated the Agricultural Adjustment Act. While I respected the opinion of the Court, I never agreed that it was correct. The precedent established in that case in no way embalmed the principle for which agriculture has aggressively fought.

The farmer kept on fighting for what he honestly conceived to be his legislative rights. The Congress passed a new Agricultural Adjustment Act in 1938, and only a few months ago the Supreme Court held the act constitutional, giving to the farmer for the first time in 20 years a permanent legislative base from which to operate.

It is generally conceded that the holding of the original Triple A unconstitutional delayed recovery and without doubt is in a large measure responsible for the present plight of cotton and wheat as we know it today. When we lost control of acreage curtailment under that decision immediately good weather gave us staggering, unmarketable surpluses. Had the original Agricultural Adjustment Act been held constitutional, I boldly assert that we would not at this hour be compelled to hazard a prophecy as to the future of the cotton farmer of the South. He would not today be confronted with a 13,000,000-bale carry-over. Our exports in cotton would not be the smallest since 1880. The exports in this season, which is more than two-thirds completed, are expected to be only three and a half million bales.

How can we recoup the losses sustained? Shall we follow the philosophy of some who would crawl complacently in our national shell and produce only what we consume, or shall we continue to use our trading and bartering ingenuity, as well as to subsidize the exporter, in order that American surplus cotton may continue to flow freely in the world market? I am one who believes that America is entitled to her fair share of world trade in the sale of cotton. We should never retreat, but constantly carry on an offensive in every honorable way with nations who need this raw material.

In addition to our support of this export feature, we should also expend every dollar that is necessary in laboratory and research work in order that we may find more use in domestic consumption for this indispensable commodity. Under such a program, working in conjunction with the present Agricultural Adjustment Act, the current surplus will gradually disappear, and the cotton farmer will again find his place in the economic sun. We must look at the cotton problem over a long period of time. It is a short-sighted policy that looks only to the current crop, losing sight of the tremendous surplus in the warehouses.

What happened to cotton also happened to wheat when the Court removed from the statute books the basic law of control. We found farmers in the fall of 1937 and the spring of 1938 planting 80,000,000 acres of wheat, producing the second largest crop in the history of this country, and creating a surplus which drove the market price of this commodity down to the point where it was far less than the cost of production.

With the great majority of wheat farmers cooperating this year in acreage curtailment in conformity with the present law, I prophesy that the wheat farmer will realize a satisfactory price for the crop produced this year. Wheat today is selling for 68 to 70 cents per bushel at the elevator in my section of the country, with subsidy payments for cooperators bringing the price to about 90 cents, while at Liverpool last Saturday wheat hit a new 6-year low. It is significant that the Chicago wheat price is now about 20 cents a bushel over Liverpool, whereas prior to the adoption of the American farm program Liverpool was about 18 cents per bushel, on an average, over the Chicago price. This would appear to be clinching proof that the Government program of loans and subsidy payments has stabilized and steadied American wheat prices. The future will bring little or no basic change in the law affecting wheat farmers. Another year of active participation under the present legislation will produce more contentment among the wheat farmers of this Nation.

When we return to the years of 1934 and 1935 we know that the corn farmer was making tremendous progress under the corn-hog program of the Agricultural Adjustment Act. And as one who has spent his entire life in the heart of the Corn Belt district of Illinois, I am glad to testify over the air that the great majority of corn farmers of this Nation approve the present legislation of soil conservation, adjustment payments, and mandatory loans. They have never before enjoyed such stabilization and security of price. They are certain that the economic barriers have once and for all eliminated the Hoover 10-cent corn that they experienced in 1932.

Under the present program the wide range of fluctuation of prices is impossible. And while the price of corn at the present time is far below parity, yet the loan and price adjustment have given to the cooperating farmer a decent, livable price for his 1938 crop. The best proof of the success of the present program affecting the corn and hog farmer can be found in the fact that nearly 1,400,000 farmers in the commercial corn-producing area have indicated their intention of participating in the 1939 program by signing individual contracts. This is an increase of 250,000 over last year. The corn farmer, with his American market, feeding 85 percent of the total crop to hogs and cattle, is obviously in the most strategic and sound position. He has given Uncle Sam little or no financial trouble. He stands on a somewhat different footing from that of the cotton and wheat farmer because of the export factors which influence cotton and wheat prices.

From the corn farmer we move over into the dairy district. Probably at no time in the history of legislation has the dairy farmer been given such special attention as during the present session of the Congress. In the appropriation of $113,000,000 to be added to the money received under section 32 of the Agricultural Adjustment Act, the dairy farmer will receive some $50,000,000 for domestic consumption. This amount will be used in keeping surplus butter and other auxiliary surplus products from directly affecting a livable price for the daily output of the dairy farmer. At the same time this surplus will be used by the Government to provide many of the necessities of life for those on relief. In other words, here is a two-edged sword that vitally affects the general welfare of many people.

The real relief for the dairy farmer in the future, however, does not lie in subsidies but in legislative action which will give him a better price for his milk in the milkshed. Today the dairy farmer in northern Illinois receives from 3 to 4 cents per quart while the consumer in Cook County pays at his kitchen door the sum of 12 cents. This is an unwarrantable spread. Too much money is being paid for cooling, pasteurizing, and distributing this vital commodity. The producer and consumer both suffer. Evidence before the Committee on Agriculture of the Senate discloses that the distributor in the city of Chicago gets as much per quart for distribution as the dairy farmer with all his cows, his standardized equipment, as well as his long hours of labor, gets for producing it. Wherever such a condition exists economic justice is being thwarted, and it is a subject which should be investigated with a view to giving relief to the dairy farmer.

Yes; the Congress made this appropriation of $113,000,000 primarily to take care of the dairy farmer, the cotton farmer, the fruit and vegetable farmer, the hog raiser, and other agricultural producers who are in distress. And as a result thereof we find all over this land much idle talk and irresponsible comment about the American farmer raiding the Federal Treasury. We appropriate billions for relief, billions for national defense, millions upon millions for various other purposes with little or no comment as to where we are going to get the money.

My friends, the farmer wants only equality before the law. He emphatically says a tariff for all or a tariff for none so long as his purchasing power is out of line with other industry. Give the farmer parity price for his produce, and he will gladly relinquish all his right in benefit payments. The farmer is not looking for hand-outs. He suffers irritation and displeasure at being told that benefit payments are putting him on the dole when he knows that last year out of every $100 received by him in farm income, $93.60 was taken from the soil with his own hard labor and industry and only $6.40 came to him from Uncle Sam.

The farmer also knows what the future has in store for him with respect to the $225,000,000 appropriation made by the Congress for parity payments. He knows what many other prejudiced individuals do not know, that if this year's cotton crop sells for 12 cents a pound, if wheat sells for $1 per bushel, and if corn sells for 62 cents per bushel, not a single dime of the money appropriated for these commodities will be expended. But you have heard little or nothing about that contingency.

I should like to repeat tonight what I have so frequently said in other addresses touching agrarian matters. It is the first law of nature for every man or group of men representing a particular commodity to protect themselves and their interests therein. But it should be remembered that we all must look at this problem from a national viewpoint. And tomorrow, as of today and yesterday, we need unity of thought, unity of action, unity of aim, and unity of plan. Therein lies permanent success for every group of American farmers, which means continued economic security.

And in the days to come, especially in 1940 when politicians begin singing their lullabies I ask the American farmer to be on guard for those who are full of sound and fury but offer nothing constructive. Analyze all political platforms dealing with agriculture to see if any of the boys back of the scenes are drafting platitudes, twaddle, and moonshine, rather than a substantial program to aid you and your family.

Now, my friends, it would be foolish for me to stand before this microphone and tell the farmers of America that their problems are all solved and settled, but I do believe that every thinking farmer and every thinking citizen who makes an impartial study of the farm problem cannot help but agree that the present program, even though it has been in existence only a short time, has what it takes to sustain and increase the annual national farm income.

In conclusion, I wish to commend the Honorable Henry A. Wallace, Secretary of Agriculture, and the heads of the various agencies of his Department for the interest, the labor, and the enthusiasm they have consistently demonstrated in attempting to give to the farmers a workable program. Nor can I conclude without paying a tribute to the sympathetic, keen, and understandable interest that the President of the United States has constantly shown in behalf of the problems of agriculture. No man who has ever served as Chief Executive of this Nation has done as much for the American farmer.

The Work of the Post Office Department

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, June 13, 1939

ADDRESS BY POSTMASTER GENERAL FARLEY AT CHEYENNE, WYO.

Mr. O'MAHONEY. Mr. President, on May 23 the postmasters of Wyoming had the great pleasure of greeting the

Postmaster General, Hon. James A. Farley, upon the occasion of their annual convention in the city of Cheyenne. It was the first time in the history of the State that the head of the Postal Department was able to attend such a convention, and a warm memory of the event will be cherished by all who were in attendance.

On this occasion the Postmaster General delivered a notable speech upon the work of the Post Office Department. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy indeed to have the opportunity to be in Cheyenne tonight and to meet with the postmasters of Wyoming. It gives me a thrill to travel in this part of our country and to meet you good people who are so typical of the progressive spirit of the West. There was a time when Cheyenne and Wyoming were regarded as far-away places; romantic regions where only the courageous and hardy pioneers could survive. Today, while you still retain in a large measure the charm and color and wholesomeness of the old West, you have combined with it in a delightful way commerce and industry, the last word in modern enterprises, and hospitality that impresses every visitor with the warmth and sincerity of your welcome.

A few years ago a trip from Cheyenne to either the eastern or western seaboard was a tedious, tiresome journey. Now you may travel in modern, high-speed airplanes to the east coast in much less than a day and to San Francisco in a few hours. Likewise, railroad transportation has been speeded up so that now you reach overnight many of the most important cities in the country. I am proud to say that the Postal Service has played an important part in the development of these modern transportation agencies, which have made neighbors of the easterners, the westerners, the northerners, and the southerners. The old sectional barriers that at one time existed in this country have been battered down, and the greatest forces in the flattening-out process have been our communication and transportation agencies. The telephone, the telegraph, and the radio have had amazing development and to the promoters, the fine upstanding businessmen, and to the capable engineers and scientists who have developed these means of communication, this Nation will be forever grateful. We are living in a great age. We are citizens of the greatest country in the world, and we should all be proud and happy that we are Americans. We are living at peace with one another. We have a great President, Franklin D. Roosevelt, who will go down in history as one of our keenest and most courageous leaders.

Business is good in America and it is getting better. For the third successive year the revenues of the Postal Service are reaching an all-time high, and I think everyone knows that when postal receipts are up the business of the country is on the upswing. While the ordinary postal revenues derived from the collection of postage last year exceeded $728,000,000, which I think you will agree is quite a sizable sum of money, and it is these revenues that indicate mail volume, business and social correspondence, yet this sum is only a small part of the financial transactions of the Postal Service. It is hard for anyone to realize, but it is a fact reported by the Comptroller General of the United States, that during the fiscal year 1938 the United States Postal Service was an $8,000,000,000 business. By that I mean that the actual money transactions in the Postal Service resulted in a total cash turn-over of more than eight billion. This amount exceeds all of the money in circulation and is more than the total appropriations made by Congress for carrying on the whole Federal establishment. The actual transaction of this business is performed in the post offices of the country under the supervision of the postmasters; therefore it is quite evident that postmasters and postal employees, in the performance of their daily tasks, are playing a most vital and most essential part in the social and economic progress of this Nation.

The railroads, the air lines, the telephone, the telegraph, the radio—in fact, every commercial and industrial organization in America—are dependent upon the Postal Service for their successful operation. Aside from the fact that we contribute in a substantial way financially to the maintenance of the great transportation systems in payments for carrying the mails, the mails carry the heavy communications of commerce and industry, the long letters, the business reports, the orders, the bills of lading, the daily newspapers, magazines, trade journals, and the personal correspondence, which form the basis and which are really the bloodstream of commercial and social intercourse. The Postal Service reaches places and people not reached by any other means of communication. I am proud to be at the head of this magnificent and universal communication system, and I am proud to be associated with the fine men and women who make up its field forces. You are doing a fine job and I am always pleased to publicly express my appreciation to the personnel of the Postal Service.

I make no extravagant claim and assert no right to any excessive amount of personal credit for the present high efficiency of the Post Office Department. I recognize that the spirit of loyalty and industry is inherent in the postal workers of today. I do claim that under this administration we have gained ground. Starting in 1933 we adopted policies which were calculated to safeguard this great public business, to improve its efficiency, to save money for the taxpayers, and to assume our full responsibility to the workers—and as we have gone along we have found no occasion to deviate from those fixed purposes. I can say without fear of successful contradiction that the adoption of these simple, straightforward policies has been the basis of our success.

The net deficit for the fiscal year 1932, which was the last full year of operation under the previous administration, was more than $152,000,000, and there was a net deficit in the fiscal year of 1933 of more than $50,000,000, notwithstanding that in the beginning of that year the postage rate on all first-class matter was raised from 2 to 3 cents. The fiscal year 1934 was the first full year of operation under this administration, and as the result of my recommendation at the beginning of that year the local rate on first-class matter was reduced from 3 to 2 cents, and in spite of the loss in revenue we suffered by that reduction in rate a net surplus was shown from our operations in that year. In 1935 we attained another net surplus. In the fiscal year 1936, due to the adoption of the shorter workweek, which cost millions of dollars and put thousands of men to work, and due to the fact that in that year the post office took over for the first time the custody of post-office buildings from the Treasury, we suffered a net deficit of less than $17,000,000. As the result of increased efficiency on the part of employees, coupled with increased revenues which reached an all-time high of $726,000,000 in the fiscal year 1937, we succeeded again in that year in maintaining our operations with a net surplus. In the fiscal year 1938 another surplus was shown; therefore, by adopting the same methods of bookkeeping as my predecessors, and by taking credit for the nonpostal items in the same manner that previous administrations claimed this credit, in 4 of the 5 full years of operation under my administration we have shown a net surplus from that part of our services which we render to the public for hire.

It was only in the fiscal year 1936 that we operated a full year with a net postal deficit. As I have said, this was the year in which we granted the shorter workweek to the employees, and I am convinced that the people of this country agree with me that it was wise for us to suffer that net deficit in order to advance the interest of the employees, to give them more time for recreation, and to enable us by this forward-looking labor measure to put more people to work.

We have established in the Department a new method of accounting, which keeps me currently and accurately advised concerning our fiscal affairs. The information furnished me recently by the Comptroller of the Department convinces me that the receipts for the present fiscal year of 1939 will at least equal and probably exceed the record-breaking receipts of the last fiscal year.

While we have been at this task of balancing our real operating expense with our income, we have carried on constant surveys looking to the improvement of our collection, distribution, transportation, and delivery services, and we shall continue to do this. I feel quite sure that with continued business prosperity, which means the continuance of the present gains in postal revenues and postal volume, and with no changes in postage rates, we can look forward to the time when under proper management the postal system of the United States will be maintained entirely from the postal revenues, and that cash withdrawals from the Treasury will not be required to meet the essential, non-revenue-producing activities of the Department.

It is obvious that the Postal Service, like any other business, can be operated more economically when the volume of business to be handled is large; therefore, it appears to be most important and in the interest of all concerned to urge the people to make the fullest possible use of the facilities offered. In my opinion, the rates of postage now in effect on all classes of mail matter are low enough to place them within reach of all the people. Letters may be mailed throughout the Nation and possessions of the United States, to Canada, and to Mexico for the domestic rate of 3 cents. Local letters for delivery within the district served by the post office at point of mailing are carried for 2 cents. Parcels containing merchandise and papers of almost any conceivable description, with the exception of poisons, may be mailed at nominal rates. No other transportation agency can offer to the public and to business the opportunities for wide distribution at so little cost.

Industrial and commercial establishments in increasing numbers are using this service as their agency of distribution yet there are many businessmen who have not availed themselves fully of the facilities offered. Therefore, I believe that it is in the interest of business and in the interest of the success of the Postal Service for postmasters to disseminate information about these matters. I do not advocate that postmasters attempt to interfere in any way with private enterprise. On the contrary I want the Postal Service to encourage private enterprise in every conceivable way. I do not want postmasters to solicit business with the idea of taking that business away from a privately operated concern. What the postmasters and postal employees should do in their publicity campaigns and in the dissemination of information is to encourage new business, and to point out to the merchants in their communities the possibilities of greater sales and other benefits to be derived by availing themselves of our various means of contact with the patrons. If you proceed in your service promotion campaigns along this line you will be rendering a public service that I am sure will be appreciated, and you will engender good will which, of course, is all important.

I shall greatly appreciate your continued cooperation both in maintaining efficient service and in the further development of the Post Office Establishment. I have enjoyed being here with you this evening and hope that I will have an opportunity to come to Wyoming again in the near future.

Balancing the Federal Budget

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, June 13, 1939

DISCUSSION OVER AMERICAN FORUM OF THE AIR

Mr. BILBO. Mr. President, on Sunday, May 28, 1939, there was a very interesting discussion over the American Forum of the Air between six Representatives and Senators on the subject of balancing the Federal Budget. I ask unanimous consent that it be made a part of the Appendix of the RECORD.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

Announcer MCCORMICK. The American Forum of the Air!

We bring you another in the weekly series of Forum broadcasts heard from coast to coast over the Mutual network from the studio-auditorium of the new Department of the Interior Building in Washington, D. C. These broadcasts are produced by WOL in cooperation with WOR.

The program takes place before a large audience in this new and modern auditorium through the kind offices of the Secretary of the Interior, Harold L. Ickes, in the interest of stimulating unrestricted discussion of nationally important topics under the direction of a nonpartisan organization.

The Forum is arranged and directed by Theodore Granik, prominent attorney and pioneer radio educator, who is chairman tonight. The Forum will be presented in two parts. First you will hear two distinguished speakers present their views on the issue. The topic then will be discussed informally by a panel. And now we turn the program over to the chairman, Mr. Granik.

Chairman GRANIK. Thank you, Mr. McCormick.

To businessmen who have been asking for relief from taxes Secretary of the Treasury Henry Morgenthau yesterday presented to Congress what some of the press have termed the administration's "business appeasement tax program." He recommended to the House Ways and Means Committee the enactment of tax legislation to promote the use of idle money for industrial expansion, asking that consideration be given to the removal of irritants to business.

But in removing defects or making adjustments at the present time, the committee should guard against changes which would fail to maintain revenues, the Secretary warned.

"We must take no step," he said, "which the public may interpret as moving away from the objective of a balanced Budget."

Budget balancing has been the highlight of political discussion during the past week. Following upon the heels of the Republican Party's announcement that they would celebrate National Debt Week, urging a reduction in Federal spending, came the answer of President Roosevelt. Speaking before the American Retail Federation, he said:

"But the people who run the three branches of our Government do not have the moral right to gamble with the well-being of 120,000,000 Americans. If millions of citizens starve, it is no answer to the starving to say that in the sweet by-and-by business, left to itself, will give them a job. Partisans are going around the country scaring parents who are not starving by telling them of an increased national debt which their grandchildren will have to pay. Certainly that is not as alarming as telling the parents who are already starving, that an untrammeled business set-up will provide their grandchildren with food in 1989. Yet that is what the radical gamblers of business and politics might have to say, if they put their theories into practice next year."

While the President's speech was a defense of the spending theory, and a renewal of his pledge to do whatever possible by governmental incentives or otherwise to raise the national income to the desired $80,000,000,000 level, critics of the administration's program maintain that it has been reckless and wasteful. They contend that the national debt is too high, that the Nation's credit has been undermined, and that the continuance of deficit spending and failure to balance the Federal Budget will bring financial disaster to the Government and to the thousands of wage earners throughout the country.

While congressional and industrial leaders weigh the problems of Budget balancing, the American Forum of the Air is pleased to present its discussion by several distinguished Members of our Congress.

Our opening speaker will be Senator JOHN A. DANAHER, of Connecticut. He will be followed by Senator CLAUDE A. PEPPER, of Florida.

And immediately following, we will present an informal panel discussion.

Our panel members are: Senator ALLEN J. ELLENDER, of Louisiana; Congressman JED JOHNSON, of Oklahoma; Congressman FRED L. CRAWFORD, of Michigan; and Congressman ROBERT A. GRANT, of Indiana.

And now Senator DANAHER.

ADDRESS BY SENATOR JOHN A. DANAHER

It was with some trepidation and great humility that I accepted an invitation to discuss with you my attitude, at least in part, toward the issue raised by a continuation of this administration's program. I have the highest personal respect for my distinguished colleague, the junior Senator from Florida, who appears upon this program with me. It is no secret to either of us that I differ from him on some of the fundamentals of the problems confronting our Nation. I am not fatuous enough to insist that my views are necessarily right but I am equally insistent that neither are his. It is part of the American way, however, that we should discuss this situation with you and point out our respective approaches in the hope and expectation that our people will ultimately give thoughtful and earnest consideration to the issues, and when they have arrived at the conclusions which will actuate the electorate, our people will select as their agents those candidates for office who represent the majority views. Out of the conflict of ideas, out of the compromises in phrasing our legislation, there will ultimately be reconciled what we know as our law. When through the legislative processes the national viewpoints have been crystallized into law, we are all and of right ought to be bound by that law.

It is the more necessary, therefore, in these trying and critical times that we define the issue, and in so doing we are justified in turning to the language of the President of the United States, not that the idea embodied therein is necessarily his; indeed, there is a growing attitude that the ideas are not his, but at least he is the spokesman of them.

The issue now before us is, Whether or not the people of the United States of America want a new economic order, one which the President said was to be built "upon essentially democratic institutions." On January 3, 1936, he told the Congress and over the radio told the country: "It goes without saying that to create such an economic constitutional order more than a single legislative enactment was called for. * * * Now after 34 months of work, we contemplate a fairly rounded whole. We have returned the control of the Federal Government to the city of Washington. * * * They (his critics) realize that in 34 months we have built up new instruments of public power. In the hands of a people's government this power is wholesome and proper. But in the hands of political puppets of an economic autocracy such power would provide shackles for the liberties of the people. * * * I recommend to Congress that we advance and that we do not retreat."

On various occasions he has told us of a planned economy which he has in store for us. He told us, and I quote: "We planned it that way."

On last Monday night speaking before the National Retailers' Forum he told us again: "You cannot expect this administration to alter the principles and objectives for which we have struggled the last 6 years."

And there you have it. Not only did the Congress receive a recommendation in 1936 that we advance and that we do not retreat, but we are now told that this administration cannot be expected to alter the objectives which it has sought for the past 6 years, a centralized government, with power which in any other hands would shackle the liberties of our people, a government which so far departed from the principles and the declarations upon which it sought and obtained office that it is reasonable to conclude an unbalanced Budget may continue to be unbalanced as part of the program.

But what of it? The President says: "Our national debt after all is an internal debt owed not only by the Nation but to the Nation." I hope that the retailers who heard that declaration were able to tell their supplying manufacturers: "Don't pay any attention to our debt to you, it's an internal debt and after all you're among friends." I hope that the charge customers of the retailers will take courage and will tell the retailers: "Just forget about last month's bill, this is an internal debt, this is just between you and me."

Well, let's see what's been happening.

On the credit side of the ledger there have been great social reforms. There have been curbs upon unlimited exploitation of finance and of people. It is certainly reasonable and probably accurate to say that there has been enacted in the past 6 years more desirable social legislation than over any similar period in the history of government. It is to be doubted that any considerable portion of our people would wish to reverse or repeal these reforms. Very properly and in all fairness it should be conceded that over many generations throughout history there had grown up abuses which called for such corrective measures and the newer and better and preponderant group among the Republican Party, as among the people as a whole, should and will accept these contributions to the body of our law.

But to balance the Federal Budget in terms reflecting this administration's program otherwise ceases at that point. In the effort to create a new economic order the administration has signally failed. The millions upon millions of unemployed throughout this country are still unemployed with no prospect whatever for their release from their plight. To me it is the

source of overwhelming dismay that the administration, despite a dominant control of the Congress, has not during the past 5 months of this session introduced a plan, nor has it contributed even an idea looking toward economic relief.

Despite the fact that hundreds of millions of dollars have sought investment, there has been no tangible evidence of encouragement in that direction. The administration has not taken one step to correct the economic fallacies which have continued the plight of our people.

The price of cotton, for instance, was pegged or fixed so that not only did we not sell our cotton abroad, we are losing our markets to foreign countries. The same number of people who bought our cotton before want it now. The same uses for cotton abroad still exist. Our President talks about placing an export bounty to move our cotton into foreign markets and then about subsidizing American manufacturers against the competition which would follow from manufacture of textiles abroad.

The capital-gains tax has been continued and constitutes an effective throttle upon even an urge to invest our money in productive enterprise. I ask any one of you if he had $100,000 to invest right now, into what business or into what field would you place it for investment? The Government says in effect: "Go ahead and invest your money. If there's a profit we'll take it, or most of it, but if there is a loss it's too bad, that's your hard luck."

You have no idea but what before the week is out, the administration might enter into a new trade agreement with some foreign power and sell your industry down the river. Hundreds of millions of dollars of agricultural products are coming into this country annually under the trade-agreements program. They displace American agricultural products. The zinc mines of Wisconsin are closed. Movements of Swiss watches are imported and displace movements made by American mechanics. British woolen goods are displacing American woolen goods in the American markets. The instances are too numerous to repeat, but the administration through its centralizing of power in the hands of the Executive, is able to tell Hitler, as the President did in the White House letter of May 14: "* * * The Government of the United States would be prepared to take part in discussions looking toward the most practical manner of opening up avenues of international trade to the end that every nation of the earth may be enabled to buy and sell on equal terms in the world market. * * *"

Do not American people realize that the goods and the articles of commerce formerly made by American workers are right now being displaced in our markets or are being threatened with displacements by importations produced by cheap foreign labor? Why would anyone want to invest money and make employment under these conditions? And, I ask you, what of the Americans walking the streets today looking for work?

Every adult listener knows the history of the development of the automobile. Do you ever think of the millions which were spent in developing inventions in connection with it? Take free-wheeling if you choose. Just a few years ago all of the automobile engineers were working on the free-wheeling device. Millions were spent in its development, and it was finally placed into a great many stock cars. It turned out to be a highly practical invention, but the public didn't like it and now you won't find free-wheeling in any stock car, and if you still have it on your own car you probably don't use it. There have been millions and millions of dollars spent in the development of the radio, in short, these millions represent investment but it was lost. And without the hope of possible profit, no one wants to risk his money.

This administration spends millions of dollars irrigating valleys in Nebraska for the production of beet sugar. Then it puts a quota on the production of sugar, places a limitation on the amount that is produced, and Nebraska can't produce sugar. Domestic sugar producers are limited to 55 percent of the domestic demand.

Two weeks ago the Senate passed the Barkley trust indenture bill, under which every agreement against which there are bond issues in excess of $1,000,000, must be approved by the Securities Exchange Commission. There is not a business with outstanding bond issues in excess of $1,000,000 which today can tell upon what terms and conditions the S. E. C. will approve a refunding indenture. At maturity, the corporation must come to Washington and it must get the approval of this agency before issuing refunding bonds. If approval is not granted, receivership will be the result. Even the very life of the business will depend upon the Commission—a new instrument of public power.

The continuation of deficits to the extent of billions of dollars a year means that the United States Government is withdrawing from our trustee institutions, our banks, our insurance companies, the people's money, giving the institutions I O U's in return, and hence withdrawing capital which would otherwise have been available for private investment. And meanwhile these Government bonds are tax-exempt to the holders, while our people are being taxed more than a billion dollars a year to pay interest on the bonds. Above all, the administration is linking the ultimate destiny of these institutions, your institutions, to its own!

There have been millions and millions of dollars spent in the development of inventions that have been failures, but there must be risk capital provided. Without the opportunity of a possible profit, no one wants to risk his money.

I ask you to look at the paper money in your pocket if you have any. If not, examine the next paper money you see and you will find that you are carrying around what passes as money now, almost every piece of it bearing the word "silver certificate." These certificates were issued against the world's silver at an artificial price of $1.29 an ounce. Never mind if the market is 46 cents an ounce, the United States says the value is $1.29, and now we have over 900,000,000 ounces of the stuff buried in a hole in the ground at West Point. For what? We can't sell it! There's no market for it unless we make it. It might just as well be beans, or tin—in fact, better, we could eat the beans and we could sell the tin. In the meantime the President retains his power to issue $3,000,000,000 in greenbacks, and when we reach our debt limit of $45,000,000,000 the President will have what he calls a club because of his power to issue the greenbacks.

While those who are employed and the farmers and business are struggling to make ends meet and at the same time pay for this administration's program, don't lose sight of the fact that you are going to build up a new economic order with new instruments of public power. Don't forget that this power may yet provide shackles for the liberties of our people.

If when you review this program in your mind you are satisfied that you get your money's worth, the Federal Budget can be said to be balanced. I choose to believe, however, that a nation, one-third of whose people is still ill-fed and ill-housed and ill-clad, is still very much in the red and it is not a new economic order that I want. I want to see our Nation produce. I want to see our Nation distribute. I want to see that ill-fed one-third, 40,000,000 people, become a happy people. I want to see a market for our goods. I want to balance the Federal Budget in terms of happiness and not of misery.

Chairman GRANIK. Thank you, Senator DANAHER. You are listening to the American Forum of the Air presenting a discussion on Balancing the Federal Budget. You have just heard Senator JOHN A. DANAHER, of Connecticut.

And now we present Senator CLAUDE PEPPER, of Florida.

ADDRESS BY SENATOR CLAUDE PEPPER

When the propagandists and the Presidential aspirants and the statesmen of the Republican Party attempt to frighten the American people with the national debt, under the head of a name that some high-priced commercial publicity agent supplied for them, National Debt Week, common honesty demands that they tell the American people the truth. The truth is that the national debt is $40,000,000,000. The truth also is that twenty of those billions of dollars existed as the national debt when Franklin D. Roosevelt took office in March 1933. The truth further is that a Republican President, Herbert Hoover, created $4,000,000,000 of that national debt with little to show for it except bread lines by the hundreds in the greatest and richest nation in the world. The truth further is that had not Andrew Mellon, under the permission and the patronage of do-nothing Calvin Coolidge, given as far as he could the fruits of American prosperity in the late twenties to the big-business interest of this country, had he not taken off their backs the just tax burden they should have borne during those days, there would have been no national debt when the depression began and the whole credit facilities of this country would have been available for an intelligent leadership and statesmanship to have made effective war upon this, the greatest enemy which has ever landed upon America's shores.

So, twenty billion from forty billion leaves $20,000,000,000 that that administration has added to the national debt. The truth also is that $2,000,000,000 of that debt went to pay the bonus—a part of the debt that the American people owed to the veterans of the World War. The truth also is that Franklin D. Roosevelt vetoed the bonus, and the Congress, with the evident approval of the American people and with the congressional support of the Republican Party, passed it over his veto. The truth also is that if Herbert Hoover's Republican administration had had a fair appreciation of the country's obligation to her veterans of the World War, he, in the day of American prosperity, instead of taking the taxes off the back of the very rich in this country so they could use those savings for speculative purposes, would have paid this bonus and been through with it instead of driving America's war heroes out of the city of Washington at the point of the bullet and the bayonet under the personal direction of the Chief of Staff of the United States Army, acting under the personal command of the President of the United States.

Two billion from twenty billion leaves eighteen billion then. There are more than three billion in the Treasury unspent. That is cash on hand. Three billion from eighteen billion then leaves fifteen billion. The truth further is that there are two billion in the stabilization fund. That, too, is cash on hand. That leaves thirteen billion. The truth further is that there are $4,000,000,000 of recoverable assets; that is to say, securities actually on hand which will yield that amount, securities which would be worth that in any bank's portfolio, the kind of securities the banks, insurance companies, and other financial institutions do have in their portfolios. That leaves $9,000,000,000. The truth further is that the people of the United States, and therefore the Government of the United States, has something definitely to show for that $9,000,000,000, because it went primarily into the greatest public construction program this country has ever seen.

That includes every structure of every kind that the P. W. A. and the W. P. A. have helped to build, all that has been done in the C. C. C. program, all the aid that's been given to agriculture, a great deal of the expenditures we made upon the national defense, all that's been done in the development of the country's natural resources in soil conservation, reforestation, the development of power resources, the T. V. A., the Boulder Dam, the Coulee Dam, the Bonneville Dam, the reclamation program of the West, the flood control of the Mississippi, the Missouri, the Ohio, the greatly

enlarged road-building program, the Dust Bowl improvement program, the public parks, playgrounds, and other recreational facilities of the country which every day are making, through the children of this country, a healthier and a happier America. These are valuable and lasting assets. Something to show for what has been spent as well as something to give a job to a man or a woman who otherwise faced starvation or the humiliation of the bread lines. The truth is that these assets are to be enjoyed by our children and their children while they paid a share of their cost and construction.

Every American knows that when this program was inaugurated it was done by the common consent of this Nation and all parties politically; everybody knows that the Republican Party went along with this program, and even until today they are essentially going along with it in the Congress in its basic principles. While the Republican high command, through its publicity department, castigates the New Deal, when they vote on the floor of the Congress they vote for Federal expenditures with as great a unanimity as do the Democrats. When $400,000,000 agricultural appropriation bill was voted by the Senate a few days ago there were hardly enough Republican "noes" to be audible except that one prominently mentioned Republican Presidential aspirant, coming from an industrial center, was willing to put himself on record as being opposed to a program to help the farmers of America.

Fundamentally we have faced in America in the last few years a different problem from that which we faced ever before in our history. The great depression would probably have come upon this country about the end of the first decade of this century. The event which postponed that great depression was the World War, which reduced the productivity of Europe for nonwar purposes and for both war and nonwar commodities gave America the greatest market it had ever had. We carried on, therefore, until the early twenties under the impetus of this European demand. The great depression would have come again immediately in the early twenties after the World War but for another intervening policy. That was our policy of continued foreign loans to aid in the restoration of war-stricken Europe. The same policy extended vast loans to construction activities the world over—Central America, South America, Asia, and the wide world. It is not commonly mentioned that that construction was being paid for—in other words, that the market for American goods was being provided by American money, $11,000,000,000 of which during the war was Federal money raised by the issue of Federal securities, added to the national debt. Another part of that money was afforded by credit that was extended by private business enterprise which was borrowed in turn by private business from the reservoir of savings of the American people. It is also overlooked that in the post-war days this new purchasing power was provided by an increase in the public and private debt, which came as all capital must, out of the savings of the American people. Supplementing the borrowings of private business in the twenties were the borrowings and the expenditures of local political subdivisions in America—States, counties, cities, districts. By the late twenties the total outstanding debt for these purposes of private business, local governmental units, and the National Government, was approximately the figure it now is. So the prosperity of that period came out of the expenditures that were derived from the savings of the American people. When the vast debt which now largely bears them to earth was being piled upon the backs of the States, counties, cities, and districts of this country the voice of Coolidge and Hoover in the White House was as silent as the tomb in protest.

When the debacle occurred in 1929 and the depression deepened to the tragic depths of 1932, loans abroad had long ceased. The States, counties, cities, and districts were overburdened with outstanding debt. The first load of relief fell upon their already weakened shoulders and many expanded their debt to the point of bankruptcy. With the productivity of the American economy system abruptly curtailed by the loss of foreign and domestic markets, with agriculture in a state of paralysis, and business in a collapse, the purchasing power of the people gone, and the vicious cycle growing worse, by common consent the people of America demanded a change in national policy. They saw, for the first time, that only the National Government could make an effective approach to the question of national prosperity and national employment and against national disaster. They rebelled against national inertia, timidity, or incompetency which allowed the national income to drop from $80,000,000,000 in 1929 to $40,000,000,000 in 1932. They demanded not only reforms in the economic and social order, but they demanded that the people of America have a chance to work, and when private enterprise did not and could not afford that opportunity, when the States, counties, cities, and districts could not make it possible, they demanded that the only agency that could do it—the National Government—do it and do it effectively.

So since 1932 we have had a different political philosophy in America. The National Government has assumed obligations it never before bore. Obligations, as the Democratic platform of 1936 said, "which are the first concern of any modern government—to protect the home, to give fair economic opportunity and relief against disaster." The Government essentially has been the go-between between idle capital and idle men. It has been the link in the economic chain which could pull the two together to strengthen the bonds of the Nation. Private enterprise could not take all the risks in this troubled period because the problem was so tremendous that no single economic unit was able to master it. But through the agency of the Government the risk could be distributed over the whole system and there could be a united attack upon the problem. That is to say, if a private enterprise borrowed from the savings of America the money to start a new business, that business might, for the lack of customers, perish. The investment would be lost, the business collapse and unemployment gain no benefit. But if the Government borrowed this savings and created with them useful work there was no risk in the first place but such risks as there were were distributed over the whole economic system. The happy result was that the lender had a safe investment and got a fair return on that investment. The borrower created a useful product, the unemployed got a chance to work, and the Nation an asset that contributed to its income and its whole wealth. All that has happened is that idle capital has been turned to useful purpose by governmental instrumentalities to the enrichment of the Nation and the employment of the people.

Now, this policy under attack by the Republican opposition is subject to the fair scrutiny of the American people. There has always been a sense of fair play in the American people. There has been a spiritual element in America's policy. Let America turn the light of honest inquiry upon the opposition for the moment. Do they propose to give America better health than it now has? Do they propose to save lives snuffed out yearly by preventable diseases with further governmental effort? Do they propose to improve the school system and the educational facilities of America? Do they propose more attention and effort upon vocational guidance and rehabilitation? Do they offer the families of America better homes? Do they hold up so they can be seen, so they can be assured, more jobs for the men and women of America? Do they offer more security to America's aged? Do they actually hold before the American farmer the assurance of a greater market and a better price for what he grows? Do they offer to the American people a more wholesome, a cleaner, a more noble society than they now have? Do they show their ability to stimulate the moral fervor and the spiritual enthusiasm of the American people to greater heights? What is it that they have to give to America that deserves America's confidence and America's cooperation? What cure do they offer for America's ills? Where would they supply the supports for the weakened portions of the system?

We have bridged the gap between money and the unemployed. We have provided hospitals. We have given better health. We have given a measure of security to the aged as well as the unemployed. We have given security to savings. We have elevated the moral tone of American business. We have, in a way becoming a Christian nation, been the Good Samaritan and tried to bind up and pour oil upon the wounds of the helpless, and by the basic reforms which we have made in the economic order in response to the demands of the times and the people, we have secured the maintenance in this country as a shining example for all the world, the maintenance and effectiveness of the principle of democracy. Under Roosevelt this is a government of, by, and for the American people.

When these cynics sit in the scorner's seat and hurl the cynic's band, let them answer for the life and the home they would build for the man by the side of the road.

Chairman GRANIK. Thank you, Senator PEPPER. This concludes the first part of tonight's presentation.

Announcer MCCORMICK. The panel discussion will proceed immediately following station identification. This is the coast-to-coast network of the Mutual Broadcasting System.

We continue with the second portion of the American Forum of the Air, originating in the studio auditorium of the new Department of the Interior Building in Washington, D. C.

We return to the chairman, Mr. Granik.

Chairman GRANIK. And now, as part 2 of tonight's forum on Balancing the Federal Budget, we present an informal panel discussion. Our panel members are Senator ALLEN J. ELLENDER, of Louisiana; Congressman JED JOHNSON, of Oklahoma; Congressman FRED L. CRAWFORD, of Michigan; and Congressman ROBERT A. GRANT, of Indiana.

Senator ELLENDER will open the discussion.

Senator ELLENDER. Mr. Chairman, ladies, and gentlemen, I am certain that all of you who are before me, as well as the radio audience, are extremely interested in the subject under discussion and enjoyed the presentation made by Senators DANAHER and PEPPER. However, I cannot help but express surprise at the speech made by my good friend and colleague, Senator DANAHER. Being fresh from the people, I thought he would adopt a new method of approach on such an important subject rather than the usual evasive manner adopted by his fellow Republicans. I felt confident he would tell us how the Budget should be balanced. I thought, maybe, he would point out to us what appropriations should be pruned. Also, what methods were proposed by him and his colleagues to remedy the situation. But, instead, he has attempted to criticize some of the policies of the New Deal which have little or nothing to do with balancing the Budget. He has sought to make mountains out of molehills with the evident intent of clouding the issue.

You know, of course, that the New Deal has been blamed for almost all the evils under creation. It was blamed for having caused the locusts and grasshoppers to do untold damage to the farmers of the West. It was also criticized for having caused the duststorms. I cannot trace the authenticity of such fantastic criticisms. I propose to point out to you, however, that in his speech the Senator has attempted to blame the New Deal for the millions that were lost by the automobile industry when the public failed to use free wheeling! I quote: "Take free wheeling, if you choose. Just a few years ago all of the automobile engineers were working on the free-wheeling device. Millions were spent in its development and it was finally placed into a great many stock

cars. It turned out to be a highly practical invention, but the public didn't like it, and now you won't find free wheeling in any stock car, and if you still have it on your own car you probably don't use it." The Senator also states in the same breath that millions of dollars were spent in developing radio, and all of this investment has been lost. I suppose the blame for such losses is likewise being laid on the doorsteps of the New Deal! Personally, I believe that the radio has provided one of the most profitable of our new industries.

The subject for discussion this evening is Balancing the Federal Budget. I wonder if Congressman JOHNSON can shed any light on that subject in keeping with the presentation made.

Congressman JOHNSON of Oklahoma. Mr. Chairman and ladies and gentlemen, I was interested also in the Senator's statement about how he would balance the Budget, or, rather, the fact that that is conspicuous by absence from his speech. The gentleman speaks in glittering generalities, as all the Republican spellbinders do, about the New Deal. But not one of them says, and the gentleman from Connecticut didn't say, that he would abolish any part of the New Deal program.

I was amazed when the gentleman made this admission, and he got a good hand on this, the only good hand he got: "There has been enacted in the past 6 years more desirable social legislation than in any single period in the history of government of the United States." And he got a good hand on it.

Then he went on to say, "It is to be doubted that any considerable portion of our people would wish to reverse or repeal these reforms." So evidently the gentleman doesn't wish to repeal or abandon that part of the program. Now are we supposed to ask questions, Mr. Chairman? I think the distinguished Senator ought to be able to defend himself. He made a very forceful speech, and yet he didn't say he would abandon the N. Y. A., the C. C. C., or any part of the program, and he admits that the social security has taken very forward steps, and I would like to know if he would like to abandon it and what part of the New Deal he would abandon in order to balance the Federal Budget.

Senator ELLENDER. Congressman JOHNSON, the Senators who have spoken cannot participate in this discussion, and maybe Congressman GRANT can give us some information on the subject. Suppose we find out from him.

Congressman GRANT of Indiana. Well, Mr. Chairman, I was particularly impressed by these words in the speech of the Senator when he said when this program of spending was inaugurated, it was done by the common consent of the Nation and all parties politically, and that the members of the Republican delegation in Congress went along. And that is true. At that they had some hopes for the future as promised by the man who had just been inaugurated as President.

Experience has proven to us, however, that the Economy Act of 1933, cutting the payments to veterans, is about the only thing that has remained. They alone have been the victims of this economy program. I am more inclined to believe the President in his statement that he made in 1932, that "any government, like any family, can for a year spend a little more than it earns, but you and I know a continuation of that program leads to the poorhouse."

Congressman JOHNSON of Oklahoma. Now, why not let's get down to cases? Why don't you tell this audience and the radio audience what part of the New Deal you would abandon this time in order to balance the Budget? Isn't that a fair question and isn't that what we are discussing?

Congressman GRANT of Indiana. No; I don't believe it is a fair question, but I want to say something about it. First of all, I don't believe the Budget can be balanced by mere pruning of expenses here and there. It was said in the speech by the Senator that in 1932 we saw the coming of an entirely new political philosophy in America, and that is the thing that distresses me, but when you ask which of those things we ought to cut out, true, those of themselves wouldn't balance the Budget, but I would quit putting in a million dollars to promote W. P. A. at the world's fair, I would quit spending a million and a half in W. P. A. for travel expense, I would quit talking about spending two or three hundred million dollars to build a ditch across the State of Florida, and other such useless uses of the Federal money.

Senator ELLENDER. Isn't it a fact that the Congress voted down that proposition, Congressman GRANT?

Congressman GRANT of Indiana. Quite true, but I believe—I only say I believe—that it had the endorsement of the administration. I think it is not denied that the distinguished Senator from Florida, who is with us tonight, is known as one of the administration spokesmen. He was one of the most ardent supporters of that matter before the Senate.

Congressman CRAWFORD. Mr. Chairman, may I answer you and answer this question about balancing the Budget? I have an exact answer; it is absolute; it doesn't deal in generalities. It comes from John W. Hanes, Under Secretary of the Treasury. Speaking at Indianapolis, Ind., May 4, he said this, and I recommend this to all new dealers and to those Members of Congress who have just propounded this question. The Under Secretary of the Treasury says: "The economic history of our country points clearly to the only sound solution for employment, for weak capital markets, and for an unbalanced Budget. That solution is the creation of a healthy, prosperous economy, whose maximum powers can be generated only under profitable private enterprise."

I think that is a good enough answer for anybody, and, so far as I am concerned, I am going to accept it.

I was very much interested in the legerdemain the Senator from Florida gave a while ago with reference to these figures on the National Budget. I thought something like this would come up in the way of giving the pedigree of all the Republican Presidents that were past, so I want to deal with cases. I am going to deal with something very specifically, instead of generalities. I have here before me the statement of the public debt of the United States, February 28, 1939, and my colleagues are looking over my shoulder and they can verify these figures.

The gross Federal debt on that date was forty and one-half billion dollars. The cash balance in the Treasury General Fund on May 24 was only two million nine fifty-two—not the figures quoted by the distinguished Senator from Florida.

Senator ELLENDER. Mr. CRAWFORD——

Congressman CRAWFORD. Wait a minute; you are very anxious to get something in detail. Furthermore, I find on the same sheet that Government has guaranteed by the United States, based on guarantee, $5,438,000,000. It has in the form of obligations based on credit of the United States another $1,289,000,000. It has an additional four billion three hundred forty-three million debt for Federal Reserve notes, but we will leave that out.

Let's take the forty and one-half billion, plus five billion four thirty-eight, plus one billion two eighty-nine, that gives forty-seven billion two twenty-seven. Let's deduct from that the $12,000,000,000 which the Democrats extended to the western European countries which they haven't tried to collect in the last 6 years, not even the interest.

Senator ELLENDER. You mean the Republicans.

Congressman CRAWFORD. That debt was made during the war, under Wilson's administration.

Senator ELLENDER. That may be true, but the Republicans were the stanchest advocates of our entry into the war.

Congressman CRAWFORD. When you sum that up you have a $47,000,000,000 debt. If we eliminate $11,000,000,000 owed by four or five or six European countries, we find three billion one twenty-eight coming back to us in the way of capital stock in R. F. C., for instance, a few things like that.

Congressman JOHNSON of Oklahoma. What does that stand for, relief for Charlie?

Congressman CRAWFORD. He doesn't want details, he wants generalities so he can demagogue back at us. Three billion one twenty-eight off the $47,000,000,000 leaves you $44,000,000,000; and if you will take off that $2,000,000,000 bonus, it leaves a debt tonight of $42,361,000,000.

Now, let them deal with a few of those things; let's stick to the issues and keep away from generalities.

Senator ELLENDER. Just a minute, Mr. CRAWFORD; you wouldn't attribute the war debt of over $12,000,000,000 to the Democrats, would you?

Congressman CRAWFORD. I certainly would. We were going to keep out of war in November 1916, and in April 1917 we were going to save the world for democracy.

Congressman JOHNSON of Oklahoma. And who scaled down those debts?

Congressman CRAWFORD. It wasn't a question of scaling down the debt, because the present administration has been scaling down these debts since 1933; and that is one of the biggest demagogic points they have today, how they have scaled down the debt. They have scaled down every debt except the debt of the taxpayer, and that is going up all the time.

Senator ELLENDER. I have before me a message of the President on the Budget——

Congressman CRAWFORD. Yes; I have that, too.

Senator ELLENDER. Delivered by the President of the United States to the Congress.

Congressman CRAWFORD. I have about 5 pounds of messages, all in print.

Senator ELLENDER. If you want to keep on talking, go ahead. I just thought I would be given an opportunity of presenting actual figures pertaining to the Budget.

Congressman CRAWFORD. I withdraw. I hope the Senator doesn't dispute these Treasury statements. If he does, I withdraw.

Senator ELLENDER. No. But I do dispute the method by which you have manipulated the figures.

Congressman CRAWFORD. I didn't manipulate them half as bad as Senator PEPPER did.

Senator ELLENDER. I cannot agree with you. You have added the cost of the World War; you have added every bond issue the Government has guaranteed in order to help business, such as Federal Housing, Slum Clearance, Rural Electrification, Reconstruction Finance, and the like.

Congressman CRAWFORD. I deducted twelve billion.

Senator ELLENDER. You have also added the cost of the Bonneville Dam, Tennessee Valley Authority, Grand Coulee, Boulder Dam——

Congressman JOHNSON of Oklahoma (interposing). All of which will pay out.

Senator ELLENDER. Exactly. Then there is also the Home Owners' Loan Corporation, which is paying out; export-import banks, which is being operated at a profit; and the like; and you charged all their obligations as a debt of the United States. But now let me give the figures as reflected in the Budget. The entire amount of revenues that was collected by the Federal Government in the past 6 years, under the Roosevelt administration, aggregated $28,088,000,000. The total amount of actual expenditures were $47,247,000,000, thereby leaving a deficit of $19,159,000,000. Now, let me point out to you how that money was spent.

Congressman CRAWFORD. Did you add into that these other guaranties?

Senator ELLENDER. Those are not direct obligations——

Congressman CRAWFORD. Oh, no. Talk about legerdemain in figures—here is $5,439,000,000 he hasn't added in there at all.

Senator ELLENDER. But those obligations are secured by ample collateral.

Congressman CRAWFORD. Those are guaranteed obligations by the United States Government.

Senator ELLENDER. But, my dear sir, they are secured with safe and bankable papers. They are secured by mortgages, bonds, and so forth, in the same manner as bank assets.

Congressman JOHNSON of Oklahoma. You gentlemen are never going to agree on what the Government owes. It owes plenty, no question about that, but let me make this suggestion. Do you know what the corporations of the United States owe at this time?

Congressman CRAWFORD. Let's talk about the Federal debt. Let's not worry about that.

Congressman JOHNSON of Oklahoma. They owe $185,000,000,000, and they are not worrying about it because they have assets. So does the Government of the United States have assets.

Congressman CRAWFORD. But the Corporation assets are items of exchange; they can be liquidated.

Congressman JOHNSON of Oklahoma. You never have told us yet what part of the New Deal you would abandon.

Congressman CRAWFORD. That wasn't the question you asked. You asked how to balance the Budget.

Senator ELLENDER. In order to balance the Budget would it not be necessary to do away with some of the New Deal activities—such as W. P. A., flood control, roads, C. C. C., and the like?

Congressman CRAWFORD. No; take Mr. Hanes' formula.

with N. Y. A., with C. C. C. or housing?

Congressman JOHNSON of Oklahoma. You don't want to do away

Congressman CRAWFORD. Check the way I voted. I voted against this debt myself.

Congressman GRANT of Indiana. May I ask the Senator a question: What do you think we have to show for this extra $20,000,000,000 debt?

Senator ELLENDER. I have the answer before me.

Congressman GRANT of Indiana. We still have people walking the streets looking for work.

Senator ELLENDER. That is true, but bear in mind that we now have 5,000,000 more employable persons than we had in 1929. This administration has spent over $1,000,000,000 in excess of ordinary expenses for national defense. I think every man on both sides voted for those items with the exception probably of my friend, Mr. CRAWFORD, who says he didn't vote for any part of the debt. Then we have the Veterans' Administration. We paid the veterans $2,000,000,000 by redeeming their bonds. For public works, for highways, for providing electricity, for reclamation, and other items, over $5,000,000,000. We have built schools, hospitals, sewer systems, sidewalks, parks, swimming pools, and so forth, for the enjoyment of the people, through W. P. A. We have——

Congressman GRANT of Indiana. If the Senator will yield, I mean in tangible results. You haven't put people back to work. There isn't confidence in business—things don't go ahead.

Senator ELLENDER. Nothing tangible? What else can be done? Has business responded? Business must cooperate with the Government. Forget the war scare. The Republicans are for practically all New Deal reforms. They say they can manage better. They desire tax reforms that will lower taxes so as to restore confidence. How can the same services be rendered in behalf of the masses with a lower income and at the same time balance the Budget? No, Congressman; the "outs" desire to get "in" so that our Government can be operated for the benefit of the few.

Congressman GRANT of Indiana. There are lots of people who would like to see the day when they can get a job.

Congressman JOHNSON of Oklahoma. Again I insist you tell us what part of the New Deal you would abandon in order to balance the Budget.

Congressman CRAWFORD. The Congressman from Oklahoma insists on getting away from the question. The question is Government spending, and that is what we are here to discuss.

Congressman JOHNSON of Oklahoma. There is very little of it you boys voted against, if it was in your own districts.

Congressman GRANT of Indiana. Back home in Indiana I heard about priming the pump, and if we put a bucketful of water in, it was supposed to make the well start to run, but under the New Deal all you get back is the primer; you put in a bucketful and get back a bucketful and the well dries up. It happened in 1937, the minute we stopped the spending program.

Congressman JOHNSON of Oklahoma. Do you know any Congressman in Indiana or any State who voted against any appropriation for his own district or State? It all depends on who locks the door as to whether or not you vote for it.

Sit-Down Strikes

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

ARTICLE FROM SOCIAL JUSTICE OF JUNE 12, 1939

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Social Justice of June 12:

[From Social Justice for June 12, 1939]

PENNSYLVANIA LEGISLATURE PASSES BILL PROHIBITING UNION VIOLENCE—WOULD NOT HARM BONA FIDE LABOR GROUPS—HITS REDS—RACKETEERS

HARRISBURG, PA.—Both the C. I. O. and the A. F. of L. have condemned the bill passed last week by the Pennsylvania State Legislature, which outlaws sit-down strikes and imposes other restrictions interpreted by union leaders as oppressive.

Granted that the bill does curb certain popular union practices, it is difficult to see where rank and file workers are deprived of any rights due them under law or ethics.

The measure surely cannot be compared to the reactionary act passed in Oregon last November.

Pennsylvania is only one of several States which have risen to defend themselves against unwarranted strikes and violence that victimize workers as well as employers. Minnesota, Missouri, and Wisconsin also have passed restrictive labor laws in the last few months.

If anyone is to blame for these measures, it is leaders of the John L. Lewis and Harry Bridges school of rule by force and bloodshed. With their deliberately conceived riots and general strikes, such leaders have so discredited themselves in the eyes of the public that reaction was a natural sequel.

RADICAL AGITATORS CAUSE REACTIONARY MEASURES

Now they cry that labor is being persecuted. Labor is being persecuted by its own leaders, whose irresponsible direction is doing the laboring man more harm than good.

Examination of the Pennsylvania bill fails to reveal any interference with labor's right to organize, to bargain collectively through an agency of its own choosing, or to enjoy any other right guaranteed by the law of the land.

On the contrary, the measure seeks to protect the worker both from employer domination and from predatory union leaders who would force him to join organizations against his will.

Coercion of employees by employers is forbidden. Under provisions of the bill an employer, another employee, a union leader, or anyone else may not forbid or force an employee to join any union. Nor may an employer be compelled by intimidation to submit to the dictates of power-drunk union leaders, who too frequently bear the "red" label of communism.

Surely the outlawing of sit-down strikes is not an encroachment upon the rights of workers. The United States Supreme Court has ruled that weapon illegal. It is recognized by practically everyone but C. I. O. leaders as an unlawful seizure of another's property.

In addition to forbidding sit-downs, the measure orders the State labor board to respect craft unions' rights to decide for themselves who shall be their collective bargaining agent. Obviously this is a blow to the C. I. O., which attempts and pretends to represent all workers in many plants where craft unions oppose C. I. O. representation.

SHOULD AFFECT ONLY RACKETEERS AND "REDS"

The bill would prohibit the deduction of union dues from an employee's pay check unless the employee individually and specifically would approve such deduction.

This provision, like the others, is not directed at bona fide labor organizations which promote the welfare of workers and cooperate with industry in the interest both of employer and employee. But it is intended to curb the activities of racketeers, who pose as friends of labor while exploiting workers for their own aggrandizement. It also seeks to squelch the growing influence of radical hate-stirring leaders bent on recruiting American labor to the ranks of communism.

Financial Policy of the Administration

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1939

Mr. MAGNUSON. Mr. Speaker, on May 22 the President of the United States addressed the Retailers' National Forum at the Mayflower Hotel in the city of Washington.

The President chose as his subject the financial policy of the administration, and to my mind he delivered one of the most able explanations of that financial policy which it has been my privilege to listen to.

Of necessity a financial policy entails taxation. We have heard a great deal lately from the opposition relative to the taxing policy which is complement to the financial activities of the administration. Many have complained about the burden of taxation. Others have objected to the methods of taxation. Still others have disagreed as to the distribution of the load. All in all, the subject involved in the fiscal policy of this Government is a live one.

It might, therefore, be interesting to compare our taxation with that of a common nation, England. Not that their tax rate is any justification for or against our tax rate, but it is indicative of our burden as compared with such countries as Britain.

The President, on the occasion above mentioned, directed a specific question to one of the guests at the dinner. Again his question was not in justification, but as one of interesting comparison. The President asked, during the course of his speech, for a disclosure of the kind of taxes an English merchant has to pay to "keep England afloat."

The distinguished guest to whom the question was directed was H. Gordon Selfridge, Jr., a former classmate of King George VI, head of one of the world's greatest department stores and one of the merchant princes of the British Empire.

Following the dinner, Mr. Selfridge gave an exclusive newspaper interview relative to Britain's taxation. The comparison is interesting. He said, generally, the average British subject pays much more than the average American. The 39-year-old Mr. Selfridge told not only of British taxes but declared the President a "really great man" and complimented him highly on his "marvelous speech." I further quote the rest of the interview relative to British taxation:

The British tax on gasoline is 16 cents a gallon, bringing the retail price up to 38 cents a gallon. Automobile tax is $6 for each horsepower, which brings the tax on my own car up to $225 each year.

British income tax is 27½ percent on all profits, worked out on a government schedule which is apt to be a little more than the balance-sheet profit because of the smaller amount allowed by the Government to be spent for depreciation, usually less than is actually spent by a firm.

Local taxes, based on occupation of property, vary from 50 percent to 150 percent of assessed rental—whether or not the company owns the property or rents.

A graduated tax is paid by my company on all salaries for national health insurance. Employees pay a tax themselves toward this insurance, and so does the Government, for the benefit of both the health of the employee and for unemployment benefits. It is a sliding scale, heavier in larger salaries, smaller on smaller salaries.

Another heavy burden is to be laid on business shortly through certain passage of a new bill now in Parliament providing that companies in vulnerable parts of the country must erect air-raid shelters for all employees within at least 5 minutes travel from the place of employment. These shelters must be finished by September, or the Government will not contribute 27½-percent subsidy promised if they are completed in time.

Total taxes paid by British citizens this year of a population of about 40,000,000 would estimate about $7,000,000,000.

It so happens that England, maintaining a civilization similar to ours, has one of the lowest tax rates, as compared to other similar countries in Europe. I do not have the figures relative to Italy, France, Germany, or the other major European powers, but they run exceedingly higher than the British rate.

It might be well for those who complain so bitterly, without considering whether or not we get value received for our tax dollar, to make a comparison with these other countries, such as Mr. Selfridge has made, before he condemns too bitterly the administration's financial policy.

The same figures obtain relative to a comparison of British income taxation rates, which run from 2.5 percent higher than the American rate on thousand-dollar incomes up to as high as 68 percent in excess in the higher brackets. For details of this interesting and lucid comparison may I refer you to the CONGRESSIONAL RECORD, volume 83, part 11, page 3079, of the Seventy-fifth Congress, under the remarks of the able Representative from Maryland, the Honorable David J. Lewis, in an article which goes into detail relative to British and American taxation.

That comparison cannot help but show that we in America are still pretty well off.

Flag Day

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 13, 1939

STATEMENT BY THE GOVERNOR OF PENNSYLVANIA

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Governor of Pennsylvania on Flag Day:

COMMONWEALTH OF PENNSYLVANIA,
GOVERNOR'S OFFICE,
Harrisburg, Pa., June 12, 1939.

STATEMENT BY THE GOVERNOR ON FLAG DAY

The flag, our Nation's well-beloved Stars and Stripes, was adopted by Congress 162 years ago in Philadelphia.

The day was June 14, 1777, and again, as is our custom, we pay tribute to those brave men who designated our Nation's emblem—the symbol of democracy, freedom, liberty, and justice—by observing Flag Day this year on June 14.

The flag stands for what we stand for, and we stand for what the flag stands for. Our fate and the fate of our flag are inextricably intertwined. It is well, on Flag Day, that we pause to realize how true these facts are. When we salute the flag we salute the Nation, which means that we salute those who have died in giving us our cherished heritage of freedom, those who carry on today to preserve what has been given us, and those yet unborn who will carry on in defense of the rights of a free people.

The Nation's flag was adopted on Pennsylvania's soil by a Congress which shortly afterward, with shot flying in nearby Brandywine, had to move from Philadelphia to Lancaster and York. The Stars and Stripes constituted a precious piece of bunting to the men who marched under it on Pennsylvania's rolling hills, because it stood for their lives, their families, their homes, their freedom, and their fortunes.

Today that flag is just as precious. Our lives, our families, our homes, our freedom, and or fortunes stand or fall with it. Our flag was conceived in the midst of battle and born at a time when liberty was most dangerously beset—an emblem for freemen to rally 'round. It is inspiring to recall that the resolution of Congress which created the flag was passed without a single word of recorded debate or argument. Those were days when men were on guard and they spoke against anything that displeased them with fiery eloquence and at length—but on the subject of their flag they were, to a man, in solid and invincible, and unalterable accord. That is the sort of spirit we need today when we think or speak of the Stars and Stripes.

Pennsylvania's men and women have played roles in the fight for freedom which are immortal. We think of them whenever we think of the Declaration of Independence, the Constitution, and the flag, particularly at this time when we are again about to celebrate Flag Day. More particularly we recall Pennsylvania's little seamstress of the flag, Betsy Ross, who lived on Arch Street in Philadelphia. Despite the fact that treasonable acts were being sought out by the enemy everywhere, Betsy went about her flag-making business with a courage which has come to be a source of inspiration to all of us. Our men and women share alike in the story of our flag.

Pennsylvania, because it is the State that has given the flag to the Nation, sets Flag Day apart as a legal holiday, so that its citizens may be free to participate in suitable celebrations. The flag will be flown from all State buildings and properties, and I know that all of our citizens will properly display the flag from their homes.

Economic Totalitarianism

EXTENSION OF REMARKS
OF
HON. CARL E. MAPES
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 13, 1939

EDITORIAL BY RAYMOND MOLEY

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Raymond Moley, which appears in the current issue of Newsweek:

[From Newsweek of June 12, 1939]

PERSPECTIVE—ECONOMIC TOTALITARIANISM

(By Raymond Moley)

The testimony of Mr. A. A. Berle, Jr., before the monopoly committee recently deserves far more attention than it is getting. A plan such as Mr. Berle describes is not to be laughed off, as are most of the scrambled economic schemes emanating from the administration. Mr. Berle thinks clearly. He knows precisely what he is driving at. His proposal is a considered one and a plausible one. It would also stand our present economic system on its head.

Briefly, Mr. Berle proposes that Government set up a special banking system for capital credit to serve the needs both of private business and of public agencies. Money is to be lent for private businesses and for "nonproductive purposes" such as, presumably, the building of hospitals, bridges, and other public conveniences. A very low rate of interest is to be charged. The Government is to guarantee such loans, which would not appear as expenditures in the Federal Budget. The process by which money would be routed to the happy recipients of these funds would be a sort of phantom circuit or induction. But, of course, the Government credit would be burdened indirectly, just as an individual's credit is burdened when he endorses another man's note. Any man who has found his fellow endorsers unable to meet their obligations knows that bankruptcy can be reached by this road as well as by any other.

The foundation of this plan is imbedded in a profound conviction of Mr. Berle. He believes that the present lack of capital expenditures is the result not of restrictions imposed upon individuals by the present regime in Washington, but of the failure of the present financial system to meet "changing needs in a changing economy." How our economy is changing and where it is going—these questions are not answered in any detail. However, it might be well to ignore theory for the moment and consider, first, the practicability of Mr. Berle's scheme.

The R. F. C. and the Federal Reserve have been lending money to business borrowers for quite some time. In 7 years the total lending of this sort has been only $218,000,000. These agencies have advertised that they would make loans that the bankers would not make. But it will be readily seen that their ability to find risk-worthy borrowers is limited, for a bank that lends $218,000,000 in 7 years is not much of a bank. Presumably the Berle bank would do better. It would find risk-worthy borrowers such as hospitals. Loans would also be made to new and growing industries. Here Mr. Berle mentions a few—"rayon, steel specialties, or knockdown houses." Some of these enterprises probably have no difficulty in getting loans now, for those he has mentioned are among the most risk-worthy. But the more Berle enumerates of loan prospects, the more he raises questions of detail. And every proposition, in detail, can be kicked over, because we are a skeptical people these days. He does not, for example, mention loans to makers of labor-saving machinery. He does not mention the inevitable row with labor and subcontractors his bank would risk by loans to a prefabricated housing enterprise. He does not mention them because these skepticisms, in detail, add up to the grand skepticism which is depression.

Presumably the Berle bank, if it were to improve on the record of the R. F. C. and the Federal Reserve, would move to the tune of a greater faith than that which characterizes the typical banker's mind. It would be less concerned with the sordid item of profit, less hopeful of "breaking even" on certain deals, and more interested in "the plain need" of society for this or that venture with other people's money. For the more important side of the new bank's activities would be lending money to communities at inconsequential rates of interest.

At the present time, with the exception of money that the Federal Government gives or lends to communities, the limit of what a community can do for itself in public improvement depends to a great extent upon the judgments of the bankers, through whom it is compelled to borrow money, and upon the judgments of the individuals who have savings to invest in the securities of local governments. There is nothing in the past record of our local governments to indicate that there is any limit at all to the appetite of local politicians for money for public improvements. But they have been limited by the means I have suggested and by legal debt limitations. And here is the point where Mr. Berle's faith shows itself at its most effulgent. Mr. Berle believes it is possible, by law, to protect this sort of lending by his bank against "partisan political administration." As though paper protections could not be circumvented by politicians and by pressure groups such as the potent lobby of mayors, social-welfare organizations, a vast army of reliefers, and a puissant bureaucracy in Washington eager to stay in power.

So much for some of the practical aspects of the scheme. Now for its theory, or rather its theories, for Berle starts with two theories: The first is that capital can be "created" outright through a banking mechanism; that it is not, as we have always assumed, created by the savings of people invested for a productive purpose; that the banking mechanism can, out of nothing, "create" new capital substantially by fiat—by some financial legerdemain which is not related to savings; and when one gets to this point in the examination of the Berle thesis one is moved to brush aside all of the verbiage and say that if this is what the game is why don't we print money and hand it out to whatever applicant can persuade the people in Washington that it is for, in Mr. Berle's words, "the plain need" of society, or the "obvious needs," or the "needs which everybody recognizes."

The other theory, which Mr. Berle attributes to John Maynard Keynes, is the idea that the national income is increased by about two and a half times the amount spent on heavy capital production financed by Government funds. Berle indicates that there are differences of opinion on this point, and in that difference of opinion I want to be included on the profoundly skeptical side, for reasons that space does not permit me to state here. Certainly the Keynes theory has never been "demonstrated," as Mr. Berle says, if I understand the meaning of the word "demonstrated."

I am unable to see how this plan, if seriously attempted, could result in anything except a new economic system, in which the motive powers that now drive men "to scorn delights and live laborious days" are wiped out and, in their place, is put the discretion of an omnipotent state. For individual judgment about the uses of individual savings and the employment of risk capital would be substituted the judgment of government. This is economic totalitarianism.

I think Mr. Berle is to be respected for the frankness and clarity with which he has stated this case. If he is correct in his assumptions that private initiative has failed, then the next step must be such a mechanism as he suggests. But the American people, I believe, prefer individual selection not only in the making of their investments and in the creation of new forms of business activity, but in the choice of their legislators and administrators. Since this is true, they will exercise their selective prerogative by voting out of power, root and branch, those officeholders who have lost faith in the present economic system. They will give that system another chance under people who believe in it.

Alcohol as a Dilution Agent for Gasoline

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 13, 1939

EDITORIAL FROM THE PEORIA (ILL.) JOURNAL TRANSCRIPT OF JUNE 2, 1939

Mr. DIRKSEN. Mr. Speaker, it is most significant that the motorcar which won the international speed classic at Indianapolis on Memorial Day was powered with a motor fuel made of alcohol and gasoline. In connection with that subject I ask leave to insert a brief editorial from the Peoria Journal Transcript, published June 2, 1939.

[From the Peoria (Ill.) Journal Transcript of June 2, 1939]

DEATH IN THE AFTERNOON

When death flicked Floyd Roberts on the head on Memorial Day afternoon at the Indianapolis Speedway, a diminutive, dapper, daredevil named Wilbur Shaw was tramping a heavy foot on the accelerator of his racing machine to whirl past the wrecked car of his rival driver to a victory in the race classic.

Thus, in the midst of death in the afternoon, men had demonstrated to them the wisdom and practicality of the use of alcohol as a dilution agent for gasoline. For Shaw's car was powered with a mixture of gasoline and alcohol.

To Peorians this feat of Shaw's is of particular importance. This community is the distilling center of the world. It is the logical place to locate plants for the manufacture of alcohol from farm products and farm wastes. The use of alcohol for dilution of motor fuel is being done abroad and here. Shaw's victory last Tuesday in an 8-cylinder Italian-made car demonstrates in dramatic fashion the potentialities of such a mixture. Nor must all the credit go to him. The men who were injured, the man who died, and the others who risked their lives to provide the competition all deserve a share of the credit. To their courage we pay homage. To the practical lesson of Shaw's victory we attach some local significance because of the potential demand for alcohol for gasoline dilution which his performance creates.

Farmers Are Greatly Helped by Farm Security Administration

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

Mr. PATMAN. Mr. Speaker, the Farm Security Administration has completed a survey of the progress made by a group of typical rehabilitation borrowers, as of January 1, 1939. This survey, covering 1,498 families in the 11 counties of the First Congressional District of Texas, showed they had increased their total net worth since coming into the program from $274,536 to $928,300 at the end of the 1938 crop year, over and above all debts.

WEALTH INCREASED $436.42 PER FARM FAMILY

These families, therefore, had added a total of $653,764 to the wealth of their communities, or an average of $436.42 per family. These net worth figures, which reflect the difference between the total assets and total liabilities of each family, are considered an even better indication of progress than repayment figures, because they show the actual progress made by the family.

AVERAGE OF $144.85 PER FAMILY INCREASE PAST CROP YEAR

During the past crop year alone, these families increased their total net worth by $217,000, or an average of $144.85 for each family.

RAISE LIVING AT HOME ENCOURAGED

One of the primary aims of the rehabilitation program is to enable borrowers to raise their own food supplies and livestock feed, so they will be less dependent upon cash crops. Their progress is indicated by the fact that the 1,498 typical F. S. A. families, who reported in our district, had stored away 431,000 quarts of fruits and vegetables last year to tide them through the winter. The average family has increased its annual production of home-canned food by 250 quarts since it first received an F. S. A. loan.

Moreover, the production of meat for home use has risen a total of 551,156 pounds annually, or 368 pounds per family; and the average increase in egg production for home consumption was 83 dozen per family.

Relatively few families owned milk cows when they first sought F. S. A. aid, and this lack often was reflected in the health of their children. By the end of the 1938 crop year, however, the borrowers in our district reported that they had increased their milk production by an average of 435 gallons annually, or a total of 652,040 gallons.

This increase in the production of foodstuffs does not mean additional competition with farmers in other areas, since virtually the entire output was consumed at home. It represents improved diet, based on foodstuffs which previously were not available, usually accompanied by a marked improvement in health.

DEBTS ADJUSTED

One of the most frequent causes of distress among farmers is the fact that they are overburdened with debts. Consequently the Farm Security Administration has set up local farm debt adjustment committees to bring the debtor and his creditors together for a friendly discussion of their mutual problems. These committees have no legal authority to compel adjustments, but usually they find it possible to reach agreements for extending the time of payment, reducing interest rates, or scaling down the obligations. As a result, the farmer is saved from foreclosure, and his creditors obtain substantial payments on what might otherwise have been uncollectible debts.

In our district 139 farm families had been helped through such debt adjustments up to January 1939. Their obligations were scaled down from $336,758 to $298,842, a total reduction of $37,916, or 11.2 percent. As a direct result of these adjustments, a total of $4,170 in back taxes was paid to local governmental agencies. In addition, four group cases were adjusted, which benefited 182 farmers. In these instances debts amounting to $615,500 were scaled down to $164,625, a reduction of $450,875, or 73.2 percent.

BETTER LAND TENURE FOR TENANTS

Another main object of the rehabilitation program is to get better land tenure for borrowers who are tenants or sharecroppers. While many of the borrowing families are owners, the report showed that among the tenants 415 had obtained written instead of oral leases. Moreover, 136 had advanced from a sharecropper to a tenant status during the year.

MANY RECEIVING MEDICAL ATTENTION

There are three other measures of the progress made by these rehabilitation borrowers. The report showed that 122 families were getting medical attention through participation in group medical care programs, 992 were practicing definite erosion-control measures, and 1,969 children of school age were enabled to attend school as a direct result of the rehabilitation program.

The field workers of F. S. A. reported that they knew personally of 1,626 families in our district who were eligible and in need of rehabilitation loans, but were unable to obtain them because of lack of funds.

TENANT LOANS TO PURCHASE HOMES

Next to the rehabilitation program the Farm Security Administration's chief function is to make loans to tenants, sharecroppers, and farm laborers for the purchase of family-size farms under the terms of the Bankhead-Jones Farm Tenant Act.

While loans have been confined to certain counties in each State we will have made approximately 69 such loans in our district, aggregating $359,564.56, by the end of this fiscal year.

Last year, the first in which the tenant-purchase program was in operation, 18 loans tataling $81,557 were made in our district. This year we estimate we will be able to make 51 loans aggregating about $278,007.56.

Testimonial to Rt. Rev. Msgr. Michael J. Lavelle

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 13, 1939

ADDRESS BY HON. JAMES A. FARLEY AT TESTIMONIAL BANQUET

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon.

James A. Farley, Postmaster General, at the testimonial banquet in honor of the diamond jubilee of Rt. Rev. Msgr. Michael J. Lavelle, the distinguished and universally beloved prelate, at the Commodore Hotel in New York City on June 6, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Excellency, Archbishop Spellman; Your Excellency, Bishop Donohue; Rt. Rev. Monsignor Lavelle, honored guest; Governor Lehman; Mayor LaGuardia; Governor Smith; right reverend and very reverend monsignori; reverend fathers; honored guests; ladies and gentlemen; as has been so aptly said by the preceding speakers, it is given to few to serve so long with such distinction as has our beloved friend in whose honor we are gathered here tonight. In every field of service to his fellowman, Monsignor Lavelle has given of himself without reserve or without thought of reward. In the service of his church, his city, his State, and his country, he typifies not only the model of service but also the ideal of service for which many strive but few attain. His career has been the exceptional one, though built on the performance of the commonplace. His thoughts have been of others. His labors have been for others. His has been a life replete with charitable intentions accomplished, administrative duties performed, pastoral responsibilities completely met.

We mark here just another milestone in his extraordinary career. When most men would be thinking of slackening up in their labors, his exceptional vigor and energy, coupled with his determined courage, and will to carry on, insure a continuance of his active participation in the activities of both the church and the community. His presence, among those with whom he has worked, today contributes, not only the fruits of his zeal, but also the benefits of a wisdom, mellowed and sharpened by the experience of most normal lifetimes. His is not only the privilege to serve, but the duty to counsel.

At this time, when so many young men are starting on the performance of their duties as priests, it might not be remiss for us to look back 60 years, to the time when Monsignor Lavelle first came to St. Patrick's as an assistant pastor. In those days, most men were more concerned about their own interests than about the welfare of others. Life then was a struggle of individuals. Living was not so confused. But during the years that have intervened, not only has the problem of living become a changed one, but also the motives of men have changed. No longer can the individual think only of himself. He must think of others, for the welfare of others bears directly on the welfare of each individual. Living has become more complicated and not a bit less difficult.

Monsignor Lavelle, with that rare vision given to few, must have foreseen what was coming, for his whole life has exemplified that cooperative service which, in the last decade, has become so prevalent among the influential men and women of America, whether they be churchmen, industrialists, labor leaders, or public servants. He, in the distant past, was a pioneer in a field, where now he numbers as co-workers, many who were not born until long after his labors began. It has been his good fortune to see the struggle of a few hardy souls become the pattern for the many. He, as a young man, took part in the prologue of the drama that now, in its last act, is approaching the happy ending. May God spare him, so that in the epilog he may actively be part of the successful culmination, the attainment of which will have been due to the efforts of such unselfish and tireless workers, as has been this man of Christ, Monsignor Lavelle.

The General Anthony Wayne Memorial Commission

EXTENSION OF REMARKS

OF

HON. EUGENE B. CROWE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

REPORT OF THE REORGANIZATION MEETING, MAY 17, 1939

Mr. CROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the reorganization meeting of the General Anthony Wayne Memorial Commission, Wednesday, May 17, 1939:

Reorganization meeting of the General Anthony Wayne Memorial Commission was held May 17, 1939, in office immediately off the Speaker's lobby, in the House of Representatives, Washington, D. C.

In attendance at the meeting were Senator Robert Taft and Representative Cliff Clevenger, of Ohio; Representative Eugene B. Crowe, of Indiana, Ninth District; Harry G. Hogan and W. A. Kunkel, Jr., of Fort Wayne, Ind.

Absent from the meeting were Senator Frederick Van Nuys, of Indiana; Senator Vic Donahey, of Ohio; Representative Dow Harter, of Ohio; and William Wayne, of Pennsylvania.

Invited to attend and present also were Representative George W. Gillie, Fourth District, Indiana; his secretary, Charles Baird; and Mark Thistlethwaite, of the Fort Wayne Journal-Gazette Washington Bureau.

The meeting was called to order at 10 a. m. by W. A. Kunkel, Jr., secretary. The chairman of the Commission, Senator Arthur Vandenberg, having resigned, W. A. Kunkel, Jr., suggested that Eugene B. Crowe be appointed temporary chairman. Mr. W. A. Kunkel, Jr., seconded by Senator Robert Taft, moved that Mr. Crowe be elected permanent chairman. Mr. Crowe was unanimously elected. It was also unanimously agreed that the present secretary and treasurer of the Commission, W. A. Kunkel, Jr., and Harry G. Hogan, respectively, retain their offices until such time as successors should be duly elected and qualified.

A resolution was passed authorizing the chairman of the Commission to communicate with the Director of the Budget requesting him, on behalf of the President, to submit to the Congress an estimate in the amount of $2,500 for the purpose of carrying on the activities of the Commission and this to be a basis of appropriation therefor.

The secretary called attention to H. R. 6269, a bill authorizing a survey of the route of the proposed General Anthony Wayne Memorial Parkway between Fort Wayne and Toledo introduced in Congress on May 10, 1939, by Cliff Clevenger, Bryan, Ohio. It was observed that this bill was somewhat in conflict with H. J. Res. 406, approved August 19, 1937, creating the Commission.

After some discussion participated in by Senator Taft, Representatives Crowe and Clevenger, and Messrs. Hogan and Kunkel, it was concluded that the conflict between the two resolutions could be covered by the body of the resolution being amended, or a new bill introduced.

Moved by Harry G. Hogan, seconded by Senator ROBERT TAFT, that said H. R. 6269 either be amended or a resolution of same purport be introduced that would include a determination for a permanent shrine or memorial in Fort Wayne, as provided in the original resolution. Motion carried.

Accordingly, Representative EUGENE B. CROWE introduced on May 17, 1939, the following bill, No. H. R. 6375.

"*Be it enacted, etc.*, That in order to further and amplify the purposes outlined in House Joint Resolution 406, first session Seventy-fifth Congress, the Secretary of the Interior is hereby authorized and directed to cause the National Park Service to make a survey of the military route of Gen. Anthony Wayne during his campaign against the Indians in the Northwest Territory in 1794. The said survey shall outline and locate a parkway as nearly as practicable in the original route, and indicate the type and location of an appropriate permanent shrine or memorial to Gen. Anthony Wayne along said parkway or at its terminus. An estimate of the cost of construction of this combined memorial project and such other data as would be valuable shall be obtained by said survey.

"SEC. 2. There is hereby authorized to be appropriated the sum of $30,000, or so much thereof as may be necessary, to be expended in carrying out the provisions of this act."

On motion of Harry G. Hogan, seconded by CLIFF CLEVENGER, the meeting adjourned, to further convene on call of the chairman.

W. A. KUNKEL, JR., *Secretary.*

Treadmill for Dogs Will Cost $1,350

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

Mr. ENGEL. Mr. Speaker, on June 7, 1939, on page 2455, I extended my remarks in the Appendix of the RECORD and included therein an invitation to bid by the Procurement Division of the Treasury Department on a "treadmill for dogs." I also made certain comments thereon. I was immediately besieged with requests for information as to the purpose for which this treadmill was to be used.

In view of the fact that, according to the unemployment statistics issued by the American Federation of Labor, we had 3,000 more people on the unemployment list in January 1939 than the average number of unemployed during the year 1932, and in view of the further fact that according to

Relief Administrator Harrington's figures we had some 3,000,000 more people on relief in February 1939 than in February 1933, the last month the Republican Party was in power, the only reason I could see as to why the treadmill was being purchased by the administration was for a yardstick with which to measure the progress the New Deal has made in the solution of the problems of recovery, unemployment, and relief since March 4, 1933.

I call especial attention to the item enclosed herewith from the International News Service to the effect that the treadmill would cost $1,350. The article reads as follows:

TREASURY BUYS TREADMILL FOR ITS WATCHDOG

The mythical United States Treasury watchdog apparently is a reality. Fiscal experts disclosed yesterday the Government is buying a treadmill at a cost of $1,350 for a dog owned by the financial agency. The canine, whose identity was not revealed, serves under the Treasury's Public Health Division, and will be put through the treadmill for scientific research into fatigue.

The Works Progress Administration Investigation

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

STATEMENT BY COL. F. C. HARRINGTON, ADMINISTRATOR OF THE WORKS PROGRESS ADMINISTRATION

Mr. CANNON of Missouri. Mr. Speaker, under consent granted for extension of remarks, I desire to include the following statement made by Col. F. C. Harrington, Administrator of the Works Progress Administration, on June 13, 1939, before the committee investigating the W. P. A.:

I have been following the general trend of the testimony which has been presented to this committee in connection with its investigation, but have not read such testimony in detail. Furthermore, I have purposely refrained from issuing any statements in connection with the testimony given, although much of it was inaccurate and some was obviously unfair. Relying upon the assurance that I would be given this opportunity to appear before the committee, I did not desire to make any public comment on these matters.

On April 5, 1939, I addressed a letter to the committee chairman enumerating important issues which I thought the committee should study in connection with the formulation of policies for the future of the Works Progress Administration. Subsequently, on April 20, 1939, at the committee's request, I presented my own views on these various points and submitted with that letter a number of exhibits giving data concerning the Works Progress Administration program in somewhat elaborate and detailed form.

I request authority at this point to insert copies of both of these letters in the record. Since some of the exhibits which accompanied my second letter were in rather bulky form, I am not asking that all of them be inserted in the record. However, some of the exhibits were relatively brief and because of their importance and pertinency to this investigation I would like to submit them with supplemental data, together with a brief summary of the more bulky exhibits, in the record.

There are certain general comments upon this investigation, insofar as it has developed up to the present time, which I would like to make at this point. The first is that so far as I have been able to determine, no official of the Works Progress Administration occupying an important and responsible position has been revealed as having engaged in any wrongdoing, either ethical or financial. Human nature being what it is, it is not possible to hope that in an organization comprising approximately 3,000,000 individuals there would not be abuses, but on the whole I believe that the record of the Works Progress Administration, as revealed in this investigation, is one of remarkable integrity, especially in view of the complex problem with which it had to deal, and the very large sums of money which it has had to handle.

The second matter to which I desire to call attention is that many cases concerning which testimony has been given before this committee are cases in which the investigation had been initiated by the Works Progress Administration through its own Division of Investigation and which had been handled through to a proper conclusion under law and regulations either by a referral to the Department of Justice or to the General Accounting Office, or by administrative action within the Works Progress Administration. I feel a very considerable degree of confidence in our Division of Investigation and its handling of these matters. The Director of the Division reports to me directly, so that I have the Division under my personal control.

Another point I would like to bring out is that many of the matters concerning which testimony has been given to the committee are really in the realm of past history. They represent occurrences which we had already investigated and concerning which action had been taken. I am quite willing to admit that some of these involved mistakes. I wish to repeat, however, that I do not believe it would have been possible for anyone to conduct this vast program without making mistakes, and I think the record conclusively shows that we have been, throughout the period of operation of the Works Progress Administration, attempting to eliminate these errors and improve the administration of the program.

During the course of the investigation there have been certain glaring misstatements of fact presented to the committee. I do not wish to attempt to refute these at this time, as my interest is more with the broader issues which are involved, but I cannot refrain from making the general observation that some of the things to which the committee has listened have been completely untrue. I wish to cite one instance of which I had personal knowledge in my former capacity as Chief Engineer. One of the committee's investigators, Mr. Burton, produced as a witness a Mr. Lancelot Armstrong, who is an attorney for a truckers' association in New York City. Mr. Armstrong's sole motivation in his dealings with the Works Progress Administration was that of securing a decision favorable to his clients. The issue was whether the Works Progress Administration in New York City was justified in requiring that bids on heavy trucks should be limited to trucks of not over a certain age. The decision in this matter was made solely upon the basis of securing suitable modern equipment for the work which was being done in New York City and thereby contributing to the efficiency of operations there.

Mr. Armstrong was given every conceivable consideration. He had a conference with Colonel Somervell, the New York City Administrator in New York, with me in Washington, and with Colonel Somervell and me jointly in my office in Washington. His contention that the trucks to which contracts were awarded were under capacity was investigated by loading these trucks and weighing the loads which they carried, which demonstrated conclusively that his contention was unfounded.

In the face of all this, Mr. Armstrong appeared before the committee and made the wholly ridiculous statement that the decision made in this matter had cost the Works Progress Administration in New York City a million and a half dollars which might otherwise have been saved. Whether Mr. Armstrong was making a deliberate misstatement or was entirely ignorant of the economics of truck operation I do not know, but my opinion inclines to the former. Certain other testimony before the committee relating to such matters as administrative costs, sponsors' contributions and efficiency percentage on Works Progress Administration projects, indicates either a complete lack of knowledge of Works Progress Administration operations or very careless investigators.

However, I cite this one instance of which I have personal knowledge merely to bring to the attention of the committee the fact that much of the testimony which has been given before it could be completely and conclusively refuted if time were available.

I wish now to pass to a few points of general policy which are exceedingly important insofar as they relate to the future of the Works Progress Administration program. These points are as follows:

(a) The efficiency with which the program has been conducted.

(b) Should the construction program operated by the Works Progress Administration be curtailed by legislative provisions?

(c) The nonconstruction program of the Works Progress Administration with particular reference to the group of activities comprised in the Federal Arts Projects.

(d) Cost of administration.

(e) The relations of the Works Progress Administration with labor organizations and specifically with the Workers Alliance.

THE EFFICIENCY WITH WHICH THE PROGRAM HAS BEEN CONDUCTED

Efficiency is a much-abused word. The same methods which may be efficient in one situation may be highly inefficient in another. The conduct of the Works Progress Administration represents a special and peculiar problem.

Up to the time when I was first detailed for duty with the Works Progress Administration in September 1935 my entire training along engineering lines had been to conduct construction operations at lowest possible unit costs. Under modern conditions this inevitably involves the use of the maximum of equipment and machinery and the minimum of labor. It very soon became apparent to me, however, that the operation of the Works Progress Administration program along these lines would certainly not carry out the obvious intent of Congress in appropriating funds for the relief of the needy unemployed through the conduct of a work program. Since my appointment as Federal Administrator, I have publicly stated in the following language what I conceive to be my mission in administering the Works Progress Administration:

(a) To administer the program in such a way as to place the maximum proportion of the funds appropriated in the hands of the able-bodied, needy unemployed.

(b) To secure from the funds expended the maximum results in the creation of valuable public assets.

I desire to place all possible emphasis on the order in which I have stated these two factors. I conceive this necessary in order to carry out my responsibilities.

I believe that an examination of the Works Progress Administration program on the foregoing basis will demonstrate that it has achieved a notable success. For example, over 95 percent of Works Progress Administration workers are taken from the certified relief rolls, that is, are needy and unemployed. Furthermore, 86 percent of the total Federal Works Progress Administration expenditures are going directly into the hands of project workers in the form of wages. Approximately 10½ percent of the Federal funds are expended for materials and equipment, and administrative costs are being held to a figure of approximately 3½ percent, although 5 percent is permitted under the terms of the current appropriation act.

There are certain other conditions peculiar to the Works Progress Administration program which affect this question of efficiency. One is that our heaviest load and greatest responsibility for providing employment arises in those seasons of the year when private construction activities are reduced to the minimum. We have to continue our operations during the winter months under severe handicaps in order to provide our workers with the wages which to them mean food, clothing, and shelter. Any construction enterprise which is operated to give low-unit costs curtails its operations to the minimum during this period. In fact, it is this very curtailment of private enterprise which makes our problem more difficult.

Another handicap against which we have had to struggle is that of labor turn-over on our projects. It is highly proper that every effort should be made to encourage, in fact, to require, that Works Progress Administration workers shall leave our rolls when opportunities for private employment are offered. However, this means at times that 200,000 workers per month are separated from the program and almost inevitably these are among our more efficient workers. This introduces a handicap against which we have to struggle in conducting our projects efficiently.

A third difficulty which faces us is the combination of a monthly security wage set on the basis of providing a minimum subsistence standard with a prevailing hourly rate requirement imposed upon us by law. This means that on a given project we may have monthly hours of work for various individuals ranging from 50 to 130 hours per month. To permit the persons earning the higher hourly rates to work the same number of hours as those who earn lower ones would greatly increase the cost of the program and cannot be done. Therefore, we face the necessity of obtaining results with a working crew whose individual members will change continuously throughout each month.

I do not wish to present any alibi in this matter of efficiency, but much has been said about cheaper results that could be obtained in construction under contract. I have had a good many years of experience in administering contract work, and I believe thoroughly in the contract system as applied to many forms of construction. However, I think it has been misleading that in the testimony given before this committee the method of contract operation has been held up as a uniform paragon of efficiency in comparison to the construction methods used by the Works Progress Administration.

In leaving this topic, I wish to say in conclusion that if efficiency is judged from the standpoint of accomplishing the purpose for which the Works Progress Administration was organized, I think that our efficiency has been high. I am perfectly willing to concede without argument that it would have been possible to have taken the amount of money that has been spent upon our construction program and secured more results in the way of finished work, which, of course, is equivalent to saying that our unit costs could have been reduced. The effect of this would inevitably have been that the cost in Federal funds of each worker on the program would have been greatly increased and that with the same amount of money that has been provided a much smaller volume of employment would have been secured. If a reasonable concept of efficiency is adhered to, I am willing to leave the case in the hands of any impartial individual. In fact, written testimony is now in the files of the committee from public officials and citizens from over 8,000 local communities testifying to the high degree of efficiency and usefulness of Works Progress Administration projects.

SHOULD THE CONSTRUCTION PROGRAM OPERATED BY THE WORKS PROGRESS ADMINISTRATION BE CURTAILED BY LEGISLATIVE PROVISIONS?

There has been discussion of various proposals for limiting the construction program of the Works Progress Administration by various restrictions. These have ranged from proposals that the Works Progress Administration program for the constuction of public buildings should be eliminated or greatly curtailed to a proposal that the Works Progress Administration should not be permitted to engage in any construction project costing more than $25,000.

So far as building construction is concerned, expenditures on public-building projects by the Works Progress Administration through March 1939 represent 10.2 percent of total Works Progress Administration expenditures during this period. The following is a partial list of the various types of public buildings which the Works Progress Administration has constructed: Educational buildings—schools, libraries; recreational buildings—auditoriums, stadiums, grandstands, etc., gymnasiums, pavilions, bathhouses, etc.; hospitals; penal institutions; courthouses, offices and other administrative buildings; fire houses; public garages; aircraft hangars; warehouses; armories.

In addition to the construction of buildings, a large amount of rehabilitation of existing structures and construction of additions to existing structures is also carried on under the Works Progress Administration public-building program.

The total cost of each of these building projects varies from less than $2,500 to well over $100,000. In the case of Works Progress Administration public-building projects approved by the President under the Emergency Relief Appropriation Act of 1938, projects for which the estimated total cost is $100,000 or more per project, account for over half of the total cost of all such projects, as shown in the following table:

Percent distribution of total cost of Works Progress Administration public-building projects approved by the President under the Emergency Relief Appropriation Act of 1938, by size of project, through February 28, 1939

Size of project:	
Less than $25,000	18.1
$25,000–$49,999	15.6
$50,000–$99,999	14.6
$100,000 and over	51.7

Employment on the public-building projects of the Works Progress Administration ranged from 153,000 persons in November 1937 to 279,000 persons in November 1938, and at the present time numbers 237,000 persons or about 10 percent of employment on all Works Progress Administration projects.

It would be well to consider some of the implications of eliminating public-building projects from the Works Progress Administration program. In the first place, there has been no criticism of the usefulness of public-building projects. The testimony has been uniform that the quality of workmanship has been good and the construction excellent in quality. The elimination of public buildings from the Works Progress Administration program would mean that these worth-while public buildings, which are frequently the type of public works most needed by a community, would simply not be constructed and the skilled workers who would otherwise be employed on them would be dependent on direct relief or be forced to take unskilled jobs, with the resulting deterioration of their skills. Also all skilled as well as unskilled workers employed by the Works Progress Administration on these building projects are taken from the local unemployed rolls in the community where the project is to be constructed.

In the second place, since a larger percentage of total expenditures on public-building projects can be secured from sponsors than on other types of work, the amount of funds sponsors put into the whole program would be reduced. During the first 9 months of the current fiscal year sponsors' funds amounted to 23.6 percent of total expenditures on Works Progress Administration public-building projects, as compared with 18 percent for all other types of projects.

It is important to remember that Works Progress Administration expenditures for all types of projects are limited to the labor cost plus $7 per man per month for nonlabor costs in each State. If the sponsor wants a large public building, involving high material costs, it is necessary for the sponsor to furnish these additional expenditures for materials. If the sponsor wishes to pay for the equipment and machinery necessary for a large public building, there seems to be no logical reason for not doing such work, inasmuch as the Works Progress Administration costs are not affected by such a decision. Thus the type of building desired by the sponsor and the skills of the unemployed in need in each community govern both the type of construction used and the amount of the sponsor's contribution. In fact, it is one of the most desirable kinds of work, because not only is the completed building final testimony to the worthwhileness of the work, but also such type of construction provides sizeable sponsors' contributions.

It is obvious that the best results in project operation can be obtained when the sponsors are sufficiently interested in the work to provide adequate plans, specifications, supervision, materials, and equipment. Thus the large proportion of total expenditures on Works Progress Administration public-building projects contributed by sponsors tends to produce maximum efficiency and minimum cost.

In planning and conducting its public-buildings program, the Works Progress Administration has consistently cooperated with other Government agencies administering Federal funds expended for the construction of public buildings. Under the new Federal Works Agency, which will become operative July 1, in which the principal Federal agencies now conducting the Government's public-works program are to be consolidated, even closer cooperation can be achieved. With the great amount of work needed to be done in the public-building field, it will be possible for the subordinate administrations of this agency to prosecute projects both by the contract method and by force account, depending upon local unemployment conditions, the financial abilities of sponsors, and the types of work needed.

A provision that all Works Progress Administration construction projects be limited to those costing not more than $25,000 would practically wreck the program now in operation. Many of our most efficient projects are large ones on which, through proper organization, we are able to secure outstanding results. If a requirement of this kind were imposed, the tendency of sponsors

would inevitably be to submit the separate items of a combined undertaking as individual projects. We in turn would become involved in the maze of administrative procedure in operating these small projects with separate accounting on each one. The resulting confusion and waste would be enormous.

I have never seen any logical presentation of arguments in favor of this size limitation on projects and am at a loss to know just what is supposed to be accomplished if such a provision were adopted. I can, however, clearly foresee the waste and confusion that such a provision would cause, and I cannot too strongly urge upon the committee that nothing of the kind should be included in legislation. I desire at this time to leave as an exhibit with the committee a detailed statement showing the location, description, and cost of all public building projects completed or now being operated by the Works Progress Administration which cost in excess of $25,000. This exhibit does not include other types of construction such as roads, streets, sewer lines, water mains, parks and playgrounds, or airports.

I desire to submit for the record a table showing the percentage distribution by estimated total cost of all types of Works Progress Administration construction projects.

Percentage distribution of value of Works Progress Administration construction projects approved by the President under the Emergency Relief Administration Act of 1938, by estimated total cost and by major types of projects, through February 28, 1939

Type of project	Percentage distribution, by estimated total cost					
	Total, all projects	Less than $25,000	$25,000 to $49,999	$50,000 to $99,999	$100,000 to $249,999	$250,000 and over
All types	100.0	5.6	6.2	8.6	14.3	65.3
Highways, roads, and streets	100.0	3.0	4.4	7.1	13.0	72.5
Public buildings	100.0	18.1	15.6	14.6	19.8	31.9
Parks and other recreational facilities	100.0	6.7	7.4	9.0	9.6	67.3
Flood control and other conservation	100.0	6.7	7.5	13.3	22.8	49.7
Water and sewer systems	100.0	5.9	6.7	10.8	16.2	60.4
Airports and other transportation facilities	100.0	1.0	1.7	4.6	9.3	83.4
Sanitation and health	100.0	7.1	6.6	6.8	8.7	70.8
Miscellaneous	100.0	7.5	4.8	4.6	25.7	57.4

THE NONCONSTRUCTION PROGRAM OF THE WORKS PROGRESS ADMINISTRATION, WITH PARTICULAR REFERENCE TO THE GROUP OF ACTIVITIES COMPRISED IN THE FEDERAL ART PROJECTS

The nonconstruction program of the Works Progress Administration constitutes about 20 percent of the whole in point of numbers and expenditures, but embraces a very complex variety of projects. As to the justification for continuing this part of the program, I would like to repeat at this point a statement concerning it which was made by the President in his message of April 27:

"I wish to state with emphasis, since the opposite view is frequently expressed, that the program of the Works Progress Administration should, as at present, include some projects of the nonconstruction type to meet the needs of those unemployed workers whose training is such that they are not adapted to employment on construction projects. The provision of work for those people at occupations which will conserve their skills is of prime importance, and the emphasis placed upon construction projects should not obscure the necessity for this portion of the program."

So far as I have been able to observe, there has been no great criticism of the nonconstruction program in general, but very severe criticism has been made of that portion of it which is embraced in what are known as the Federal arts projects. This group includes five activities—theater, writing, art, music, and the historical records survey. The committee has apparently heard no criticism at all of either the music project or the historical records survey. So far as I know, the only mention of the art project during the investigation has been in connection with the production of a book of photographs of models, which the press seized upon as news worthy. I do know how seriously the committee took this matter, but it seems hardly necessary to point out that the use of models in connection with painting is the normal and uniform practice. Severe criticism has been made of the writers' project, and the theater project has been even more drastically attacked by the witnesses who appeared before the committee. Some of these witnesses are old customers of the Works Progress Administration and include some who have appeared before other congressional committees.

I also desire to call the attention of the committee to the fact that a great number of outstanding professional people in the fields of writing and theater have highly commended these projects.

I wish to make a plea for all of these Federal arts projects. They represent only a small proportion of total Works Progress Administration employment, but they also represent an experiment which is making a real contribution to cultural values in American life, and they are providing a suitable type of employment for persons who may become just as hungry as construction workers.

I am quite prepared to admit that mistakes have been made in the administration of these projects. I merely wish to state that it would have been miraculous if it had been possible to make this great experiment in an uncharted field without making such mistakes. Before this committee was created I had planned certain measures in connection with the Federal arts projects looking to improved administration, and have delayed the execution of these plans only to avoid conflict with the work of the committee. In general I propose the following measures:

(a) To move the offices of the directors of all projects to Washington, where they will function under the close supervision of the national office.

(b) To endeavor to secure local sponsorship in as great a degree as possible for these projects.

(c) To reorganize the Federal theater project with a view to improved administration and efficiency.

(d) To make certain changes in personnel to the end of securing more effective project operation.

I am very anxious to have an opportunity to carry out these steps which I have in mind, and I certainly hope that restrictions which would practically wreck this very valuable program will not be included in legislation.

COST OF ADMINISTRATION

There has been criticism of the administrative expenditures of the Works Progress Administration, which in general I believe is not warranted. Our administrative expenditures in the current fiscal year up to April 1, 1939, have been 3.3 percent as opposed to an authority to expend not to exceed 5 percent for administration. I think this record is a remarkable one, but am striving to reduce these costs even further.

The salaries paid our administrative employees are not too high. There has been furnished to this committee a list showing the salaries of all administrative employees of the Works Progress Administration, and after this had been obtained these salaries were compared to those paid throughout the Government service. The result showed that the average Works Progress Administration administrative salary was $1,581 a year, which was $290 under the average in the Government service.

The principal steps which I have in mind for administrative economies, some of which are partially in force, are the following:

(a) A reduction in the expenditure for travel.

(b) A reduction in the expenditure for communications, and in particular a restriction upon the use of long-distance telephone as a means of communication.

(c) Reductions in personnel where possible.

The principal measures already in effect are those in the central office in Washington. The personnel of that office during the current fiscal year has been as follows:

January, 2,012; February, 1,960; March, 1,931; April, 1,878; May, 1,875. (Of the 1,875, 29 were in final-leave status on June 1.)

Long-distance telephone bills in the central office are being drastically reduced as shown by the following table:

February	$6,054.05
March	4,965.70
April	3,072.10
May	2,122.95

These economies are being extended to the field as rapidly as possible. A Division of Administration has been established in the Washington office, which includes a budget section to study and control the administration costs of the State administrations, and a Personnel Section to develop proper and uniform personnel policies. The control of travel and communication expense which I have proposed is through the method of budgeting these costs month by month, and I am sure that this will effectively prevent any undue expenditures on these items.

I desire, however, to state emphatically to the committee that I do believe that our present limitation on administrative costs of 5 percent should not be lowered. The program for the fiscal year 1940 contemplates a reduction in the amount of Works Progress Administration employment with a consequent reduction in total expenditures. Anyone with administrative experience knows that when a program declines, overhead costs cannot be brought down in the same proportion. In other words, while it may be possible to conduct a program employing 3,000,000 people with an administrative cost of 3½ percent, if the program declines to 2,000,000 people, the administrative expenditures will diminish but the percentage of administrative costs will necessarily increase. This is practically axiomatic.

Another point which I believe should be considered is that certain increases in administrative costs might very wisely be made with a view to increasing the effectiveness and efficiency of the program. I have previously testified to the committee that I would like to institute periodic reviews of the need of persons on the Works Progress Administration. This cannot be accomplished without increased administrative expense, but I believe that expenditures for this purpose would be amply justified.

THE RELATIONS OF THE WORKS PROGRESS ADMINISTRATION WITH LABOR ORGANIZATIONS AND SPECIFICALLY WITH THE WORKERS ALLIANCE

The labor relations policy of an organization as large as the Works Progress Administration is a matter of prime importance, and I believe it might be well for me to state very briefly my own opinion concerning this matter. I believe in the right of workers to organize and to present their views through the channels of organization to those who are responsible for the operation of the

program. Injustices are bound to arise in as vast an undertaking as the Works Progress Administration, and the individual, particularly at the bottom of the heap, is often powerless to present his case unless some labor relations machinery is provided. The fact that Works Progress Administration project workers are receiving their wages from Federal funds does not appear to me to be any argument against their right to form organizations for the purpose of presenting their views.

Something has been said to the general effect that this right of organization should not apply to project workers because their organizations become pressure groups seeking larger appropriations. "Pressure groups" is a term in quite common use today, and the existence of such groups is of course undeniable, as you gentlemen know only too well, but perhaps in the last analysis it may be said that the making of representations to the Congress as to measures that should be enacted, including those for the appropriation of funds, is merely the functioning of a democratic system of government. If the general principle of denying the right of organization to any individuals who receive Federal benefits were adopted, it would decimate the membership of many organizations other than those formed by Works Progress Administration workers.

It is my policy to deal on equal terms with all labor organizations where their requests are properly presented and to consider each such organization as representative of its membership. There is no sole bargaining agency for Works Progress Administration workers. This is not only my policy, but that of my predecessor, as evidenced by General Letter No. 90, the provisions of which I would like to read at this point.

So much has been said about the Workers Alliance that I would like to devote a portion of my testimony to that organization. I was appointed Federal Administrator on December 24, 1938. Prior to that time my acquaintance with Mr. David Lasser, president of the Workers Alliance, was extremely limited, and I had had no conferences with him whatever, as there was no reason for him to deal with the portion of the Works Progress Administration which constituted my field of responsibility. Since my appointment I have seen Mr. Lasser, each time in company with Mr. Herbert Benjamin, secretary of the Workers Alliance, on four occasions, namely, December 28, 1938, February 9, April 12, and June 7, 1939. I would like to give the committee a brief résumé of what occurred at each of these meetings.

The first meeting, on December 28, 1938, was devoted largely to a general discussion of relations between the Works Progress Administration and the Workers Alliance, and specifically to certain points which had been raised by Mr. Lasser in a letter of December 6, 1938, to Mr. Aubrey Williams, a copy of which I desire to insert in the record at this point. As I had just been appointed Federal Administrator, I was obviously in no position to make any commitments to Mr. Lasser and told him so frankly, and according to my recollection he replied that he appreciated my position.

During our meeting of February 9, 1939, Mr. Lasser presented to me a letter dated February 8, 1939, concerning (1) changes in the 1938 Relief Act, (2) labor relations on Works Progress Administration, and (3) wages on Works Progress Administration. A reply to this letter was made under date of February 18, and I desire to submit a copy of the reply for the record at this time.

Early in April I had an exchange of correspondence with Mr. Lasser consisting of a telegram from him to me dated April 1 and my reply of April 3. These had to do with the matter of the reductions in the Works Progress Administration program which were necessary at that time. I would like to read these into the record.

An exchange of correspondence upon another matter occurred at about the same time. This had to do with the question as to whether the Workers Alliance was the sole bargaining agency for Works Progress Administration workers. The correspondence on this matter consisted of the following: Letter dated March 30 from Mr. Lasser to Mr. Rauch about Congressman MAAS; reply of April 3, and letter from Mr. Lasser of April 4.

I wish particularly to call attention to the fact that Mr. Lasser's letter of April 4 contains a definite statement that he does not claim that the Workers Alliance should be recognized as the sole bargaining agency for Works Progress Administration workers.

On April 12, 1939, I met Mr. Lasser and Mr. Benjamin for the third time, the topic of discussion at this meeting being the size of the reductions which I proposed to make in the Works Progress Administration program from that date until the end of the fiscal year. The discussion was very general in nature and consisted largely in my listening to the ideas which Mr. Lasser and Mr. Benjamin expressed as to the way in which reductions should be made.

My fourth and last meeting with Mr. Lasser was on June 7, at which time he and Mr. Benjamin, with 11 delegates from the Right-to-Work Congress, which was then in session in Washington, called at my office. They submitted to me at that time a letter setting forth certain requests, which I desire to submit for the record. These requests related to—

(a) The size of the appropriation for the fiscal year 1940, including their recommendation that it be $2,250,000,000.

(b) The labor-relations machinery which should be set up by the Works Progress Administration.

(c) The inadequacy of Works Progress Administration security wages.

(d) The establishment of competitive tests for administrative and supervisory positions.

(e) The continuation of the Federal project No. 1.

The foregoing represents a summary of my relationships with the head of the Workers Alliance. I wish to state again that this organization, so far as I am concerned, represents its membership, and I believe that Mr. Lasser testified before you that it had about 150,000 dues-paying members. I cannot avoid feeling that representations that the Workers Alliance is a subversive organization have been considerably exaggerated. I can certainly say that so far as my personal dealings have been concerned, no improper request has been presented to me by that organization and no demand has been made of me as a demand. I have stated to the representatives of the Workers Alliance that I would discuss matters concerning labor relations, but that decisions in those matters were my own responsibility which I could not under any circumstances delegate to anyone outside of the Works Progress Administration.

Perhaps the proportion of Communists in the Workers Alliance is relatively high. I do not know. However, if that is the case, I do not think it is unusual, because the Workers Alliance is recruiting its membership from project workers who have been pretty severely buffeted by fate, who have taken an economic licking, and whose normal tendency would be to aline themselves with a political party which promised a utopia in which everyone would be happy and prosperous.

I have gone into this question of relations with the Workers Alliance in some detail because of the relatively large amount of discussion in the public press on this subject, which led me to believe that the situation required clarification. I would be very glad indeed to answer any questions on this matter which the committee may desire to ask me.

In closing my prepared statement I would like to say that investigators and witnesses for the committee have given testimony which has been quite severely critical of several of our State administrations, the operation of a few of our projects, and our relation with sponsors as to their financial participation. I am therefore asking to be permitted to submit for the record a rebuttal of such of this testimony as time has permitted us to collect.

However, in view of my previously announced desire to limit my testimony at this time to broader issues, I do not wish to discuss these matters now, and therefore close my statement.

The Duty of the Press

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

Mr. LUDLOW. Mr. Speaker, the centenary of the Press Gallery of Congress, which we are celebrating this year, may well be accompanied by thoughtful meditations on the duty of the press. We have in this country a free press, and let us pray that it will ever remain free.

When we observe how the press in other lands is bulldosed, controlled, suppressed, and manipulated by dictators, we should thank God on bended knee that no such condition obtains in America. In the totalitarian states the citizen either gets no information at all through the press or such twisted, garbled, and colored information as suits the whim of the dictator. In free America it is altogether different. When I read some of the things that are printed about our well-meaning President in hostile newspapers I feel like licking the editor, but I thank the Almighty that the editor has a right to print such things.

The absolute freedom which the press enjoys under our Bill of Rights, the inability of those in authority to dictate to it or to control it, imposes upon our newspapers a high responsibility of so conducting themselves that they will be a helpful influence and not an undermining, corroding influence in the social order.

The newspaper should be something more than a mirror of life. The vast power which the newspaper editor in America enjoys under the constitutional guaranty of freedom of the press makes it possible for him to be a trail blazer, a proponent of better things, a doer of great deeds, a public servant in the greatest sense of that term.

Some years ago, when I was president of the National Press Club, the world's largest organization of newspapermen, I

was asked to write an article on The Duty of the Press, and at that time I put on paper some views derived in a long career devoted to journalism. In the hope that my observations may be regarded as having an appropriateness in association with the centenary of the Press Gallery, I present the article referred to for printing in the RECORD. It is as follows:

THE DUTY OF THE PRESS

(By LOUIS LUDLOW, president of the National Press Club)

An invitation to write a "short article" on the Duty of the Press brought instantly to my mind two occurrences. One of these was told to me long ago by a good old Presbyterian elder and I was an earwitness of the other. At a busy meeting of the Presbyterian General Assembly many years ago, when there was a full program and time was precious, the moderator made this announcement:

"The next event will be a discussion by the Reverend James McCosh, president of Princeton University. Subject: The Immortality of the Soul. Time allotted, 1 minute."

The other incident was of more recent vintage. A few weeks ago the National Press Club celebrated "Lame Duck Night," when defeated Members of Congress were the guests of honor. Leo Sack, the clever and adroit ring-master, warned all of the crippled ducks at the outset that speeches would be limited to 8 minutes. This threatened arbitrary application of the gag irked Senator Irvine L. Lenroot, of Wisconsin, who, when he arose to speak, said in an outburst of simulated indignation:

"The very idea of expecting a United States Senator to discuss any subject under the sun in 8 minutes! How ridiculous!"

Paraphrasing Senator Lenroot, I can well exclaim:

"The very idea of expecting a prolix and prosy correspondent to discuss the Duty of the Press in 2,000 words! How ridiculous!"

Probably the upshot will be that I will do as Rev. Mr. McCosh and Senator Lenroot did. The distinguished clergyman treated that 1-minute limitation as a scrap of paper and he thrashed around for half an hour, or so, on The Immortality of the Soul without in any way exhausting the subject. Senator Lenroot defied Leo Sack to do his worst and, although Mr. Sack was armed with a portentous gavel that Speaker Longworth had loaned him, it had no efficiency whatever in providing terminal facilities for the Senator's brilliant speech, which rippled on to the great delectation of the audience for about 40 minutes.

Personally, I am glad that the invitation to write this article came in the form of a sliding scale, which specified 2,000 words as the minimum and 2,500 as the maximum. I speak for that extra 500 words right now.

The responsibilities of the press are very great and very real. The eulogium on "The Power of the Press" which is a part of the unctious politican's stock in trade may seem to be a bromide of the stalest and most unprofitable sort, but it cloaks an obvious truth. The press is, indeed, mighty and writing for publication is a serious business. No man can foresee how far the words of a lowly reporter will travel or what astounding consequences may sometimes develop from an article that is seemingly inconsequential at the time of publication.

Out of my own life I might cite some striking instances in point. In doing so I disclaim any thought of self-glorification. It is only because these experiences come vividly to my mind and I can vouch for their authenticity that I herewith commit them to paper. My purpose in recalling these events is to illustrate the power of suggestion which often gives the words of the reporter a potency and projectile force that is amazing to the last degree.

In the fall of 1906, when I was on the staff of the Indianapolis Star, I went on a roving commission into the various congressional districts of Indiana to write up the political situations. In the Republican ranks of the Eleventh District there was a schism and an undercurrent of revolution, the extent of which was by no means apparent on the surface. In an article sent from Logansport and featured on the first page of the Star I drew an analogy between the Republican opponents of Representative Fred Landis and the frogs that infest the millpond back of the barn on almost any Indiana farm, which, although only three in number, sound like a million frogs when they croak in unison.

"In the Eleventh District the air is full of frog music," I wrote, "but diligent inquiry reveals the fact that there are only a few frogs as compared with the entire voting population."

Immediately after this article appeared the power of suggestion got to work. The particular idea the article suggested to the Republican opponents of Mr. Landis was the organization of "Bullfrog Clubs," which was done forthwith all over the district. A button was especially designed with an embossed frog as the emblem of the malcontents. "Knee-deep" was adopted as the password and hailing sign of the anti-Landis bullfrog Clubs, and largely by this means a body of anti-Landis sentiment was worked up that turned the district topsy-turvy, swept Landis out of office, and for 10 years sent a Democrat to Congress from that district, which had long been regarded as impregnably Republican.

Although my Logansport article backfired most outrageously the next important suggestion that I was lucky enough to launch got off in the right direction, and it almost made a President of the United States before it spent its force. In the summer after the eleventh district upheaval we experienced our usual off-year dullness in campaign circles. These doldrums always tested the inventive genius of political reporters like myself, who were hard put to maintain the dignity of a regular column. One day I was conversing with Albert W. Wishard, an Indianapolis Republican leader, who was always sympathetic and helpful in advancing ideas to be elaborated and expanded and window-dressed in my individualistic way into filling the yawning space set aside for my signed articles.

"Why don't you propose Tom Marshall for the Democratic gubernatorial nomination?" said Wishard. "He's the best timber in the Democratic Party and he would carry the State. You needn't say so out loud," he added, with a chuckle, "but I would vote for him myself."

Wishard and Marshall had been students together at Wabash College and were fast friends.

"I will take a flyer on Tom Marshall," I responded, and I wrote an article on Marshall for Governor that traveled with 10-league boots. Mr. Marshall himself, on page 154 of his Hoosier Salad, tells the story of how he was catapulted into public life.

"I was lost, or thought I was, in the pine forests of northern Michigan in the summer of 1907," he says, "when word reached me that my good friend, LOUIS LUDLOW, had taken his life and his reputation in his hands and had dared to assert that he thought I would make a good Democratic candidate for Governor. His suggestion was immediately approved in a two-column editorial in the Fort Wayne Journal-Gazette by the most loyal soul who ever lived on earth, Andy Moynihan. Mrs. Marshall and I came back from our vacation brown as berries and impecunious as tramps. I found that my law office was about to be turned into political headquarters. My partners had searched in vain for anything in my life that distinguished me from the common run of men, so they had ventured into the field of fiction, had written and had printed an 8-page pamphlet reviewing the history of the Marshall family from the time of the flood down to the year 1907."

Marshall was elected Governor and then he ascended in pyrotechnic fashion to the Vice Presidency, and when President Wilson became a casualty of the World War and his life hung in the balance there were many lingering months when the elevation of Mr. Marshall to the Presidency was expected momentarily.

What has all this to do with "the duty of the press"? Nothing, except that it proves in a rather convincing way, I take it, the power of the press, the indefinable, the far-reaching efficiency of the subtle force that operates so potentially on men's minds and which is based upon suggestion. Up to the moment when Albert W. Wishard, a stalwart Republican, suggested Marshall, a stalwart Democrat, for Governor, and I whipped the suggestion into a newspaper article, Mr. Marshall, who was a prosperous lawyer with a large practice, had no more thought than the man in the moon of entering upon a political career. If a humble reporter on an Indianapolis newspaper could start a man straight toward the White House, what then may we expect of others in the profession who are in higher station and more influentially circumstanced? And since a large element of the American people believes what it sees in the newspapers, is not the field in which this power of suggestion operates, either for weal or for woe, practically illimitable?

There have been and always will be hairsplitting arguments as to what the newspapers should print and what they should not print, and countless homilies have been spoken and written on the duties of the press, but it has always seemed to me that there is nothing very abstruse or recondite about the matter. On the contrary, it strikes me as being, in the main, a very elemental proposition. God places upon every human being who inhabits the earth the responsibility to do right according to his lights and opportunities and no exception is made in the case of reporters, editors, and publishers. It seems to me that if this simple rule were applied to given cases it might often lead us out of the bog of confusion when no amount of disputation over theories and formulas would get us anywhere.

I would say, therefore, that first of all a newspaper should have a conscience. Its primary responsibility is to serve mankind, and no other agency on the globe is as well fitted to perform that service in myriad ways. It cannot discharge that obligation if it is made a sewer of filth through which flows the putrid output sometimes misnamed "news" that acts as a perpetual stimulus to vice and crime. I refer now, especially, to the sensation-mongering sheets that feature the "human triangles" and play up all of the salacious details of the Peaches Browning cases. No argument that could be advanced for untrammeled freedom of the press—and it is of the highest importance that the press shall be kept free—offsets the fact that the publication of these prurient details brings great power for evil to bear, through the influence of suggestion, upon impressionable young minds.

The press has a responsibility not to print as well as to print. Many of the stories of human errors that are printed nowadays with garish display in a certain class of newspapers should be

minimized and "played down," while many others could be and should be omitted altogether.

With all of the respect due to a great newspaper genius, I cannot but feel that Charles A. Dana erred grievously when he said:

"I have always felt that whatever the divine Providence permitted to occur I was not too proud to report."

Dana's dictum on news was that everything should be published that was of human interest, but I will venture the assertion that multitudinous things of human interest happened which he did not describe in his New York Sun. The hoary dictum of Dana, so often invoked by apologists for sensational newspapers, is not a dependable criterion. I prefer the Canons of Journalism adopted by the American Society of Newspaper Editors, which declare:

"A newspaper cannot escape conviction of insincerity if, while professing high moral purpose, it supplies incentives to base conduct, such as are to be found in details of crime and vice, publication of which is not demonstrably for the public good."

In my judgment the function of a newspaper is to suppress, as well as to publish. I know that in my long and exceedingly active career as a newspaper worker I have suppressed as many items as I have written for publication. I have no apology to offer for it. On the whole, I think I am prouder of the items I have suppressed than of those I have published. While in many instances the items that I sent to the graveyard measured up to Dana's standard of "human interest," publication would have wrought injustice to some one or would have brought pain to some poor soul who did not deserve it. I think one of the funniest and strangest sights I ever witnessed was that of a bow-legged boy delivering a high-school commencement address out in Indiana. His legs looked like two animated brackets and, as if to accentuate his physical imperfection, while he was droning through his speech a cat came from somewhere in the rear of the hall, sauntered across the stage and walked with tail up between his legs. The audience roared. Here were the makings of what Mr. Dana would have called a good "human interest" story and I was not slow to grasp it, but when I looked down from the reporters' box and saw the face of the boy's mother as it colored crimson red and thought of how she had almost worked her fingers off to put her son through school I said to myself that I would rather die than write anything that would call attention to that young man's deformities. When I cut out the cat story I killed the best part of my report, but even now I am glad I did it.

E. Lansing Ray, publisher of the St. Louis Globe-Democrat, one of the great newspapermen of the country, has said that the first essential of a newspaper is that it be interesting. A newspaper can be interesting without being putrid. In this world of ours there is an infinite variety of interesting subjects to be written about without stressing those things that cause minds to be polluted and hearts to ache. God expects of newspapermen exactly what He expects of all of His children everywhere, and that is that they will do all they can to make the world a better place in which to live, only, I think He must expect a little more of newspapermen because they have richer opportunities and their power is greater. Any newspaperman, whether he be a silk-hatted journalist or a cub reporter, who uses his power for any selfish or unworthy purpose is faithless to a high trust.

These thoughts bring up the question, "To what extent should a newspaper be a mirror of events and to what extent should it be a preacher?" My answer is that it can, and should, be largely both mirror and upbuilder. It cannot overlook the sordid and seamy side of life, but it can present the news of crime and criminals in a way that will do the least harm to the social structure and that will tend to lift society into a more sublimated atmosphere. The modern newspaper is not performing its function if it merely chronicles the news. "For unto whomsoever much is given, of him shall be much required." The editor should be a leader among his fellows, a proponent of better things, and a doer of great deeds for the benefit of his community. He should be a trail blazer in all kinds of community service that will contribute to the welfare of society. Whether his activities for the moment take the form of an effort to secure a town auditorium, or another railroad, or a community house, or what not, is immaterial, for there will always be something worth while for his mind and his hands to do.

In conclusion let me say that, in my opinion, what the journalism of America needs today is more of the spirit of the Master. I have in mind now two great newspapers, both of which I represented for many years as Washington correspondent, and with the traits of which I am equally familiar. One is an iconoclast. Some call it a tyrant. The other is an upbuilder. Each one dominates the city where it is located. The former governs because everybody is afraid of its power, which is often ruthlessly exercised. The latter is a great humanitarian newspaper and lives up to its golden precept of helping individuals and enterprises that are worthy of assistance, the result being that it rules by loving kindness. While both of these newspapers are tremendous money makers, it is demonstrated in the case of the latter that a newspaper can be run on a basis of the broadest humanitarian sympathies and community service without damage to its counting room. Many worthy men and women, always speaking in terms of endearment, have told me how they have been helped by this newspaper. If all our journals were like it, life would indeed be a real brotherhood.

Address by Postmaster General Farley to Tennessee Postmasters

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 13, 1939

EDITORIAL FROM THE CHATTANOOGA (TENN.) NEWS

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Chattanooga News of June 6, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chattanooga News of June 6, 1939]

A TIMELY SPEECH BY A USEFUL PUBLIC SERVANT

James A. Farley, Postmaster General of the United States and chairman of the National Democratic Committee, made an excellent impression here Monday morning in his speech at the breakfast of the Tennessee postmasters. He was as genial as only "Gentleman Jim" knows how to be. He was close in touch with the essential qualities which postmasters need to seek and to observe, in their functioning in the No. 1 business of the Nation. And he was admirably sound and persuasive in his expressions of general views of politics and public policy.

Mr. Farley stressed the obligation upon all post-office people who should show the utmost courtesy to the public they are serving, whether complaints as to that service be right or wrong. He emphasized other elements of the Government's business. In what he said he gave further reason for the common judgment that his administration of this great functioning arm of our Federal Government has been admirably done under his shrewd and painstaking administration.

Then, as to general matters, he was at his best in emphasizing the objectives of the administration. He said these in a simple and easily understandable format. Mr. Farley stated them thus:

"1. Business should make a reasonable profit from its investments.

"2. Labor should secure a wage that is sufficient to bring a sense of dignity and security.

"3. Farmers should reap rewards from their toil sufficient to lift the mortgage from the farm and leave a bank balance.

"4. We want the banks to thrive and to use their gold to meet the needs of industry and finance home building.

"5. We want business to boom—but we want all America in on the business.

"6. We want the aged workers free from the haunting fear of a twilight of misery and poverty.

"7. We want free press, free speech, and the right to worship God according to the dictates of conscience."

To this he added that the tumults and alarms now afflicting the world as a whole make it of major consequence that we here in America learn how to present a united front of liberty and democracy to the rest of the nations.

"Let the American people," urged the Postmaster General, "lay aside all backbiting and bickering, and let us present a united democracy as an example to the world. Liberty and freedom can never be extinguished while the torchlight of Jeffersonian democracy is held aloft by the citizens of this Republic." It was a timely speech, made by a public servant as able as he is genial and kind.

Editorial Endorsement of the National Youth Administration

EXTENSION OF REMARKS

OF

HON. ROSS A. COLLINS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

Mr. COLLINS. Mr. Speaker, the editors of the country have only kind words for the National Youth Administration.

This is particularly true of those who are close to the scene, who actually know what this well-administered, community-serving Federal agency is doing in their own respective localities. It has its critics of the New Deal and relief legislation in all their aspects but little fault has been leveled at the National Youth Administration itself.

Editorial endorsement of N. Y. A. comes from papers of all shades of political opinion in cities and towns of all sizes. The National Youth Administration probably has been the object of less hostile comment than any other Federal emergency agency. There is no section of the Nation, so far as I am aware, that is without editorial tribute to the constructive achievements of the National Youth Administration. Indeed, considering the fact that the N. Y. A. operates in all but a very few of the 3,000 and more counties of the United States, newspaper opinion seems practically unanimous in applauding its good work.

Let me call attention to some of these expressions of recognition and good will. They speak for themselves. They are not propaganda. They emanate from the newspapers themselves. They show what the home-town paper and home community think of the N. Y. A. This general chorus of praise and appreciation is by far the most convincing testimonial to the intelligence and sincerity, as well as the administrative efficiency, of Administrator Aubrey Williams and his staff that could be laid before Congress.

Whatever may be said of the editors of this Nation, they are not sentimentalists. If some have made an exception of the N. Y. A. in their broadsides against the progressive measures of this administration, you may be sure there is a sound reason for their attitude. But let them tell their own story.

Here is an editorial published June 9 in the Charleston Gazette, of Charleston, W. Va., which is greatly disturbed by the rumors that N. Y. A. is to be given but $81,000,000 for the coming fiscal year, instead of the $123,000,000 sought by President Roosevelt. Under the heading "Human Material," it says:

There are more than two and one-half million youths between the ages of 16 and 25 in this country, members of families with income of less than $40 per month. The President has asked Congress to provide $123,000,000 to insure the future of these youths. Congress is haggling over the price of this human material, tentatively offering to compromise on approximately $81,000,000.

There is no one who can gainsay the fact that the youth of today are the citizenship of tomorrow. The surest—the only way to build an ever finer America is to train our youth for future responsibilities and leadership. Herein lie potential human values almost beyond comprehension. Is it not our foremost, our prime duty to our country to provide for its future? Yet Congress haggles.

The record of the National Youth Administration is that of major accomplishment. We know of no Government agency that has done more, for it has been building citizenship. Its administrative cost is less than 4 percent; salaries paid its administrative staff are less than those of the average Federal employee. We have seen no evidence of waste of funds. We have seen much accomplished. We devoutly desire to see more done.

Referring to the N. Y. A. achievements in West Virginia, the Gazette concludes:

As for our Democratic Congressmen, it would be an absurdity for them to vote curtailment of a project which is so free from waste and politics and which is doing so much for our State.

That the N. Y. A. must have a splendid program and reputation in West Virginia is indicated by the fact that the News-Register is equally strong for an appropriation of $123,000,000. On June 8 it published this editorial under the caption, "Encouraging Youth":

There are 4,000,000 youths in the Nation who are unemployed, and 80,000 of them between the ages of 18 and 25 are in West Virginia. President Roosevelt has requested Congress to appropriate $123,000,000 for the National Youth Administration for the ensuing year.

If Congress approves that appropriation, it will give the N. Y. A. an opportunity to broaden its field in training the youth that is the future backbone of the Nation.

Three main features of the program include employment of youth out of school on work projects, resident training centers in which N. Y. A. attempts to ascertain the type of work for which youth is best suited, and student aid whereby needy high-school, college, and graduate students are enabled to continue in school.

Of all Government movements, none is more worth while than the Youth Administration. Every dollar spent in this direction will come back a hundredfold in keeping kindled the spirit and courage of our youth.

It is a long way from West Virginia to New Mexico, but I have here an editorial from the Albuquerque Tribune, of Albuquerque, that is one of the finest examples of newspaper cooperation with a Government agency I have ever noted. The Tribune, for some time past, has been conducting a newspaper campaign for community youth centers in Albuquerque, to be constructed by N. Y. A. and urging municipal cooperation to provide them.

I am particularly glad to call your attention to this editorial endorsement of N. Y. A., because the Albuquerque Tribune is a member of the powerful and lately quite critical Scripps-Howard newspaper chain. But it likes what N. Y. A. has done and can do in its own town and writes about it in an editorial, in April last, entitled, "Why Not a Chain of Community Centers?" It begins the editorial with the following quotation from President Roosevelt:

In providing for the health and education of its children for the formation of their minds and characters, in ways which are in harmony with the institutions of a free country, democracy is training its future leaders. The safety of democracy therefore depends upon the widespread diffusion of opportunities for developing these qualities of mind and character that are essential to leadership in our modern age.

The editor then says:

President Roosevelt has pointed squarely at a project for Albuquerque. Federal funds are available. They may not be always. The time to go to work is now. The Tribune would like to see established in Albuquerque a chain of community centers. We have two. We need at least five. The program is entirely feasible. The N. Y. A. stands ready to provide labor for construction of clubhouses and personnel to supervise the play. It has already cooperated in two splendid projects, one in the Heights and one at Barelas * * *. We hear a lot of preachment about saving democracy these days. Some of our statesmen are worrying about democracy in Europe. We've got plenty to do at home. President Roosevelt says, and he is right, that the safety of democracy lies in opportunities for its children. Albuquerque can demonstrate practical interest in the welfare of democracy and of the city by joining in a campaign to establish this chain of community centers. The conditions were never more ideal nor the need more urgent.

Some of the keenest editorial opinion of our day comes from the columnists and syndicate writers who study the Washington scene and whose writings appear in hundreds of newspapers. One of the most widely known and quoted of these national observers is Ernest Lindley, who made an intensive study of the National Youth Administration in 1938 and published a volume on its program entitled "A New Deal for Youth." With reference to the then reported intention of the Appropriations Committee to reduce the appropriation sought by N. Y. A., Mr. Lindley wrote in the Washington Post of Sunday, June 11, an interesting summary of N. Y. A.'s accomplishment, in which he said:

The man who lets his machinery rust is considered a wastrel. But some Congressmen seem to think they are being thrifty when they allow the youth of the Nation to rust in idleness. Many of these young people have never learned how to work—much less learned any skills which will enable them to earn a decent living. A reduction of one-third in the N. Y. A. appropriation is one of the most expensive cuts Congress can make.

Bruce Catton, of the N. E. A. Service, writes for some 700 newspapers from Washington. Commenting upon the statement by Administrator Williams that the increase in funds sought for the coming fiscal year would give aid to another half million youngsters, Mr. Catton writes:

Is all of this worth what it costs? Well, for one thing, it is enabling 400,000 youngsters to continue their education. It is giving a quarter of a million more the experience by which, later on, they can get jobs and become self-sustaining. The material it is working with is pretty high grade, too. Currently, for instance, 88 percent of the N. Y. A. students are among the top-ranking students in their respective schools. Perhaps it is a general recognition of that fact that has spared N. Y. A. much of the criticism that is visited on so many other New Deal projects.

When the question of converting an old school property into a playground came up, the Seattle Post-Intelligencer, of Seattle, Wash., urged action and cooperation with the N. Y. A. in an editorial headed "Our Playground Problem," in which it said:

The National Youth Administration and the Junior Chamber of Commerce have proposed that the present property be taken over for a large-scale recreational project. This proposal is soon to be submitted in detailed form by the school board. Certainly the needs of boys and girls of this district for an adequate playground must be given attention in any plans for future utilization of this property.

Commenting upon the turning over of some municipal property for an N. Y. A. training center, the Williamsport Sun, of Williamsport, Pa., in an editorial entitled "Service to Youth," says of the N. Y. A.:

The practical character of the N. Y. A. program and the generally recognized importance of its work in salvaging youth from the worst effects of enforced unemployment and denial of economic and social opportunities should make this community deeply interested in doing what it can to make a success of the youth training center to be established here.

The same idea is forcefully expressed by the Lowell Sun, of Lowell, Mass., up in staid and conservative New England, where N. Y. A. assistance in many of the textile centers has been much appreciated. "Saving Youth for America" is the caption on the Sun's editorial, which reads:

The National Youth Administration has done a good deal to help young people who were cast adrift by the depression. Its value as a defense against the peril of dictatorship has generally been overlooked; but that it plays a useful role in that regard is indicated by speeches at a regional conference of N. Y. A. supervisors.

Dr. Henry Busch, a college professor, pointed out that unemployment and dissatisfied youth constitute the most fertile field a would-be dictator can cultivate. If such a leader can take such young people, give them uniforms and a program, promise them jobs, and make them feel that they are part of a great cause, his battle is half won. "For youth," says Dr. Busch, "will not sit around forever waiting for something to turn up."

It is in removing youth from the danger of this kind of exploitation that the National Youth Administration performs one of its greatest services.

The Star, of Minneapolis, Minn., feels the same way about it. Under the caption of "N. Y. A.'s Achievement" it comments editorially:

Like the C. C. C., the N. Y. A.—National Youth Administration—has been one of the New Deal projects which has gained far more approval than criticism and has attracted, in fact, a large measure of public acceptance * * *. With C. C. C., N. Y. A. is carrying a great share of the burden of keeping youth busy and happy and making it increasingly apt in productive study and work, which will some day "pay out" in better citizens.

A little farther west the Tribune-Herald, of Casper, Wyo., waxes enthusiastic praise of N. Y. A.'s activities in its own city. "N. Y. A. Dividends" is the title of the editorial, which reads in part, concerning acknowledgment of the good management of the N. Y. A. program, as follows:

On the latter score it is doubtful if there is a city or community in Wyoming which can equal Casper's record in enthusiasm or cooperation, or in net results * * *. And for the national program, as a whole, much can be said if experiences elsewhere measure up in any substantial degree with results here. Directing the forces of unoccupied youth into clean, constructive channels always pays good dividends.

Commenting upon a woodcraft project, the Times, of Reading, Pa., said recently:

Useful projects of this kind are a boon to the community as a whole as well as to the individuals who are thus given employment. In all fairness to the Works Progress Administration, National Youth Administration, and other Federal agencies, we should bear such projects in mind when Government "spending" is up for criticism.

When a proposal was made to provide an N. Y. A. training center in Altoona, Pa., the Mirror, of that city, got behind the plan and gave it an editorial endorsement, as follows:

Establishment in Altoona of a training school in the mechanical trades for graduates of Blair and Altoona County high schools, projected by the National Youth Administration and presented to the Altoona School Board, should prove attractive and advantageous. The Government would benefit by drawing students with whom the mechanical skills are traditional, the young men would be provided training at no expense to themselves, with employment assured, the city would have additional buying power, and the school district would have better served the community as a whole by participating in the program.

The Brownwood Bulletin, of Brownwood, Tex., gives credit to the N. Y. A. for aiding young people at a critical time. In an editorial entitled "N. Y. A. to the Rescue" it says:

Conditions of the past few years have placed heavy burdens upon many ambitious young people whose educational plans have been seriously disrupted because of lack of funds and of jobs to make them partially self-supporting while attending school. The N. Y. A. has come to their rescue and has been the answer to the needs of a great many of them. Because of the good work it has been doing, this division of the general recovery and rehabilitation program of the National Government has been subjected to a minimum of criticism.

In North Carolina, where the National Youth Administration has established a "related training" program, James A. Best, writing in the Asheville Citizen Times, said:

Having only meager resources with which to work—the National Youth Administration gets only a comparatively small portion of the billions appropriated for relief—this agency is attempting to give youths work that will pay them a small amount, and at the same time provide them with a trade and an education that will make them self-supporting.

A survey of the Works Progress Administration rolls will show that a great majority of those who must turn to the Government for a livelihood lack the skill to compete successfully in private work. Many looked to the communities or local governments for assistance before establishment of the Works Progress Administration.

Therefore the National Youth Administration is not only helping these young people to learn a trade but is helping to relieve an economic condition that otherwise would continue unabated.

In Beaver Dam, Wis., N. Y. A. has established a machine shop training project, and the Beaver Dam Citizen, in describing the project, had this to say:

As they hammer sheets of copper from confiscated stills and illegal gambling devices into useful office equipment, National Youth Administration youth on the metal "trade finding" project here are getting a new lease on the future.

Unemployed for months, these National Youth Administration workers welcomed the opportunity to "get off the streets" and receive valuable and practical experience toward chosen fields in metal-trade work.

The entire program is one of guiding youth in finding a vocation suited to them. It is not intended to turn out skilled workmen, but rather to correct haphazard job training or complete lack of training for any definite trade, among unemployed youth, and turn out better citizens well placed industrially according to aptitude and ability.

In describing work done by N. Y. A. students in the Cleveland School of Art, Grace V. Kelly, writing in a recent issue of the Cleveland Plain Dealer, said:

All of these students, gifted and industrious, were enabled to secure their educations through practical work done by them under the N. Y. A., which would appear to be a Government activity the usefulness of which hardly could be questioned.

The Paris (Tex.) News comments on the girls' training project set up by the N. Y. A. in that city:

And while counting up the educational facilities available to American youth, don't overlook the girls' resident training project of the National Youth Administration which is functioning here. Certainly this project is worthy of continuation. This will be agreed by every person who has come in contact with the work.

The N. Y. A. boys and girls themselves get a bouquet from the Here and There column in the Fort Worth Star-Telegram. Speaking of the N. Y. A. group in that Texas city, the writer says:

The membership is made up of young men and women in all kinds of jobs. They are Jacks and Jills carrying their own pails and qualifying as American citizens. This part of the youth movement is moving effectively and happily.

Protesting strongly against the refusal of Harvard University to participate in the N. Y. A. student-aid program, the Harvard Crimson, student daily newspaper, calls this "narrow-minded individualism," and points out that:

Only two strings are tied to National Youth Administration aid. Those who benefit must be in such great need that without it they could not attend college; and they must be in good standing scholastically. Beyond this there is nothing. Methods of administration, the nature and amount of work required in return,

the choosing of recipients—all these are solely in the hands of the university. Even to Harvard, traditionally terrified by anything smacking of Government interference, such terms must appear generous and straightforward. Ninety-eight percent of all the Nation's schools eligible to receive aid, including Yale and Radcliffe, have gladly accepted, and as yet there have been no signs of their being compromised by the gift.

In reference to the educational opportunities provided by the related training program of the National Youth Administration, the Journal of Antigo, Wis., recently stated editorially:

Another activity that promises even greater possibilities in an educational way to deserving young men is the N. Y. A. training course now being given to some 20 young men here. These young men are taken from the country and are not financially able to attend school, but are desirous of improving themselves along lines in which they are interested. There are some 10 or 11 schools of this kind in the State. Each school specializes in certain work. The Antigo School, which will serve 3 counties, will direct its training largely to agriculture. If the young man finds he is best in auto mechanics, for instance, he can be transferred from the Antigo School to one specializing in that work. But regardless of the specialty each school will give a general education that will better fit the young man to earn a living at work that is suited to him. And the fine thing about it is that he works during his training and is earning enough to pay expenses.

The Boston (Mass.) Herald, in a recent editorial devoted to the National Youth Administration program in that State said:

The turn-over in the N. Y. A. is rapid. Every youth is encouraged to leave it as soon as he can. Vocational aptitudes are studied and counsel on work-finding is freely given. It is always difficult to measure the success of such an enterprise. N. Y. A. aided youngsters usually get marks at least as good as those of non-N. Y. A. students. N. Y. A. project workers are continually going into private employment, but never fast enough to satisfy Mr. Casey (State N. Y. A. director) and his associates. The N. Y. A.'s principal service, it seems, has been in keeping thousands of otherwise unemployed boys and girls busy, and in so doing it has unquestionably helped to keep down the curve of juvenile delinquency. Compared to C. C. C. costs, which run to $1,200 per year per boy, its expense is trifling. A youngster in high school is kept occupied at one-thirtieth of the C. C. C. price; a college student at one-tenth; and an older youth in a work project at one-fifth.

A sign-making project which was operated in Lynn, Mass., recently occasioned the following comment in the Telegram News of that city:

City officials and the public in general in Lynn are paying compliments to the Lynn boys employed under the National Youth Administration who have completed hundreds of well-made and artistic signs for the various city departments. Lynn N. Y. A. boys engaged in this particular pursuit are performing their work under the most competent supervision, thus enabling them an opportunity to develop their talents to the fullest degree. The needy in the city have benefited by the assistance given by the N. Y. A. boys in the repairing, staining, and painting of their furniture.

A most pleasing aspect of this N. Y. A. work program in Lynn is the fact that many of the youths have been able to find private employment as a result of the training received under the National Youth Administration.

The Lawrence Tribune, of Lawrence, Mass., in commenting on the N. Y. A. program in operation in that city recently stated:

Much good is being done throughout the town by the local members of the National Youth Administration.

When the National Youth Administration opened its regional center at the Algiers Navy Yard at New Orleans, the New Orleans States said in reference to job training under the N. Y. A. program:

Having such an army of young Americans prepared to fill useful places in the trials of war or the arts of peace according to the demands of the times, strikes us as being wise national policy. No one will begrudge the millions expended on the N. Y. A. if results such as these are the product.

The Daily Courier-Democrat, of Russellville, Ark., had the following to say in regard to the National Youth Administration in a recent editorial:

The N. Y. A. was created 4 years ago as a depression emergency program, though it has proven so practical and constructive that it should remain a part of our national education program.

The N. Y. A. has operated in Arkansas since President J. W. Hull, of Arkansas Polytechnic College, was appointed director in 1935, and today approximately 12,500 boys and girls in Arkansas are enabled through the N. Y. A. to remain in high school or college or find work on projects such as construction, arts and crafts, clerical assistants, etc. Youths from low-income families, both white and Negro, whose families are in need of Government assistance, are eligible for N. Y. A. benefits, and thousands of young people in the State have received training under expert instructors that has enabled them to find employment in private business and industry.

And the N. Y. A. has left its physical monuments in Arkansas that will live even though this agency should be abolished. The training and employment program is centered in the construction of school buildings, gymnasiums, auditoriums, etc., mostly in the rural communities, where the youths work under the direction of skilled foremen who conduct discussion periods to supplement the actual work. To date 98 major construction projects have been completed in the State and 116 are in active status.

N. Y. A. program should be carried on as part of our education program, either as a separate unit or through consolidation with some other department. Within limited scope it fills a place which has long been regarded by educators generally as a weak spot in our education system.

In reference to the program of the National Youth Administration in Arkansas, the Daily Citizen, of Searcy, said in a recent editorial:

Much credit is due the many agencies working for the social and economic betterment of the youth of the United States. Not merely because Searcy has materially benefited by the work of the organization, we sincerely believe that no governmental agency in Arkansas is doing a more constructive piece of work than the National Youth Administration.

The Daily Banner, of Magnolia, Ark., had the following to say in regard to appropriation of funds for continuation of the National Youth Administration:

When Congress appropriates money for its relief agencies, it will do well to place the program for youth at the top of its "must" list. The work that the N. Y. A. is doing is vital and fundamental and should be enlarged and made into an independent organization free from any regulations which would not work to the best advantage of the youth workers. The more we can do for our youth today, the better our civilization of tomorrow will be.

The program of the National Youth Administration in Arkansas evoked high praise in a recent editorial of the Daily Tribune, of Jonesboro, which had the following to say:

The National Youth Administration has undoubtedly been one of the most effective New Deal agencies to operate within this State.

Craighead County has benefited materially by the N. Y. A. program in both construction work and student aid to both high-school and college students.

We commend the work of this organization and express the hope that it may be permitted to continue serving the young people of Arkansas.

A recent editorial in the Sarasota Herald, of Sarasota, Fla., on the subject of the National Youth Administration, urged the city to undertake an N. Y. A. project with the following statement:

It would seem wise for Sarasota to establish a construction project for the National Youth Administration, not only that it may acquire a fine building, but also to provide skilled men who can take technical jobs to become available in the future.

In an editorial entitled "Valuable Agency," which was devoted to the National Youth Administration, the Miami Daily News, of Miami, Fla., had this to say:

Perhaps one of the most submerged of these agencies, insofar as publicity goes, is the National Youth Administration. Yet here in Dade County the N. Y. A. has been operating on an efficient basis for 5 years and has helped between 500 and 1,000 young men and women find themselves either in student work or in healthy able-bodied occupations.

In south Florida, the projects have operated smoothly and without political favoritism. Some 200 young men and women of Dade County are working on N. Y. A. part-time projects at the present time.

The experiment has been a success in south Florida, an advantage to the affected young people and a benefit to these communities. Certainly there has been no justification for the rather vaguely whispered charges that the N. Y. A. is "regimenting" youth into a private political army.

I find the Morning Tribune, of Tampa, Fla., saying this, under the caption "A New Deal for Youth":

Among the New Deal agencies that may become permanent at the will of Congress is the National Youth Administration. For many years young people have felt more and more that the odds of life were against them; they have felt their insecurity. The N. Y. A. is aiding materially in relieving the situation. It is helping young

people to find anchor until they can work out their own problems. Congress has always shown a helpful spirit toward the care and education of young people and it is believed that the agency may finally develop into a clearing house for the problems of unemployment of American youth.

Another Tampa newspaper, the Times, editorially says:

A significant contribution to social welfare, law enforcement, and civic economy in the Tampa area can be made through the projected new county detention home for delinquent Negro children which the National Youth Administration will begin building next week and for which the county commissioners have appropriated $3,700 for equipment and maintenance. * * * The whole idea sounds excellent, and with proper administration of the detention home the county should get big dividends in crime reduction and better citizenship in years to come.

The Edmonson News, of Brownsville, Ky., has a most unusual editorial on N. Y. A., entitled, "N. Y. A. Boys Accomplish Something With Nothing." It reads in part:

It is so seldom that the Edmonson News feels justified to make favorable comment on the accomplishment of any of the many alphabetical agencies of the Federal Government, and when we do that is news within itself.

However, let credit go where it is due, and we do feel moved to make favorable comment on the project of the Edmonson County N. Y. A. in the building of a permanent workshop at the Brownsville High School. This project is a concrete-block building, built entirely with labor of boys, and even a casual examination of the building should convince some of the "experts" employed by other divisions of the New Deal in Edmonson County that they have been strangely miscarried.

In analyzing the youth unemployment situation in Georgia, the Atlanta Constitution has the following to say on Aids to Youth:

The third and possibly the most valuable agency in its final analysis is the National Youth Administration, which has been applying these same principles in a different manner throughout the State of Georgia. The Youth Administration has been slowly working out an adequate, efficient method of training underprivileged youth in gainful occupations that will mean, in the future, much to Georgia.

In North Carolina the Asheville Citizen a few months ago paid tribute to the N. Y. A. program in a long editorial entitled "School of Experience," in which it said:

Since N. Y. A. first began functioning in 1935 as an auxiliary of W. P. A., some 220,000 young people have been given training. In a real sense, as one N. Y. A. official describes the work: "N. Y. A. projects are not apprenticeships, they are not vocational schools * * *. They are efforts to show inexperienced youth what it means to hold a job, to work for wages, to give a dollar's service for a dollar's pay, to punch a time clock with no alibis accepted."

The good work of the N. Y. A. has been recognized in an editorial in the News-Press, of Fort Myers, Fla., entitled "Boys Get a Break," in which it says:

Rapidly growing to augment the good work of the Civilian Conservation Corps is another New Deal agency, known as the N. Y. A.—National Youth Administration. Without much publicity, the N. Y. A. has supplied outdoor and educational work for a number of Fort Myers boys and girls at the municipal recreation center.

"Giving Youth a Lift," is the headline over an editorial in the Star, of Minneapolis, Minn., which reads:

The work of the National Youth Administration has played a vital role not only in seeing thousands of young people through the depression years but in giving them worthy aims and purposes in life * * * something to live for and work for.

The value of educating intelligent youth who want education but cannot pay for it themselves is incalculable, in terms of social good and individual good.

Certainly this endeavor, as Administrator Aubrey Williams says, is worth continuing, for it pays out in better citizenship, higher accomplishment, an educated and high-grade citizenry guaranteed not to go to seed.

The News, of Wilmington, Del., endorses the N. Y. A.'s program in the following words:

Young people who enroll in the service of the Youth Administration thereby manifest a spirit of industry. When they find permanent employment, that is further evidence of their desire to be useful not only to themselves but also to others. It is to their credit that they accept private employment when there is an opportunity to do so.

National Youth Administration supplies the means of employment when other work is not available. Thus it enables young people to maintain their industrious tendencies and at the same time be earning and learning.

The Times, of Fairmont, W. Va., is generous in its editorial endorsement of N. Y. A. In one editorial entitled, "The Good Work of the N. Y. A.," it says:

Since its State unit was established and its labor begun in the various counties, The Times has maintained that the National Youth Administration was one of the soundest and most valuable of the Federal Government's emergency movements. We came to this belief because of the knowledge of the fine work that N. Y. A. is doing for the unfortunate boys and girls of the State, thousands of whom have been assisted in receiving educations after every other avenue of assistance had been denied the youths.

The Grand Rapids Herald, of Grand Rapids, Mich., lauds N. Y. A. under an editorial caption, "Good Job, Well Done." It concludes the editorial by saying:

We hear only a little about N. Y. A. for it is not a highly ballyhooed project. Perhaps that is one of the things which makes it more worth while than some of those which are always in the newspapers but accomplish little of real value either for themselves or for their community. N. Y. A. really does a good job and does it well.

In Texas, the Lubbock Avalanche hands N. Y. A. "A Pat on the Back," as its editorial comment is headed, for a college project. It says:

Easily one of the finest National Youth Administration undertakings to come under Lubbock observation is the vocational agricultural project at Texas Technological College for which a 6 months' extension has just been authorized.

Last fall the Illinois N. Y. A. conducted a 60-day drive to obtain jobs for 4,000 N. Y. A. youths. It was so successful that many more than 5,000 secured positions in private industry throughout the State. The East St. Louis Journal, praising this achievement editorially and referring to the old charge of boondoggling, said:

There may be some basis for some of the boondoggling charges, but certainly the job that the National Youth Administration has done in this district and throughout the State is proof that that agency, at least, is doing something constructive and that the young people of the Nation are ready and anxious to make their own way in the world if given the opportunity.

The Toledo Blade, of Toledo, Ohio, commends National Youth Administration providing student aid at the University of Toledo. "Help From the N. Y. A." is the heading of its editorial, which says, in part:

Critics of the National Youth Administration will have to think hard to find some way in which to turn this gesture around and put it in a bad light. There is nothing bad which can be said about education being made available to those who might not otherwise be able to afford it. The National Youth Administration is to be commended for this helpful hand given to those who need it.

In the Muskingum Valley, in Ohio, the National Youth Administration has recently established a large regional work-experience center, located near New Philadelphia. Said the Cleveland Plain Dealer, when this project was started:

Establishment near New Philadelphia, Ohio, of one of six regional training schools by the National Youth Administration will greatly facilitate the work of this agency which has done an important job in fitting out-of-school youths into regular employment. * * * Employers today demand skilled workers. Many youths find themselves excluded from possible jobs because they lack the necessary training. This they can get through the National Youth Administration. The need for such a scheme is amply shown by the fact that there is a waiting list of 12,000 for places in the National Youth Administration work projects.

The Hamilton Journal-News, of the same State, warmly endorses the National Youth Administration and its New Philadelphia project. The Journal-News says editorially:

The purpose of these camps is commendable in that they prepare boys for their future work and means of livelihood. * * * Many boys who leave high school find it impossible to obtain employment. This camp will provide the opportunity for some of them at least to choose their life work and lay the foundation in training to meet the requirements of that work. There has been much complaint that manufacturers have found it impossible to secure young men, properly trained to take the places of those who because of age or other causes, are compelled to leave their employment. With such a school as the one proposed, this complaint can be removed and the younger men properly trained to meet industry's requirements.

Mr. Speaker, if the press is the voice of America, then I think I have shown that it has spoken on N. Y. A. and in no

uncertain terms. I do not presume to say there has been no unfavorable criticism; I do not presume to say the N. Y. A. does not have an opponent in the newspaper world. But as I said in the beginning, N. Y. A. per se has been subjected to practically no censure. Some of our conservative editors, who do not like the philosophy of the New Deal, include the N. Y. A. in their general onslaught upon President Roosevelt's policies, but few, indeed, I believe, have found any cause to attack the management and accomplishments of the N. Y. A. under the able leadership of Administrator Williams.

The comments I have given you are but a portion of the immense volume of favorable opinion published by the American press on N. Y. A. In every locality that I have heard of, it is integrated to the community and is well thought of; in fact, the local sponsorship of projects indicates the high regard in which local public agencies and local citizens hold N. Y. A. I might cite the names of many, many other newspapers which have encouraged, supported, and appreciated the efforts of the N. Y. A. to do something for young America; it is one of the most gratifying and, I hold, significant things in the life of our Government today, that there should be such unanimity and enthusiasm on the part of the press for this little publicized Federal agency to aid young people.

The Columbia Basin's "Big Four"

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

ARTICLE FROM LIFE MAGAZINE

Mr. HILL. Mr. Speaker, I ask unanimous consent to extend my remarks in the CONGRESSIONAL RECORD and to include therein a brief article in the June 5 issue of Life magazine entitled "America's Future, the Pacific Northwest: the Story of a Vision and a Promised Land."

In the article, since it deals with those who had the original concept of the Grand Coulee Dam, the name of one of the pioneers, whose name cannot be forgotten in any chronicle of this mighty undertaking, is not mentioned. He is James O'Sullivan, of Ephrata, Wash., who, probably more than any other one man, has been the real force behind Grand Coulee development.

O'Sullivan's interest in the Grand Coulee dates back more than 20 years and since that time his abilities, both as a lawyer and engineer, have been invaluable. It was he who first envisioned the dam as it now is, and who persistently and insistently answered all critics and those who would see private interests enriched at the expense of public convenience and progress. Later he was appointed secretary of the Columbia Basin Commission by the Governor of Washington and held that post until the commission was consolidated with another State agency about 2 years ago. He was then employed by several communities to direct the formation of what recently became the largest irrigation district in the world. At the present time he is the executive secretary of the Quincy Columbia Basin League.

Mr. Speaker, I do not mean to minimize the honor which is due William M. ("Billy") Clapp, Gale Mathews, and Rufus Woods. Theirs is a distinction which will make them immortal in the Pacific Northwest. Nor will they object to my nomination of Jim O'Sullivan to the "big four" of the Grand Coulee.

In years to come the teeming millions who will find happy and contented homes in this most favored section of the United States, tilling its rich virgin soil, laboring in its humming factories, carrying on its diversified businesses or following its many professions, will gratefully remember these four men who first conceived the idea of repeating Mother Nature's artifice in damming the mighty Columbia, but for an economic and useful and lasting purpose. We of the present generation pay homage to the "big four" of the Columbia Basin.

The article is as follows:

[From Life Magazine of June 5, 1939]

AMERICA'S FUTURE—PACIFIC NORTHWEST—THE STORY OF A VISION AND A PROMISED LAND

In the Ephrata Cafe in Ephrata, Wash. (population, 516), three obscure small-town Americans—a lawyer, a newspaper editor, and an abstractor—were sitting over their lunch one July day in 1918. Most citizens were talking about the second battle of the Marne that day, but these three, looking ahead to peace, were thinking about the future of the great raw, thinly settled Northwest country to which two of them had migrated from Nebraska, one from Wisconsin. Inevitably, thoughts turned to the mighty Columbia, second largest river in America, pouring unchecked down to the Pacific, wasting untold quantities of potential hydroelectric power and of water to irrigate the country's rich but arid land. Musing on those lost riches, the lawyer, William M. ("Billy") Clapp, had an idea.

Fifty miles north of Ephrata in central Washington eons ago the Columbia had been dammed by ice. Swelling to a great lake behind this obstruction, the river had flooded over its high canyon walls, flowed off at right angles to its old course. By the time the ice melted and the river returned to its original channel it had carved out a new channel some 50 miles long, 2 to 5 miles wide, 500 to 1,000 feet deep. This gorge, left dry and barren high above the river, was named the Grand Coulee. In the dry country around and to the south of it lay 1,200,000 acres of the Nation's richest land, needing only water to be transformed into a national garden. For 15 years, since the Bureau of Reclamation had reported on the land's potentialities, men had been racking their brains for a way to get water to it.

Billy Clapp turned to his companions. "Why not," he said, "dam the Columbia and pump the water back into the Coulee?" If he had proposed a bridge across the Pacific or a ladder to the moon, it could hardly have seemed more fantastic. To replace the ancient ice with concrete and steel called for a greater building feat than any that man had attempted in all history. But Billy Clapp's friends were men of vision, too. Gale Mathews, the abstractor, bobbed his head. The editor, Rufus Woods, of the Wenatchee (Wash.) Daily World, banged a fist on the table. "Billy has it!"

Past now are the years when they were ridiculed as idle dreamers while Woods campaigned for the dam in his paper and all three pushed their crusade with speeches up and down the State, pleas to legislators, letters to Washington, mimeographed press releases by the thousand. Franklin Roosevelt caught their vision of the Northwest's promise when he visited it as a Vice Presidential candidate in 1920. Thirteen years later, when he became President in 1933, their great dream of water and power at last began to take shape. Today 7,000 men, midway in the 8-year job, are rearing monstrous Grand Coulee Dam.

Vast as it is, the area to be irrigated by Coulee is a relatively small chunk of the Northwest country comprised in the four big States of Washington, Oregon, Idaho, and Montana. Rufus Woods, Billy Clapp, and Gale Mathews are only three of many enthusiastic, confident northwesterners who see their region as America's "last frontier" and "promised land." Life, beginning this special issue on the future of America, salutes the seers, the vision, and the land.

THE LAND IS RICH IN NATURE'S GOODS—LUMBER, METALS, WHEAT, AND FRUIT

The look of the land bears out the Northwest's frontier promise. Behind the cities of the coast lie mighty reaches of forest, mountain, valley, and river, where you may go for miles and see only a thread of railroad track or a lonely settler's clearing as evidence of man's presence on the giant earth. The four Northwest States contain 13 percent of America's land, less than 3 percent of its population, and 41 percent of its potential hydroelectric power.

Unlike great open spaces to the south and west, the Northwest land is rich. Out of it pours a flood of useful wealth: more than a third of the Nation's lumber, a seventh of its wheat, a tenth of its flour, a third of its apples, a sixth of its wool, an eighth of its salmon and potatoes. Rich in minerals, the Northwest since 1848 has produced some $6,000,000,000 worth of gold, silver, copper, lead, and zinc. In the Northwest stands over one-half of all the virgin timber left in America—enough to supply the Nation's needs forever if it is properly conserved and replenished. President Jefferson did well indeed when he sent Meriwether Lewis and William Clark in 1804 to explore the Northwest wilderness and claim it for the United States.

The Northwest's chief industrial handicap has been its distance from the manufacturing centers and markets of the Midwest and East. Hence little manufacturing, except of forest products, has developed. But America itself was once thus distant from the markets of Europe and overcame the handicap by creating its greatest market at home. This is what the Northwest hopes to do. If the people from the parched and eroded lands of the Great Plains continue to crowd into this "promised land," manufacturing industries seem sure to follow—especially with the lure of cheap and abundant electric power. Not much heavy manufacturing is expected to develop soon because of transportation costs and lack of coal and iron. But the Northwest can manufacture for itself and for California, in new abundance, many of the light goods which it now largely imports. In this lies the hope, shared by

President Roosevelt, that the Northwest may also prove a promised land for idle workers from the overcrowded factory towns and slums of the East and Middle West.

IRRIGATION MAKES THE NORTHWEST LAND BLOOM

The western valley of the Northwest, lying between the low Coast Range and the towering Cascade Mountains which slice down through Washington and Oregon, in general, gets abundant rain. But the Cascades catch and condense the flying Pacific rain clouds. In the reaches to the east the land is dry. Unwatered, most of it is good for little but grazing and precarious wheat farming. But the Northwest makes the land bloom by damming or diverting the rivers which rush down from its mountains, draining them onto the land through irrigation canals.

Five million acres in the Northwest, a land of dams and ditches, have been irrigated. Five million more are suitable for irrigation. The giant Grand Coulee project alone will water more than one-fifth of these. Still another 5,000,000 fertile acres remain to be reclaimed by clearing cut-over timberland, draining swamps, etc.

Into this pioneer country, whose hardy settlers were still fighting Indians when Mrs. William Astor was giving regal lawn parties at Newport, have migrated 400,000 people since 1930. They include 25,000 drought-driven families from the Great Plains, like those described in John Steinbeck's stirring new novel, The Grapes of Wrath. Most of these have settled on poor, cheap land. In the short-range view the Nation's farm problem is overproduction and low crop prices. But if America over the years is to flourish as it might, it must make the best possible use of its soil and human resources. Some 600,000 American families are now miserably farming, at little profit to themselves and the Nation, 86,000,000 acres of submarginal land which should no longer be cultivated. The Federal Government has helped some by lending money to buy new land, must help many more if there is to be any great shift of American farmers from overcrowded and worn-out lands to the productive acres of the Northwest.

GRAND COULEE DAM—POWER AND PROMISE

This is Grand Coulee Dam, the dream of Billy Clapp, Rufus Woods, and Gale Mathews, as it stood—flanked by the towns for its 7,000 builders on either side of the Columbia—at the end of May 1939. It is three-fifths finished. When completed, in a year and a half, it will be as high as the Washington Monument. It will be wide and thick enough to imbed four United States Capitols. It will contain two and a half times as much concrete as Boulder Dam, biggest thing built by man to date.

Piling up a 151-mile lake behind it, it will lift the level of the river 355 feet. The world's biggest pumps will force 500 tons of water per second up another 280 feet through the diversion tunnels shown just left of dam on far side, into the Coulee shown stretching off at right, thence to be sluiced down on 1,200,000 thirsty acres to the south.

Irrigation will begin in 1943. The generators which will make Grand Coulee the world's greatest single source of electric power are to be installed in units over the next 20 years. The dam and power plant will cost some $200,000,000, the irrigation project another $200,000,000. Smaller Bonneville Dam, another New Deal project, 290 miles down the Columbia in Oregon, is already finished. It has two of its prospective 10 generators in place. Between them Grand Coulee and Bonneville will open up nearly the whole Columbia River to navigation, supply enough power to electrify an agricultural-industrial empire.

Will the empire rise? This is the challenge to America—to all Americans.

The old American frontier, where a strong man with ax and plow could take up free land and make his way regardless of his neighbors is gone. In the industrial civilization of today and tomorrow no region, no city, no business, no individual in America will ever again be able to prosper alone and independent of the rest. The new frontier is one on which, working together for the common good, Americans will use their great technical and creative resources to produce the full abundance of which the American land is capable, an abundance which will make the long American dream of dignity and freedom and equal opportunity for every citizen at last come true.

Partial Description of a Few of the Provisions of S. 1970

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

STATEMENT OF HON. CLARE E. HOFFMAN, OF MICHIGAN, BEFORE THE SUBCOMMITTEE OF THE SENATE COMMITTEE ON EDUCATION AND LABOR HOLDING HEARINGS ON S. 1970

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herein the substance of a statement made by me before the Subcommittee of the Senate Committee on Education and Labor holding hearings on the so-called Thomas-LaFollette bill, S. 1970, having added additional paragraphs on labor boycotts and extortion:

A PARTIAL DESCRIPTION OF A FEW OF THE UNFAIR CIVIL LIBERTY DESTROYING PROVISIONS CONTAINED IN S. 1970

Only by viewing this measure in the light of other Federal activities and laws can we understand and appreciate some of its provisions.

S. 1970 complements the plan and the activities which have received recognition and support through the investigations of the Senate Civil Liberties Committee and the National Labor Relations Act, as interpreted by the National Labor Relations Board.

The Senate Civil Liberties Committee, while ostensibly holding hearings for the purpose, among others, of bringing further evidence to show the deprivation of civil liberties, either called as witnesses those who had grievances against employers or called employers and subjected them to methods of examination and cross-examination which were not such as to elicit the whole truth.

The record of these hearings fails to show that any real, continuous effort was made to bring out those instances where employees, where men who desired to work, were deprived of their opportunity to work because of union activities.

The hearings by that committee tended to intimidate employers, to coerce employees, into yielding to the advice or demands of labor organizers and to bring about industrial unrest.

The National Labor Relations Act, as interpreted and administered by the National Labor Relations Board, judged in the forum of public opinion as shown by various polls, has been condemned as unfair and as needing either repeal or drastic revision. It, too, as interpreted by the Board, has denied to hundreds of thousands the right to work at a job where wages, hours, and conditions of employment were reasonably acceptable. It, as interpreted by the Board, has proven to be a fertile field for the growth of industrial disputes and a breeder of disputes affecting and burdening interstate commerce.

It has been used, according to the A. F. of L., as the tool of the C. I. O., aiding the C. I. O. in its organizing activities and bringing injury to the A. F. of L.

Its interpretation and enforcement, as at present carried on, is making it more and more difficult for employers to operate their plants efficiently and successfully to furnish jobs. It is destructive rather than constructive in its tendency.

The act and those enforcing it proceed, as apparently did the Senate Civil Liberties Committee, upon the assumption that no one other than a certain group or class of employees, i. e., those belonging to a certain organization, is entitled to consideration; that business can continue to exist regardless of the demands made upon it by the worker.

The N. L. R. A. and this bill ignore the fact that organized labor is but a small part of labor in this country. That act and this bill disregard the fact that there are today in this country millions of workers who do not belong to any labor organization; who do not desire to belong to any labor organization; who desire only that their civil liberties be protected; that they be permitted to work; and that employers be permitted, proceeding fairly and honestly, to give them employment.

The measure is entitled "A bill to eliminate certain oppressive labor practices affecting interstate and foreign commerce, and for other purposes."

Considered in the light of our legislative history prior to the enactment of the New Deal emergency legislation, it is so extraordinary in form and substance that one is startled to learn that it was approved without qualification by the Attorney General of the United States, whose utterances would lead one to believe that he was extremely desirous of protecting the civil liberties of those subject to oppression, until it is remembered that the Attorney General is the man who, as Governor of the State of Michigan, for more than a month deprived hundreds of thousands of men of the very essential civil liberty—the right to work.

It may be possible that the arduous duties of the new Attorney General and his almost continuous traveling about the country prevented any personal examination by him of the legal structure of this bill and the consequences of a proposal which would disarm every mill, mine, factory, and business house in America and give notice to every hold-up man and thief that the prevention of bloodshed was more important than the protection of property, liberty, or life—all of which, under the provisions of this bill, might well be required to be sacrificed to avoid bloodshed.

The measure attempts to "gag" its critics by incorporating in the first section a finding that the utilization of certain agencies which have come in the public mind—and largely through the activities of the Senate Civil Liberties Committee—to be considered unfair and disreputable, deprive employees of certain recognized rights.

The bill then proceeds very insidiously to bring within the agencies so designated a large group of persons and of activities which in no way properly fall within the terms of accurate definitions of the agencies so described.

THE PURPOSE OF THE ACT DEFEATED BY ITS PROVISIONS

Assuming that the purpose of this bill is to aid in lessening the disputes affecting interstate and foreign commerce it proceeds upon an erroneous theory. It assumes that there must inevitably be strife and discord between employer and employee. It overlooks the fact that of necessity, to create an industrial dispute, there must be two contesting parties, and in order to solve the question

at issue in such dispute it applies restrictive measures to but one of those involved in the controversy.

The measure is based upon the premise that the employer is always wrong, the employee is always right, and that a correct, just, and equitable solution can only be reached by disarming the employer and permitting the employee to arm; compelling the employer to submit; granting demands of the employee.

The trend of the bill is well illustrated by recalling the old, old reply of the small girl, who, admonished by her mother to quit pulling the cat's tail, made answer, "Mother, I am not pulling the cat's tail. I am only holding it. The cat is doing the pulling."

The utter hypocrisy of this measure is demonstrated by a reading of section 3, which provides that it is an oppressive labor practice for any person, for example, to employ or utilize any labor spy; to employ or utilize any strikebreaker or strikebreaking agency; and remembering the definitions of a labor spy, of a strikebreaker, of a strikebreaking agency, and keeping in mind that the bill contains no definition of nor prohibition against the activities of a strikemaker, a strikemaking agency, and that the definition of a labor spy does not include a spy in a labor dispute who is employed by a union organization.

There are many other provisions of the bill which bring one to the inevitable conclusion that the measure will not lessen but will increase and add to the violence of labor disputes.

Following the pattern of the N. L. R. A., the bill defines activities which, if practiced by an employer, render him guilty of a criminal offense, subject him to punishment as a criminal and to civil liabilities, while like conduct on the part of an employee, a labor organizer, or a labor organization is in no instance rendered criminal or designated as the basis for a civil action. Experience with the Wagner Act has demonstrated beyond controversy that such a theory renders a law fatally defective.

Sailing under a title which might well enlist the active support of the casual reader, the bill, if taken apart, analyzed, and put together again in its proper order, stands disclosed as a measure which would not only place industry but the individual worker at the mercy of the labor organizer, labor organization, and the professional labor politician, some of whom have nothing other than their pretended activities in behalf of labor to commend them to the public.

The bill, if it became law, would not only aid in destroying civil liberties but it would be an active force in subjecting to a labor dictator or a labor politician all those millions of workers who have no desire whatever to fall under the legalized racketeering carried on under the National Labor Relations Act, as it is administered.

The measure, if enacted into law, will, if that be possible, prove more destructive to civil liberties than has the National Labor Relations Act or the activities of the Senate Civil Liberties Committee.

It takes up and carries on where the National Labor Relations Act ends the persecution and oppression not only of employers, not only of the public, but of that vast army of employees who do not recognize and bow to the commands of certain so-called labor organizers or leaders.

The second amendment to the Constitution reads:

"Right to bear arms: A well-regulated Militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed."

This bill would disarm the peaceful, law-abiding citizen, if an employer, and place him at the mercy of the armed goon squad or flying squadron of invading labor organizers.

That very thing happened in Michigan when, from the 1st day of January 1937 until the 8th day of February following, the then Governor Murphy, now Attorney General Murphy, announced his policy of permitting strikers to violate the law, on the theory that there should be no bloodshed, and when, during the latter portion of that period, by the use of the armed forces of the State, he permitted the commission of felonies, the violation of ordinances, the destruction of civil liberties, and denied to the people of the State and to the city of Flint the right to enforce the laws of the State, the ordinances of the city, on the theory that it was better to submit and surrender our civil liberties than to dispute their destruction, if such dispute involved bloodshed.

Time will not permit a complete analysis of the bill nor a full disclosure of the vicious practices which might lawfully be carried on if it became the law of the land. Sufficient to condemn the bill may be learned by a brief analysis of some of its provisions.

Let me take apart some of the provisions of this bill and then replace them in their proper relation to each other, so that the true effect may be discerned.

Let us give to some of the words of section 1 of title I the definitions found in section 2; keep in mind that some of the acts described in section 1 of title I are by section 3 declared to be oppressive labor practices; ascertain from section 4 the acts which are prohibited and made unlawful, and learn from section 6 the penalties imposed for the commission of such prohibited acts.

From section 1 of title I we learn that—

"The Congress hereby finds that the utilization of labor spies * * * (1) violates the right of employees to organize, bargain collectively, and engage in concerted activities for their mutual aid and protection; (2) causes and provokes acts of violence, breaches of the peace, and destruction of property, affecting commerce; (3) leads to labor disputes burdening and obstructing commerce and the free flow of commerce; (4) obstructs the settlement of labor disputes through negotiation and the orderly procedure of collective bargaining, thereby tending to prolong interruption of the free flow of commerce; (5) burdens and obstructs commerce and the free flow of commerce; (6) interferes with the United States and its agencies in obtaining goods and services pursuant to contract; and (7) interferes with and obstructs the effective exercise by the several States of their respective police powers."

"LABOR SPIES"

Who is a "labor spy"? Section 2 (1) (p. 5) gives us the definition. Let me quote in part:

"The term 'labor spy' means any person who for any compensation, promise of compensation, or other inducement, and whether done as a separate duty or as an additional duty in connection with other work, engages in industrial espionage," etc.

We are forced now to learn the meaning of "industrial espionage." Section 2 (m) (p. 5) reads:

"(m) The term 'industrial espionage' means reporting, securing and reporting, or attempting to secure and report to an employer, directly or indirectly—

"(1) Information with respect to the plans or activities of any of his employees or any labor organization with reference to self-organization or mutual aid or protection, or with respect to the identity, number, or composition of the membership of any labor organization, without the express consent of such employees or of such labor organization, as the case may be; or

"(2) Information with respect to the political or economic views or activities of any of his employees or prospective employees, or of any organizer, officer, or member of a labor organization, or with respect to the affiliation of any of his employees or prospective employees with a labor organization, without the express consent of such employees or prospective employees, or of such organizer, officer, or member of a labor organization, as the case may be."

Let us apply these various sections to a hypothetical case, one which is all too often an actual case. Employees are satisfied with wages, hours, and working conditions. An organizer or a union deems it advisable that that particular factory, mill, or mine should be organized, should operate as a closed shop, and, for the purpose of unionizing the industry, pickets the plant in mass formation or by the use of pickets who are armed with clubs, stones, or knives. An employee working in the plant for compensation, although he has not been instructed so to do, reports to the employer that the pickets who came in from outside, who were never employed in that plant, or that employees who are on the picket line do not represent a majority of the employees; or that pickets advocate the taking possession of the plant by force; or that pickets are armed; or that pickets assert that they will not permit any employee who may leave the place of employment to return to his job.

The person so reporting is a "labor spy." He is guilty of "industrial espionage." Under section 3 the employer is guilty of an oppressive labor practice and, under section 4 (a), page 10, he is guilty of a "prohibited act" and may be punished, under section 6, page 12, by a fine of $10,000 or 6 months' imprisonment, or both.

Thus we find that under this bill any employee who advises his employer of either the political or the economic views or activities of any other employee or prospective employee of any labor organizer or member of a labor organization, without the express consent of such employee or prospective employee or of such organizer, is a "labor spy" engaged in "industrial espionage."

Under this bill, if a Communist, if an anarchist who believed and who is engaged in activities looking toward the destruction of individual ownership, toward the common ownership of the factory; who believed in and was engaged in activities looking toward the taking over of the industry and its future conduct by members of his organization—was attempting to convert employees to his views and to induce them to take and hold forcible possession of the factory until his demands or the demands of his organization were granted, and an employee advised the employer of these facts, or of any of them, the employee so advising is a "labor spy"; the employer is guilty of an "oppressive labor practice" and subject to a fine and imprisonment.

Under the law of some States the employee who failed to make known to employer or public authorities the commission of the proposed unlawful act would be an accessory before the fact. In Michigan, if he advised or counseled or took part in the malicious injury to property of the value of more than $25, he would be guilty of a felony as a principal.

Why is it that the definition of a "labor spy" does not include those who are hired by the unions to spy out the activities of the employer and to report to the union and its organizers the activities of the employer?

Is it not true that spies have been employed by the Senate Civil Liberties Committee? By other committees of the Senate? By the various departments of the Federal Government itself?

If the use of spies is to be outlawed, why not then outlaw their use by unions and by organizers as well as by employers?

Did not Arthur J. Wiltse, plant manager of the Ann Arbor Press, of Ann Arbor, Mich., one of the nation's small-business men, recently give testimony before the Senate Committee on Education and Labor which, in substance, is as follows:

"It works both ways, you know. The employers are not the only ones that have spies in the plants. In fact, Roy L. Tucker admitted here in Washington that he was in the Ann Arbor Press purely and solely as an employee of the Typographical Union and that he collected all kinds of evidence that we were in interstate

commerce, and he turned over printed samples, and he watched our work all the time that he was in there in the employ of the Typographical Union, and we asked him how many plants he had worked in in the last 7 years, and he said that he had worked in 500 plants for the Typographical Union.

"This fellow admitted that he came in there purely as a representative, and it is a part of the record of Harry A. Reifen. We asked him, 'Weren't you working for the Ann Arbor Press? You were taking their money?' And he said, 'Well, they thought I was.'

"That is the way they formulated and fomented their strike with that kind of people. There were at least three people that were professional strike makers placed in our plant to organize and make the trouble that affected commerce and let the National Labor Relations Board in. If it was not for any other purpose—it was not that they wanted to affect commerce * * *. But, anyway, here are some checks that we received from the Michigan Mutual Fire Insurance Co.

"When we had this strike we had insurance of $200,000 in our plant, because we were afraid that they would blow it up or burn it up, or do something to it, and we got this fellow in sabotage absolutely. He had destroyed $1,800 worth in 1 week of work where he had changed letters in jobs just going to the press or had misspelled things purposely, and done it after proofreading had been done, and destroyed $1,800 worth of printing, and I took it up with our insurance company, and they immediately paid us in a settlement on it of $500 * * *."

Is it not true that this bill condemns the labor spy if he acts in the interest of the employer—visits no condemnation upon him if he acts for the union or for an organizer? Do the authors of this bill contend for one moment that that which is wrong and unlawful if done by the employer is proper and lawful if done by the employee?

STRIKEBREAKERS

Again we find that section 1 (a), title I, reads:

"The Congress hereby finds that the utilization of * * * strikebreakers * * * violates the right of employees to organize, bargain collectively, and," etc.

We learn from section 2 (n) (p. 6) that—

"(n) The term "strikebreaker" means any person who, during or in anticipation of a labor dispute, is hired—

"(1) To replace any regular employee whose work ceases as a consequence of or in connection with such labor dispute if such person receives or is offered a wage, salary, or other compensation from any source (including transportation to the place of employment, board, lodgings, or other facilities) at a rate in excess of the rate received by such regular employee immediately prior to the cessation of his work; or," etc.

By reference to section 2 (g) (p. 4), we learn that—

"The term 'labor dispute' includes any controversy concerning terms, tenure, or conditions of employment, or concerning the association, or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, regardless of whether the disputants stand in the proximate relation of employer and employee."

Let us make application to a concrete case. A retail store here in Washington, where all the employees are white, or part are Negro and part white, is located in a district where the majority of the residents are colored. An organization, none of whose members had ever been employees (as was the case in the *New Negro Alliance* v. *Grocery Company matter*, 303 U. S. 552), demands that the store employ either a greater number of or all Negroes. Thus we have a labor dispute.

If a Negro regular employee quits because of such dispute—if the employer hires another person at the same compensation, including, for example, transportation from the city of Baltimore, such employee coming from Baltimore becomes a strikebreaker; or, if the employer is forced because of the strike, to replace the regular employee with one who receives a higher wage, the person so employed becomes a strikebreaker, the employer is guilty of an "oppressive labor practice"; he is guilty of an unlawful act and may be punished as a criminal and is also liable in a civil action.

Here is another case which illustrates the injustice, the absurdity, of this bill. Relations between employer and employees are harmonious. Employees are satisfied with wages, hours, and working conditions; in short, they have no complaint. But they are not members of a union. An organizer appears upon the scene. The demand is that a closed shop, with the check-off, be established. Perhaps a small minority, as in the sit-down strikes in Flint early in 1937, with the aid of armed outside organizers and pickets, takes possession or establishes a picket line without taking possession of the factory and demands that before any man proceeds to work he must join the union and the employer must employ only members of that particular organization; must deduct all union dues and special assessments from the pay checks, letting the butcher, the baker—yes; and the undertaker—bills be paid subsequently to union dues.

Conditions are tense; there is fear of violence. Some of the more timid of the regular employees quit because of the labor dispute. Farmer boys, having had no experience with the head-cracking activities of the organizers or of the picket lines, are willing, for an additional compensation, to go to work. If they are put to work they become strikebreakers; the employer is guilty under this measure of a criminal offense and may be fined and imprisoned.

Analyzed, this part of the bill shows that, if it becomes a law, employees who are driven from their jobs may not be returned to work if additional compensation for the additional risk involved in their reemployment is paid them.

STRIKE MAKERS

If the purpose of the bill be to promote industrial peace: if the use of a strikebreaker tends to defeat that end, all knowing that the activities of a strike maker bring industrial strife, why is it that this bill does not define a strike maker and prohibit his activities?

Is it right, is it fair, is it just that unions should be permitted, as they are now permitted, to send from one city, from one State to another, armed men who are not, who never were employees in the plant where a strike is about to be called or where a strike is in existence?

Neither the committee nor Congress should close its eyes to the fact that organizers are sent from one city to another, from one State to another, and on more than one occasion violate the laws of the State into which they go, bring violence, civil strife, and in some instances necessitate the calling out of State troops.

Two years ago I introduced a bill which in substance prohibited the crossing of a State line by strike makers, but that measure was successfully and permanently buried in committee.

On what theory of justice, by what reasoning, do the authors of this bill arrive at the conclusion that no one should be permitted to take, at additional compensation, a job refused by a man who does not desire to work and, by failing to include him in the restrictions of this bill, sanction the use of a paid, armed agent of a union who seeks to keep employees who would work from their places of employment?

The authors of this bill, by failing to define a strike maker, to place any restrictions upon his activities, lend their approval to the proposition that a union or an organization may send armed men across a city or State line to deprive men of their jobs when the only offense of such jobholders is that they decline to join a particular organization.

STRIKEBREAKING AGENCIES

Section 1 of title I also provides that—

"The Congress hereby finds that the utilization of * * * strikebreaking agencies * * * violates the right of employees to organize, bargain collectively, and," etc.

Section 2 (o) (p. 7):

"The term 'strikebreaking agency' means any person engaged, directly or indirectly, in whole or in part, in the business of hiring, recruiting, enlisting, or inducing any person to act as a strikebreaker or labor spy."

We have seen how any employee by advising his employer that a Communist, who was attempting to organize the employees, advocated a sit-down strike, the driving of employees from their jobs, or the destruction of personal property, becomes a "labor spy." We have seen how any person who comes from another locality or a more distant place at the employer's expense to take the place of a striker is a strikebreaker.

So we learn that any newspaperman who, through an advertisement calling attention to the strike and to the need for workers, induces a person either to give information or, at a compensation greater than that paid the man whose place he takes, accept employment, is conducting a strikebreaking agency.

And again, the employer, inserting an ad asking for employees to carry on his business and advising that a greater rate of compensation will be paid than was paid to the former worker, is guilty of a criminal offense.

It is only by that degree of fairness and impartiality which our people have come to believe essential in every law, in every act, of the Federal Government, if such law or activity is to be effective and permanent, incorporated within this measure that it can accomplish its assumed objective.

This bill defines strikebreaking agencies and prohibits their activities. So, too, it should define "strike-making agencies" and should limit their activities.

Apply the reasoning back of this bill to a domestic situation. Husband and wife are living together in peace and harmony. But a neighbor, viewing their lives, insists that one or the other is not properly treated. So, acting upon his views, he intrudes, creates domestic discord, and insists that the spouse whose cause he championed is always right, the other always wrong.

If employer and employee are satisfied with the relationship existing between them, why should a third party, a labor union, an organizer, a Communist, be permitted to interfere and disrupt the relationship?

INDUSTRIAL MUNITIONS

Section 1 (a) of title I provides that—

"The Congress hereby finds that the utilization of * * * industrial munitions" is an oppressive labor practice, unlawful, and punishable by a fine and imprisonment.

Section 2 (i) (pp. 4–5) states:

"The term 'industrial munitions' means any bomb, grenade, canister, or shell designed to be projected or capable of being projected by explosive or mechanical force, by hand, or otherwise, and containing, or capable of emitting, any tear gas, sickening gas, or nauseating gas; any shotgun having a barrel of less than 25 inches in length; or any weapon which shoots or is designed to shoot, automatically or semiautomatically, more than one shot without manual reloading, by a single function of the trigger."

It is an oppressive labor practice (p. 9)—

"(4) (A) To possess or utilize industrial munitions in or about any place of employment, or to furnish industrial munitions to any person or to any law-enforcement officer or agency of any State or political subdivision thereof: *Provided*, That the possession, sale, or

disposition of industrial munitions in the regular course of business by any manufacturer or importer thereof, or dealer therein, shall not be deemed to be an oppressive labor practice, (B) to utilize industrial munitions in connection with any labor dispute, or to possess industrial munitions for the purpose of utilizing them in connection with any labor dispute."

From these quotations we learn that it is an oppressive labor practice, a violation of the law, punishable by imprisonment or fine or both, for an employer, including the officers of a bank, to possess or use in or about any place of employment any shotgun with a barrel less than 25 inches in length, or any automatic or semi-automatic weapon, in or about his place of employment. This provision would not only disarm all industrial plants but all banks and like institutions.

Again let us take a concrete case. Armed forces, men in mass formation, greatly outnumbering the employees of a particular plant, march down upon it and demand that the employees march out and either join a particular organization or cease work. The members of this organizing group, these flying squadrons, or whatever they may be called, are not prohibited by this law from arming themselves, for section 2 (e) (p. 4) expressly provides that the term "employer" does not include any labor organization or anyone acting in the capacity of officer or agent of such organization.

This section (4) (A) not only does this thing but in a case where the local authorities were either unwilling or unable financially to arm themselves in order to resist invasion, this bill makes it unlawful for the employer to furnish to the lawfully elected officers of the community the weapons to make their lawful acts effective.

INDUSTRIAL MUNITIONS USED BY STRIKERS

It is true that section 3 (a) (4) (A) (p. 9) defines as an oppressive labor practice the possession or utilization of industrial munitions by any person in or about any place of employment, and this would seem to include strikers and strike makers.

The definition of "industrial munitions" should, however, include clubs, stones, brick, and other weapons, and to the definition of the term "person" as contained in the bill should be added the words "labor union, labor organization, labor organizer, and striker"; and from the definition of the term "employer" should be stricken those words which exempt "any labor organization or anyone acting in the capacity of officer or agent of such labor organization."

There should also be added to the bill, if justice is to be done, a provision which would prohibit the use of "industrial munitions" by strikers, organizers, agents of unions, in or about the homes of employers or employees.

The practice of labor organizers or those acting for or in their behalf of going from home to home of employees who do not desire to strike, who wish to return to work, and by show of force or intimidating such employees through direct threats or through threats to members of their families should be made an offense.

The bill should also make it an oppressive labor practice to by force of numbers or by violence other than through the use of weapons, prevent men who desire to return to their jobs from so doing. Violence, intimidation, and coercion and a deprivation of civil liberties may be brought about by mass picketing as well as by the use of industrial munitions.

There should be added to the bill a paragraph making it an oppressive labor practice for employees or any organization of employees, or for any other organization, to boycott the products of a manufacturer or producer; and a secondary or sympathetic strike should be made an oppressive labor practice.

Members of some organizations have declined not only to handle but to permit the handling of manufactured products and of produce shipped in interstate commerce for the reason that such products were manufactured or produced by others than members of their own organization.

While it is true that no man should be required to do work that he does not wish to do, it is equally true that, if our form of government is to continue and if we are to avoid the rule of a dictator over labor, no employee should be permitted to refuse to let others perform the work which he declines to do or he should be required to do that work himself.

It is also true that, if those employees who are engaged in occupations which affect interstate commerce are to be permitted to insist that all manufacturers and all producers and all the employees of each be required to belong to a particular organization and pay tribute, then we have a dictatorship over labor and the legalization of a racket which would make all others appear insignificant.

Take this illustration: If the farmers of my home State, producing eggs, as some of our cooperative organizations do, by the carload, desire to ship those eggs into New York City, where some organization is permitted to demand that they shall not be placed on the market until the farmers owning the hens which produce the eggs become members of the New York organization, the free flow of commerce is ended, independence of action in this country has ceased.

We have an example of this on the west coast, where employees belonging to one organization cut the timber, manufacture it into lumber, while members of another organization refuse to handle that lumber in the construction of buildings on which they are employed.

The press also reports that products of the farm have been denied entrance into some cities until the producers were ready to pay the tribute levied by the city organization.

I have an instance in my own congressional distrnct where the products of the farm were denied access, for shipment, to a wharf in New York State until union demands were met.

In Somerset County, Pa., where farmers wanted to work on a highway financed through Federal and State funds, the demand was made that they first join a labor organization, paying $15 each, membership fee, and then monthly dues.

Just why should there be superimposed upon all of our activities an organization levying and collecting tribute for the right to earn a living?

A more strife-producing, liberty-destroying enactment it would be difficult to conceive.

Some may think that the revolution in this country has proceeded far enough so that they can get by with a law of this type. But there are many of us who not only believe that the substantial, patriotic citizens of the country will not only repudiate at the polls those who sponsor this oppressive legislation, but that they stand willing to sacrifice their liberty and, if need be, their lives in resisting to the utmost measures such as this.

Our people are patient; they are long suffering; but they have common sense and they love their liberties. They are patriotic, and when once it is made clear to them the shackles which are being forged to destroy their liberties, they will not be slow to act, and those who would bring about the destruction of civil liberties, even though they profess to maintain them, should realize that there is much truth in the old saying, "Though the mills of God grind slowly, yet they grind exceeding fine," and that the day has come when the people of this land will not much longer submit to the insidious inroads which of late have been made upon our liberties.

Dedication of Palmyra Post Office

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

ADDRESS BY HON. JOHN C. KUNKEL, OF PENNSYLVANIA, MAY 27, 1939

Mr. KUNKEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the dedication of the Palmyra post office, May 27, 1939:

The post office is probably the most important institution in the town. More than any other one institution, it forms the tie that binds the city, the town, the community to the outside world. It was the early development of the post office that made it possible for our pioneering forefathers to keep in touch with their friends and relatives back home while they themselves were establishing new frontiers. It was the post office that has been one of the great factors in modern commercial expansion. It has provided outlets for our products and it has provided the means of arranging for the disposition of those products. It has provided opportunity for expressions of sympathy and thoughts of kindness which means so much in our moral and spiritual life. It would not be an overstatement to say that one can trace the outline, the history, and development of our Nation by a study of the history of our Postal Service. It is one case of Government in business—for we must admit that the post office is not only business but big business—which has been successful and economical.

The establishment of a post-office building is always an event of tremendous importance in any community.

It is not only important because of the building. It is not important merely because it provides a little temporary activity in the community although those are factors to be considered.

The importance of a new post office lies in the fact that it is a step forward in the progress of the Postal Service, the intercommunication between citizens, that great agency which makes the communication of intelligence, of ideas, and of ideals possible between men. It is a step forward for the community.

Think what it would mean to us today if the mails should stop. Think what would have been our condition if the mail service had never been developed. There is in all probability no single agency in Government that has had the great educational and moral effect and benefit of the Postal Service. There is probably no agency since the printing press that has more far-reaching effects in this direction than postal service. By means of it men have exchanged ideas; philosophy has become widespread; the problems of life have become matters of common discussion and common solution—no problem of life—no difficulty of the individual—no necessity of a man or a nation is untouched by the mail service. It has to do with them all.

It seems to me that the most interesting feature of the development of our Postal Service has been its ability to solve particular problems as they arose. For instance, the establishing of the time-saving device of sorting mail in transit. The establishment of Air Mail Service when modern invention developed the airplane. And in this connection, let me point out that today as in the past the post office's problems are particular everyday problems. It does not deal with theories. It studies concrete problems such as where to build a new post office, where to extend or curtail service, where to have a star route or an R. F. D.

We can draw a lesson today from this success from attention to everyday life and to detail and to the solution of everyday problems as and when they occur. That lesson is that attention to detail and his own problems by the individual is more important in the long run in the solution of governmental problems than is any general grand theory as to how these problems may be solved. I am particularly convinced of this because today we have conflicting theories in all fields and they can't all be right. For instance, Secretary of the Treasury Morgenthau, and President Eccles, of the Reserve Board, have divergent views on financing. Both are highly intelligent men and yet both can't be right. We have a two-party system of government. Someone has said neither party was ever entirely right on all lines at any one time. And yet through the years our Government has charted a forward movement. Why? Because at no time did the country ever follow wholly the theories of one party or the other. It charted a middle course and that course was determined by the individual actions and judgments of the individuals of the country. The better those judgments were and the more careful those actions were, the more nearly correct was the course.

The solution of our problems doesn't depend so much on anyone as it does upon the sum total of all of us. A noted statesman once said: "The continuance of democracy depends upon the capacity of the people to cope with the problems of government." It seems to me that is true and that theories or planning by individuals or small groups can never solve the problems of government if we are to continue as a democracy. On the other hand, does anyone deny or even doubt that the American people, who transformed a wilderness into the greatest country on the face of the earth have that capacity?

We hear a great deal of false philosophy about the fact that America has reached its peak, that the machine age has overpowered us, that problems today are impossible to solve. I just don't believe any of these things. But I also don't believe any one person will solve them. They will just get solved if everyone keeps his pride in himself, in his ability, in his country, and in his religion. There isn't anything new about this. It is inherent in every page of the history of our country and in the Christian religion. "The essence of Christianity is its insistence on the supreme value of the individual," says Henry C. Link in the Rediscovery of Man. "In Christianity men are not the puppets of the state; they are the sons of God. They are not cogs in a machine but creatures with souls."

Our problems will be met in time and in part by our citizens in communities like this—courageously meeting their own problems as best they can and insisting on their own value their own identity which their Christian faith and their American citizenship teaches them. This is a challenge and an inspiration to each one of us—when we solve our own questions, when we develop our own personalities, we at the same time are helping in the solution of those of our friends and neighbors and in directing the chart and course of our democracy closest to the best possible course. It is no accident that in those countries where democracy no longer exists that attacks on religion have occurred. It is much easier to make a unit in a totalitarian State of one who does not believe he is the captain of his fate.

I am delighted to be here with you today at the dedication of this post-office building because it marks a step in progress in the Postal Service whose motto always has been "The mails must go through."

A post office is a monument. It is a monument to the years of faithful untiring service of the many who in continuous succession through the years have seen to it that the "mails went through." It is a monument to the industry, growth, and development of the community in which it is located. It is a monument to those who worked to secure it and to those who worked on it—and finally it is a monument to the relationship between this community, other communities, and the Nation. It is a United States post office and a symbol of a united, undivided, forward-marching nation.

It is peculiarly appropriate to dedicate this post office, this monument to the community and the undivided Nation so close to Memorial Day, when we will again commemorate those who offered their lives to keep this Nation one and indivisible and when we think of those who later fought in behalf of idealism and to preserve democracy. It is peculiarly interesting that this important milestone in the life of Palmyra and its postal service should occur at approximately the same time as that important milestone in the history of the Postal Service—the starting of the trans-Atlantic mail.

May the fine building, beautiful and useful, a fitting tribute to a fine community, long remain.

May the countless millions of letters that come through and go out from this building bring success and joy and happiness to you and to your children and to your children's children.

Politics Would Take Over Medicine

EXTENSION OF REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

ARTICLE BY CHARLES MORRIS MILLS

Mr. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Charles Morris Mills that appeared in the New York Herald Tribune.

[From the New York Herald Tribune]

POLITICS WOULD TAKE OVER MEDICINE

(By Charles Morris Mills)

The family doctor is a cornerstone of American life. To millions he is a priest rather than a physician—a father confessor knowing more about the second mortgage or the deferred payment on the Ford than Charlie's cough or Mary's mumps. The day of high-pressure specialists and high-sounding sanatoria has not changed him. The burden of calls upon the poor and needy has not broken him. The allure of fame and fortune in unknown trails of research has not dazzled him. The darkness of depression and debt has not dismayed him. Rich or poor, in costly hospitals or free clinics, in lofty apartments or third floors back, the American doctor has carried on. The Nation is proud of his record.

Now, however, we are told that medicine has failed in America, that we must put a large share of our doctors on the Federal pay roll, that we must build our hospitals at the beck and call of politicians, not physicians; that we must regulate our maternal and child care through absentee bureaucrats in Washington. The day of free enterprise in American medicine is to be ended. The glory of American achievement in prevention of disease is to be snuffed out. The pride of research against the enemies of health is to be subdued.

Instead, American medicine is to be streamlined a la European models. Free hospital and medical service is to be provided for the 40,000,000 poor (W. P. A. statistics derived by dividing 120,000,000 population by one-third; the American Medical Association, by careful survey, shows the figure to be about 40,000) who are supposed to be unable to get adequate attention. Hospitals are to be erected all over the Nation irrespective of existing church and community facilities. Sickness disability payments, otherwise known as compulsory health insurance, are to be determined by the Social Security Board. The rich States are to put $2 in the hat and get back 50 percent from Uncle Sam, while the poor States receive a 200-percent jackpot.

Yet these are the essential points in the Wagner health bill, introduced on February 28 and upon which hearings are now being held. No one except possibly the President and Senator WAGNER knows why this bill, entailing the ultimate expenditure of more than a billion dollars a year, was introduced at this time. No epidemic or sickness emergency exists, for the records show the health of the Nation at its highest peak. No high-pressure demands have been made for its passage, for federally controlled hospitals or for federally hired doctors. Yet when the President admits that the Budget cannot be balanced under the present conditions, when business and unemployment grow steadily worse, when national defense becomes paramount if we are to survive as a nation, this great new burden threatens to descend upon the neck of every citizen.

Why, therefore, is this bill presented now rather than in 1935 or 1942? The answer is that patriotism has been shoved aside for politics and principles for partisanship. A New Deal victory is more important in 1940 than safeguarding the Nation's best interest in 1939.

The Wagner health bill is a typical New Deal measure. It is sloppy, vague, discriminatory. It was conceived without the benefit of clergy—without advice from the medical profession by professional bureaucrats in Washington. It further establishes the "grants-in-aid-to-States" policy which is undermining the stamina and structure of the States themselves. It sets up a vast Federal bureaucracy of unlimited character. It envisions huge appropriations without visible revenue. Yet on May 10 the General Federation of Women's Clubs in the annual convention at San Francisco voted 187 to 72 for this bill. The delegates from the Eastern and Middle Western States demanded more time for study, but were outvoted by the Southern and far Western States. The debate was largely a battle between the "haves and the have nots," with the cry of the dust bowl louder than that of the cash-laden conservatives.

On May 11, the A. F. of L. and C. I. O. both indorsed the bill, but complained that the measure did not go far enough. Matthew Woll, of the A. F. of L., said "the cost of medical care should

be lowered so that it is within the reach of the large part of the population which has less than $1,500 income. Little do these leaders of American labor realize what they are endorsing.

Little do they know of the results of compulsory health insurance in England and Germany. They do not understand that the average house call of a state doctor in England is from 5 to 7 minutes and that the average clinic interview is 3 minutes. They have never heard that England is becoming a nation of medicine drinkers—"You, know, Doc, I want some more of the same old stuff." The cold bare facts show that in the last 10 years, America under the free-enterprise system has reduced mortality rates for tuberculosis and diptheria 36 and 68 percent, respectively, compared with compulsory health-insurance figures of 28 and 3 percent in England and 23 percent decrease and 212 percent increase in Germany. Yet Senator WAGNER says that his bill "will not break with the American tradition."

Two weeks ago the American Medical Association held its annual convention in St. Louis. Last December the officers of this association, which represents 112,200 doctors, were indicted by a Federal grand jury in the District of Columbia for alleged violation of the Sherman Antitrust Act. Assistant Attorney General Arnold then attempted to salve the situation by use of "the consent decree" already developed through the petroleum and automobile finance cases in the Middle West. Arnold suggested to the doctors that if they "agreed to constructive proposals" laid down by him beyond the tenets of the law, they might escape going to Leavenworth. If the physicians failed to comply, the heat would be turned on, and that is exactly what happened, for the next move was the threat of an income-tax investigation on this nonprofit scientific association.

The Wagner health bill was the next slap against American medicine. The chief author of the bill is currently reported to be an official of one of the financial branches of the Government. Thus the proposition becomes as preposterous as if the teachers of the country were to be regulated by the W. P. A. or the lawyers by the C. C. C. The bill is far more cuckoo than Passamaquoddy or the Florida ship canal. Those propositions dealt with physical chances; this deals with the undermining of a profession. Thus, there was little surprise when the St. Louis convention by unanimous vote of its 174 delegates condemned the Wagner bill for 22 reasons because it "insidiously promotes the development of a complete system of tax-supported governmental care * * * provides for supreme Federal control * * * inconsistent with the fundamental principles of medical care established by scientific medical experience and therefore contrary to the best interests of the American people."

The resolution charged the bill did not provide for the use of thousands of vacant beds available in church and community hospitals; did not recognize the environmental conditions necessary to continuous prevention of disease; did not provide for the extent of medical services for which allotments were to be made. The association proposed that, instead of permanent Federal control of medicine, any State, in the case of medical emergency, should be able to obtain Federal help rather than impose burdens upon all the States.

There are undoubtedly certain practices and policies pursued by the A. M. A. which may be subjected to severe criticism. There have been certain attitudes of the "high hat" which have angered the rank and file. There have been personal animosities. However, this does not condone a vitriolic attack upon the A. M. A. or the introduction of a Wagner bill at this time.

No wonder, therefore, that every right-thinking doctor is aroused to preserve his profession. If every patient and friend of every doctor wheels into action, the most powerful lobby in history will be created to fight political medicine. The great middle class, upon whom the average doctor depends for support, would then overwhelm the endorsement of both branches of organized labor and any other groups. To accomplish this result the doctors themselves must drop professional shrouds and act as citizens. The question of professional ethics is not involved when one's profession is at stake. The dangerous shadow of totalitarianism in the professions affects every lawyer, teacher, minister, and engineer, as well as every doctor.

National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

LETTER FROM OTIS C. MOYER

Mr. MURRAY. Mr. Speaker, under leave to revise and extend my remarks, I include the following letter with resolution received from Mr. Otis C. Moyer, secretary of the International Brotherhood of Paper Makers, Local No. 116, of Stevens Point, Wis., regarding the amendments to the Wagner Act:

INTERNATIONAL BROTHERHOOD OF PAPER MAKERS,
LOCAL NO. 116,
Stevens Point, Wis., March 1, 1939.

Hon. REID F. MURRAY,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: The enclosed resolutions were drawn up and adopted by the Stevens Point Local, No. 116, at a special meeting February 19.

We believe that any changes in the Wagner bill at this time would be detrimental to the labor movement. As industry will try to insert amendments into the bill that will make it a weapon with which to fight labor, rather than a protection for labor against unfair practices of the industrialist.

The local urges that you cooperate with us in fighting any proposed changes to be made in the Wagner bill.

Yours sincerely,

[SEAL] STEVENS POINT LOCAL, No. 116,
By OTIS C. MOYER, *Secretary.*

Resolution 1

Whereas we believe that labor as a whole is opposed to any and all amendments to the National Labor Relations Act.

Whereas any and all amendments at this time to the Wagner labor bill would be detrimental to the labor movement.

Whereas amendments to the Wagner bill would give industry a decided advantage over labor.

Be it resolved, That the rank and file of the labor organizations shall assert themselves by demanding that the National Labor Relations Act shall be left intact.

1. That the Honorable Franklin D. Roosevelt, President of the United States, be hereby requested to use his power and influence to prevent changes in the National Labor Relations Act.

2. We earnestly urge that all local unions and organized groups, regardless of affiliation, join us in this request petitioning the President of the United States, the president of the American Federation of Labor, the United States Senators, and United States Congressmen to use their power and influence to prevent changes or amendments being made to the National Labor Relations Act.

Resolution 2

Whereas the La Follette subcommittee on civil liberties and the Labor Relations Board are essential in sighting violations of the Labor Act and settling labor disputes: Be it

Resolved, That Congress appropriate adequate funds for the La Follette subcommittee on civil liberties and the Labor Relations Board.

The Other Side

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

Mr. BOREN. Mr. Speaker, there has been a great deal of material placed in the CONGRESSIONAL RECORD in the last few months regarding the attitude of the State administration in Oklahoma toward the construction of a flood-control project on the Red River. Everything that has been put in the CONGRESSIONAL RECORD has been on one side of the case. Irrespective of what one's attitude may be on a specific problem, impartial judgment of this body should have their attention called to the views of those who hold a position opposite to what heretofore has been presented. There are certainly two sides to any issue.

My particular interest in this project has been entirely confined to the district I represent. I felt at the outset that the city of Tishomingo and the good lands immediately adjacent thereto should not be inundated. The project has been revised to take care of that particular problem. It may be that revision of the project which saved the city of Tishomingo from inundation will also solve other problems affecting the State of Oklahoma fundamental to causing the project to become an issue.

Of the State-wide problem, I am not well advised, having confined, as I say, my attitude solely to the interests of the Fourth Congressional District. In any event, an issue is never properly met and the correct answer never found in

an attempt to overshadow the right and wrong of an idea by impugning the motives of its adherents. I have always taken for granted that a man who opposed me on any issues that arose in this Congress was sincere in his opposition. I have tried to meet each issue here solely on evidence of right and wrong on the question involved.

There is a judge in the district which I represent in Oklahoma who is well known for his caustic wit and keen intellect. A certain lawyer attempted over a period of years to renew a certain case in this judge's court. The judge constantly overruled him because the lawyer was never able to present evidence to substantiate his claim. Finally, the judge dismissed the case permanently, advising the lawyer that it was time for him to get a new case.

I ask unanimous consent to extend at this point in the RECORD an article from the Tulsa Daily World of Friday, May 26, which presents the other side of the case, a side which has heretofore been unrecorded.

[From the Tulsa Daily World of May 26, 1939]

STATE CAPITAL GOSSIP—SENATOR JOSH LEE STILL HAZY AS TO WHY GOVERNOR PHILLIPS IS OPPOSED TO DENISON DAM PROJECT

(By Edward D. Burks)

OKLAHOMA CITY, May 25.—Reports from the hearing at Washington on the Denison Dam indicate that JOSH LEE, the State's junior Senator, who is favoring construction of the project which is opposed by Gov. Leon C. Phillips, apparently got his wires twisted—again.

An Associated Press dispatch from Washington quotes Senator LEE as charging the Phillips opposition is influenced by power interests.

He said Governor Phillips' three representatives at the hearing "had strangely failed to criticize" 10 other dams authorized for the State of Oklahoma which did not generate power.

The fact Governor Phillips has opposed Red River Dam is not news—in fact, he was opposed to it when he served as minority leader of the house 2 years ago—he was opposed to the principle involved in 1935, when as speaker of the house he approved the bill providing for the Grand River Dam Authority, which is a power project.

The Governor was openly opposed to the Denison River Dam project when, as Governor, he signed a senate bill increasing from $15,000,000 to $25,000,000 the authority of the G. R. D. A. to issue bonds for the construction of dams at Fort Gibson and Markhams Ferry, both of which are power projects.

The Governor also was openly opposed to the Denison Dam when he signed a bill creating the Fairfax-Kaw City Authority, which would be set up to obtain a power dam for the Arkansas River in Osage County.

Senator LEE probably has not been informed then that the Governor has given his wholehearted approval of four power-dam projects lying within the State of Oklahoma, the Grand River, Markhams Ferry, Fort Gibson, and Fairfax-Kaw City, although each has received the enthusiastic support of the Governor, both as chief executive of the State and as a legislative leader.

However, Senator LEE, in the past, has made statements that have not always checked out when compared with the record.

Neither has he been able to get simple geographic facts straight. It is recalled that when he made the address at the Will Rogers memorial services in Claremore shortly after the Alaskan tragedy, he pictured the "sparkling Spavinaw" as coursing down through the "Osage hills."

Governor Phillips first voiced his opposition, publicly, to construction of the Denison Dam when he was minority leader of the house, and that was when he spoke in favor of house resolution 37, which authorized the sending of a committee to St. Louis to protest construction of the dam.

That same session of the legislature he hit at the principle involved in the project which has motivated his opposition to it. He came near a break with William O. Coe, member of the house from Oklahoma City, who strangely enough is representing the State in protest to the dam.

Coe was supporting house bill 566, which would have granted the citizens of Texas the equal right with Oklahomans to fish in the Red River without a fishing license.

"That was the first threat to the rights of Oklahoma in the Red River," said the Governor.

That same session the Governor supported house bill 3, which amended house bill 385 of the fifteenth session. Effective, house bill 3 was to remove from the Grand River Dam Authority bill the so-called Kirkpatrick amendment, which provided that power generated by the dam could only be distributed through power companies.

Thus Governor Phillips, contrary to charges of JOSH LEE and others, has consistently supported, as a legislator and chief executive of the State, Federal projects which would generate cheap power in competition with the utility companies.

He is opposed, however, to any project which would throw State rights to the Red River country into controversy.

The Townsend Bill

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

Mr. BOEHNE. Mr. Speaker, on page 2537 of the Appendix of the RECORD of Monday, June 12, there appears an extension of remarks by my colleague from Indiana [Mr. GILLIE], in which he takes the House Ways and Means Committee to task for the method which it pursued in bringing the so-called Townsend bill to a vote on the floor of the House. I think it is entirely proper for one, who is a member of that committee, to correct some of the inferences drawn by my colleague.

Beginning in the fourth paragraph of these remarks, I quote the following words:

The new Townsend bill on which we were obliged to vote was introduced in the House on May 23 without benefit of hearings.

Even though this is an accurate statement of facts, it does not portray what actually happened in the Ways and Means Committee. As everyone knows, the first Townsend bill this year was introduced by the gentleman from Florida, Congressman HENDRICKS, on January 3, 1939, and bore the number H. R. 2. During the latter part of January the committee decided to conduct open hearings on the amendments to the Social Security Act and all of its phases. As a result, the Townsend movement was given all of the opportunity it desired to have that legislation explained in detail. The record shows that about 600 pages of written testimony is a part of the official records of that committee. From this testimony I want to repeat a few lines that can be found on page 660 of the printed hearings:

Mr. TREADWAY. If I may supplement what the chairman has said, Doctor, you have been perfectly pleased and satisfied with the manner in which you have been received by the committee at this time?

Dr. TOWNSEND. I have, indeed.

Mr. TREADWAY. In speaking for other witnesses in behalf of your measure, that would apply likewise to their testimony?

Dr. TOWNSEND. Yes, sir.

Mr. TREADWAY. And I think you will also give us credit for the line of questions we have asked, that they have been for informative purposes rather than to in any way embarrass either you or any of your associates.

Dr. TOWNSEND. I do, and I thank you all and individually.

Mr. TREADWAY. I had just one question. You have suffered no persecution from the lawyers on this committee?

Dr. TOWNSEND. No. Gentlemen, I came up here with a little trepidation, I admit. My experience with committees has not been such as to make me seek this sort of thing, but my courage was bolstered by the fact of the fairness, and the evident intent of this committee to be fair all the way through, and by the fact that it was only three jumps to the door.

Just to keep the record straight, Dr. Townsend suggested certain amendments, minor in character, in his testimony before the committee. These amendments were included in the new bill, which bore the number H. R. 6466, which was introduced on May 23. However, the hearings on H. R. 2 were to be applied to H. R. 6466. My colleague from Indiana goes on to say as follows:

It—the new bill, H. R. 6466—was hastily thrown together and included many absurd provisions, such as the following: "Throughout the act the present tense includes the past and future tenses, and the future the present. The masculine gender includes the feminine and neuter. The singular number includes the plural, and the plural the singular. Shall means must and is mandatory."

I just want to remind everyone that even though this language was contained in the new bill, H. R. 6466, it also was contained in the original Townsend bill, known as H. R. 2, and can be found in the first six lines on page 5 of that bill.

Further quoting my colleague from Indiana:

Just what this—

Meaning the above phraseology—

meant, I do not know; but it was no more amazing than many other provisions of this measure. The House Ways and Means

Committee might have eliminated these provisions, but it declined to do so, and the Rules Committee reported a "gag" rule, which meant that amendments were barred. I think my Townsend friends were badly treated by being denied the usual privilege of perfecting their bill by amendments. The entire aim of the Democratic leadership seemed to be to make the bill as obnoxious as possible to insure its defeat.

In order to clear up a misunderstanding, may I refer you to the colloquy between the gentleman from Florida, Congressman HENDRICKS, and the gentleman from Georgia, Congressman COX, which can be found on page 6362 of the CONGRESSIONAL RECORD of May 31, and which reads as follows:

Mr. HENDRICKS. There may be some question as to where the friends of this bill stand on this closed rule and on this bill. You have heard the argument, and will again, that this is not the bill H. R. 2; that instead of being H. R. 2 it is H. R. 6466. Minor changes only have been made. Furthermore, the hearings on H. R. 2 are available to every Member of the House. I dare to say that if the opponents of this rule were asked if they had read the testimony on H. R. 2 that practically every one of them would have to say, "No; I have not." Had this bill been before the House for 6 months and hearings been held on it, those same Members would not have read the hearings on this bill.

Mr. COX. Mr. Speaker, will the gentleman yield?

Mr. HENDRICKS. I yield gladly.

Mr. COX. Is the House to understand from what the gentleman has stated that he and his associates, the advocates of the adoption of this proposal, join with him in asking for the adoption of the rule, and that the gentleman and his associates, the advocates of the measure, will vote for the previous question?

Mr. HENDRICKS. I am sure that is true, I may say to the gentleman from Georgia. I have not questioned every one of them. We would have preferred more time, but we have agreed to this.

Mr. COX. I have understood that that was also the request of the founder of the movement.

Mr. HENDRICKS. I shall be glad to clear that up by reading a couple of letters written by Dr. Townsend, one addressed to myself and one addressed to the chairman of the Committee on Rules.

Under date of May 15, 1939, Dr. Townsend wrote me as follows:

"MY DEAR REPRESENTATIVE: It is my understanding that while there has not yet been any official action taken by the Committee on Ways and Means on H. R. 2, that if we will present a new bill including the amendments which are submitted to the committee, the committee will report the bill without recommendation, and the leaders will give us 4 hours in which to discuss the bill, after which we will have a roll-call vote.

"I do not think the time allotted to this bill is sufficient. I believe its importance justifies at least 10 hours' debate; however, in order to get a roll-call vote on our bill, which is what we desire, I feel that our supporters are justified in agreeing to the 4 hours' debate.

"I trust that every Member of Congress will give this measure his most careful and sympathetic consideration as a constructive contribution to the national recovery we all desire."

Under date of May 24 last, Dr. Townsend addressed a letter to the chairman of the Committee on Rules, from which I read the following:

"Congressman HENDRICKS has called my attention to the fact that the Committee on Ways and Means reported H. R. 6466 to the House of Representatives without a recommendation. It is my understanding that the chairman of the committee was also instructed to ask for a rule on this bill. Congressman HENDRICKS called my attention to the fact that all concerned were desirous of knowing whether this bill, H. R. 6466, had my approval.

"While we all realize that this bill is not a perfect bill, we believe it to be the best that we can get at this time, and we are therefore asking the Rules Committee to give us a rule in order that this bill may be discussed in the House of Representatives and a record vote taken on this bill as the Townsend issue at this time."

Mr. Speaker, Dr. Townsend asked me further to convey this message to friends of this bill in the House of Representatives:

"Friends have advised me that in all probability there will be certain dilatory tactics used to damage our bill. I understand that there will be an attempt to vote down the previous question on the rule and also a motion to recommit the bill.

"Will you kindly assure our friends that either move will be considered an attempt to scuttle our bill and ask them to cooperate with you in voting against these tactics?"

Mr. Speaker, I believe I am justified in saying that any vote to vote down the previous question on this rule or any vote to recommit this bill will be considered a vote against the Townsend bill.

It must be borne in mind that if it was the "aim of the Democratic leadership to make the bill as obnoxious as possible," then it must also be said that the Ways and Means Committee reported the bill as written by Dr. Townsend, including the amendments that were offered by him, and which were included in H. R. 6466, and that the bill was reported without recommendation by the Ways and Means Committee, no member of it offering a motion to report the bill favorably.

It is also interesing to note that in spite of the charge that H. R. 6466 was hastily thrown together, and that no hearings were held on it, that the only change between this bill and the original H. R. 2, on which full hearings were conducted, was a minor change in the taxing provisions designed to create the revenues to put this pension scheme into effect.

I think it is well that the above facts be cited in order to show that not only was H. R. 6466, as written, the bill that the Townsend followers demanded, but that the so-called "gag" rule was the rule requested by the supporters of this movement.

Facts, rather than fiction, should be the basis for a post-discussion of the procedure before and during the vote of June 1, and should also be the basis on which an alibi should be constructed.

The Case for the Wagner-Rogers Bill

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 13, 1939

STATEMENT BY HOWARD A. SEITZ BEFORE THE COMMITTEE ON IMMIGRATION AND NATURALIZATION

Mr. MASON. Mr. Speaker, under permission to extend my remarks in the RECORD, I am inserting herein the statement of Howard A. Seitz before the Immigration and Naturalization Committee.

Fifteen years ago the Congress in its wisdom determined to restrict immigration into this country. Its reasons for so doing were ample and the restrictions then laid down are and will remain, I believe, the law of the land. The choice of policy, however, at all times rests with the Congress. It determines alike when a rule is to be laid down and when an exception is to be made. Sound adherence to policy may from time to time require sound discrimination as to the need of exception. You who were the judges of the country's need when you laid down the policy of restriction are likewise the judges of the country's right to live up to the American tradition of kindliness, gentleness, and tolerance. If you determine that the 20,000 children whose cause I plead touch the history and the heart of America deeply and essentially, it is not only your duty but your privilege to express that determination in a modification of the general policy suited to the emergency now before you.

Let us examine for a moment exactly what the proposal before you is. Permission is sought to admit 10,000 children a year into the United States for the next 2 years. Under the terms of the resolution the authority so sought is carefully safeguarded. Only children under 14 years of age may be admitted. No visa shall be issued to any child who does not meet mentally and physically the exacting requirements of the present immigration laws. Moreover—and fundamental to the whole proposal—no children may be admitted unless assurances which comply with the requirements of the executive departments having jurisdiction are given with regard to each individual child insuring that they will not become public charges. Finally, appropriate provisions are made vesting in the Departments of State and Labor the necessary power to administer the provisions of the resolution.

I do not have to take your time to describe in detail the need for this legislation. The policy of the German Government with respect to its minorities is a matter of common knowledge to all of you. The testimony of the witnesses who have appeared before you has established the completeness and thoroughness of the persecutions which have now become a central policy of that Government. We are presented with a situation unique in modern history. In the language of one of the witnesses who appeared before you, "Its like has not been seen since the days of Herod." Children from homes shattered by the dictator wander helplessly over the face of Europe. They are not the victims of a war or of a famine or of some natural catastrophe. They are the victims of a planned program of extermination.

As the full extent of the tragedy which has befallen these children has become known to the American people, demand has grown that our great land should take some part in the work of rescue. The American Friends Service Committee at once assumed its historic position of leadership in this effort. Its attempt to ameliorate suffering has proceeded continuously to such extent as the situation made possible. The efforts of the Friends were supported in this country by thousands of other Americans to

whom liberty, justice, gentleness, and tolerance were cherished ideals. Out of this common effort was born the Nonsectarian Committee for German Refugee Children. This is the group which has sponsored the resolution now before you, and it has been planning continuously since its organization for the rescue and care of some of the child victims of German oppression.

The plan which the nonsectarian committee has worked out has been given to you in detail by four witnesses. I need not repeat it to you now. Selection of the children will be made in Germany by qualified persons acting under the supervision of the American Friends service committee and allied organizations. The children thus selected will be brought to this country and placed under the supervision of social agencies of their own faiths. They will be kept for a brief period at the ports of entry, and then will be placed either with responsible American families who will undertake their entire and permanent care or will be settled in boarding homes. The selection of the families to which these children will be entrusted will be under the supervision of established child-welfare agencies in this country, agencies which for many years have been leaders in the field of child care and child placement. These agencies will not only see to the placement of the children but will continue supervision after placement to insure that each child remains in a healthy and favorable environment. Each step of the process of selection, transit, placement, and supervision has been considered and planned by the leading American experts in the field.

The appeal of the children themselves, the sponsorship underlying the resolution, and the care with which the entire plan for handling the children has been worked out have combined to produce the extraordinary support for the resolution now before you. Ex-President Hoover was among the first to accord the measure his support. Former Governors Landon and La Follette and Mayor LaGuardia have spoken out in favor of the resolution. The Senate of the State of New York has memorialized to Congress to the same end, and the California Assembly has approved the project by the overwhelming vote of 47 to 10.

Church support has been equally generous. All of the leading religious denominations have voiced approval of the bill through recognized spokesmen, and the Federal Council of Churches has submitted a formal resolution in support. Labor has added its voice in gratifying and generous measure. Mr. Green, president of the American Federation of Labor; Mr. Lewis, chairman of the Congress of Industrial Organization; Mr. Whitney, president of the Brotherhood of Railroad Trainmen; and Mr. Dubinsky, president of the International Ladies' Garment Workers Union, have made their views known to you in detail. Resolutions of various unions have likewise been submitted for your consideration. Educators in large numbers have sent messages or appeared before you. President Neilson, of Smith College; President Hutchins, of Chicago University; President Graham, of the University of North Carolina; President Wilbur, of Leland Stanford; and President-elect Rainey, of the University of Texas, have made their views known to you. Business, professional, men's and women's associations have forwarded to you their opinions in behalf of the resolution. From the leaders of opinion in all sections of the country the response has been clear, unambiguous, and insistent. Editorial comment has been almost universally favorable throughout the length and breadth of the land. You will recall the statement of the editor of Collier's Weekly, which has earnestly supported American action in behalf of refugees, that out of an estimated total of 12,000,000 readers not more than 20 expressed themselves as opposed to the position of the magazine in this regard. From every corner of America, then, have come voices urging the Congress to make the gesture which this resolution embodies.

I would add a word concerning the main objections which have from time to time been urged against the resolution.

1. "The resolution is an opening wedge for breaking down the quota law."

While admittedly the effect of the resolution is to permit the entry of 10,000 children a year for 2 years, in addition to the number permitted to enter under the present German quota, the resolution is strictly an emergency measure and does not alter, except for the emergency, our basic immigration policy.

2. "The children so admitted would, at a later date, seek priority for the admission of their parents into the United States."

Even if such were the outcome, this would not increase the total number of persons admitted to the United States; only the order of admission would be changed. Visas for these parents would be dependent on the quota law, and it certainly would be of little, if any, importance whether they or some other adult were admitted.

3. "The resolution is limited to German children and ignores suffering children in other countries."

It is the German situation which is the most acute, and the resolution recognizes just that. Other central European countries have not adopted policies comparable to those adopted in Germany. As for the Spanish children, desperate as their plight has been and is, most of them will and can return to Spain when war conditions have ameliorated, and those who cannot can find haven in Mexico, which has offered to receive them.

4. "The resolution would add heavily to the burden of unemployment in this country."

The children whom it is proposed to bring in would not enter the labor market for some years, and then only gradually. In the meanwhile they would be consumers. In this connection it is noteworthy that labor has raised its voice in behalf of the resolution.

5. "As long as there are needy children in this country it is unwise to offer refuge to children of other lands."

The provision to be made for the refugee children would not serve to relieve the problems of a great number of suffering American children who must be cared for not in foster homes but in their own homes. Moreover, the country's leading child-welfare workers testified in favor of the resolution, and have expressed their feeling that the sympathy aroused for German children will open up new channels of support for the work being done to help American children.

6. "Bringing in these children would cause a break-up of many families in Germany."

Obviously, it is the present German Government which is forcing the breaking-up of families. There is no intention to bring to the United States any children except from families which have already been broken or who are eager to part with their children despite the personal sacrifice involved.

7. "The children do not constitute a desirable group."

The children would be carefully selected by agencies specially equipped for such selection. No child will be admitted who fails to meet the requirements of existing law as to physical and mental health.

8. "How can we be sure that the children will not become public charges?"

The resolution vests in the appropriate executive department the authority to require satisfactory assurances, and even after the enactment of the resolution, not a single child can be admitted until those requirements have been fully met.

In connection with the foregoing objections, one other proposal frequently mentioned during these hearings should be referred to. The question has been put on several occasions as to whether the children proposed to be helped by the resolution should not be given priority under the existing quota. It is urged that these children could be thus rescued without any impairment of the existing quota system. I cannot refrain from expressing unyielding opposition to this suggestion. To dam up one of the few remaining outlets for the adult victims of persecution would convert the resolution now before you from a humanitarian proposal into an act of needless cruelty.

There is nothing more to add. The proposal before you is a simple and kindly gesture, typically American, and symbolic of America's best. We are still the great democracy—the leading exponent of tolerance and of liberty. May I in closing paraphrase the lines that are carved at the base of the Statue of Liberty:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, the tempest-tost, to me:
I lift my lamp beside the golden door."

John Joseph Boylan

MEMORIAL ADDRESS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN JOSEPH BOYLAN, late a Representative from the State of New York

Mr. CELLER. Mr. Speaker, I desire to pay tribute to the life and memory of my friend and colleague the late Honorable JOHN J. BOYLAN, of New York.

It was my great privilege and real pleasure to have known Mr. BOYLAN intimately, and to have served with him in the Congress for many years. During this entire period of time, I never found him to be other than a gentleman of unassuming manner, of honesty, sincerity, and courage. Kindly and courteous to all, faithful to every trust, devoted to his fellow men, conscientious in the performance of his every duty—these words, in brief, sum up the life and work of our departed friend.

It is a sad realization that the services of this devoted public servant have been terminated; but we should be happy in the knowledge that the ideals for which he stood and which he championed, live on. Great has been the loss that has come to us through the death of our beloved colleague; yet equally great has been our gain and the enrichment of the Nation through his having been here. For of JOHN J. BOYLAN, it may be truly written: he has left his footprints of beneficent deeds in the sands of time.

We who remain to carry on the ideals which he so nobly cherished, salute his memory and say: Well done, good and faithful servant; rest peacefully, dear friend, in your new home in the land of eternity.

Another Anniversary Recalled

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 12, 1939

Mr. LUDLOW. Mr. Speaker, since the centenary of the Press Gallery is bringing the press into the limelight, it is interesting to recall that Sunday, June 11, was the twelfth anniversary of one of the most notable events ever sponsored by the press in the National Capital—the reception tendered under auspices of the National Press Club to Col. Charles A. Lindbergh on the night of his return to America from his epochal flight to Paris.

The cruiser *Memphis* brought the returning hero to the Capital of his native land on Saturday, June 11, 1927, and a vast concourse greeted him in the Mall, where President Coolidge spoke in the afternoon.

The evening reception was placed in charge of the National Press Club, of which I happened at the time to be the president. Never before or since have I beheld such scenes of wild enthusiasm as greeted him when he appeared at the auditorium on Nineteenth Street.

Members of the press have a rather canny faculty of being able to detect the real from the phony and they were charmed by the sheer audacity and heroism of this lone pioneer of the air. Acting under instructions of our board of governors, I sent the following cablegram:

CHARLES A. LINDBERGH,
Care of Ambassador Herrick, Paris, France:
National Press Club is thrilled by your matchless achievement. Heartiest congratulations.

LOUIS LUDLOW, *President.*

The enthusiasm of our newspaper group continued to mount and in a few days it was decided that the only way we could properly manifest our appreciation of the "Lone Eagle" would be to sponsor a mammoth reception for him on the night of his return to this country. This could not be done, of course, without the approval of the President, speaking for our Government, which had arranged for the aviator's transportation home, and the approval of Mr. Lindbergh himself. The President's approval was readily given and I then sent the following cablegram to the famous flyer:

CHARLES A. LINDBERGH,
Care of Ambassador Herrick, Paris, France:
Recognizing that you have written a matchless page of history, and desiring as an organization to show our appreciation of superlative valor and genius, the National Press Club, composed of 1,700 representative newspapermen of America, invites you to be our guest at a luncheon and reception upon your return to Washington, and would appreciate an answer assigning us a definite date.

LOUIS LUDLOW, *President.*

The hoped-for answer was received and the arrangements for the reception proceeded feverishly.

When the time came the auditorium was packed and thousands of people were jammed into New York Avenue, Nineteenth, Twentieth, D, and surrounding streets, struggling in vain to secure entrance. Colonel Lindbergh, who had just been elevated to a colonelcy, appeared about 10 o'clock, in immaculate evening dress, accompanied by his mother, Mrs. Evangeline Lodge Lindbergh. Although radio was not very far advanced there was a broadcast that carried the voices of the speakers to all parts of the country and into foreign lands. The program opened with an address by the late Richard V. Oulahan, chief correspondent of the New York Times, the gracious and dignified dean of the corps of correspondents.

With characteristic modesty the aviator himself made only a few extemporaneous remarks of appreciation. Addresses were delivered by Charles Michelson, Washington correspondent of the New York World, Secretary of State Frank B. Kellogg, Postmaster General Harry S. New, and others, and messages from the British Ambassador and other members of the diplomatic corps, were read lauding the Colonel in superlative language. It is much to be regretted, I think, that most of the speeches made that night were not preserved in textual form. It fell to my lot as president of the club to present the honored guest. Rummaging among some old papers the other day I ran across a copy of my address, which was as follows:

Mr. Chairman, ladies, and gentlemen, not for ages has the imagination of man been stirred as it was 3 weeks ago when Charles A. Lindbergh, fired by the intrepid spirit of the Western World, launched forth in his airplane alone, provisioned with four sandwiches and a bottle of water, a pioneer of the trackless seas. As America's shores receded in the distance he faced a vast wilderness of treacherous ocean.

As if roiled by the very boldness of this Columbus of the air—this winged Mercury, speeding like a thunderbolt of Jove—nature sent her tempestuous elements athwart his path, and while he battled with the storm and sleet millions upon millions of his fellow beings sent up prayers for his safety to the throne of God. The 33 hours and 30 minutes from New York to Paris was a period of tragic suspense, when the whole world poured forth in a myriad of mystic ways its admiration for the incomparable aviator and its love for the mother who had brought forth such a boy.

To him mountains of peril were as nothing. His faith was buoyant and his hopes were high. Courage was his woof and fiber, and it is not difficult to imagine that stern fate, surprised by this peremptory challenge of her inexorable decree, lifted her beetled brows and was touched by the very sublimity of his heroism, for she gave him a sporting chance.

And when he reached the other shores he arose to another test of character as greatly as when he battled with time and the elements. Amid all of the adulations of kings and parliaments he remained a modest, unassuming American, an honor to his home country, an ambassador of good will, doing more to foster amity between nations than could have been done by a thousand ministers of state.

"After all," he said in London, "two Britishers were the first to fly across the Atlantic." Again, when he learned that Chamberlain had started on the long flight, he remarked fervently, "I hope he makes it." Here he struck the major chord of his character in his desire to give to his comrades at home and across the seas a share of his imperishable glory. And when, in foreign lands, the ties of home began to press and strain against his heart and he confessed, in simple truth and sincerity, to being homesick, how America did yearn to take him to her bosom!

His name is now among the immortals. Around the firesides and in the vast, crowded halls of the future, wherever worth is recognized and genius is extolled, his achievement will be recalled with pride by countless generations yet unborn. Nothing finer could have been done; nothing grander could have been done; no greater epic could have been written into history, and tonight we thank Almighty God that in His infinite goodness and mercy He has permitted Charles A. Lindbergh to return to the arms of those who love him.

I now present Colonel Lindbergh.

The Late Joseph A. Lyons, Prime Minister of Australia

REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

Mr. DONDERO. Mr. Speaker, last week the Prime Minister of Australia passed away. He left behind a philosophy on which we in this legislative body of the American people might well meditate. In an editorial the Daily Tribune, of Royal Oak, Mich., my home city, had this to say:

Something of the economic philosophy of Poor Richard found expression in the fiscal principles of Prime Minister Joseph A. Lyons, who was credited with saving Australia from bankruptcy.

To him a debt was an obligation which meant failure if evaded, and accordingly he considered it futile to spend money the Commonwealth did not possess. None of this spending-our-way-out-of-debt business for him. He put Australia on a sound basis the hard way. When the pinch came he bore down on government expenditures and cut them 20 percent. The immediate effect of that and other measures was to convert an impending deficit of $1,000,000,000 into a surplus. So greatly did his economy policies bolster the Commonwealth's morale that within 3 years unemployment has been reduced 50 percent.

There must be something to Mr. Lyons' fiscal program, which he pursued until his death last week. This country, reversing his technique, still has a vast number of unemployed, and the debt and the spending show no shrinkage either. Of course, Mr. Lyons' program called for governmental sacrifices. But isn't it about time that government—Federal, State, and local—got over the notion that sacrifices are the exclusive province of the taxpayer?

Preservation of Indiana's Forest Resources

REMARKS

OF

HON. EUGENE B. CROWE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

Mr. CROWE. Mr. Speaker, I have introduced for the RECORD a resolution passed at the Fiftieth Annual Convention of the Indiana Federation of Clubs, which was held at the Claypool Hotel, Indianapolis, Ind., on May 24, 1939, which has to do with and is in the interest of preserving our national forests and for the reforestation of eroded, worn-out hill land and other depleted lands.

In Indiana we have the Hoosier forest area, which has had no funds to speak of for several years on account of a clause issued by the National Forest Reservation Commission which does not permit a State to participate in appropriations made for purchases of forest lands which does not have 20 percent or more of its principal forest area already purchased. We have 35,000 acres in our State purchased in an area that covers some 722,000 acres, and we should have more money to purchase forest lands in Indiana. We have been and are now being discriminated against by this National Forest Reservation Commission. They are doing a great injustice to our State and are destroying the forest work in Indiana. I urge that whatever sums are appropriated that our State receive its fair share of the appropriation.

The resolution referred to above follows:

RESOLUTION PASSED AT FIFTIETH ANNUAL CONVENTION OF INDIANA FEDERATION OF CLUBS HELD AT INDIANAPOLIS, IND., MAY 24, 1939

Whereas Indiana's forest resources have been depleted to the point where wood-using industries are forced to stop operations for lack of raw material, resulting in further unemployment; and

Whereas sloping hills once farmed but now so badly eroded as to make them unfit for any other use than the growing of timber; and

Whereas erosion has caused farm abandonment in some southern counties to the extent of 105 farms per county; and

Whereas tax delinquency caused largely by lack of farm income requires State aid for 85 percent of the schools in the southern counties; and

Whereas habitat for wildlife needs to be restored by establishing forest cover through planting and fire protection; and

Whereas many of these permanent benefits can be secured through the development of the Hoosier National Forest: Be it therefore

Resolved, That we, the Indiana Federation of Clubs, in State convention assembled, do endorse the national-forest program in Indiana and hereby urge that the restriction imposed in Indiana against the expenditure of Federal funds for land acquisition for the Hoosier National Forest be immediately removed; and be it further

Resolved, That each Member of Congress and of the Senate from Indiana be furnished copies of this resolution.

There Is No Sense Quitting a Good Job in the Middle—Farm Security Administration Should Have Ample Funds This Year to Continue Most Constructive Farm Job in America

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

Mr. LYNDON B. JOHNSON. Mr. Speaker, we are giving our consideration in Congress at this time to an appropriation to carry forward the splendid work of the Farm Security Administration during the coming year.

To my mind, in a time when our whole agricultural economy is in a state of flux, uncertainty, and difficulty, we have no more important business than to make provisions to go on uninterruptedly with this program.

President Roosevelt has recommended an appropriation of $138,000,000 for 1940, including reappropriated balances left over from the current fiscal year. This compares with an appropriation of $198,000,000 for the current year.

Now think of this:

If the Farm Security Administration is given the proposed $138,000,000 for 1940, that will constitute practically all the funds available to needy farm families in the United States. You and I know that in times of distress, when hail and storm strike, when drought clamps down and floods come washing across the land the farmer cannot turn to the W. P. A. Mighty few farmers have got any help from the W. P. A. But the Farm Security Administration has come to their rescue time and again.

Last year $198,000,000 was considered necessary to carry on this work as a minimum. That is $60,000,000 more than is proposed for next year.

The lower amount will by no means meet the urgent demands for help from destitute farm folk. It cannot begin to meet them. Why? Well, when $198,000,000 cannot do the job thoroughly there is little chance that $138,000,000 will get the job done. During this present year nearly 400,000 needy and destitute farm families who applied to the F. S. A. for assistance had to be turned away. Half a million families! That means at least 2,000,000 individuals—an intolerable situation.

I know intimately about the work of the Farm Security Administration. Every time I look about my central Texas district I can see evidences of its work. We have a great many stubborn farm problems in Texas. Our economy is a farm and ranch economy. The F. S. A. is making an intelligent attack upon these problems.

The major activity of the Farm Security Administration is the rehabilitation of needy and low-income families through small loans, accompanied by guidance in practical farm methods to insure the best possible use of the money.

Most of these families would be considered poor risks by ordinary standards. None of them can get any credit on decent terms anywhere else. A good many of them have been on relief. The F. S. A. program aims to make them independent of further help by putting in their hands the equipment and training necessary for successful farming. From the beginning of the program in 1935 until January 1, 1939, a total of $232,410,369 had been loaned to approximately 650,000 farm families in the United States. These borrowers have already paid back into the Federal Treasury $72,000,000 of these loans, although many of them are on a long-term basis.

One of the chief purposes is to make it possible for borrowers to raise their own food supplies and livestock feed, so they will be less dependent upon cash crops. The increase in the production of foodstuffs does not mean additional competition with farmers in other areas, since virtually the entire output is consumed at home. It represents better and more adequate diet, improved by foodstuffs previously not obtainable.

A glimpse at a group of 373 typical families in my own central Texas district will show you what this means. These families during 1 year stored away 78,500 quarts of fruits and vegetables for winter. Meat for home consumption rose 57,136 pounds during the year. Few owned milk cows when they first sought F. S. A. loans and their children generally reflected the condition. By the end of 1938 these borrowers had reported an increase in milk production and consumption of 122,600 gallons.

One of the commonest troubles with farmers is debt—unadjusted debt. Farm debt adjustment committees, operated by the F. S. A., with no legal authority to force conciliation, helped 259 of my families last year. Their original obligations

amounted to more than half a million dollars. Their assets were negligible. Today that half million is collectible.

Under the Farm Security Administration the provisions of the Bankhead tenant purchase program are being carried out. There is no need to go into details about this program to do the first job on any American's calendar—get American farm folks on farms of their own.

I do not feel, in the light of all these things, that we can afford to go back. I do not think we can afford to tinker with a good thing. I think it will ultimately cost us a lot more in actual money if we chop off portions of the F. S. A. program and delude ourselves that we can "save money" that way. We had better put up sufficient funds and go on with the work we have started.

National Youth Administration

EXTENSION OF REMARKS
OF
HON. ROSS A. COLLINS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

Mr. COLLINS. Mr. Speaker, I have presented recently for your inspection facts about the National Youth Administration program operations in each State. Yesterday I gave a sampling of editorial comment on the N. Y. A. which showed unusual support by the local press of the exceptional place which the N. Y. A. occupies among Federal programs. This commendation has come to my attention, not only editorially but from citizens who represent the leaders in the Nation, the community, and the State—men and women who do not give mere political "lip service," but who watch for results and who evaluate results in terms of constructive human benefit and practical effectiveness. These people say without qualification that the N. Y. A. is a better investment of Federal money than any other Federal-assistance program; they stress the urgent need for this program in extending the principles of democracy; they stress the value of the work being performed by the young men and women on the N. Y. A. as fundamental to a solution of the national problem.

From my own State of Mississippi, Dr. B. L. Parkinson, president of the Mississippi State College for Women at Columbus, says:

National Youth Administration funds, efficiently and honestly administered in Mississippi, have been better invested, in my opinion, than any other of the special Federal aids.

Minor L. Bott, superintendent of the Bay Springs High School in Mississippi, writes:

I wish you would do all you can for the program which has done so much to merit the approval of the general public and justify the money that has been allotted to this department.

From the graduate school of education of Harvard University, Dr. Payson Smith makes no reservation as to his feeling about the N. Y. A.:

I have had opportunity to know intimately of the work of the National Youth Administration. Without any question it has been and is a powerfully stabilizing and constructive force for youth during an exceedingly critical period. It would be impossible to calculate the benefits that are coming and will come both to individuals and to society out of the wise leadership the Nation has provided in this matter.

Dr. Ben G. Graham, superintendent of schools in Pittsburgh, Pa., urges the necessity of continuing the care of our distressed youth through the programs which have been developed under the N. Y. A. and makes strong argument for this program:

May I urge your support of this measure in behalf of high-school and college students? Many deserving youth in Pennsylvania would be unable to attend college today were it not for what the National Youth Administration has made possible. The same is true of many high-school students who could not be decently clothed and able to hold up their heads among their fellow students were it not for what the National Youth Administration has made possible.

I wish to urge, also, the importance of the work projects which have been developed for young people who are out of high school and unable to find work. They are the prey of community influences which tend toward juvenile delinquency and even to criminality. The work projects have given these young people worthwhile work and have brought them back into the vocational schools for trade training. This training has enabled a number of them to be placed in profitable employment.

Also, Alexander J. Stoddard, superintendent of schools in Philadelphia, Pa., urges:

Urge very strongly continuation of adequate funds for the remedial and preventive human-welfare program involved in the National Youth Administration.

John D. Beatty, head of the bureau of recommendations, Carnegie Institute of Technology of Pittsburgh, Pa., and a member of the American College Personnel Association's executive council, states that his observations lead him to believe that the N. Y. A. is one of the most efficient and economic methods of assisting the youth of America and urges support for the recommended appropriation to the National Youth Administration.

Archbishop Gerken, of Santa Fe, N. Mex., an outstanding Catholic leader, says:

We believe there is a great need for increased employment and work-experience opportunities for out-of-school youth in the Southwest. Therefore we strongly support proposed National Youth Administration appropriation of $123,000,000.

Chancelor E. H. Lindley, of the University of Kansas, a noted educational authority, supports the N. Y. A. student-aid program wholeheartedly:

Work of National Youth Administration in judgment of many leaders of education has been one of the most successful contributions to the youth problem in this country. It has given educational opportunities to large numbers of capable and ambitious young persons. In one-half of the American colleges and universities they rank in the upper third in scholarship, which is evidence of care in selection of capable students. I sincerely trust this important work will be continued.

From Shawnee, Okla., comes a message from W. E. Harber, president of the American National Bank in that city:

Notice by press reports committee reducing N. Y. A. appropriation substantially. Wiring to urge that appropriation not be reduced. Under able leadership Hon. Aubrey Williams as national director doing a great work.

Dr. Homer P. Rainey, former director of the American Youth Commission and now president of that great institution the University of Texas, urges the full appropriation as proposed by President Roosevelt:

The work of the National Youth Administration in recent years in keeping hundreds of thousands of American youth in schools and colleges has been of incalculable value. The National Youth Administration has handled these funds for the benefit of American youth with rare efficiency and with almost universal approval of the college and university authorities of the country. I can think of no finer way for the Federal Government to help equalize the educational opportunities of American youth, and at the same time contribute further to the solution of a national emergency, than the appropriation of the President's request for the National Youth Administration. I, therefore, sincerely hope that the Congress will support his proposed budget.

American businessmen are aware of the training and work experience which the N. Y. A. is giving to young people and their support is well expressed by Mr. Charles W. Taussig, president of the American Molasses Co. in New York City:

Your approval of the full Budget request of $123,000,000 for the National Youth Administration is seriously solicited. This agency has performed a most valuable service for the youth of America. The student-aid and out-of-school programs this year have meant the difference between needed additional education and work experience for 750,000 young people on the one hand or complete lack of confidence and stagnation on the other if this aid had not been forthcoming. The low per-year cost of $125, the complete decentralization of these programs to fit the needs of the youth in the community, the splendid response received from 3,000 local advisory committees, the large number of placements of youth who have had N. Y. A. work experience in private industry, and the splendid administrative efficiency of this agency under the able leadership of Mr. Aubrey Williams are urgent reasons for the complete approval of the Budget estimate. Legislative restrictions for administrative expenses should be avoided. It is important that the best supervisory assistance be maintained and any restriction for an administrative expense limit of less than

6 percent would cripple the efficiency of the work for the young people involved. I feel certain that forward-looking businessmen in this country who are interested in the success of the democratic form of government realize that these expenditures for the youth which will provide additional education and work experience are important and should be continued in line with the Budget estimate.

American educators are known to be conservative in their enthusiasms and are not given to favorable comment of Federal activities unless they are certain that these are not detrimental to the American system of education and to American youth. I feel a certain pride in including in the RECORD a few of the messages which have been received in support of the National Youth Administration and in support of the President's recommendation of $123,000,000 for this agency.

Dr. Willard E. Givens, executive secretary of the National Education Association of the United States, writes:

In legislative halls, both State and Nation, we are hearing much these days about appropriations for relief, unemployment, old-age pensions, roads, and armaments, each of which has its place, but we are hearing entirely too little about appropriations for the education and welfare of children and youth. Children come first in a democracy. Unless their needs are taken care of satisfactorily, nothing else has great significance.

The appropriations made available to the National Youth Administration during recent years have helped many, many thousands of worthy and needy girls and boys to continue their work in secondary schools and colleges and thousands of others to secure worthy employment.

The National Education Association of the United States, which is interested in better educational opportunities for all youth in our country, asks you to do everything that you can to secure an appropriation adequate to the present needs of youth which we all know are great.

From C. B. Glenn, superintendent of schools, in Birmingham, Ala., comes a telegram of endorsement of the N. Y. A. program:

I endorse plan of aid to youth through N. Y. A. and urge increased appropriations for it. Many pupils now in our high schools would be debarred without it.

Harry V. Masters, president of Albright College, in Reading, Pa., writes the following:

The value of the assistance which has been given young people in colleges and universities through the National Youth Administration can be fully appreciated only by those who are in close contact with these students and their problems. The expenditure of governmental funds in this very worthy enterprise should be continued by all means.

As a president of one of the colleges of Pennsylvania, I am asking that you give particular attention to this very needy group and, if at all possible, lend your support to the continuation of the program for their assistance during their years in college.

Dr. Alonzo G. Grace, commissioner of education, Hartford, Conn., states:

The National Youth Administration has been one of the most effective agencies ministering to the needs of youth in this country. This department has a very close relationship with the State youth administration, and I urge continuance of the program.

A letter from N. R. Crozier, superintendent of schools, Dallas, Tex., in endorsement of the work which is being done by N. Y. A.:

Of all the work that is being done by the Federal Government, it seems to me there is none that meets a more pressing need than what we call in the schools the N. Y. A. scholarships. The small scholarship of $6 per month has done untold good. I have contacted all of our high-school principals, and they tell me that this money has enabled 300 high-school pupils to stay in school in Dallas. What is true in Dallas is probably true of every city in the United States. We can invest in buildings, we can invest in roads, we can invest in dwelling houses, but an investment in youth will perhaps pay bigger dividends than any other investment that can be made.

Congress is confronted with the appropriation of funds for the N. Y. A. next year. We cannot afford to lose our sense of discrimination in granting funds for the increased activities of a Federal agency which is performing such a beneficial piece of work and which holds the respect of citizens in the communities, in the States, and in the Nation. Its critics are few, and its supporters are legion.

Threats to Democracy

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

RADIO ADDRESS BY HON. HENRY C. DWORSHAK, OF IDAHO, JUNE 13, 1939

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered June 13 over the Columbia Broadcasting System:

This week has been designated as a time to discuss the subject "Keep America Out of War," sponsored by the National Committee to Keep America Out of Foreign Wars. I am speaking to you tonight not only as a Congressman, but as a veteran of that last conflict waged on foreign soil in which America participated. I am not speaking as an alarmist, but as an American who has vivid recollections of that crisis through which our country passed two decades ago. I am not a pacifist, as I have for many years vigorously advocated adequate preparedness for national defense.

Reports during the past few years indicate that various European nations have been embroiled in territorial disputes and one crisis after another has been precipitated. Despite this, those who have visited Europe during the past few months declare that there is far less public concern there over the possibilities of war than agitation in our own country. For more than a year we have witnessed a relentless campaign in the United States to disseminate propaganda designed to create a war hysteria by inflaming the fears and passions of our people, thereby inciting hatreds against foreign nations. Unquestionably sentiment throughout this country is overwhelmingly against intervention in foreign disputes and decidedly in favor of preserving our neutrality and independence. Nevertheless actions of many responsible officials have created a condition which minimizes the possibility of preserving peace, thereby necessitating the use of the facilities of the press, the radio, and the platform to counteract such propaganda in facing realistic facts. If we fail to do this, we may become unintentionally committed so that our involvement in a possible European war would be inevitable.

Current reports indicate the Congress may be in session throughout the summer and fall in an effort to crystallize definite American policies on neutrality. There is almost complete agreement on the part of our citizens that strict neutrality is the only justifiable course, but there is confusion and disagreement relative to formulating our country's policy on neutrality. The Chief Executive has frequently announced his intention to utilize our Government's influence in behalf of the so-called democracies of Europe and to employ methods short of war. Some officials contend that we should have the right to name aggressor nations and then to arbitrarily assail and denounce them. Others believe that this country should remain aloof in case hostilities should be initiated, but also contend that we should furnish munitions, food, and war supplies to nations with whom we may be in sympathy.

However, neutrality really means remaining neutral; not becoming involved in controversies between others, "refraining from taking part directly or indirectly in a war between other powers."

In 1914, following the outbreak of the World War, certain industrial and financial leaders in this country ignored President Wilson's appeal for neutrality and aggressively sought to aid the Allies. War supplies, munitions, and food were purchased in this country, said contraband being shipped aboard American vessels. Such policies eventually plunged the United States into the war as associates of the Allies, resulting in the American people being aroused to a high pitch of patriotism with appeals, "to make the world safe for democracy," and to outlaw war. Failure to adhere to a strict policy of neutrality was responsible in 1917 for our involvement in that memorable encounter.

On the subject of neutrality the United States Government should profit by experiences with European powers. Secretary of State Bainbridge Colby, in testifying before the Senate Foreign Affairs Committee last month, said:

"Instead of enlarging the discretion of the President, I think it would be a wise step toward preserving the constitutional distribution of power to reaffirm congressional control of this great issue of war and to devise legislation to safeguard it. We cannot intervene in European problems with benefit to Europe or without inevitable disaster to ourselves."

Surely Mr. Colby knows whereof he speaks, as he was the head of our State Department during the last war. I am not in favor of Congress delegating its constitutional powers in this regard to the executive branch of our Government, but believe firmly that Congress should and will adequately cope with any difficulties of this nature, if and when they may arise.

It is easy to recall our experiences following the signing of the armistice in 1918 and the efforts made by our wartime President to preserve the traditions and ideals for which America fought. Then followed the Versailles Treaty, and, much to our chagrin, we found the Allies primarily interested in claiming the spoils of victory rather than being concerned with the negotiations of an equitable peace designed to outlaw war. The United States—thanks to foresighted Americans in Congress—did not ratify the Versailles Treaty and failed to subscribe to the terms of the League of Nations, which proposed to enforce the iniquitous terms of that treaty. The principles of democracy were completely overlooked by our Allies as they greedily "grabbed" more than 1,000,000 square miles of colonial possessions from the Central Powers. There was a complete reversal in sentiment, forcing the United States to recognize the futility of attaining its objectives in the war. Statesmen at the conclusion of said conference predicted that ultimately resentment on the part of the then vanquished nations would culminate in another upheaval.

Century-old hatreds and animosities have been responsible for perpetual outbreaks of war on the European continent. Washington 150 years ago admonished this new nation to maintain trade relations with foreign countries but to preserve its independence by remaining aloof from entangling alliances. Europe today is struggling to solve many difficulties which are an outgrowth of the Versailles Treaty. Italy maintains that she was not given her just share of the spoils, and she is obviously seeking to force France to relinquish certain territories in Africa. Germany and other nations have contended that they were unjustly penalized, which they now maintain entitles them to redress. Elsewhere on the European continent trouble is brewing as a result of protectorates set up under the Versailles Treaty, and we could further analyze the various causes of the disputes which have occasioned frequent outbursts of diplomatic intrigue.

Two decades after the World War Americans must recognize that we accomplished little, if anything, during the World War; thus we must consider deliberately and cautiously the advisability of maintaining a policy of nonintervention, or otherwise becoming involved in disputes and possible warfare because of failure to "mind our own business."

We hear much talk about the necessity of preserving democracy in Europe, but I challenge any student of political science to show me one genuine form of democratic government in existence in Europe today. I desire to point out that these so-called democracies have principles of government entirely foreign to us. Democracy means freedom and liberty, insuring citizens of these God-given rights: freedom of speech, press, religion, and assembly. Only a few weeks ago our mother country chose to ban from its radio audience the spoken words of a member of the royal family. Is that true democracy? France recently delegated dictatorial powers to its premier. Is that true democracy? Russia has utilized the heartless purge to stifle political freedom. Is that true democracy?

I firmly believe in promoting friendly relations with all countries, regardless of race, creed, or color. I believe that as Americans we should be tolerant and extend to those across the Atlantic the same privileges which we enjoy. We would—and rightly so—rise up in arms if any official or government should assail the form of government under which we live. Since the inception of our national autonomy, we have insisted that foreign powers maintain a strict policy of "hands off" in matters pertaining to the Western Hemisphere. This has been our consistent policy since President Monroe declared on December 2, 1823, that:

"In the wars of the European powers in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparations for our defense. With the movements in this hemisphere, we are of necessity more immediately connected. * * * Our policy in regard to Europe, nevertheless, remains the same, which is not to interfere in the internal concerns of any of its powers; to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy."

Therein lies the cogency of the long-adhered-to Monroe Doctrine, recognized throughout the world. I maintain that it is beyond our prerogative, at this time, to disregard the principles of this doctrine.

In the two decades since the World War the United States has displayed leadership in disarmament conferences and in negotiating peace pacts among various nations. Some countries have observed such treaties when it was selfishly advantageous to do so, but many of them have ruthlessly disregarded their obligations. Likewise, many nations with whom we were associated during the World War have nonchalantly ignored their war debts, although the United States has canceled a large share of such obligations and expected repayment only of loans made for purposes of rehabilitation following the signing of the armistice. There has been little difference in the nationalistic policies of Old World nations, whether they are operating under so-called democratic forms of government or are controlled by self-imposed dictators.

The greatest menace to the United States has been the susceptibility of our people to European propaganda. Although the League of Nations was repudiated by us 20 years ago, persistent efforts have been made to commit our Government to some alliance similar to the League of Nations. This we should resent.

The British viewpoint was disclosed in an article published in the London Observer last February and which was recently reprinted in a Washington newspaper, adroitly analyzing the steps necessary to successfully aline the United States with that country and deliberately seeking to create the impression that if Britain becomes involved in war it is inevitable that the United States will participate.

This article adds that the best policy for the United States is to help France and Great Britain to buy all the armaments and supplies here that they need, because the stronger they are the less likely is war and the less need of intervention by the United States.

Such propaganda is conclusive evidence that Great Britain does not believe in American neutrality, despite claims of administration leaders. We are told that neutrality is designed to keep America out of European affairs, while disclosures are made of virtual alliances and efforts being made to use our country as a buffer against the totalitarian states. It is time that we unmasked such unholy alliances and Americans apprised of the subtle attempts to place the burden of another war upon our country.

We fought in the World War to legalize aggression by our Allies. Must we fight again to protect their right to retain possession of those territorial gains?

Foreign powers would not hesitate to desert the United States in any crisis if such action were advantageous to their welfare. Britain's attitude toward Manchuria in 1932 proves this assertion. The American frontier is not in France, regardless of such specious claims. The British Navy is not the first line of defense for the United States despite assertions to the contrary.

Our country has the superb protection of two great oceans, which minimizes the possibilities of invasion. Adequate military and naval preparedness will reinforce that defensive position.

About a year ago the May bill was proposed in Congress to give the Chief Executive dictatorial powers over every phase of American life if this country is plunged into war. This proposal was so repugnant and foreign to American ideals of self-government that it has been side-tracked. But a state of war would immediately revive such legislation and subject this country to a dictatorship as ruthless as any foreign tyranny. The rights of individuals guaranteed by the Constitution would be summarily withdrawn, and all vestiges of freedom and liberty would be destroyed.

The real threat to American democracy is not in Europe but in our own country. The preservation of the status quo in another hemisphere is not so vital to our country as the imperative need of solving domestic problems. There can be no solidarity here until we restore confidence in the hearts of Americans in the invincibility of our form of government. Greater security must be provided for the 10,000,000 who are now victims of unemployment by accelerating industrial and business activity and restoring to labor its rightful rewards. The farmers of our country must be protected from agricultural imports and higher price levels restored for farm commodities.

The fiscal policies of our Government must be revised to avert national bankruptcy and our financial house placed in order, so that a crushing debt will not foredoom the United States to defeat in case we are faced by another major crisis.

There may be enemies abroad, but actually the insidious encroachments of subversive creeds and the promotion of fascism, nazi-ism, and communism by aliens within our own borders are far more menacing to the future security and welfare of our country.

If Americans are intrigued by the glamour of war, they can utilize our national energies and resources in combating the devastating influences of the depression.

Let us, therefore, resolve to demonstrate our national esprit de corps in this country rather than on foreign soil, and meet the challenge to preserve our traditionally inspired ideals of democracy.

The Flag Speaks

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

Mr. HARTER of New York. Mr. Speaker, this being the day when our citizens throughout this land—and, yes, throughout the world—are pausing to honor Old Glory, I would like my colleagues to pause and reflect on the story told in The Flag Speaks. I do not know who the author of this proud story is, but I read it while in the office of Miss Louise C. Gerry, of Buffalo, N. Y., one of the feminine leaders of our country, and a former international president of Zonta International.

This story, as I understand, accompanied a gift to Miss Gerry through the ladies making up the membership of Zonta Clubs.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bit of verse, and I hope that

you and each of our colleagues will enjoy, as I have, the splendid story told in—

THE FLAG SPEAKS

Born during the Nation's infancy,
I have grown with it,
My stars increasing in number as the country has grown in size;
The domain over which I wave expanding until the sun on my flying folds now never sets.
Filled with significance are my colors of red, white, and blue
Into which have been woven the strength and courage of American manhood,
The love and loyalty of American womanhood.
Stirring are the stories of my Stars and Stripes.
I represent the Declaration of Independence.
I stand for the Constitution of the United States.
I reflect the wealth and grandeur of this great land of opportunity.
I signify the law of the land.
I tell of the achievements and progress of the American people.
In art and science, culture and literature, invention and commerce, transportation and industry,
I stand for peace and good will among the nations of the world.
I believe in tolerance.
I am the badge of the Nation's greatness and the emblem of its destiny.
Threaten me and millions will spring to my defense.
I am the American Flag.

Thomas Brackett Reed

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

Mr. OLIVER. Mr. Speaker, under permission granted to me to extend my remarks, I am pleased to make the following reference to a famous former Speaker of this House and a great American:

Today, June 14, has been designated as Flag Day of our Nation, and in view of the patriotic significance of this designation it is particularly appropriate that I call to the attention of the membership of the Seventy-sixth Congress a letter received from the president of the Thomas Brackett Reed Centennial Association.

Just 100 years ago there was born in the city of Portland, Maine, a great statesman, a great orator, and a great parliamentarian, Thomas Brackett Reed. The service rendered by this famous native son of Maine is too well known to require at this time any detailed statement commemorating his ability; the simple reference alone to his name is sufficient.

I am indeed proud and honored to represent in this, the greatest parliamentary body on earth, the same constituency that he represented, and I know of no finer example to emulate than that which may be found in his honesty, courage, and devotion to principle regardless of the shifting winds of political popularity and opinion. The letter to which I have referred, and which most appropriately refers to Thomas Brackett Reed and Henry Wadsworth Longfellow as famous sons of Bowdoin College, reads as follows:

WASHINGTON, D. C., *Flag Day, June 14, 1939.*

Hon. JAMES C. OLIVER,
Member of Congress,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: On October 18, 1939, there will be celebrated in Maine, Washington, New York, and elsewhere, the one hundredth anniversary of the birth of Thomas Brackett Reed, one of the greatest of your predecessors and one of the world's greatest parliamentarians.

Your present critics are few in number and mild as a May morning compared to his; yet he thrived and luxuriated in opposition, and so will you.

As you were both graduates of grand old Bowdoin College, whose commencement exercises will be held this week, what could be more appropriate than recognition in the RECORD, together with poems by the greatest of all Bowdoin men, the world's best loved poet, Henry Wadsworth Longfellow, who, like yourself and Speaker Reed, was born in Portland, and whose birthplace, a stately three-story old colonial mansion, has become a world shrine and place of pilgrimage.

Sincerely,
ARTHUR C. JACKSON,
President, Thomas Bracket Reed Centennial Association and the International Longfellow Society.

Any reference at any time to the name of the best beloved poet of the known world would be completely inadequate if at the same time it did not contain one of the famous and well-known writings of this immortal genius.

A PSALM OF LIFE

Tell me not, in mournful numbers,
Life is but an empty dream!
For the soul is dead that slumbers,
And things are not what they seem.

Life is real! Life is earnest!
And the grave is not its goal;
Dust thou art, to dust returnest,
Was not spoken of the soul.

Not enjoyment, and not sorrow,
Is our destined end or way;
But to act, that each tomorrow
Find us farther than today.

Art is long, and Time is fleeting,
And our hearts, though stout and brave
Still, like muffled drums, are beating
Funeral marches to the grave.

In the world's broad field of battle,
In the bivouac of Life,
Be not like dumb, driven cattle!
Be a hero in the strife!

Trust no Future, howe'er pleasant!
Let the dead Past bury its dead!
Act—act in the living Present!
Heart within, and God o'erhead!

Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time;

Footprints, that perhaps another,
Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
Seeing, shall take heart again.

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait.

Misuse of W. P. A. Labor in Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

ARTICLE FROM THE PITTSBURGH POST-GAZETTE

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette:

[From the Pittsburgh Post-Gazette]

DANDO, FIVE OTHERS ARE HELD GUILTY—DEMOCRATIC STATE SENATOR CONVICTED OF WORKS PROGRESS ADMINISTRATION LABOR MISUSE—WILL ASK NEW TRIAL—PRISON TERM POSSIBLE PENALTY OF POLITICIANS IN SCHUYLKILL

PHILADELPHIA, June 12.—State Senator Joseph P. Dando and five other Schuylkill countians were convicted in Federal court today of conspiracy to divert Works Progress Administration labor to the Democratic legislator's amusement center in Llewellyn.

The jury freed one of the eight accused, all of whom were Works Progress Administration foremen and timekeepers. The judge had ordered acquittal of two others.

Should the convictions stand, the maximum penalty possible is 2 years in prison and a $10,000 fine for each defendant.

Convicted with the Democratic senator were Charles Simmett and Forrest Pinkerton, of Llewellyn; Clyde Schock and Roy Hosler, of Pottsville; and Oswald Bendrick, of Minersville.

The jury acquitted John E. Kelly, of Pottsville, and recommended mercy for Schock.

Previously acquitted by directed verdict were James Butler and Francis Validus, of Minersville.

ALL ARE FREED ON BOND

Pending arguments for a new trial, Dando was freed under $1,500 bond and each of the others on $500 bond.

Three hours and fifty minutes the jury of eight men and four women deliberated after hearing defense counsel warn them to "guard against political crucifixion in this case."

Attorney Thomas C. Egan had called Dando a "great humanitarian."

In his defense, Dando contended the W. P. A. labor had been used on his recreation beer hall, trapshooting range, swimming pool, and tennis courts without his direct knowledge.

Picturing his client as a benefactor, Egan declared he had turned the amusement property over to the National Youth Administration.

"The humanitarian idea," declared Gerald A. Gleeson, assistant United States attorney, "was a myth."

"As a matter of fact," Gleeson declared, "Senator Dando diverted 268 days of labor for his private benefit, close to $1,000."

Small-Business Men Urge Constructive Tax-Revision Program Before Adjournment

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

LETTER FROM MR. FRANCIS C. SPENCE, EXECUTIVE DIRECTOR OF THE MICHIGAN DIVISION OF THE NATIONAL SMALL-BUSINESS MEN'S ASSOCIATION

Mr. SHAFER of Michigan. Mr. Speaker, the small-business men of the Nation are looking to this Congress to aid them by revising the present tax program and by enacting needed amendments to the Wagner Act. In support of this statement I ask unanimous consent to include herein a letter received from Mr. Francis C. Spence, executive director of the Michigan division of the National Small-Business Men's Association. This letter urges this Congress to remain in session until a constructive tax-revision program is adopted and amendments made to the National Labor Relations Act. The letter follows:

DETROIT, MICH., *June 12, 1939.*

Hon. PAUL W. SHAFER,
House Office Building, Washington, D. C.

DEAR SIR: The members of this association, through its representatives, have repeatedly expressed their attitude on legislation pending before this Congress. They are particularly interested in amendments to the Wagner Act and in a tax-revision program that will permit business expansion and reemployment in preference to the continual losses now evident in the large majority of business establishments in this State.

We would like to call your attention to our letter to Senator VANDENBERG on this point, which was placed in the RECORD Monday, May 8. Our letter clearly indicates the need for tax revision. Additional response to the survey since the writing of that letter most emphatically points out the increasing seriousness of the situation. Careful scrutiny of the responses shows that restrictions of the Wagner Act, coupled with the restrictions of the Social Security Act, are very definitely hampering reemployment and retarding business. We can give you specific instances of organizations that have closed down or intend to liquidate because of tax burdens and present labor legislation. These firms are not contemplating liquidation as a matter of choice. They prefer to keep their establishments running and continue to provide steady employment for their employees, but to do so while digging into reserves to pay taxes is a financial suicide.

At the request of the Detroit unit of our association we obtained the consensus of opinion of our members throughout the State. As a result of that poll, the board of trustees at a meeting held June 8 instructed that all the Michigan Congressmen and Senators should stay in session until a constructive tax revision program has been adopted and amendments made to the Wagner Act.

Testimony before the committee investigating the Wagner Act conclusively points out the need of amendments to it. The members of the association have repeatedly endorsed the Burke amendments and they unqualifiedly support Representative HOFFMAN'S bill to establish a new Labor Board.

The need for action on business relief measures has been evident to Congress since January.

A further shilly-shallying behind a smoke screen of war scare and neutrality legislation is not going to help the situation.

By and large the actions of our Congressmen have been most constructive. Therefore, in view of the seriousness of this situation, we now look to them for increasingly intensive effort along these lines. We sincerely hope that you are in sympathy with the attitude of our members and I am sure that a letter from you in this regard that we can report in our next regular bulletin will be much appreciated by them.

Yours very truly,

F. C. SPENCE,
Executive Secretary.

Easy Credit—and Government Banking

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

Mr. BENDER. Mr. Speaker, in 1933 the newly elected President of the United States, Franklin Delano Roosevelt, took the oath of office and delivered an address which must frequently rise to haunt him in the night. The enormous scope upon which his administration has failed to achieve the goals he outlined, the complete repudiation of economy as a principle of sound government, the steadily mounting burdens of Federal Government which have accentuated the burdens of the Nation should be an endless source of ironic disappointment to those who cast their votes for the Democratic Party in 1932. During the course of that memorable election campaign Mr. Roosevelt cudgeled the Republican Party with crushing blows because of its "extravagance" and the constantly mounting size of the Federal Government.

Among other things, in his first inaugural address, President Roosevelt pointed his finger at the Nation's bankers to heap scorn upon their heads. He said of them, "Faced by failure of credit, they have proposed only the lending of more money."

Today the failure of credit is more pronounced than it has ever been before in the history of our Nation, and the New Deal offers Congress a measure which proposes precisely the same thing which President Roosevelt bitterly condemned in 1933, the lending of more money. It is undoubtedly a commendable motive which has moved the administration to activity on behalf of small-business men. Everywhere they are complaining of the difficulties they encounter in borrowing money. But it is not the Government alone which has discovered obstacles in the path of renewed credit. Banks and bankers, for all their vulnerability, for all their excellent availability for the slings and arrows of the New Deal, are still very much on the alert. They have been trying desperately to move their lendable funds. Advertisements, personal solicitation have been used to stimulate loans. Consumers' credit has been extended in many instances to an extent unheard of in other days.

None of this has proven effective. Businessmen who have good prospects of repayment are not seeking loans. The Government itself has discovered this truth. In the last 5 years the Federal Reserve Banking System of the Nation and the Reconstruction Finance Corporation have been engaged in the business of lending money to business. At the present time the total amount of loans outstanding to the credit of the entire machinery of the Federal Government is $125,000,000. The 12 banks of the Federal Reserve System have succeeded in the entire 5-year period in lending only $58,000,000. These amounts are utterly insignificant in the credit structure of the Nation. Today, even in the midst of depressed circumstances, there are outstanding $21,000,000,000 in bank loans. It is more than obvious that the R. F. C. and the Federal Reserve lending agencies have been

no more successful in stimulating borrowing than the private bankers of our country.

Now the New Deal proposes to enlarge the Nation's credit facilities even further. Who will be the borrowers? There is plenty of money lying in the vaults of our banks begging for use. Banks have tried to move it out, but no bank will be justified in lending to borrowers who cannot repay. What the Government seeks to do, seemingly, is to lend funds to businessmen who are such poor risks that private bankers, anxious as they are to lend, cannot venture.

If it is this group to whom we are now about to lend, we are faced with another subtle program. Loans may be a mask for gifts, designed to maintain in power the generous giver without regard to the economic structure which they may disrupt completely. Economists who have studied the present difficulties confronting American capitalism agree that the Nation does not need easy credit today so much as it needs a group of men who will willingly undertake to risk their funds in new enterprises—not creditors, but partners. These men are the chief victims of the restrictive measures imposed by the New Deal. With their hope of profits cut to meaningless proportions, with their assurance that any speculation today is subject to the unpredictable whims of a national administration which delights in harassing business, those who are willing to take their chance with the investment of their funds are few and far between.

Were it not so tragic, the spectacle would be a source of grim humor. Faced with the same problems, Mr. Roosevelt falls back upon precisely the same solution which he branded as worthless in the not so distant past. The Nation is discovering daily that in the last analysis we must return to sound economic methods to achieve sound economic results.

Annual Alumni Dinner, Massachusetts Institute of Technology

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

ADDRESS BY KARL T. COMPTON, PRESIDENT OF MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address by President Karl T. Compton, of the Massachusetts Institute of Technology, at the annual alumni dinner on June 5:

However interesting things may be in retrospect and however pleasant and inspiring may be our renewal of old associations at our alumni reunion, the important business of life is ahead of us, not behind us. The past is important, for it is the foundation on which we build the future, and its experiences show the directions in which our future efforts should be guided if we can interpret these experiences aright. * * *

Our original directive * * * was stated in our charter in 1861, which incorporated the Massachusetts Institute of Technology "for the purpose of instituting and maintaining a society of arts, a museum of arts, and a school of industrial science, and aiding generally by suitable means the advancement, development, and practical applications of science in connection with arts, agriculture, manufactures, and commerce."

This objective has stood the test of time, and is perhaps even more important now than ever before. I say this with confidence, despite the panicky thoughts of some who have sought, during the last 9 years, to see in science the scapegoat for our recent economic troubles, and who have sought salvation in legislation contrived by social planners. Granting a real value in social planning, if wisely conceived and efficiently administered, why do I still believe that our most valuable contribution to humanity can come through "advancement, development, and practical applications of science" with all the wisdom, energy, and resources which we can marshal for the task?

Consider first the long-range lesson of history. Just before the "machine age," social planners, including some of the ablest minds of all time, were devising resettlement projects and model industrial communities in which an essential feature was the employment of all children above the age of four. This was their best solution for the desperate struggle of the masses of people for the bare necessities of life. Only by efficient use of child labor could children be afforded and could families hope to escape the privations of starvation and hopeless existence. The proposed solution through systematic employment of children in factories was viewed, not as exploitation of child labor, but as a great social improvement.

But since that time science and engineering have so increased productive power that it has been possible for enlightened public leaders to inaugurate a great program of social security, including abolition of child labor, universal education, moderate hours of labor, pensions, insurance, and unemployment relief on a huge scale. These are superimposed on an enormously improved general standard of comfort, health, and interest in living.

Such achievements of science dwarf into insignificance the recent social and economic dislocations and have provided opportunities for social planning on a scale formerly undreamed of. So I make no apology for affirming faith in our M. I. T. objective. But I would point out a very important feature of the situation which makes our program even more important than it would otherwise be.

Having recognized the opportunities of a greatly expanded social-security program and perhaps not adequately realizing that this program has been made possible only by the productivity that has come from technology, there is grave danger that the public and its leaders may push this program beyond the limits which the present state of technology can support. If this should happen, the whole structure of social security and high standards of living may fall like a house of cards. The danger is, I believe, very real. It can be combated by two forces: First, better education of the public, and especially of its leaders, to a realization of the necessity of keeping the demands of taxation and regulation within the limits which our technological production can support; second, the improvement of technological processes themselves, so that the increased demands for social security can be met by production and taxable profits.

Really included in the above argument is another aspect of our economic situation on which major attention has been focused—the problem of unemployment. After the necessary emergency relief measures, and the efforts to stimulate employment by huge "pump priming" projects, and the attempt to produce employment by distributing wealth, the public and its leaders are coming to realize what more scientifically minded people realized from the beginning, namely, permanent new employment can only come, as it has always come in the past, through the technological development of new products which people will be willing to work and to pay for to possess, and through technological development of more efficient methods of production which will lower costs to permit of increased volume of purchase.

Any attempt at social planning without recognition of and provision for this essential technological basis of prosperity is going back to the "horse and buggy" days with a vengeance; it is based on the same restricted viewpoint as that of the social planners several hundred years ago, but with this difference: They had no way of knowing what science could contribute to their plans, while we have the lesson of the intervening history to guide us.

So I have no reservations in defending the objectives of this institution on the grounds of their vital importance to the welfare of this country and their benefit to mankind generally.

Use of Dictographs on Capitol Hill

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

REPORT OF THE SERGEANT AT ARMS OF THE HOUSE OF REPRESENTATIVES

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

report made by the Sergeant at Arms of the House, Hon. Kenneth Romney, to the Speaker of the House of Representatives:

JUNE 12, 1939.

Hon. W. B. BANKHEAD,

United States House of Representatives, Washington, D. C.

MY DEAR MR. SPEAKER: In reporting to you the result of my investigation of published reports of the use of dictographs in the old House Office Building, I beg to advise that I started an inquiry only after vigorous protests from numerous Members of the House. I want to emphasize also that I am concerned with no phase of the milk investigation other than that relating to dictographs on Capitol Hill.

When these reports were called to my attention, I felt that they raised a graver and more important issue than any other that could come out of the hearings of the milk investigating committee. It involved the right of Members of Congress to privacy in their own offices, the right to be free from espionage and eavesdropping. Obviously, if dictographs could be placed in a congressional committee room they could be placed in the office of any Congressman on Capitol Hill. Moreover, it involved an invasion of the police power of Congress, which Congress reserved to itself and lodged in its own authorities.

The published reports themselves are very definite and illuminating. In its issue of May 27 the Washington Post, in a story by James D. Secrest, under the heading "Subcommittee's Secretary Resigns; Office Building of House Tapped," said:

"Dictaphone attachments were placed in hotel rooms in downtown Washington and in the subcommittee's own room on the fifth floor of the old House Office Building by specially detailed police when Chairman BATES and J. Edward Burroughs, committee counsel, were apprised of an offer allegedly made by Whiting Faulkner, Martinsburg, W. Va., postmaster, to the Maryland-Virginia Milk Producers' Association."

On the same day the Washington Times-Herald, in a story by Thomas E. Stevens, said:

"Dictaphones 'planted' in hotel rooms and on Capitol Hill by 'eavesdropping' detectives were whirling while lobbyists, politicians, and girls 'let their hair down' in conversations they thought would never be repeated, it was learned last night."

The Evening Star, of May 27, 1939, under the byline of James E. Chinn, said:

"Transcript of records of dictaphones set up in the House Office Building and two downtown hotels by inspectors for the House Milk Investigating Committee disclose that efforts had been made to influence the District to specify the use of a particular kind of asphalt in street-paving contracts, it was learned today."

The following day, May 28, 1939, the Evening Star published further:

"Hints that efforts had been made to influence the District to use imported asphalt were found unexpectedly in the transcript of records of dictaphones set up in the House Office Building and in two downtown hotels by inspectors for the House Milk Investigating Committee."

These are all positive statements made by reputable newspaper reporters well known to many Members of Congress. I am unwilling to assume that they were made without foundation. I believe that these men would testify under oath to the truth of these statements, although they might invoke the newspaper code and decline to reveal the source of their information. This, however, would in no way destroy the usefulness of their testimony in establishing the placing of dictaphones in the House Office Building.

No denial of these published reports was made by anyone until after I announced that I would conduct an investigation. Subsequently you, Mr. Speaker, stated at a press conference that you desired the matter investigated thoroughly, and made it clear that the power granted to the House subcommittee conducting the milk investigation to call upon other agencies of the Government for aid was merely the routine resolution that contemplated the use only of clerical assistants and not police detectives. When the temper of the House was indicated by the uproar that ensued, denials were forthcoming, but they were not made by the Metropolitan Police Department. As you may know, it has since been developed in the testimony of the milk investigation that the use of dictaphones either on or off Capitol Hill was not authorized by the District Committee as a whole or by the subcommittee making the investigation.

Early in my inquiry I telephoned Maj. Ernest W. Brown, superintendent of the Metropolitan Police Department, and was advised by him that he had detailed men from his department to assist Chairman BATES, of the subcommittee, at the latter's request, but that he had no knowledge as to what they may have done. I ascertained that at times there were several Metropolitan policemen working for the subcommittee under a detail headed by Captain Truscott, of Precinct No. 10. To one of them, Precinct Detective Richard Felber, I had given, at the request of Chairman BATES, a letter empowering him to serve subpenas for the committee, but no other authority. When I gave Felber this letter I did not know the committee intended to use detectives for under-cover work. Upon questioning by me, Mr. Felber denied that he had placed any dictaphones in the House Office Building. I am prepared, however, to give the names of witnesses who will impeach the testimony on wire tapping he gave to the committee.

I do not wish to make any criticism whatever of the Metropolitan Police Department. Major Brown is a most reputable and efficient gentleman. He is a long-time friend of mine and I have the highest regard for him. He has frequently aided Capitol Police authorities at ceremonies on Capitol Hill, the most recent occasion being the visit of the King and Queen of England. Any activity of the Metropolitan Police officers detailed to Chairman BATES, of the subcommittee investigating the milk situation was undoubtedly based on the assumption that they were acting with the full authority of the District Committee and of the House.

Miss Julia Castleman, former clerk of the Bates subcommittee, came to my office and told me that on a number of occasions she talked over the telephone on personal matters from her office room, 537 old House Office Building, to Postmaster Whiting Faulkner, of Martinsburg, W. Va., both when he was in Martinsburg and when he was in Washington. She told me she had never been inside the Hamilton Hotel and was not present on any occasion when recordings were made downtown. Mr. Faulkner became a central figure in the investigation, and Miss Castleman was under suspicion of revealing secrets of the committee to him. If any records of the conversations between Miss Castleman and Mr. Faulkner were obtained at all by under-cover agents, they had to be obtained by tapping the wires in her office in the House Office Building or at her home, 1363 Otis Place NW., where she lives with her mother.

When the Capitol police entered the case there were no dictaphones in the Bates subcommittee offices on the fifth floor of the old House Office Building. As dictaphones are easily attached and detached and require only a connecting room for operation, they could not tell whether any had been used. I have no positive evidence that they were used and have never stated that I had.

Inasmuch as a number of members of the District Committee, as well as of the subcommittee making the milk investigation, have told me they were convinced dictaphones were used in the House Office Building, the facts in the case can be cleared up very easily by the committee calling witnesses and taking testimony under oath. If subpenas were issued for the newspapermen mentioned above and for Miss Martha Strayer, Captain Truscott, and Detectives Felber and Klotz, the latter expert wireman for the Metropolitan Police, the question could be disposed of once and for all.

I am sending a copy of this report to Hon. JENNINGS RANDOLPH, chairman of the District Committee.

Respectfully yours,

KENNETH ROMNEY,
Sergeant at Arms, United States House of Representatives.

Our Flag

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

POEM BY C. S. LONGACRE

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem sent to me by a friend in connection with the observance of Flag Day:

OUR FLAG

(By C. S. Longacre)

We hail our flag of liberty!
  Its folds in hues resplendent spread;
The blue for truth and loyalty,
  The crimson red for blood we shed,
The spotless white for purity.

Our flag has never known defeat.
  Its staff e'er stands on holy ground;
Its cause is just, its mission meet,
  Its principles of right are sound,
Its every star with hope replete.

Thank God, this flag, in every clime,
  Upholds the right, condemns the wrong,
Sustains the just, denounces crime,
  Defends the weak against the strong,
Its purpose high, its aim sublime,

Long may it wave o'er our fair land,
  A diadem of stainless fame:
Fit symbol of our freedom grand,
  For aye aglow with glory's fame,
Securely held in God's own hand.

The Spanish-American War

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

ARTICLE BY DAMON RUNYAN

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Cincinnati Enquirer of Monday June 5, 1939, by Damon Runyan:

[From the Cincinnati Enquirer]

It has now become quite apparent that the most important war the United States ever engaged in, bar the one in 1776, was the War with Spain.

This is a curious situation when you consider that the Spanish-American War was long rated one of our minor martial feats. Indeed, it was hotly criticized for years afterward as an unnecessary adventure, yet today it looms on the horizon of American history as the most useful exploit of our arms since the Revolution.

Just imagine, if you please, what a sweat this Nation would be in at this very moment if Spain owned Cuba and Puerto Rico, on one side of us, and Guam and the Philippines on the other side, and Franco was in command on both sides with his Nazi and Fascist allies at his elbows.

Yet that might be Franco's status right now if the United States had not fought and won the War with Spain back in 1898, and in the peace settlement forced Spain to give Cuba her freedom and took over the Philippines and the islands of Puerto Rico and Guam. He would be in a spot where he could send over a crate on a gallon of gas and flatten our onions on Hibiscus Island, Dade County, Fla., any time he felt like it.

From Cuba and Puerto Rico, Franco and his allies would be bosses of the Caribbean and the Panama Canal. Americans would not dast say boo down there. From Guam and the Philippines, Franco and company would rule the Pacific, especially hooked up as they are with Japan. The good old United States of America would be boxed in by the Nazis and the Fascists both ways from the jack.

Well, as it stands now, Cuba is free and our friend. The Cubans may get a little irked at us now and then, but if ever it comes to a show-down you can bet all the sugar in the Pearl of the Antilles that they will be in there slugging on our side. Cuam is our most important outpost in the Pacific and the Philippines count for something as a base.

Puerto Rico is our ace-in-the-hole in the Caribbean, and will probably one day be a great state in the American Union. As we understand the present plans of the United States of America, when they get through fixing up Puerto Rico as an air base, a mosquito will be unable to skim across yon waters without being spotted and probably brought down by an American plane.

All this, remember, came out of the Spanish-American War that folks once said was a bad war. No war is a good war, we admit that, but from a selfishly American standpoint we hold that as the fall of the play now transpires, this was the best war we ever fought, bar again the one for freedom. It certainly was a better war for the United States than the World War.

That war, as you may recall, was to make the world safe for democracy. We raised an army of millions of men and contracted debts from which the taxpayers have not yet recovered. We did not make the world safe for democracy. On that war alone we would not have made even the United States safe for democracy; but fortunately we had already done that with the War with Spain, though we did not realize it at the time.

The realization has just recently developed, after a lapse of 40 years. It is now that long that this country with tremendous fanfare hastily hustled together a slipshod sort of an Army of Regulars and Volunteers, not too well armed, not too well clad, and certainly not too well fed, and went out and gave those Spaniards a shoving around. It soon developed that the Spaniards were just pop-overs, though it cannot be said that the United States of America knew that when the match was made; and after the excitement petered out and we had all that new territory an awful squawk went up from some quarters.

The wicked fellow in those days was the fellow who wanted to keep the new territory for our very own. He was called an imperialist. Strangely enough, some folks thought we should not hang on to the territory we won by conquest, though that is the identical manner in which most of the real estate that constitutes these United States was originally acquired. It is a good thing now we had the imperialist.

It is conceivable, of course, that Cuba might have won her freedom from Spain even had the United States not stepped in. Those Cubans were and still are brave and desperate fighters in a cause they love. The Philippines and even Puerto Rico might have won their independence by their own efforts, but we are dealing here with what happened, not with what might have happened.

What happened was that the United States chased Spain out of the Western World forever, and the free flag floats where the banners of the Nazis and the Fascists might today be casting shadows over the security of this land. But for the Spanish-American War, the Spaniards would likely have retained at least some holds that would be mighty inconvenient to us now, so that war takes on new stature in history as one of the greatest things the United States ever did for itself.

The Constitution Has Stood the Test

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 14, 1939

RADIO ADDRESS BY HON. A. P. LAMNECK, JUNE 8, 1939

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. A. P. Lamneck over radio station WHKC, Columbus, Ohio, Thursday, June 8, 1939:

I want to congratulate the sponsors of this program upon their wisdom in presenting a balanced diet. They are far too familiar with the real nature of our institutions to fall into the easy, slovenly, and insiduous habit of referring to the central Government in Washington as if it were the only government in the United States. Thus the sponsors of this program have arranged that you shall hear about State, county, and municipal governments in order that the picture may carry a true rather than a distorted perspective.

I am proud of my particular assignment, which is to discuss our Federal form of government. For as Chief Justice Hughes said at the one hundred and fiftieth celebration of Congress, on March 4 last, the most significant fact in connection with such an anniversary is that the vastly preponderant sentiment of the American people is in behalf of the preservation of our form of government. It has made for both stability and the capacity for orderly progress in a world of turmoil and revolutionary upheavals. Thus it is one of the most precious possessions on earth.

But just what is our Federal form of government? The answer is simple. It is expressed and embodied in the Constitution. Therein is to be found what we call the form or system of our government and all its fundamental principles. The Constitution is a direct emanation from the people. They are the sovereign power, they adopted the Constitution, and it is amendable by them alone. To the Constitution all laws, all executive actions, and all judicial decisions, with no exceptions whatsoever, must conform. This is because the Constitution is the creator of all the powers exercised by the departments of government.

But what are the fundamental principles of our form of government as embodied in the Constitution? There may be said to be three—first, the sovereignty of the people; second, the separation of powers; and third, the dual or so-called Federal system of government, combining States and Nation in a working whole. The sovereignty of the people is made unmistakably clear by the first three words of the Constitution—"We, the people"—thus declaring by what authority the United States of America is ruled.

Back of the determination of the people to be sovereign lay centuries of struggle for liberty and experience in self-government, the main features of which were brought over from England and further developed through a century and a half in the Colonies, the early States, and the Continental Congress.

Coming now to the second great principle—the separation of powers—the Supreme Court once declared that "our form of government is opposed to the deposit of unlimited powers anywhere." The framers of the Constitution knew that neither legislators nor executive officials are good judges of the extent to which their own powers should go. They knew that even the courts must be subordinate to the Constitution, and they made them so.

They were determined to make the three branches of government of equal rank, each independent of the other two, and to delegate to each only certain restricted and delegated powers. If there is any one thing we can be certain of it is that the Constitution aimed, and still aims, to establish, define, limit, and distribute the fundamental powers of government. Alexander Hamilton joined with James Madison in later years in declaring that "an effective despotism was not the Government we fought for."

But the third fundamental principle of our form of government, the dual system, is what distinguishes it most from other countries; it is the chief new invention, as it were, of the Constitution, and it is no less clearly emphasized in that document than the other fundamental principles. In fact, the very name of our

country—United States of America—tells the story. That is the name which appears in the Constitution; 150 years later it is still our official and only name.

Thus the United States came into existence and remains in existence, not as a superstate but as a union of States. The States existed before the United States was formed to bind them together. the States formed the Union, not the Union the States. As the United States Constitution Sesquicentennial Commission says in its little book, The Story of the Constitution:

"Until the people decide otherwise the United States is, in the noble phrase of Chief Justice Chase, 'an indissoluble union of indestructible States.' It is made indissoluble by the Constitution, which also provides for the indestructibility of the States by guaranteeing to each State a republican form of government and equal suffrage in the Senate.

"The people have ordained in the Constitution that the National Government shall depend for its existence upon the perpetuity of the States. There is, however, no guaranty of unchangeable State areas, but all elections are by States, including the election of Senators and Representatives in Congress and Presidential electors. When the House of Representatives is called upon to elect a President of the United States each State has one vote. Failure of the States to perform their functions would annihilate the National Government."

This brief but accurate summary of a few of the essential provisions of the Constitution is a striking indication of how utterly false to its spirit and original intent we are where we permit the constant encroachment of central authority upon the States.

But it is not merely the spirit and original intent of the Constitution which we are getting away from by the steady centralization of power. I have quoted an official publication of the United States Constitution Sesquicentennial Commission as saying that failure of the States to perform their functions would annihilate the National Government.

President Dodds, of Princeton University, a foremost student of government, recently said that the United States would have long since broken down if there had been no device of States and Federal Government, and he added that the success of centralized governments over small European areas has "little significance." But let me quote a greater authority, Chief Justice Hughes. Only a few months ago he spoke of the necessary balance between centralized authority and local autonomy, and added:

"It has been said that to preserve that balance if we did not have States, we should have to create them. In our 48 States we have the separate sources of power necessary to protect local interests and thus also to preserve the central authority, in the vast variety of our concerns, from breaking down under its own weight.

"Our States, each with her historic background and supported by the loyal sentiment of her citizens, afford opportunity for the essential activity of political units, the advantages of which no artificial territorial arrangement could secure."

Now it may be possible that these distinguished authorities, including even the Chief Justice, are doddering old fogies who do not know what is good for the country. It may be that this device of a union of States, this United States of America, with the powers of government carefully established, defined, limited, and distributed by the Constitution, has become antiquated and inefficient, because of changed social and economic conditions. If so, let us do away with it

But let us be honest about it. If the reasons which led the framers of the Constitution to adopt this form of government no longer hold why not be open and aboveboard?

The fair, the honorable, the candid thing to do if we want a unitary, totalitarian state is to change the Constitution and the name. The sly, the underhanded, the dishonest, the sinister course is this process of constant encroachment of central authority, not openly and frankly for what it is, but under a thousand different pretexts, roundabout, indirect, and subtle, meanwhile keeping the Constitution and the name.

A vast amount of hasty, drastic, and far-reaching legislation has been driven through Congress since 1933. Portions have been held unconstitutional; other particular acts have been upheld by the courts. But the sum total, the net effect, has been to whittle away the functions of Congress and of the States and lodge in the Executive the power of legislation, which should rest with the legislative.

Huge lump sums are given the Executive and he has discretionary power to hand them out as he pleases, thus making importunate beggars of sovereign States and mighty cities. Measures like the Social Security Act and the National Labor Relations Act, if really desirable, should have had behind them the slower but more reasoned authority of a constitutional amendment rather than the sudden push of a powerful Executive. The original reorganization bill and the court-packing bill were plainly contrary to the whole spirit of the Constitution. In the farm acts and Bituminous Coal Act Congress surrendered its taxing power to the executive branch and in the reciprocal-tariff measure gave up still another, though closely related, function.

It may be that the motives which animated the framers of the Constitution, including their distrust of the concentration and unlimited deposit of power, are out of date. If so, the straightforward, the honorable course would be to amend the Constitution or even to call a convention and write a new Constitution, rather than to whittle away its provisions. If we must have a unitary, authoritarian state, let us have it openly.

But if what we want is a higher standard of living, the surest way is by the gradual process of trying out different features in different States. Such progress is solid and sure. When Franklin D. Roosevelt was Governor of New York he said: "It is obvious that almost every new and old problem of government must be solved by each State in its own way." It is to be suspected that the constant concentration and centralization of powers in the Federal Government is not so much for the purpose of making real and lasting progress as it is because certain people, with good or bad motives, thought that they have found short cuts to utopia.

Another danger in the centralization of power is that the amount of money which the Federal Government has at its disposal is perilously large. When it spends billions for aid, subsidies, relief, allotments, bonuses, and the like, every selfish-pressure group in the country tries to get still more and yet more. Thus nearly all political issues are brought down to the low level of the "gimme" variety. And, of course, these expenditures are far less subject to taxpayer and creditor resistance than State and local outlays.

It is an old and sound axiom that centralization and concentration feed upon themselves. The officials who are given these powers can never see any danger in them, provided they are the ones to exercise the powers. Eight or nine years ago, when President Roosevelt was Governor of New York, he denounced the idea of government by "master minds," saying that if such unselfish and godlike men could be found it might be in the interest of the country, "but none such were on the political horizon."

Finally, under our form of government, marvelous progress had been made before this excessive tendency toward centralization set in. For a century and a half our dual or Federal form of government has provided flexibility, equilibrium, strength, and stability almost unknown elsewhere.

It is true that government must experience growth as well as stability; it must be dynamic as well as static. But surely we had growth and change of every kind, even before we began to pile duties on the executive branch of the Federal Government in such utter profusion. Just because we have had disturbed conditions for the past decade it seems premature, precipitate, ill-advised, and reckless to throw overboard the system of divided powers, and checks and balances, which has served us so well in the past.

I have already quoted from that great recent document, the address of Chief Justice Hughes at the one hundred and fiftieth celebration of Congress last March, in which he said that it is necessary to maintain the functions of the States in order to keep the central government from breaking down under its own weight. I can conclude in no better way than to quote these further words from the same address:

"If we owe to the wisdom and restraint of the fathers a system of government which has thus far stood the test, we all recognize that it is only by wisdom and restraint in our own day that we can make that system last."

Distribution of Milk and Dairy Products

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

RESOLUTION OF THE NATIONAL CONFERENCE ON INTERSTATE BARRIERS OF THE COUNCIL OF STATE GOVERNMENTS

Mr. GWYNNE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am inserting therein a resolution adopted by the National Conference on Interstate Trade Barriers of the Council of State Governments, held at Chicago, Ill., in April 1939. This resolution which has to do with the distribution of milk and dairy products, was included in the report of the committee on agriculture of said national conference. The chairman of the committee on agriculture was Dean W. Peisen, of Eldora, Iowa, a distinguished member of the Iowa State Legislature.

The resolution is as follows:

The committee on agriculture deplores and condemns the practice of States, counties, and municipalities promulgating economic regulations and ordinances, making more stringent rules for the production and processing of milk and dairy products than are necessary for the protection of public health, and having the purpose of barring such products from such States, counties, and municipalities, and thereby erecting insurmountable trade barriers and protective walls around fluid-milk markets, to the benefit of special local interests and to the detriment of the community and the consumers therein.

The committee on agriculture heartily appreciates the necessity of sanitary regulations. The committee is convinced that the providing of wholesale dairy products to the consumer is not in conflict with the free movement of milk and dairy products in interstate commerce.

In order to reconcile public-health protection with free interstate movement of milk and dairy products it is recommended that States adopt uniform minimum standards with respect to acceptable sanitary requirements. It is further recommended that milk and dairy products from a State having such minimum standards be accepted in another State having like standards upon certification by the State of origin.

Under such a plan it is urgently suggested that the Federal Public Health authorities, or some other Federal agency, designate those States in which the inspection services meet the agreed standards.

The committee wishes to call to the attention of the conference that the Congress of the United States, through a committee of the House of Representatives, is at present investigating the need for new legislation for the District of Columbia on health regulations as affecting milk and dairy products. It is to be hoped that any legislation which may result will be drafted with a view to setting up requirements as a model for the States and to provide for a cooperative Federal-State inspection service.

A Banking System for Capital and Capital Credit

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

STATEMENT BY A. A. BERLE, JR.

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am very glad to include the following extremely important statement on A Banking System for Capital and Capital Credit, by Assistant Secretary of State A. A. Berle, Jr., delivered before the Temporary National Economic Committee:

A BANKING SYSTEM FOR CAPITAL AND CAPITAL CREDIT

INTRODUCTION

Beneath the highly technical title of "capital credit" there is really concealed a tremendous issue. It serves no useful purpose not to state that issue with some bluntness, in spite of the fact that so to state it tends to antagonize a good many interests. Briefly the private financial system as at present constituted does not work. It has, accordingly, to be supplemented by vast amounts of Federal credit which make up in some measure, but inadequately, for the difficulties in the existing system of private finance. Use of the Federal credit by providing relief and by taking care of certain necessary social requirements through public works in a limited field does keep the economic machinery of the country running; but it is not a permanent solution. There is always the danger that the time may come when an economy so organized will reach the end of its tether. We should be getting about the process of reorganization now, instead of leaving it for the more violent processes which always occur when the country is in great stress.

Most of the sequences of figures with which I am familiar indicate that we will (unless fundamental remedies are adopted) reach a period of stress in any case within a short period of years. Unless there is some distortion, such as that which might be caused by a general war, I should think that the next major downturn of the business cycle (due in any case within 4 or 5 years) might present all the factors for an explosive situation. We may, of course, navigate safely through that period, leaving the final reckoning to be made at some later downturn of the business cycle. In any event the next decade will, I think, probably force a showdown.

Since the United States has at its command all necessary productivity, all necessary technical skill, all necessary energy and labor, and substantially all necessary raw materials, any failure of the economic system must be directly due to malorganization.

In a democratic economy the processes of finance are in large measure relied upon to make it possible for individuals to organize their energy, the materials obtainable, and other necessary elements to produce and distribute whatever the country may, in reason, desire. I suppose the test of a financial system is whether it approximately accomplishes that purpose. The present system apparently does not, and a major difficulty appears to be in the system of handling capital finance and capital credit. Conceivably, by solving this question we may be able to take care of much of the difficulty.

I note one historical fact which, I think, is significant. Whenever there have been hard times in the country the public has almost instinctively turned toward the currency—credit machinery—and has called for monetary measures. My own feeling is that the instinct of the country in doing this was sound. Many of the specific remedies actively pressed have been dangerous or ridiculous, or both. The fact, however, that the solutions suggested were absurd does not make it safe to conclude that the public was wrong in feeling that the credit system needed overhauling and was capable of vastly more use than we have made of it. Too often the views expressed in such times were dismissed with statements that they were "inflationary," or "unsound," or that they violated some traditional principle. These comments, though true, left unexplained and unsolved the fundamental fact—namely, that the financial system, in the face of great need and adequate elements of supply, was unable to take the supply, organize it into production, and carry it to the known need. So long as this fact continues the case in favor of the existing financial system remains unproved and unconvincing.

I. THE BACKGROUND OF CAPITAL CREDIT

(A) Historical

Classic finance recognizes the sharp difference between short-term credit and money—the sort of function a commercial bank normally performs, and long-term financing—the kind of thing done by the investment banking houses through bond and stock issues.

The short-term credit field has been evolving continuously and rapidly. During the last century the private commercial banks moved steadily forward. As they did so repeated occasional stoppages of currency and credit forced a steady evolution of their theories and their machinery. The result was the organization of the great European central banks, and reserve bank systems developed in the latter half of the nineteenth century, and, in the United States with the creation of the Federal Reserve System in 1914.

Briefly, what happened was the creation of machinery so that the supply of money and short-term credit should keep pace and proportion with the need for it, and yet be kept in rough working relation to the floating supply of current goods and services moving toward consumption or final use. In result, the supply of bank credit and bank deposits (in effect, the power of commercial banks to create and circulate money) is rightly considered as much a part of our monetary system as is currency itself. Proper use of this machinery could make (as I think it has made) any general strain on American commercial banks a negligible danger. Probably if the monetary mechanisms made available between 1933 and the present time had been created and available in 1929–32, much of the suffering of the great depression could have been mitigated if not avoided.

By contrast, the long-term credit field has had no comparable development since its appearance at and after the time of the Napoleonic wars. A striking fact is that long-term credit—that is, the type of money which normally goes toward construction, public improvements, and permanent acquisitions to plant through investment—moves in much the same way that it did when the House of Rothschild started selling bonds more than a century ago. The bond-selling business has not changed much. Indeed, the Rothschilds themselves did not improve, very much, upon the system which the British East India Co. had used in securing its capital during the seventeenth and eighteenth centuries.

We have, today, a highly elastic system for handling short-term credit; for creating the equivalent of currency; for enlarging and contracting the supply of that currency; and (within very narrow limits) for steering that currency and credit where it is needed, though the "controls" of it are not yet well organized. We have no really modern system of long-term finance.

(B) The newer theories

Meanwhile, certain academic students have developed major discoveries. Outstanding among them is the fact that long-term capital is by no means a thing apart from money and credit.

The studies of Prof. Harold Moulton plainly indicated that the whole theory of long-term credit necessarily had to be revised. As noted, his major contribution was the discovery that a large part of what had been assumed to be "savings"—that is, money destined for long-term investment—was not different from any other kind of created bank credit. His conclusion, stated concisely, was that a considerable part of what we had called "savings" consisted merely in an excess of money or bank deposits created through the normal operation of the banks and made available for investment.

I do not think that the revolutionary quality of this discovery has been adequately appreciated. If true, it meant that our ideas on the whole subject of capital and capital credit had to change. For if capital could be created by creating bank credit, we were released from the irregularities of the flow of so-called "savings." Banking mechanisms could be called on to accomplish at least part, and perhaps more than part, of what had been done by a much less dependable process, and with far less regularity. Capital development can go on though there are no savings, or though owners of those savings decline to invest them and wish to hoard. Moulton's study pointed to a definite reorganization of the banking structure. It at least suggested the possibility that long-term investment might be assisted or carried on through properly controlled banking operations in much the same way that we have learned to assist or carry on ordinary mercantile and manufacturing activities through the use of currency and bank credit created through the Federal Reserve

System and made available through ordinary commercial banks. Professor Moulton did not suggest any banking methods by which this could be done, nor did he undertake to develop the possible dangers to be guarded against. But he did demonstrate one fact. There is no more reason why the flow of capital toward wealth-creating industry should stop any more than there is any real reason why the flow of currency should stop; no more reason why the capital markets should be closed than why the commercial banks should be closed.

Likewise, during the past decade, the work of Maynard Keynes had indicated the importance of capital financing in a national economy. The point of interest here lies in his demonstration that capital financing directly increased the national income by more than its amount. A dollar put into construction—that is, into a road or plant or building which served a social necessity—would increase the national income in that year or in the subsequent year by not less than one and three-quarters dollars nor more than approximately three and one-half dollars. To put it differently, $10,000,000,000 spent in sound capital financing would increase the national income by not less than seventeen billion five hundred millions nor more than thirty-five billions. This formula, sometimes called the "Keynes multiplier," can roughly be taken as a multiplier of 2½ to 1, meaning that national income is increased by about two and a half times the amount spent on heavy capital construction.

The theory of the Keynes multiplier has been both attacked and defended. The National Industrial Conference Board held a seminar in which both proponents and opponents debated the proposition. My own conclusion, after reading the discussion, is that as a matter of theory Keynes' demonstration stands up. There is evidence, based on the work of Schacht, who put the theory into practice in Germany, that it stands up in practice as well.

It is against that theoretical background that we have to work in undertaking to reappraise our theories of capital credit.

(C) Our capital market has been largely closed since 1931

Finally, we have the undisputed fact in the United States—it appears partly true also in France, and to a less extent in Great Britain—that the private capital markets have been in large measure closed since the year 1931. The precise figures differ with the methods of the statistician who is making up the addition; but the general conclusion is inescapable no matter what statistical methods are adopted.

The flow into capital construction may be said to have found its norm at a level of somewhere between eight and ten billions of dollars during the decade from 1920 to 1930. Of this, at least six billions went through the public markets—that is, occurred by sale of stocks and bonds. The balance went into construction through the mortgage markets or through private placement. By 1931 the amounts going through the public markets had fallen to approximately half that amount; then withered to a mere fraction. At a maximum, since 1931, not more than two and one-half billions of true capital money has gone through the mechanism of the public markets. The average is considerably less.

The conclusion is obvious: American private markets are not funneling capital funds into capital construction at more than (roughly) one-third to one-half the rate they were doing in the 1920–30 decade. This means that private activity in heavy industry is not being continuously generated in sufficient volume to keep those industries busy, or to keep the country continuously on an even economic keel.

The slack has been taken up by Government financing. It is entirely beside the point to object to this so long as the situation remains unchanged. Irrespective of political complexion, any government faced with a substantial closure of the capital markets would be forced to take measures to keep the heavy industries and the capital-goods markets sufficiently active to provide employment. If the only available method was use of Government credit, that method would necessarily be used. To attack Government spending as such in this situation is simply to ignore realities.

(D) The effects and the dangers of a closed capital market

If it be true, as apparently it is, that the private capital markets are not providing the necessary flow of capital toward actual construction of tangible economic wealth, and in place of it the Government is undertaking to do the job, we have to face certain definite effects.

The danger of a break-down in the Government credit is discussed later; enough here to say that it may be discounted. In any case, it has been wholly overstressed.

In a capitalistic world, creation of wealth invariably means the creation of a corresponding claim against that wealth. In practice this means either a stock or a bond—either an equity or a debt. Actually it means a debt in the great majority of cases. The expansion in American industrial plants from 1920 to 1930 was accompanied by an equivalent expansion in debt, though the debt was private rather than public. In a national economy it does not make a great deal of difference, from the strict finance and monetary point of view, whether the debt is that of a corporation or is that of the United States, of a State, or of a municipality, provided the expenditure actually creates wealth.

The real danger lies elsewhere.

There is, first, the fact that the wealth-creating power of the Government is relatively limited. It has under its direct control not more than, perhaps, one-tenth of the productive machinery of the country. This is largely traditional in form. The Government can create, and does create, wealth in the form of roads, parks, public buildings, public hospitals, and the traditional public services of the Federal, State, and local units. Plainly, these as they now stand are not sufficient to serve as the market for more than a fraction of the capital goods production in the United States. If, therefore, wealth is to be created by creation of Government debt, the scope of Government enterprise must be largely increased. Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government ultimately will control and own those activities. Put differently, if the Government undertakes to create wealth by using its own credit at the rate of four billion or so a year, and if its work is well done, the Government will be acquiring direct productive mechanisms at the rate of four billions worth a year, or thereabouts. Over a period of years the Government will gradually come to own most of the productive plants of the United States.

This is certainly so fundamentally a change in the course of American life that the decision to make it should be taken for reasons other than relief of a series of temporary difficulties. If the country desires to make wealth creation a function of government (I personally believe it must do so in larger measure than it has heretofore) the choice should be the considered choice of the country, and not the result of a policy of drift.

The Government's ability to create wealth efficiently is denied by a good many people. It seems to me a good many of these attacks are unjustified, though I am frankly biased in favor of public ownership of certain forms of wealth. The country will probably be deciding in the next few years whether the Government ought not to own, directly or indirectly, part of the national plan such as railroads, electric power, and mineral resources, and the Temporary National Economic Committee may give us a final answer.

But in any case, it is true that there are vast areas in which the Government probably cannot act effectively. Where the service to be rendered or the goods to be turned out are standard; where the problem of choice or fashion or individual desire does not enter into the problem very much; where the development of the art is not rapid, and where the benefit from the plant constructed is generally distributed, and especially where the process of rendering the service or creating the goods tends to be a monopoly, the Government has a possible field for expansion. Where these elements are not present, the ability of the Government to do a good job becomes questionable, to say the least. The Government undoubtedly could mine and deliver ore from the Minnesota fields without difficulty. Conceivably, it could smelt the ore into steel. But if the Government endeavored to go into the business of fine castings or steel specialities, either the nature of industry would have to change, or the nature of government would have to change.

In a democratic organization of economy, the obvious end should be to permit and require private initiative to do as much of the work as it can, consistent with maintaining the national economy on a reasonably even flow, distributing the burdens and benefits meanwhile that no class will be unduly favored, no class unduly burdened, and a maximum of opportunity be provided for everyone to use his abilities usefully with corresponding reward. It is the definite function of the financial system to make this possible at all times.

The conclusion seems inevitable. Either we are on the eve of a change in our financial system or we are on the eve of a change in our social system.

Plainly, a revised financial system should not be conceived to settle the question of whether the United States becomes a Socialist country, which, of course, I am not advocating. That will be determined partly by economic forces and partly by the thinking and the desires of the country itself. In consequence, the system of finance has to be so adapted that it can serve equally well private enterprise, public enterprise, or a combination of both, and any intermediate forms which may appear. The plan must be flexible enough to permit any development—always provided that the development actually does create added tangible wealth. If private enterprise will do it, and maintain an even and expanding national economy, good. If it is unable to do so, the scheme must be drawn widely enough to tap other methods of organization of wealth.

II. THE UNDERLYING REASONS

Before attempting a solution, it is perhaps useful to appraise some of the reasons usually given for the stoppage in the capital markets and for the change in the system. There will be no agreement on these reasons. I here set some of them down, fully realizing that every observer will assess the reasons differently, adding others of his own.

(A) The restricted base of national enterprise

One great reason for the change of emphasis lies in the fact that the portion of the world operating under a free economy has now shrunk to approximately half its former size. One by one, certain great nations of the world have ceased to operate on a free economy; have organized more or less totalitarian systems; and have attempted to set up for themselves an artificial self-sufficiency which is commonly called "autarchy." Of the great powers of the world still running upon an approximately free economy there now remain only Great Britain, France, and the United States, and the South American countries, whose development obviously still lies ahead. Necessarily, this has restricted or rechanneled the scope of the industries of all countries, including those which lived in part (as did the United States) directly or indirectly on the export trade.

We have not, up to date, felt the full possible effect of this change. What has happened thus far has been merely restriction. The impact of an "autarchic" country seriously endeavoring to use its integrated mechanism to exchange its product for ours is yet to be felt. If, for instance, Germany undertook to disarm, and funneled the activity which has gone into armament into production of steel products for export; and if she undertook to lay these down in the United States virtually irrespective of cost (which is perfectly possible under the German system), we should be faced either with a vanishing steel industry here, or with the necessity at once of going into partially autarchic measures of our own. Dimly, American business enterprise is aware of this; and for that reason has, in general, rightly supported Secretary Hull's policy of endeavoring to reestablish and restore an open economy throughout the world. It is not convinced as yet that the policy, though inevitable in the long view, will be successful in the immediate future; and for that reason private-profit capital is wary of investing in any enterprises save those which are plainly comprehended within our domestic picture.

(B) Increases in needed social services

Second in order of importance, perhaps, is the probability that there has been a major change in the relation of public and private activities. As development of a country progresses, I think it will be found, on careful analysis, that there is an increased need for wealth of the nonprofit type. I think that the need for such wealth increases at a rate faster than the development of the country. This is certainly true where the result of industrial development is either to concentrate population in cities, or to increase the speed of transportation and communication. Both have happened in the United States to an extremely marked degree. It is not wholly clear whether this is a physical necessity, or whether it arises from the fact that with an increased standard of living, we become more aware of social needs which have to be met. For the purposes of this discussion, it is immaterial. Whether the needs are logical or psychological, they are real enough. It is possible that we could run a huge industrial plant with the same rudimental provision for, let us say, public health, which we had 50 years ago; though I doubt it. The fact is that people do insist on a higher standard of public health work today, and that the community will not tolerate its absence. In result, the proportionate expense in cities like, let us say, New York, Detroit, or Chicago, for hosiptals, health work, and the like, have steadily grown; and not even the most ardent advocate of economy will permit its reduction.

Under the traditional businessman's view this sort of construction is not usually considered "wealth." The argument is plainly untenable. In New York there are two bridges—the Brooklyn Bridge, which is free, and the George Washington Bridge, which is a toll bridge. The Brooklyn Bridge makes possible the free flow of traffic from one part of New York to another, and therefore adds to the wealth of the entire city, though it does not charge by the unit and is supported out of the tax roll. The George Washington Bridge is owned by the port authority and pays its way by a standard charge collected from each passing car. It likewise assists the free flow of goods, though a different method of payment is used. It is absurd to say that the Brooklyn Bridge is not "wealth" and that the George Washington Bridge is "wealth" merely because of this difference. It is equally absurd to say that a public hospital is not "wealth" because it serves the area gratis, or nearly so, while a private hospital which is able to pay its expenses through charges made against its patients is "wealth." In this sense wealth is anything which satisfies a recognized need. The advance in technical, demographic, and cultural development of the country has apparently brought to the fore recognized social needs with greater rapidity than heretofore. Many, perhaps most, of these social needs cannot be handled on a "price per unit" basis; their cost must be paid by the community at large; yet the productive functions of the community are better off for their existence. They therefore become a logical field for public capital financing.

Private capital and industry do not understand this; they have been, up to now, afraid of it. I believe that this fear will rapidly disappear, given two conditions: The first condition is that there is a sufficient public understanding. The second is that this class of wealth be removed from partisan political administration so far as humanly possible.

In this respect the outstanding experience of the country has been that of the city of New York, where Mayor LaGuardia took this view. He was able to overcome both the fear of private interests of increased meeting of social needs, particularly in the field of parks, hospitals, and transportation facilities; and he was able to do this because of his announced policy of nonpolitical administration whereby the creation and handling of such wealth was removed, so far as he could do so, from the realm of party politics.

The result would seem to indicate that an extension of government creation of wealth is indicated; and that it can be done without danger to our political or social system provided the development is done with honesty and character.

(C) The fears of capital and capital groups

It is frequently said that certain governmental policies are responsible for the stoppage of the capital markets. The policies are emphasized usually according to the personal experience of the speaker. The utilities industry will insist that no investment can be expected in it so long as the Government, in various ways, either enters into competition or permits or assists other public competition—a flat insistence that unless they are permitted a monopoly private investment cannot be expected. An industrialist will insist that so long as labor relations are in a difficult state, and that the National Labor Relations Act is manned by individuals alleged to be unfairly biased in favor of laborers, private capital cannot be expected to go into manufacturing. Other groups insist that the repeated Government investigations, antitrust moves, and the multiplication of burdensome and annoying regulations, frequently in the hands of inexperienced administrators, discourages enterprisers from carrying on business, let alone entry into new fields.

Still other groups insist that the imposition of certain types of taxation creates a "heads you win, tails I lose" situation, so that there is not adequate incentive. Still others point out that private capital will not go into private business with its necessary risks when it can find a safe and reasonably certain return, frequently without necessity of income tax, in a bond of the United States Government or of some agency. As to this last, it may be noted that the argument is somewhat overstressed, since the price of a tax-exempt bond usually discounts in considerable degree the difference between the Government and the private bond; the purchaser of the tax-exempt bond pays his income tax in advance when he pays a higher price for the security or accepts a lower return. But the competition is real enough; a trustee, savings bank, or insurance company seeking investment in a disturbed time will normally gravitate toward the Government bond, which has not the risk involved in a private bond.

There is something in all these contentions, but probably all have been exaggerated entirely out of measure. This essay is not the place for setting out the reason for this conclusion; still less for analyzing the peculiar psychology of the American capital markets in which a half-truth stated loudly enough too often becomes the sincere and honest belief of the financial community, and is thereby passed on to the investing community. I do believe the fears have been badly overstated. Prophecies of complete stoppage or complete disaster have been made whenever any reform has been undertaken; and they have usually proved unfounded once there is acceptance of the reform, and as soon as the mechanism of the reform ceases to be annoying and self-conscious. We have not yet reached this phase, though it is visibly approaching.

The fact that this third set of objections can be overcome does not, nevertheless, eliminate the validity of the first two; and those three do indicate the need for a serious and thoroughgoing change in the machinery of capital and investment.

(D) The need for a causative mechanism

Perhaps the greatest change which has influenced the present situation lies in the fact that the machinery we now have is passive. A businessman with a sufficiently strong imagination and will and sufficient ability to convince the public that there is possibility of profit can attract toward his enterprise the capital necessary to construct his plant and set up his organization. He cannot, of course, do this in a field where the need is social rather than commercial, and the initiative rests upon the government—Federal, State, or local. In this last field there is a whole mine of initiative which could be tapped, were the financial resources readily available, which they are not.

Yet a businessman may be perfectly convinced of a need and of the possibility of filling it, and may be entirely willing to fill it with only a modicum of profit, but he will not be stimulated into action unless he has some reason to believe that there is a capital machinery which is anxious to have him tackle the job. The plain need for more housing, for instance, has not engendered any great amount of enterprising ability, at least partly because there was no organized group of finance which was not only ready to provide him with capital by actively endeavoring to find him and put him to work.

In any new capital credit set-up, accordingly, there ought to be not merely a passive mechanism which can be availed of; but an active group recognizing the responsibility for filling certain needs of the community and for finding the means and the men who can fill those needs, and for putting at their resources the capital necessary to do so. In earlier times the local bank not infrequently used to do this, providing capital to young men who had ideas and ability, and staking them to the creation of enterprises of benefit both to the enterpriser and to the community. Many American businesses which have since attained substantial proportions were started in exactly this way. The large commercial banks do not do this today. If they desired to do so, they would probably not be permitted to do so under the prevailing banking regulations. Indeed, the major theory on which they operate, i. e., creation of bank credit for short-term processing or transportation or merchandising jobs—runs chiefly counter to any theory that the bank, among other things, is supposed to assist in organizing new productivity. Outside of the large corporations men who have ideas for new enterprise cannot expect to find much assistance in the commercial banking system today.

There is one other lack in our financial machinery. It is crucial. We have not, anywhere in the banking world, that process of development which has been the lifeblood of the technical development of American industry. There is no one looking for new financial methods, new theories of credit, new means of attacking financial and economic difficulties with the same persistence, freedom to explore ideas, and to state results which the chemical or technical research bureaus in any large industry continuously use in looking for new processes, new products, new developments, and new methods.

III. SYSTEM OF CAPITAL CREDIT BANKING

Even a brief review of the major elements tends to indicate the line of solution. In essence it suggests creation of a capital

credit banking system which can do for the country what the revised commercial banking system has done in the short-term credit and strict currency field.

(A) The essentials of such a system

It would appear that such a banking system must meet certain major requirements:

(1) It must make available at all times an adequate supply of cash for "investment" purposes, for the purpose of construction of net tangible additions to the wealth of the country. Such cash may be savings withdrawn from the ordinary currency and short-term credit supply, or may be bank credit created for the purpose, or may be a combination of both.

(2) It must, however, provide for noncommercial as well as commercial increases in national wealth. In other words, it must provide funds which may be available for strictly private commercial construction, or for quasi-public endeavor, or for public use, as need may appear. Particularly the supply must be so handled as to open up and make possible new lines of construction which the community obviously needs, but which are not normally undertaken by private enterprise. Thereby the field of possible capital construction is vastly enlarged.

(3) The interest rates must be flexible—that is, adjustable to the need which the country at any given time may have to stimulate capital construction. It should be possible to lower interest rates to a nominal figure when construction is to be stimulated; to raise them, when it should be discouraged. In other words, it is necessary to apply in the investment-banking field the same technique which has been worked out in the short-term credit field.

(4) As a corollary to that, it is probably necessary that the interest rate should be selective. There may be every reason for asking 4 or even 5 percent return from a commercial enterprise; but there should be the possibility of charging, say, one-eight of 1 percent for a noncommercial enterprise, such as a hospital. It is to be remembered that when the Government gives to a banking organization the power to create money, it no longer is necessary to offer an interest rate to stimulate that creation. The interest rate under the classic system was designed to lure money out of the normal channel of consumption and into the longer range of investment; to induce people to divert money from present consumption into construction by offering the hope of future rewards. In a word, to stimulate savings. There should be no such necessity to stimulate a bank to use the power which the Government gives it.

(5) The use of capital credit ought to be limited to projects which actually do result in capital construction and in a net addition to the tangible plant, private, quasi-public, or social of the country. Just as a bank credit in the commercial field is supposedly limited so that it will at all times stay in relation to the floating supply of goods and services moving toward consumption or final use, so currency or credit created for capital purposes should be limited, to the end that the amount of it in existence shall correspond to the amount of capital assets.

(6) Controls must be in existence so that the currency and credit so created shall not, as it mingles with the ordinary supply of currency and credit, produce "inflation"; that is, raise the price level of goods and services solely because of monetary factors. This subject is dealt with in a following section.

(7) Because a capital credit banking system of this sort must serve public as well as private ends, it cannot be exclusively in private control. Conceivably, it may be wholly under nonpolitical public control; conceivably, it may have units both private and public. But it is essential that the capital credit which it supplies shall never be cut off merely through private motives.

(B) Possible forms and functions

This memorandum is not designed to attempt the elaboration of a plan of capital credit banks, but rather to try to examine their possible underlying principles. Nevertheless, certain factors emerge, which must be included in any successful plan.

The point of contact must be a bank or set of banks to which there will come people who desire to construct additions to the plant of the country. The people who come may range from individual enterprisers who wish to construct plants for rayon, steel specialities, or knock-down houses; railroads which wish to reequip their lines; semipublic authorities which desire to construct bridges or parks or low-cost housing; municipalities, counties, or estates which need to construct hospitals, prisons, courthouses, health centers, or other necessary conveniences.

A capital-credit bank must be charged with the task of assuring itself that the proposed project really does result in a net addition to wealth, interpreted broadly. If the money is merely to be wasted in a project which is useless or unsound, the result would be to create credit without creating wealth; and to the extent that this is done, the credit system is weakened. This is, in theory, the test which reputable investment bankers are supposed to apply when determining whether they will float a bond issue.

The amortization rate of any loan must be such that the loan will be paid within the life of the asset created by it.

The interest rate will be determined as much by social factors, and by the need of the country for construction in general, and the particular kind of construction in particular, as by any desire to reap a banking profit.

(C) Capital banking as a profit enterprise

The theory that a bank must "make a profit" today has ceased to be valid, except in an extremely limited sense. The profit of the bank is interesting as showing that by financial standards its work has been well done. In the sense, however, that the bank is entitled to a profit, as a reward for something or other, there seems to be no reason for its existence. A bank today is a mechanism for creating currency. It receives this privilege from the Government; there is no more valid reason why a bank should make an unlimited profit for creating and applying currency than there is why taxes should be farmed out to the highest bidder and tax collectors allowed to make a profit on their collection. What is needed is that the managers of capital banks shall be paid, and preferably well paid, for their work, and have an incentive to do that work carefully. But their job is to keep an even flow of capital construction and to see that the country is well served; the bank is not an institution for making profits for private shareholders. This might be accomplished either by public ownership or by private ownership with limited dividends, or by banks chartered to serve particular industries and run on a mutual plan. In this connection it is to be noted that, in theory, many of our largest and most successful financial institutions today are nonprofit; for instance, savings banks and mutual insurance companies. Apparently it is perfectly possible for large financial institutions to be organized and run without the necessity of a set of stockholders asking for profits. The bulk of investment today is probably done through just such channels. There is, therefore, no reason now for assuming that a stockholder's profit is somehow essential to run an effective financial institution.

Though essentially nonprofit, any capital-credit system must be rigidly nonpolitical. We have been in the frying pan of having the flow of investment credit used in large measure to build up private positions of power, and the resulting dangers are obvious. This is not a reason for jumping into the fire of a public institution under political control whereby a politician uses the mechanism to build up his power instead. By consequence, the management of a system of this kind should be entrusted to professionals who are barred from political connection or office but who are alive both to the economic and social needs of the country and realize that political movements largely do reflect those needs.

(D) Operations

The conclusion of a capital-credit transaction would presumably result in the borrower selling to the bank a bond or a set of bonds on agreed terms. To make certain that there will always be an adequate supply of cash for investment purposes, such bonds must be rediscountable with the Federal Reserve. I do not see that an effective capital-credit mechanism is possible except as it is tied into the Federal Reserve machinery. There is some difference of opinion on this subject, particularly in Treasury circles; but I believe that on closer examination the differences of opinion will disappear.

There is no particular reason why the bank may not take, if it chooses, deposits in the same fashion that large private banks, such as J. P. Morgan & Co., take them today. Such deposits, however, should be definitely less withdrawable than ordinary commercial bank deposits, and this should be distinctly understood. Private deposits so taken consist of "savings"—that is, currency or credit not created by the process of the loan but withdrawn from the flow of currency and credit adapted to the floating supply of goods. Conceivably also a capital-credit bank might issue its own debentures for sale in the open market (if its operations were adjusted so that it was making an interest profit), but these, again, would have to be limited to the commercial operations of the capital-credit bank, since in this case it would have to bid for savings, and for that purpose would have to offer an interest rate. The public and quasi-public functions of the bank would have to be financed primarily through the creation of reserve credit.

A system of such banks might be either (1) created as a division of existing commercial banks; (2) created as a new national or regional system; or (3) created dividing the various capital banks functionally, as capital-credit banks primarily interested in transportation; others primarily interested in particular lines of manufacture; others particularly for the purpose of serving quasi-public and public needs.

It probably is not practicable to construct a system of this kind out of the existing commercial banking field. This is not because of any inherent impossibility. It is because commercial bankers have been trained for generations in the classic system—that is, that the job of their bank was not to supply capital. The training was right in connection with their present function; but it is, of course, wrong when they are asked to perform an almost exactly opposite function. The real difficulty would lie in securing men of elasticity and training. Logically, if private units were used as a base for all or any part of such a system, the solution would be to permit existing banking firms to apply for charters as capital-credit banks, where the record of the investment banking firm demonstrated that it was successful in applying capital to the creation of the need for plant. This could not be satisfactory as an entire solution, however, because investment bankers have been, naturally enough, trained only in the pure profit system. They could, perhaps, handle that part of the capital credit banking machinery designed merely to serve private and commercial needs. For the quasi-public and public needs, one would expect to find personnel rather in the younger men who had been trained in nonprofit sys-

tems, such as savings banks or mutual life-insurance companies, and who would, under a new system, be performing much the same functions which they had been doing up to the present, except that instead of having to think of securing repayment of the loan plus a commercial interest rate, they would now have to think only of securing repayment of the loan plus a nominal interest rate for the purpose of paying running expenses, plus an added amount collected as a reserve against losses.

The regulations governing the administration of such a banking system ought to be so framed as to free them from the rigidities which now obstruct the flow of capital. For instance, a capital-credit bank which holds a portfolio of bonds or obligations, not primarily designed for resale, can do a number of things impossible in the investment market. If it is dealing with a commercial instrument it can, for instance, demand a base rate of interest, but make it flexible, so that in a good year more is paid, in a bad year less is paid; so that, in a word, a rigid interest rate does not assert a constant pressure against the industry at a time when the industry may not be able to pay it. In this respect, it would be possible to put into effect the theory recently expressed by Mr. Jerome Frank, namely, that in a large measure and in many fields a fixed or rigid interest rate no longer conforms to commercial need.

(E) Interest rates, public and private

In quasi-public or public fields, the flexibility must be even greater. There the community as a whole is paying for the wealth, and there is no real reason for an interest rate except to set up a reserve for the inevitable mistakes which are made when construction is undertaken which does not add to the wealth of the community. The only other use for an interest rate in this connection would be to discourage the tide of construction when it appeared to be too high. The amortization rate could be made flexible, but there is a solid reason for its existence, namely, to complete the supply of capital credit in accurate relation to the existing capital assets. Yet the amortization might be made flexible so that at any given period it did not bear too heavily. We are merely at the threshold here of a long exploration of financial method which has yet to be done.

Finally, the capital-credit banking system must justify its existence as much by enlarging the basis for capital operations as by supplying the capital operations which are now conventional. Probably the most constructive contribution it will make will be opening up a new layer of enterprise which is not now comprehended within the private profit field. For this reason I have ventured to emphasize the quasi-public and public elements involved. A single illustration may suffice.

According to the hospital survey of New York (United Hospital Fund of New York, 1938), New York City alone will need, over the next 20 years, in capital construction for hospitals (land, buildings, and equipment), an investment of $428,000,000. This is not to create a millenium but to keep the health plant of New York City approximately at par.

Humanitarianism aside, this represents a possible construction market of nearly half a billion dollars in a single activity, and in a single city. It is simply absurd to say that there is no outlet for capital constructive ability with this sort of need in existence. It is possible over a period of, say, 30 or 40 years—within the life of the hospitals—for New York City to borrow and repay a half billion dollars. It is probably not possible for it to borrow and repay a billion dollars—the amount of capital construction doubled by the interest rate—without sacrificing a huge amount of other needed construction. Eliminate the interest rate and you have uncovered a new market. It is true that instead of being organized by a private enterprise this new market is organized and put into action by public or semipublic bodies, but the economic effect of this construction is quite as great as though a private enterpriser had decided to build a half-billion-dollar railroad.

A major objective of the capital-credit system must be to open up as an enlarged field of activity necessary nonprofit enterprises quite as much as necessary profit enterprises.

How rapidly a capital-credit mechanism will need to develop this class of enterprise need not be discussed here. Were there a general stoppage of industry in the country, it might have to develop such enterprise with great speed. If such development is not needed now (I personally think a great deal of it is needed), the powers of a capital credit banking system to that end still ought to be in existence as an insurance policy against the next depression.

There has been some discussion of the type of security which a capital-credit bank should be able to buy. The extremely conservative policy suggests the purchase of high-grade securities only, leaving capital which should be represented by first- or second-lien securities to shift for itself. The more radical conception is that the capital-credit bank should be prepared to buy anything, including equities; that, indeed, it is more important that it should purchase equity securities which do not find ready market than seasoned or top securities which do. The fear arising from this latter proposal rests, of course, on the fact that where the bank purchases securities which carry management power with them the bank becomes a potential owner and operator of business. There is perhaps no reason for attempting to resolve the controversy here. Obviously, capital-credit banks cannot become vehicles of general control of great chunks of miscellaneous industry; there is no reason to assume that this type of "banker control" would prove more satisfactory than the banker control exerted by the investment banking groups. Yet if it is recognized that today management has very little to do with ownership, and that the important thing in business enterprise is to get a good manager and watch him, it may well be that an intermediate use of junior lien securities might be worked out. This is mentioned merely as indicating that the range of measures available is such as to make a number of solutions possible, avoiding either the danger of too much management by the bank or the danger of leaving it in a wholly helpless position.

IV. THE NECESSARY CONTROL

The controls of such a system are so important that they justify a separate word. Briefly controls must be in existence which will prevent the creation of currency and credit for capital purposes from so increasing the supply and circulation of currency that it will affect the price level. This is the effect loosely called inflation.

(A) Open-market operations

The classic reason why commercial banks did not like to create credit or currency against a capital loan was a thoroughly good one. Where a loan was extended and bank credit or currency created for the purpose of bringing into existence a supply of floating goods headed for consumption or final use, the supply of currency and credit, though it was increased, met an equivalent increase in the supply of goods, and the price level was thus kept in balance. But if currency or credit were created against a static asset, like a building, the currency and credit operated on the floating supply of goods and not on the building (or at least only to a limited extent on the building). The currency and credit floated into the banking system. Since the floating supply of consumers' goods is more or less constant, it is obvious that the price level could be thrown out of gear at once were any considerable part of permanent or capital assets coined into currency, and the currency turned loose on the community for use in buying and reselling consumers' goods. For this reason every banker has been firmly taught that the creation of currency and credit cannot be legitimately used where it is based on capital assets. The famous experiment of creating currency against capital assets by the issue, during the French Revolution, of assignats based on land, has been the classic illustration. That same danger exists in any capital credit banking system where bank credit and currency can be created against a capital loan.

It may be noted in passing that this precise danger exists in the United States at this minute. In practice we are doing just this under our existing fiscal system. Because the capital markets have been closed, we have entered into a public-works program. We have financed that program by issuing Government bonds. The bonds have been in large measure sold to the banks; and the banks have paid for them by creating deposits; that is, currency. We have been, in a word, creating bank credit and currency against public works, represented by Government bonds. So long as this is kept within reasonable limits, and so long as there is not vigorous commercial demand for loans, there is no inflationary effect. As the amount of such credit increases, however, and in the event of a business upturn, there may be danger that the amount of bank credit and currency created, coupled with a rapid increase in the speed of its circulation, will upset the price levels and have, therefore, an inflationary effect. In coping with this danger under a capital-credit system such as that here suggested, we are merely coping with a danger with which we must deal in any event.

The logical answer to a supply of currency and credit unduly expanded lies in the ability to reduce the amount of that currency and credit by appropriate reserve banking control. The principle has been established in the so-called open-market operations of the Federal Reserve System. By selling bonds at any given time in the open market, the supply of bank credit and currency is reduced to any needed point.

Though this establishes the principle, the amount of bonds held in the Federal Reserve System at the present time, and its consequent buying power, is not sufficient to expand or contract the amount of bank credit which would be created by a capital-reserve system. For that matter, it is not sufficient to contract adequately the supply of currency and credit we have out today; and its operations to be effective would have to be augmented by Treasury operations such as the resterilization of gold and other similar processes.

What is needed thus appears to be an "open-market power" on a national scale, operated by the Treasury and the Federal Reserve combined, or by the Federal Reserve acting for the Treasury, as the case may be, by which there could be sold to banks Government bonds in volume sufficient to demonetize, when necessary, any dangerous excess of bank credit and currency.

It is true that the banking system would have to accept the responsibility for operations of this kind. I believe that bankers generally are prepared to do this; that they do not claim that the banking community, like a House of Lords, can exercise a veto on social and national policies by the threat of throwing the currency system out of gear; that they realize their business now is to maintain a smooth, adequate, and effective flow of currency and credit.

There are, of course, subsidiary open-market operations which would produce similar results. For instance, the capital-credit banks could sell their own debentures on a large scale; or they can sell the paper they held out of portfolio to commercial banks, and may well adapt the type of paper they buy with that in mind.

In combination, these should produce the possibility of open-market operations adequate to maintain the supply of currency and credit on an even keel in relation to floating goods, and therefore avoid inflationary effects on the bank level. (For example, a long-term loan might be represented by serial notes. As the maturity of any note approached within, say, a year or two, the note becomes available for sale to a commercial bank. Again, if bonds are purchased with a low interest rate, it will be perfectly possible to divide them so that part of the bonds carry a rate of interest making them attractive in the open market, while the balance of the bonds carry only a nominal rate of interest. In this way, part of the securities would always be available for resale.)

The steady amortization of loans made from a capital-credit system would in itself act as a steady brake on undue expansion of the currency and credit system.

If necessary, the reserve powers of the Treasury in connection with sterilization of gold and the like could be called in as an added factor, though if the Reserve System is properly run there should be no need of this.

(B) Use of the interest rate

Decisions as to open-market operations are inherently the province of the Federal Reserve System. That System is charged with the responsibility of keeping the supply of bank credit and currency in approximate order; and for this reason a capital-credit system must be keyed into the Federal Reserve which can, when necessary, accelerate or slow down the operations of that system by requiring higher or lower interest rates, or by stiffening amortization terms. When necessary, the Federal Reserve would supplement these by balancing open-market operations; and if a situation is really serious, it should be in a position to request the Treasury to use its extraordinary powers to assist.

(C) Limiting or suspending rediscount privileges

A second great control must be the power of the Federal Reserve to limit or suspend rediscount privileges whenever necessary to prevent expansion of the supply of currency and credit. This is the logical extension of its power to raise the rediscount interest rate. When capital expansion proceeds too fast, the logic of the situation calls for limiting creation of credit for that purpose. Enterprises desiring capital will then have to bid for savings in the open market; and open-market operations by the Federal Reserve can even restrict, were it absolutely necessary, the amount of savings which could be easily diverted.

Summarizing, the three major controls must be these:

(1) Open-market operations on a large scale, which might be carried on by the Federal Reserve in conjunction with the Treasury, and would presumably dovetail with the entering of the Federal Government into the bond market;

(2) The right to raise and lower rediscount rates, and by regulation to require the credit banks to raise or lower the interest and amortization rates they charge;

(3) The power to limit or suspend rediscount operations altogether.

V. CONCLUSION

Certain points may be touched on in conclusion.

It is sometimes said that any idea of capital-credit banking is "radical." This, though not argument, is worth a word of examination. Actually, it will be found that most businessmen engaged in actual production—that is, businessmen who are not in banking—are pretty clear themselves that there must be some radical overhauling of the banking system. Faced with the constriction of economic activity as it flows through the bottleneck of finance-capitalism, as at present organized, they seek avenues of escape.

The radicalism of the suggestion fundamentally lies only in a single field. Control over economic expansion today lies chiefly in certain groups mainly allied with the investment-banking operation. Development of capital-credit banking undoubtedly does shift that control. New centers are set up; centers which should be more responsible to the public, and carried on by groups which, by their nature, assume greater responsibility for maintaining a continuous economic flow.

No mere change of the capital-banking system will supply the ultimate and basic need for men and organisms whose actual business is organizing production for the creation of useful wealth. Private enterprise has done this almost entirely in the past. Private enterprises, quasi-public groups, and wholly public groups may have to do so in the future. No one now can foresee the ultimate nuclei; and, indeed, a banking system should be so organized that it will permit any effective nucleus to be used, as economic logic may dictate. The drive which sets men to work is quite as much moral as financial. Plenty of energy certainly exists in the United States. Work like that of LaGuardia in New York, of Nathan Straus in the housing field, of Lilienthal and Morgan in the electric power field, efforts of hosts of men in less spectacular areas is quite as significant, today, as the work of a Harriman, a Huntington, or a Carnegie of yesterday. Both types are creators of wealth; and we need not undertake to decide which, in the long view, is most needed. A credit system can be evolved which will furnish all the necessary material to put both groups to work, if needed. But the will to work proceeds from the desires of men to create something useful, whether for profit, as monuments to themselves, or out of a purer spirit of public service or altruism.

VI. RECOMMENDATIONS

It seems to me that the T. N. E. C. can now, and should promptly recommend three things:

First, that there be drawn, passed, and put into operation, a bill creating a public-works finance corporation, with suitably guarded rediscount privileges at the Federal Reserve bank. This would make it possible for the self-liquidating public-works agencies of the United States Government to finance directly, instead of through a Federal project. Like privileges could be extended to the municipalities and local units, so that housing, hospitals, and other necessary local improvements could be carried on, without reference to the Federal project. Such institutions could quote any rate of interest which was necessary to get the business done. The rate of interest ought to be almost nil in a nonprofit enterprise like a hospital, and running up to commercial rates in a straight business proposition.

Second, that a bill to insure loans for a small business be drawn and passed. This would mean that the small enterprise had just as good access to the capital markets and to banking facilities as the large corporations. It would put the small man who cannot finance internally on a par with large corporations.

Third, this committee should appoint a special subcommittee to study out and to report to the next Congress a bill providing for capital-credit banks, whose business it should be to provide capital for those enterprises which need it, when they need it; and it should make that capital equally available to the Government or to local units for public work, when public enterprise went into action, or to private enterprise when private enterprise, either new or old, needed the assistance.

With these three bills we should have the elements for a modern financial tool kit. These would not solve all our problems. They are no panacea, but they would give tools so that initiative and ideas could go to work, and so that our financial system could do what is expected of it, namely, to permit men, materials, and ideas to combine in satisfying the obvious needs of the country; and in meeting the increased demands which the less fortunate part of our population properly make on the system as a whole.

The Case for the Veterans of the Philippine Insurrection

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

Mr. ALEXANDER. Mr. Speaker, the Philippine Insurrection officially began February 4, 1899. The first American troops to engage the insurgents were the State volunteers, aided by a few regiments of the Regular Establishment, followed later by the United States Volunteer regiments and more units from the Regular Army. The State volunteers were returned home about October 1899, remaining in the islands over a year beyond their period of enlistment.

The insurrection continued and spread throughout the remainder of 1899, through 1900, to June 1901, and extended to the southern islands. The United States Volunteer regiments were returned home in June 1901. The insurrection was fought from about July 1, 1901, entirely by the Regular Establishment; the insurrection was officially terminated as of July 4, 1902, on paper only; the bloody insurrection continued over a long period of time up to December 31, 1913, despite the official documents to the contrary.

The number of men who served in the Philippine Archipelago between July 4, 1902, and December 31, 1913, are approximately 253,000—possibly a greater number than served prior to July 4, 1902. I could say to the gentlemen of the Congress it would be almost impossible for me to enlarge upon the loyalty and intrepidity of this much neglected group of veterans. They endured hardships of every description, and almost completely isolated from news of home, and at times even communication from their own headquarters in the islands; also suffered from lack of proper food, contaminated water, and tropical diseases of all kinds. The campaigning was especially difficult in the southern

islands—such as Mindoro, Leyte, Samar, Cebu, Panay, Negros, Mindanao, and Jolo.

History has never fully told of the glorious achievements of our soldiers in the Philippine Islands. This grand little army was composed of real soldiers, tried upon the firing line, veterans in fact, if you please, not in name only—men who were willing to serve their country 10,000 miles from home and families, hiking night and day, sun-scorched by day and soaked to the skin by night, over mountains, through rice paddies, through dense jungles, fearing nothing, and suffering much.

They were witnesses to deeds that have never been recorded, by comrades who have long ago "gone west."

These Philippine veterans have banded themselves together in a grand organization known as National Society, Army of the Philippines. An official recently said:

We decided from the outset that we desired to be together, because we fought in the same land, ate of the same rations, composed of Egan corned beef and bloated hardtack, sleeping in the same rice paddies, wading the same swamps, and suffering the same agonies, diseases, and hardships. We represent a body of men that for the first time in the history of our country were transported to distant shores to protect our flag.

A group of soldiers that planted the Stars and Stripes 10,000 miles from the homeland and established the United States as a world power. By our sacrifices our great Nation was raised from a fifth power in that day to a first power of today.

The National Society, Army of the Philippines, is not the progeny or offshoot of any other organization, neither do we have any antagonism toward any other group of veterans; we go out of our way to cooperate with them at all times; but I would like to state to the gentlemen of the Congress that we believe it very unfair that a soldier who served in the Philippine Islands for 2 years and in some instances much longer, and considering the above facts, cannot receive a thin dime in pension, while a soldier who perhaps only went to one of the several camps in the United States for a few weeks in 1898 can draw a pension from our Government of $60 a month.

We heartily believe the time has arrived to rectify this gross injustice, which should have been done 26 years ago. I might state that we are the very oldest of the Spanish War groups, having been organized at Denver, Colo., August 13, 1900, by that brilliant officer, Gen. Irving Hale. The veterans of the Philippine Insurrection stand in a class by themselves, and they should have the same protection as other veterans, based on the same requirements.

In President Theodore Roosevelt's orders to the Army, these three paragraphs allude to the Philippine Insurrection. I quote from his order:

The President thanks the officers and enlisted men of the Army in the Philippines, both Regulars and Volunteers, for the courage and fortitude, the indomitable spirit and loyal devotion with which they have put down and ended the great insurrection which has raged through the archipelago against the lawful sovereignty and just authority of the United States. The task was peculiarly difficult and trying. They were required at first to overcome organized resistance of superior numbers, well equipped with modern arms of precision, intrenched in an unknown country of mountains, defiles, jungles, and swamps, apparently capable of interminable defense. When this resistance had been overcome, they were required to crush out a general system of guerilla warfare conducted among a people speaking unknown tongues, from whom it was almost impossible to obtain the information necessary for successful pursuit or to guard against surprise and ambush.

The enemies by whom they were surrounded were regardless of all obligations of good faith and of all the limitations which humanity has imposed upon civilized warfare. Bound themselves by the laws of war, our soldiers were called upon to meet every device of unscrupulous treachery and to contemplate without reprisal the infliction of barbarous cruelties upon their comrades and friendly natives. They were instructed, while punishing armed resistance, to conciliate the friendship of the peaceful, yet had to do with a population among whom it was impossible to distinguish friend from foe, and who in countless instances used a false appearance of friendship for ambush and assassination. They were obliged to deal with problems of communication and transportation in a country without roads and frequently made impassable by torrential rains. They were weakened by tropical heat and tropical diseases. Widely scattered over a great archipelago, extending over a thousand miles north to south, the gravest responsibilities, involving the life or death of their commands, frequently devolved upon young and inexperienced officers beyond the reach of specific orders or advice.

Under all these adverse circumstances the Army of the Philippines has accomplished its task rapidly and completely. In more than 2,000 combats, great and small, it has exhibited unvarying courage and resolution. With admirable good temper, sympathy, and loyalty to American ideals its commanding generals have joined with the civilian agents of the Government in healing the wounds of war and assuring to the people of the Philippines the blessings of peace and prosperity. Individual liberty, protection of personal rights, civil order, public instruction, and religious freedom have followed its footsteps. It has added honor to the flag which it defended, and has justified increased confidence in the future of the American people, whose soldiers do not shrink from labor or death, yet love liberty and peace.

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. WILLIAM L. NELSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. NELSON. Mr. Speaker, in the death of CHARLES J. COLDEN the Congress lost a most valuable Member, a man who was honest in thought and deed, an able Representative, and one who was as industrious as able.

Of Mr. COLDEN and his work, I can speak in an intimate way. As young men, in fact, when I was barely old enough to meet the age requirements, CHARLIE COLDEN and I served together in the Missouri State Legislature. We had much in common. We represented outstanding farming counties, where many herds of good livestock were maintained. Mr. COLDEN, in his county, and I, in mine, were interested in country newspaper work, our papers giving special attention to farming. So we were drawn together.

The years went by. Mr. COLDEN left Missouri and located in California. Elected in 1932 to represent the Seventeenth Congressional District of California, he came to Washington at the opening of the new Congress in order to learn more intimately of the work and the better to prepare himself for his duties. As a candidate for this same Congress, and in a State-wide campaign in Missouri, my home State, with 56 Democrats seeking nominations, of which 13 were to be made, I finished 14th. Returning to Washington at the opening of the "lame duck" session of the old Congress, Mr. COLDEN and I happened to travel from St. Louis in the same Pullman car. I had not learned of his election to Congress. On the way to Washington, he introduced himself by asking, "Isn't this WILL NELSON?" On being answered in the affirmative, he replied, "This is CHARLIE COLDEN." It was a happy reunion.

On arriving in the National Capital, I invited Mr. COLDEN to make his headquarters in my office, supplying him with a desk. We were together until the close of the session on March 4, at which time I turned over to him my office and arranged for my efficient secretary to serve him in the same capacity that he had served me.

Again elected to the House of Representatives in 1934, it was my privilege to again be closely associated with Mr. COLDEN until his death. I shall always count myself fortunate in having had such a friend. He was an unusual man. He did not hesitate to leave old and beaten paths if they led to better places. As illustrating this, while still editing the Maryville (Mo.) Forum, he visited Europe, when, instead of taking the usual tourist routes, he availed himself of the opportunity to go through parts of the country not frequented by tourists, and where he studied, first hand, the real lives of the people. The series of articles which he wrote of his travels, and which appeared weekly in his own paper, were outstanding in accuracy and excellence. In short, accuracy and excellence characterized the work of CHARLES J. COLDEN. So useful was he, so good his judgment, so brave his positions on public questions, that it seems a pity that in these days of doubt, days of stress and storm, he could not be here to help.

The Trade-Agreements Program and American Agriculture

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

STATEMENT BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by myself on the subject of the Trade-Agreements Program and American Agriculture.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE TRADE-AGREEMENTS PROGRAM AND AMERICAN AGRICULTURE

BETTER MARKETS HELP SOLVE FARM PROBLEM

The Federal Government is helping American farmers, through the trade-agreements program, to enlarge the remunerative foreign and domestic markets for their crops, while they are seeking to protect both their incomes and the productivity of the soil resources of the Nation by balancing production and marketing with demand. The greater the markets for farm products, the less will be the necessary adjustments in production.

Regardless of what production-control steps farmers may take, it is obvious that better foreign and domestic markets for farm goods are to the advantage of American farmers and of other American economic groups as well. Such markets mean better general industrial and business conditions, more economic activity, greater production of all kinds of goods, and wider distribution of those goods. They mean more employment and higher living standards on American farms and in American cities.

The two programs of better markets and better adjustment supplement each other. Soundly administered they lead from different approaches to the same final objective—to increase farm income. The trade-agreements program is administered by all Government agencies concerned with commercial policies, including the Department of Agriculture.

LOSS OF FOREIGN MARKETS

Before going into the details of the effects of the trade-agreements program on agriculture it may be well first to briefly examine why the trade-agreements program fits into the farm picture. First, it may be mentioned that our farm exports were valued at $1,693,000,000 in 1929. After the Tariff Act of 1930 these exports greatly decreased, until in 1932 they had declined to $662,000,000, or by more than a billion dollars. A billion dollars is a considerable loss for any group in the United States. This loss in the foreign markets eliminated a large slice of the farmers' national income; it was a decisive blow to agriculture. From 1929 to 1932 was the period when American farmers were "taken out of the foreign markets." Let no one tell you that foreign markets have been lost during this administration.

It is recognized by all that to regain the markets for agriculture is a rather slow and gradual process. Foreign trade is more easily and quickly lost than gained. The figures for 1938, however, indicate substantial success in this respect. The exports of agricultural products in that year amounted to $828,000,000, or a gain of $166,000,000 over the depression low. This was the highest figure since 1930, the year of the Hawley-Smoot Tariff Act. In view of the high tariffs and other trade-strangling methods placed in force from 1929 to 1933, together with the slogan "Buy domestic," this gain indicates substantial progress.

The final test of the trade-agreements program for the farmer, as well as the manufacturer and laborer, is the increase in purchasing power, or of the advancement of the individual share which each one's income will buy. The trade-agreements program is designed to increase the farmer's income and purchasing power in two different directions. First, from the producer's point of view the program lowers trade barriers in foreign markets so that larger quantities of his products can be disposed of abroad. This is the point which has been emphasized heretofore and rightly so, but the other way by which the farmer may increase his net income is by our removal of some of the excessive tariffs on products which the farmer buys. We hear very little about this phase of the program. Thus, the farmer, as with other groups, gains both as a producer and as a consumer by the trade-agreements program.

TRADE RESULTS

Some of those who claim to represent the interests of agriculture continue to criticize the trade-agreements program. It might be well for us, therefore, to examine recent foreign trade figures on farm products with agreement and nonagreement countries. The best over-all statement relative to foreign exports and the trade-agreements program is that appearing in the December issue of the Agricultural Situation, Department of Agriculture, as follows:

United States foreign trade with trade-agreement countries[1] *and with other countries*

[Department of Agriculture figures]

	1935–36	1936–37	Year ended June 30— 1937–38 [2]	Increase (+) or decrease (−)— 1937–38 over 1935–36	
				Amount	Percent
United States domestic exports of farm products:	*Million dollars*	*Million dollars*	*Million dollars*	*Million dollars*	
To the 16 countries	186	207	288	+102	+55
To all other countries	580	525	600	+20	+3
United States imports (for consumption) of agricultural commodities:					
From the 16 countries	468	600	454	−14	−3
From all other courties	674	637	701	+27	+4

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti; Kingdom of the Netherlands; Nicaragua: Sweden; and Switzerland.

[2] Preliminary.

These figures show that farm products exported from the United States to the 16 countries with which trade agreements were in effect during the periods defined rose by $102,000,000, or 55 percent, from the fiscal year 1935–36 (when only three of the agreements were in effect throughout the year) to the fiscal year 1937–38. Farm exports to all other countries rose by only $20,000,000, or 3 percent, for the same period.

An analysis of the increase in the exports of farm products to agreement countries shows that the major portion was in products on which foreign countries granted concessions. This occurred in spite of the fact that two of the greatest droughts in our history held down farm exports, while these droughts increased competitive imports from 1935 to 1937. The plentiful harvest of 1937 and 1938 naturally had the reverse effects on imports of agricultural products.

EXPORT GAINS OF FARM PRODUCTS TO SPECIFIED TRADE-AGREEMENT COUNTRIES

The largest part of the gain in agricultural exports to agreement countries was a rise to $45,000,000, or 141 percent, which was recorded for exports to Canada. A large part of this increase occurred in the items on which Canadian duties were reduced by the trade agreement. Expansion in the quantity of our exports to Canada of some of the leading commodities on which Canadian duty reductions were granted was proportionately greater than the expansion for exports of the same commodities to the rest of the world. This was true not only for some of the drought commodities such as wheat and oats, which expanded by an enormous percentage on the number of excellent crops of 1937, but also of a number of other leading items, such as grapefruit and fresh apples.

The second largest part of the $102,000,000 increase in agricultural exports occurred in farm products other than cotton to the Netherlands. These exports rose to $28,000,000, or by 204 percent. Here also the increase took place in items upon which the Netherlands duties were reduced by the terms of the trade agreement. The third largest increase occurred in exports of agricultural products to Belgium. This represented $19,000,000, or an increase of 208 percent. The fourth largest increase was a rise of $8,000,000, or 53 percent, in agricultural exports to Cuba. It should be noted, however, that not all trade-agreement countries showed equally favorable results.

The conclusion that trade agreements have had an important effect on the exports of agricultural products is corroborated by the imports statistics of the trade-agreement countries themselves. Such statistics are available from 1934 to 1937 for the 11 most important of the 14 countries with which trade agreements were in effect by 1936. In 10 of these 11 countries the United States' proportion of total imports has risen since the conclusion of trade agreements. The only exception being Brazil, where large sales to Germany had, until the beginning of 1938, increased its share in the Brazilian market and reduced the share of other countries, including the United States. The United States' proportion of total imports to the 11 countries rose from 16.5 percent in 1934 to 20.1 percent in 1937.

CONCESSIONS OBTAINED ON SPECIFIC FARM PRODUCTS UNDER TRADE AGREEMENTS

The United States has obtained, through the trade agreements, more favorable treatment on about two-thirds of its farm exports to trade-agreement countries. Concessions on farm products obtained from the trade-agreement countries are far more

numerous than the concessions on agricultural imports granted by the United States.

Meat products: Great Britain has abolished her tariff on lard and has greatly increased the quota of American ham imports into the United Kingdom. Cuba has reduced its tariff on lard from the United States by more than three-fourths. Canada has reduced duties on meat products by from 12 to 65 percent. Fifteen other countries have reduced their tariffs or made other concessions on meat products.

Fruits: Sixteen trade-agreement countries, including Great Britain and Canada, have reduced, abolished, or bound their tariffs on fresh or canned citrus fruits; 18 have made concessions on dried fruits; 17 on fresh fruits other than citrus; and 18 on canned fruits.

Grains and other products: On wheat, the United Kingdom has abolished its tariff entirely; five other countries have made tariff concessions on wheat and seven on wheat flour. Ten countries have made concessions on prepared milk products. Eight have assured the continuance of the existing tariff treatment on imports of raw cotton, and others have reduced or bound their tariffs on cottonseed oil meal and cake. In seven agreements there are concessions advantageous to exports of American tobacco.

FARMERS AIDED BY INDUSTRIAL EXPORTS

American farmers are helped by increasing our exports of manufactured products. Industrial workers in the United States employed in producing these goods for export are better customers for American farm products, and many farm products are used in the manufacture of the industrial goods exported. For example, approximately one-tenth of the cotton consumed in the United States goes into the manufacture of automobile and truck tires, and in 16 agreements concessions have been obtained on tires. Five agreements include benefits for exports of American cotton yarn, and 10 include benefits for exports of American cotton textiles.

THE SIGNIFICANCE OF THE AGREEMENT WITH THE UNITED KINGDOM IN RELATION TO AGRICULTURE

The United Kingdom is the largest foreign market for our farm products, taking about a third of our total exports of agricultural products to all countries of the world. Even in 1937, despite the adverse effects of trade barriers and of earlier droughts in the United States, we exported $261,000,000 worth of farm products to the United Kingdom.

The concessions granted by the British on all items, agricultural and nonagricultural, cover British imports valued, in 1936, at about $300,000,000, and more than $200,000,000 of this consists of farm products on which concessions have been granted. In addition, the British agreement includes, on behalf of the non-self-governing colonies and Newfoundland, concessions on items accounting for about $26,000,000 out of $52,000,000 worth of goods imported into those areas from the United States, including concessions on about $7,000,000 worth of farm products.

1. Grains

Among the most important of the concessions obtained are the concessions obtained on grain and grain products. The United Kingdom removes entirely her 6-cent duty on wheat—a duty which, though not high, placed us at a great disadvantage in the highly important British market, because Dominion wheat was meanwhile permitted to enter free of duty. Before this discrimination began in 1932, the United Kingdom had been taking about a fourth of our total exports of wheat. On wheat flour, continued free entry is guaranteed by Newfoundland, and free entry or improved trade treatment is secured in seven of the British colonies—these colonial concessions affecting a trade of sizable proportions.

On corn (other than flat white corn) the United Kingdom guarantees to continue free entry. Nearly all of our corn exports to the United Kingdom fall in this class. The British also bind the 10-percent duty on cornstarch. Corn and corn meal are among the concessions obtained in various British colonies.

Other concessions on grains include a reduction by the British of one-third in the duty on oatmeal; valuable concessions on rice in both the British and the Canadian agreements, particularly the British. A reduction of one-third in the British duty on rice substantially narrows the British preference on Empire rice, which is admitted free of duty, and should assist toward the recovery of some part of the large trade in this product which had in recent years been diverted to Empire sources.

2. Meats and meat products

As regards meat and meat products, another group of concessions have been obtained which should be of great value to the livestock-producing and meat-packing industries. On lard the British have entirely removed their 10-percent duty. Lard is one of the biggest items in our agricultural export trade, and the British market—always important—has in recent years been the leading export outlet. Although that market has tended to hold up fairly well whenever we had ample lard supplies to export, the removal of this duty is assisting in enlarging and preserving it against the inroads of competing substitutes.

On hams the British have had no duty, but on all cured pork (including hams) there are restrictive import quotas. Under the British agreement the quota on hams is substantially increased and provision made for further possible increases in the future. On hams and on fresh, chilled, and frozen pork the continuance of existing low-duty rates or free entry is guaranteed by the British; and free entry or existing low-duty rates are also guaranteed for a variety of other animal products, such as edible offal of various kinds, sausage casings, oleo and oleo oil, and refined tallow. Important concessions are obtained on animal products in Newfoundland and the colonies.

3. Fruits and vegetables

On fruits and vegetables the range and variety of concessions obtained in these agreements are large. Fruits have in recent years been the most important of the dutiable items, except tobacco, in our agricultural trade with the United Kingdom; but they have been increasingly hampered by duties and preferences in favor of British countries. The British agreement greatly improves this situation.

On apples and pears—very important items—the British reduced their duties, and hence their preference to British countries, by a third during the months when our exports chiefly take place. On a wide range of canned fruits and fruit juices some duties are removed entirely, others reduced, still others bound at existing low levels. On raisins and prunes the existing substantial duty of 35 percent, which has especially favored Australian raisins admitted free into the British market, is bound against increase. For both these products the British market is very important. In the case of prunes we have continued to predominate in that market despite the preferential duty. Concessions on fruits are also obtained in Newfoundland and a large number of the colonies. The British agreement also reduces the duties in the United Kingdom on canned asparagus and canned corn, and binds existing duties on canned beans and tomato juice.

4. Cotton

On cotton the United Kingdom guarantees continued free entry. Cotton is the largest item among the agricultural imports from the United States. In 1937 the United Kingdom once more resumed first place as an export market, having been earlier displaced by Japan, taking nearly $100,000,000 worth of American cotton. While the chief benefits of the trade-agreements program to the cotton grower are of a different character, this guaranty of free entry nevertheless serves to assure against the possibility of any future tariff preference in either country in favor of Empire-grown cotton.

5. Tobacco

On tobacco the British agreement guarantees against any increase in the existing preference in favor of Empire-grown tobacco, a preference which the United Kingdom is pledged to maintain until 1942; but it also includes an undertaking by the British to reexamine the whole position upon the expiration of this commitment, with a view to possible reduction of the preference at that time. Tobacco is the most important dutiable agricultural item in our export trade with the United Kingdom. Although our share of the British imports of tobacco has declined somewhat as a result of the preference, we have nevertheless continued to supply more than three-fourths of the total. Valuable concessions for American tobacco are obtained in numerous British colonies.

Those are the leading categories of farm products on which concessions were obtained, but the list includes a great many other items, such as linseed cake and meal, hay, garden and grass seeds, nuts of various kinds, honey, dried peas, and so on.

SOME SPECIFIC INCREASES IN EXPORTS OF AGRICULTURAL PRODUCTS

Many encouraging increases in export trade in agricultural products have occurred in items on which concessions have been obtained.

During 1937, the second year during which the agreement with Canada was in effect, Canadian imports of fresh fruits from the United States totaled $7,541,000, as compared with $5,095,000 in 1935 (detailed analyses of the effects on individual commodities have not been made for 1938). American dried and canned fruit imports into Canada increased by $156,000 and $47,000, respectively, during the same period. In 1937, the second full calendar year after the agreements with Belgium and Sweden went into effect, Belgian imports of American fresh pears were $263,000 greater than during 1934, while Swedish imports of canned fruit during the same time increased by $103,000. Prunes and raisins imported into France from the United States showed a gain of almost $500,000 in the first year of the agreement with that country. Netherlands imports of American raisins were over 2,000,000 pounds, or $150,000 greater in 1937 than in 1935, the pre-agreement year. Switzerland took 800,000 pounds more of dried fruit in 1937, the first calendar year under the agreement, than in 1935.

Imports into Canada from the United States of fresh vegetables affected by the agreement were almost $2,000,000 greater in 1937 than in 1935, while imports of canned vegetables and vegetable preparations increased by $120,000. In 1937 Cuban imports of American beans, peas, onions, and potatoes, on which reductions in duties were obtained, were valued at slightly over $1,000,000, as compared with only $250,000 during 1933, the preagreement calendar year. Cuban imports from the United States of canned peas, sweet corn, and asparagus totaled $115,000 in 1937 contrasted with $10,000 in 1933.

Despite the droughts of 1934 and 1936, which seriously curtailed the exportable surplus of various pork products, exports of such products expanded in a number of instances following effective date of concessions obtained from certain foreign countries. Canadian imports of bacon, hams, shoulders, and other cured pork from the United States were valued at over $23,000 in 1937, or four times greater than in 1933; while pork barreled in brine or dry salted increased by nearly $200,000. Cuban imports of American bacon, hams, and shoulders increased from $37,000 in 1933 to $100,000 in 1937, and imports of salted pork increased from $197,000 in 1933 to $500,000 in 1937, while Cuban lard imports from the United States increased from $536,000 in 1933 to $5,000,000 in 1937. Swiss imports of American lard increased over one-half million pounds, valued at $120,000, between 1935 and 1937. With more normal domestic supplies of these products, it may be expected that even greater increases in exports will take place.

Swiss imports of American wheat in 1937 were valued at $1,400,000, against practically none imported from the United States during the 2 prior years. Wheat and wheat flour imported into the Netherlands from the United States amounted to $9,413,000 in 1937 and to $14,506,000 in 1938, compared with $1,600,000 in 1935, the year preceding the trade agreement with that country. Total imports into Canada from the United States of grains and preparations upon which that country granted duty reductions increased from $592,000 in 1935 to over $4,000,000 in 1937.

CONCESSIONS GRANTED FOR THOSE OBTAINED

Naturally, in order to obtain concessions from foreign countries for our farm and other products, we must give concessions in return. That is both fair and necessary. We have granted some concessions on farm products.

Each concession has been made only after the most careful study of all the pertinent facts. Where necessary, the concession has been accompanied by safeguards which make it virtually certain that the effect will not be seriously felt by the domestic industry concerned, even when looking at the matter exclusively from the point of view of the share of the domestic market which it will continue to enjoy. When it comes to the actual amount sold by the domestic industry and the income from its sales—and that is what really counts—it is necessary to keep in mind the fact that the trade-agreements program as a whole tends to create a better domestic market. Thus, a reduced share of the domestic market for domestic products may nevertheless mean an increased volume of sales. Certainly, it is far better for a domestic industry to have 95 percent of a good domestic market than 100 percent of a poor one.

THE PROGRAM IS NATIONAL

The trade-agreements program as a whole is fundamentally in the interest of the overwhelming majority of the farmers of this country, and no amount of misrepresentation or misleading use of trade statistics can alter this basic fact. The agreements recently signed with the United Kingdom and Canada add tremendously to the potentialities of the program for agriculture and for the nation.

We realize that the program is not a cure-all for all the ills of agriculture. It does not promise a complete solution of the farm surplus problem. But it is a fundamentally sound and an important contribution to the solution of that problem. At the same time, without injury to domestic industry, the program benefits farmers as consumers by increasing the buying power of the money income they get from the sale of their products. You cannot escape the conclusion that the program operates in the interest of the entire Nation, but especially in the interest of agriculture. It deserves the loyal support of farmers in every State of the Union.

National Farm and Home Hour

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

RADIO ADDRESS BY EDWARD A. O'NEAL

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by Edward A. O'Neal, president of the American Farm Bureau Federation, over the National Farm and Home Hour, on June 10, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The sun shines, the rain falls, the warm earth nurtures the seeds implanted in it by the husbandman, and the unseen alchemy of nature sets to work, producing a new crop which will provide food and fiber for the people.

The farmer plows and plants and cultivates, watching over the tender seedlings to protect them from weed and pest, so that at harvest season he may gather a bountiful harvest into his barns. He glories in the heat of the sun and the feel of the land beneath his feet as he goes about his appointed tasks. He labors from sun to sun, sustained by faith in divine and natural law, and he is at peace with the world.

The farmer is not thinking of a minimum wage for his efforts, nor of a 6-hour day or a 30-hour week; he is thinking of his crop and what he must do to make sure of a rich harvest. His hours may be long and his labors trying when vagaries of wind and weather leave him distressingly little time to get his crop planted or to harvest it undamaged by the elements.

He accepts the eternal challenge of the elements. He pits his skill against the weather, against insect and parasite, drought and hurricane, as he fulfills the sacred obligation to feed and clothe mankind.

His face is turned toward the sun, alight with hope and faith and confidence. He knows Nature well because he works intimately with her in creating, out of sun and soil and air, commodities that are essential to human life on this earth.

He is the trustee and shepherd of the new wealth that miraculously springs from the earth with each recurring season. Whether he labors in a cotton field, or in a tobacco field, or a corn field, or a wheat field, or in an orchard, or a garden plot, he knows that he is producing new wealth to add to the welfare of the human race. How immense is the far-flung empire of agriculture in this country. Incalculable wealth produced annually by more than 6,000,000 farm families toiling and planning and hoping. How infinite in variety and complexity of operation.

The farmer knows that he must labor that people may live. He knows that he must care well for his cattle that little children may grow strong and vigorous, that men in factories may have meat and bread to sustain them while they fashion goods that people must have to live in this modern age.

The farmer has learned how to produce well. The best in scientific knowledge is brought to him through the land-grant colleges, the Extension Service, and the county agent, who works with him to solve the problems of the farm. There is no problem of production which he feels incapable of meeting with the assistance of the Farm Bureau, the county agent, and other great rural institutions which serve him.

The farmer loves to produce. A rich harvest gives him satisfaction and contentment as nothing else can. He has habitually and consistently produced an abundance.

The only cloud in his sky is the matter of price. He wonders if the price he will receive at harvest time will permit him to put in his house a bathroom that his family has been wanting. He knows full well that 8-cent cotton or 60-cent wheat will not permit him to pay a plumber $1.50 an hour for labor. We knows that when he produces a quart of milk costing the consumer 11 cents he will get only 3½ cents out of the retail price and that labor handling the milk after it leaves the farm and carrying it to the consumer will get nearly twice as much as he gets, or 6.41 cents. He knows that the cotton shirt he wears has only a few cents worth of cotton in it, but that it cost him a dollar. He knows that the manufacturer of that shirt is protected in his price by 40-percent ad valorem tariff, while the farmer must sell the cotton at a world price. He knows that here is a problem which he is impotent to solve by himself. His land-grant college or his county agent cannot help him. He knows that only by farmers working with the Federal Government to solve their price problem as a group can he make any progress in this field.

The farmer must live. He must feed and clothe and educate his children. He knows that some of his children must go to the city because the big city is a mechanical monster, incapable of maintaining its population.

Not only must the farmer live, but also he must live under conditions that have been created by our industrial civilization. No longer can the farmer live to himself alone on his broad acres producing all that the family may require. Not only must he contend with the imponderable forces of Nature, but also he must face without flinching the stern economic forces released by the machine age. He can't trade some of his food and fiber for shoes and clothing for his children. His commodities must go into the churning streams of trade and commerce, and, when sent to market, the farmer hopes that the returns may be large enough to permit him to maintain his family in comfort and decency.

It was not the farmer's choice, nor was it of his doing, that these conditions have come about. Turn the clock back to pioneer days, and the farmer will know that he will get along. He will eat and he will have clothing. But he lives not in pioneer days, but in a streamlined age. This country has become an industrial Nation, and the national economy is man made.

As the rapid shift to an industrial economy took place, the farmer saw his soil despoiled of its natural fertility to furnish cheap food for a growing industrial army. Grim necessity forced him to push his productive efforts to the utmost, that he might secure enough in return to enable him to pay the artificial prices which the Nation's man-made economy exacted of him in all of his purchases.

As the chasm widened between the pioneer agricultural economy and the developing industrial economy, the farmer found it harder

and harder to get along. He was well aware that the conditions he faced could not go on forever, because he knew that every nation in history that neglected its agriculture eventually paid the price. The buried cities of antiquity are mute but eloquent monuments of peoples who exploited their soils and their peasant population until finally the people on the land not only could not feed the cities but could not maintain themselves. The result was dust, famine, desolation, and destruction.

In our own Nation, the people paid little attention to the problem of growing disparity between the agricultural and industrial communities until the sheer force of economic necessity drove them to a measure of recognition of the tremendous significance of the situation. Bitter experience taught this Nation that when farmers could not buy, the laboring man could not find a job. People began to appreciate the fact that in a nation of stabilized industrial production, stabilized prices for industrial goods, stabilized wages, fixed tariffs, monopoly rates, and the entire brood of man-made, artificial controls, the farming group alone was not provided for.

The Nation, in its own self-interest, set out to do something to restore balance between the farm and the factory, between the man on the land and the man off the land. The parity concept of balance was developed. The Federal Government has recognized in farm legislation the farmer's right to balanced prices and balanced income—prices and income which will permit the farmer to exchange his commodities on a fair basis for the goods and services produced by other groups.

The Congress of the United States last year passed, and the President signed, a bill based on the parity concept. That legislation provided that farmers might cooperate with each other and with the Federal Government in a plan to bring a measure of stability to the farm community, equivalent to the stability enjoyed by the industrial community. That law is based on the idea that it is in the national interest to stabilize agriculture, even to the extent of providing that in case prices received in the market place are below the parity level, cash payments may be made to individual farmers by the Federal Government to bring farm prices in balance.

And today, just as the farmer has faith in the sun and the rain, and in all the subtle alchemy of Nature, he also has faith and confidence in the law given him by the Congress and the President. This must be so, because farmers operating around 85 percent of all the cultivated land in this country are this year cooperating in this broad program. And the public generally appreciates the importance of a stabilized agriculture, for only recently a Nation-wide poll indicated that 62 percent of the people were opposed to reducing benefit payments to agriculture.

In the face of all this, the enemies of farmers, as usual, are seeking to divide the ranks of agriculture. These enemies, many of them occupying positions of great power in the fields of processing and distribution of farm products, have tremendous and widespread influence. Well they know that everything we have achieved has been achieved by a united agriculture, and now they attempt to drive a wedge between the commodities, between the different agricultural regions, and between this farm group and that farm group.

Then there is a group in Congress that wants to economize on Federal appropriations. When you analyze their plans, you find that they want to do all of the economizing at the expense of the farmer.

There are also those who attempt to inflame labor against the farmer. They pounced upon the farm groups which have been attempting to clarify by amendment certain parts of the wage and hour law which applied to the packing and processing of certain farm products in rural areas. Farmers have asked for little more in the way of exemptions than seemed clearly intended by the Congress when the law was passed, and yet the enemy seizes this occasion to make the absurd charge that the farmer is playing the game of the big processor and distributor.

The farmer, as he labors in his fields, knows well enough that laboring people must eat and that they must wear clothes, and he wants labor to have plenty with which to buy what he needs. But he knows too well that if his own group is out of economic balance with other groups, then the laborer may not even have a job. The farmer does his duty as a citizen. He pays his taxes to support his schools and maintain the Government, and he is always willing to do his proper share. He is ready and willing at any time to meet with other groups to work out a plan for keeping the groups in balance.

But he knows for certain that the tariffs and the monopoly privileges and the other benefits that have been extended to other groups have simply worked in reverse for him. He does not understand why he should be penalized unduly to give tariff protection to industry and labor.

At this very moment the handlers and processors of cotton are bending every effort to split the farm ranks wide open in order that the trade may have the benefit of cheap cotton. The farmer knows that cheap cotton never did him any good, even though it means large volume and profit for the handlers. He knows that the huge accumulation of cotton that has piled up must be moved into export channels, because that is the only place for it to go. By history and tradition we are a great cotton-exporting nation, and the cotton producer knows that we must maintain our position. He is willing to fight for his fair share of the foreign market for all commodities. He knows that he must adjust his production to effective demand. He has done that, and he has had the benefit of a Government loan to maintain the domestic price. Now the cotton trade wants to annul the loan so that cotton may become cheap again.

The cotton farmer has his program that has helped him, and now he is being asked by the cotton trade to back a proposal that is deliberately designed to make cotton cheap, and he sees his farm organization subjected to vicious attack—his organization that has represented him so effectively and so faithfully during the years and showed him how he can join with his neighbors to solve, by united action, the problems that he is impotent to solve by himself.

But the farmer is not fooled. He has faith and confidence that Congress will not permit sinister hands to undo everything that has been accomplished by the program. He is not fooled by the uproar of the interests that call the organized farmers an iniquitous "pressure group." He knows that the old crowd that ran things in this country before the farmers asserted themselves are selfish to the core, that they want the farmer to be a peasant and to take orders complacently.

The farmer knows that he himself has paid the bill for the pressure groups that dominated national policies for generations, and he knows that everything farmers have secured has been won by organized effort by farmers themselves through their organizations. He is not going to give up either his organization or his program, and he has faith that the present Congress will provide him enough money to make the program work.

He knows that the enemy never gave him a farm program, with price-sustaining loans and the mechanism to bring agriculture back into balance with industry and labor. He knows that agricultural income increased at the rate of a billion dollars a year for 4 years after 1933, and that the farm program was a potent factor in that rehabilitation. And he is taking Congress at its word in its declaration of policy in the Agricultural Adjustment Act of 1938, namely, that it is in the national interest to stabilize agriculture. He knows that the soil-conservation program constitutes the first recognition by the Federal Government that the conservation of our soil resources is a matter of national concern. He knows that these things have come about because farmers were organized, and so he is going to stick to his organization and to his program. With 1939 compliance with the program at 85 percent, can any sane person doubt that the farmers are for it?

The farmer sees this great cooperative program of farmers as the only way in which farming can be restored to its rightful position in our national economy, and the only way in which the economic balance necessary to make this country prosperous, and he is going to stick to it in spite of attacks of the selfish interests that would like to dictate what kind of a program agriculture should have.

In the next few days the issue must be met. A conference of House and Senate will consider the farm appropriations. The farmer, as I have said, has done his part in creating the ever-normal granary, which is the consumers' guaranty of abundance and also insures against unduly high prices. Now the farmer believes it is up to the Congress to appropriate enough money to make the program effective for the farmer. He looks at his cribs bulging with corn, at the cotton warehouse crammed to the ceiling with cotton, and he wonders if all this abundance is going to mean, after all, just what it has meant in the past, namely, low prices for the producer. Farmers should immediately let Congress and the President know how strongly they feel on this matter.

The farmer rightfully looks to Congress to carry on. He knows that Congress has been with him in the past, that the President has heartily endorsed the program designed to stabilize agriculture, and that the Supreme Court has given its approval to the fundamental principles of the program. The three great departments of the Federal Government, it may fairly be said, are in substantial agreement on the principle that it is in the national interest to bring agriculture up into economic balance with the other groups in this country.

There has been much discussion as to how we can raise the national income to $80,000,000,000. The quickest way to do it, and the most effective, I believe, would be to raise agriculture's income to $12,000,000,000. We know from past experience that labor's income would go up immediately to approximately the same figure, and without any increase in wage rates. The increased business that would result from this increased purchasing power among the two groups which do most of the consumer buying would give the recovery movement a tremendous boost. It is my firm conviction, supported by the records of the ups and downs of the economic cycle, that national income can never reach the desired figure unless the farmers are brought into fair balance so that they can buy the products of industry in normal volume.

All of our experience indicates that national prosperity cannot be brought back by pouring money into the top of the economic pyramid. It must be applied at the base, from whence it will permeate to the last nook and cranny of our economic structure. I believe without question that this will be done, and when that time comes the way will be cleared for real national progress on a program of constantly increasing production and consumption of useful goods. This country has every means necessary to attain prosperity and standards of living heretofore undreamed of if we as a people have

the common sense to insist on restoring fair balance between the different groups. Until we as a people gain full understanding of this fundamental problem we will continue to flounder about, getting nowhere, and hindering the march of progress.

Death of Americans in Airplane Accident in Mexico

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

ADDRESS BY HON. JOSEPHUS DANIELS

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum dealing with the death of two Harvard students, Bronson H. Rumsey and Daniel S. Roosevelt, and injury to Miss Carlotta Constantine, in an airplane accident in Mexico on April 18 this year, and also a speech by Ambassador Josephus Daniels in connection therewith.

There being no objection, the memorandum and speech were ordered to be printed in the RECORD, as follows:

MEMORANDUM

On the 18th day of April of this year a plane carrying two Harvard students, Bronson H. Rumsey and Daniel S. Roosevelt, who were killed, and Miss Carlotta Constantine, who received severe injuries, went down in thick weather near Canoitas, an Indian village in the State of Puebla. Maurilio Islas, a farm worker plowing in a field near by, hurried to the scene. The young men were dead. Miss Constantine had been thrown into a barranca and, being terribly injured, was unable to move. Señor Islas lifted her on his back and carried her 5 miles over a rocky and rough trail to Canoitas. Indians removed the bodies from the wrecked plane to nearby shelter.

On the following day Señor Manuel Diaz, "chief" of the village, directed the Indians to take the bodies to Canoitas. There they reposed in the little church, pending their removal the same day to Mexico City.

On Sunday, May 28, the American Ambassador, Mr. Josephus Daniels, accompanied by his secretary, Mr. Stephen E. Aguirre, and Consul Robert McGregor (the latter having gone accompanied by Vice Consul John W. Wilson, to the scene of the tragedy immediately after the accident and made the necessary arrangements for the removal of the bodies), as well as Vice Consul Oscar Fredrickson, visited Canoitas to express appreciation to the villagers for their kind helpfulness and voluntary assistance. The whole village—men, women, and children—gathered in welcome to the visitors in front of the church, where the Ambassador delivered a brief address, to which Señor Diaz responded with feeling.

Accompanying this memorandum is the address delivered by Ambassador Daniels on that occasion.

ADDRESS BY AMBASSADOR JOSEPHUS DANIELS AT CANOITAS, GUADALUPE VICTORIA, PUEBLA, SUNDAY, MAY 28, 1939

My mission is a sacred one. I have come today to Canoitas for the purpose of conveying the grateful appreciation of my Government; the gratitude of the families of Mr. Rumsey and Mr. Roosevelt, the fine young men who perished in the tragedy when their plane fell last month and was burned near here; the thanks of the parents of the lovely young woman, Miss Carlota Constantine, who owes her rescue to Señor Maurilio Islas. For these and for myself and officers of the Embassy and Consulate General in Mexico, I wish to tell you, Señor Diaz, Secretary of the Court of Guadalupe Victoria, who in a time of emergency proved a leader in prompt efficiency and helpfulness, and your official associates and your warm-hearted people, how thankful we all are for your manifestation of the spirit of brotherhood which ennobles our common humanity. Commissioned by members of the families of the splendid youths whose promising careers were suddenly brought to an end near your village, I wish to assure you of their gratitude, which they desire to express in some way suitable to the sense of obligation which they and all of us feel to the people of your vicinage.

The peoples and Governments of our two countries have long cherished the existence of good neighborliness, and have rejoiced in its attainment. The evidence of its application in flower here last month recalls a golden legend long cherished among Spanish-American people. It is apposite at this time.

According to the best authorities, San Ysidro was plowing in his garden one spring day. He looked up and beheld an angel, who said to him: "The Lord wants to see you, Ysidro. Come with me." He answered that he was busy. "I can't go now. You tell the Lord that I am late in getting my corn planted, and that I'll see Him when I have finished." The angel retired, but soon another heavenly messenger appeared in the field and said: "The Lord wishes to see you immediately, Ysidro, and directs me to say that if you do not come at once He will send hot winds and drought that will wither your corn." Ysidro, dripping with perspiration in the hot sun, continued plowing, pausing to send back the message, "I've seen hot winds and droughts many a time before. They don't bother me. I can bring water from the river. Tell the Lord I can't come now, but I will see Him when I have finished planting my corn." Not long afterward another heavenly courier with stern mien tapped Ysidro on the shoulder and said: "I am commissioned to tell you that the Lord does not like your attitude and sends word to you that unless you come with me right now He will send a plague of locusts to devour your corn from the top and a plague of cutworms to eat its roots." Ysidro did not stop plowing, but sent back answer: "That does not frighten me. I've had plagues before, but by the use of fire and hoeing and hard work I've harvested my crop all right. You tell the Lord I'll finish my plowing tomorrow and will see Him when my work is completed."

The messenger from the skies disappeared, and before the fourth messenger descended he had finished several furrows. This last angel had the appearance and bearing of authority. As he flapped his wings and walked along the furrows to keep step with the stubborn plowman, the angel spoke sternly: "The Lord isn't going to argue with you any more, Ysidro. He commands me to tell you that if you do not come with me without a moment's delay He will send you a bad neighbor."

That threat terrified San Ysidro. He called "whoa" to his mule, stopped him short, and wrapped the reins around the plow handle. The look of his eyes showed that fear had taken possession of him.

"The Lord says unless I come He will send me a bad neighbor, does He? I cannot stand that infliction. Life isn't worth trying to live with a bad neighbor. You tell the Lord I can stand hot winds and droughts, locusts, cutworms, and all kinds of plagues. I can endure anything but a bad neighbor. I'll go with you right now"; and he stopped short in the middle of the row, not even waiting to unhitch the mule from the plow.

The kindly people of this community did not need the warnings of that parable to act the part of the good neighbor and set an example of kindness and succor to the peoples on both sides of the Rio Grande. They showed in an emergency, when death and injury came to Americans in their village, that they are good Samaritans as well as good neighbors.

The National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

RADIO ADDRESS BY LLOYD K. GARRISON

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Lloyd K. Garrison on June 7, 1939, on the subject of the National Labor Relations Act.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The National Lawyers' Guild has asked me to give this talk. I have agreed to do so because I feel, as the guild feels, that the National Labor Relations Act is widely misunderstood. Many of you, I am sure, are convinced that the act is one-sided because it puts restrictions on employers without putting restrictions on employees. This complaint of one-sidedness has been repeated so often in newspapers and speeches that a great many people have come to believe it as a matter of course.

But our job as citizens is to think for ourselves. And if we would judge the act, we must know its background. What was the situation that led up to its passage in 1935?

In many industries employers were banded together in associations whose object was to prevent the banding together of workers in unions. These associations put forth antiunion propaganda. They lobbied against labor legislation. The maintained blacklists of union men. They aided members engaged in strikes or lockouts. They sometimes supplied strikebreakers and spies.

Meanwhile the right of workers to associate was in practice defeated. Men were fired merely for joining unions. Foremen and superintendents would threaten discharge, which was equally effective. Spies were sometimes planted in union ranks and even

wormed their way into official positions. Company unions were formed by employers, or under their direction, and the men were herded into them. In some communities private police forces were employed, meetings were broken up, and union agents were run out of town or violently assaulted.

These tactics were but little used in industries where collective bargaining had long been established. But in many industries they were widely used—more widely than in any other democratic country. Against these tactics the workers were nearly helpless. The National Labor Relations Act was passed to equalize the rights of employers and employees to organize. This it did by forbidding the tactics I have described. It brought about a more even balance of rights. It did away with one-sidedness.

But some of you will, I know, have other objections. You may argue as follows: Granted that before the act was passed the balance of power was all on the side of the employer. But then when the act came along and guaranteed the right of men to organize and bargain collectively the unions became very strong. They became so strong that the balance of power shifted and is now all on the side of the workers. Those of you who feel this way naturally grope for some change in the law which will restrict the power of unions.

I want to discuss this point of view because I know it is sincerely held. It is understandable because for some 6 years we have been in a period of rapid union growth, with accompanying strikes for recognition and better terms; and this period, like similar periods in the past, has produced a certain uneasiness in the public mind. But we must keep cool heads and look at the facts. Actually, in terms of percentages of men organized, the American labor movement is still very weak. The percentage of organization in Great Britain is more than double that here. In Sweden it is more than four times that here. But in both Great Britain and Sweden there is relative industrial peace. It does not follow that strong unions produce industrial warfare. The contrary is generally true. In those American industries where union strength is greatest—in railroading, coal mining, printing, the building and garment trades, for example—industrial relations are among the best. And this is not because one side or the other is able to dictate terms. It is because both sides are strong enough to respect each other and because both sides have found by experience that it pays to recognize each other and to make and keep agreements.

The really difficult area of industrial relations is where newly formed unions attempt to deal with employers who have never recognized a union before. The employers are generally hostile, suspicious, and resentful; the unions are generally inexperienced and impatient and often expect and demand too much. There is no absolute remedy for this but time. With time the necessary lessons are learned, and confidence and understanding ripen. During the process mediation by third parties can be of much help. Many people think that the National Labor Relations Board is supposed to do this job. But the law confers that function on the Labor Department. It does good work but its excellent staff is undermanned.

More than any other country we have been suffering from the difficulties I have just described—where newly formed unions and employers who have not dealt with unions confront each other for the first time. The reason why we have had more difficulty of this sort than, for example, Great Britain or Sweden, is because normal union growth in this country was retarded by the determined opposition of employers in many industries. When their repressive tactics were forbidden by the National Labor Relations Act, the natural result was an up surge in union organization. Thus the job of learning how to live together had to be faced all at once instead of gradually. It is unfair to blame the law for this. The law simply struck off shackles which never should have been there in the first place. The reform was long overdue, and, as with so many other reforms, we have made things harder for ourselves by resisting change too long.

One other attitude of mind must be considered. It is often said that unions are not responsible and that somehow the law should be changed to make them responsible. Now the word "responsibility" is capable of two meanings. If you mean legal responsibility, the answer is that unions are already legally responsible. In many States and in the Federal courts, under the antitrust laws, they can be sued for damages. In all States and in the Federal courts they can be enjoined. In all States picketing is regulated, and racketeering, violence, and intimidation are punishable. I know that the laws are not always enforced and are sometimes hard to enforce. I know that some unions, in some trades, are guilty of offenses which no one can condone. I deplore these offenses, and I deplore also the fact that they alone are what make the headlines, and that the public is apt to generalize from the headlines and to suppose that all unions are alike.

But abuses do exist, and it is proper to ask what the remedy is. Is the remedy more legal penalties? I do not think so. Those that we have would be adequate if they were vigorously enforced, as they have been in some places. In any event penalties are not a cure-all for human behavior. In Great Britain, for over a generation, except in general strike situations, the courts have been forbidden by Parliament to entertain suits for damages against unions, or to issue injunctions against unions. It can truly be said that in Great Britain, for most purposes, unions are legally irresponsible. And yet they have developed a high degree of responsibility in fact. This brings me to the second meaning of the word "responsibility," namely, responsibility in fact. By this I mean the honoring of agreements, intelligence, and common sense in negotiating and applying them, and honest, business-like, competent management.

That is the kind of responsibility which we expect of unions, as of employers, and it is the only kind of responsibility which is worth anything. How, then, is it produced? It cannot be produced except by giving responsibility. You cannot make an individual responsible without giving him responsibility. And the same is true of groups of individuals like unions. To give a union responsibility you must recognize its status as a negotiating agency and as a necessary party to agreements regulating the employment relationship. And the wider the coverage of these agreements—as where they are made between a union and groups or associations of employers—the greater the responsibility of the union in maintaining and applying the agreements, and therefore the greater the likelihood of its becoming and remaining responsible in fact.

This is the lesson of experience, here and elsewhere. As a great British industrialist said to me: "When you are in the stage of fighting the unions they put up against you their fighting men. When you are in the stage of dealing with them on a broad business basis they send you their ambassadors." By this he meant that every group tends to produce leaders who are best fitted to carry on the particular group activities. If those activities are fighting for existence and recognition, the group will produce its fighters—the harder the struggle, the tougher the fighters. If the activities are making and carrying out agreements, the group will produce its negotiators—men with the requisite intelligence and understanding to succeed at the task. This does not always happen at once, but it almost always happens in the long run.

I have stressed these general considerations because they are so important and so little understood. If we could only perceive that there is no legislative panacea for industrial peace; that the existing penalties against union misconduct are sufficient when enforced; that in any event the imposition of penalties is not the way to produce responsibility in fact; that to get responsibility you have to give it; if we could perceive these things, the agitation for amending the National Labor Relations Act would largely cease. Among the persons most insistent on changes are those who originally opposed the act, who flouted it after it was passed until it was upheld by the Supreme Court, and who since have given it only lip service. Senator BURKE'S bill, which represents chiefly the views of this group, would not merely amend the act; it would destroy it. The A. F. of L. is seeking changes of a different sort, the most important of which would enable employers to take active sides in the tragic A. F. of L.-C. I. O. struggle. Without passing judgment on the merits of that struggle, I fear it would only be intensified if employers were to engage in aiding one group or the other.

The existence of the split in labor's ranks bears heavily upon employers caught in the cross-fire, as well as upon employees and the public. The Chairman of the National Labor Relations Board has announced that it will amend its rules to permit employers under proper circumstances to petition for elections. That change, and a few other procedural changes, can be made without amending the act.

It is now scarcely 2 years since the act was validated by the Supreme Court. Since then strikes have declined, and issues of discrimination and nonrecognition which formerly accounted for nearly half our strikes have increasingly been taken to the Board for peaceful adjudication. Of all the charges filed against employers with the Board, about 95 percent have never had to be tried; about half have been amicably settled, and nearly half have been dismissed. The Board's rulings are all subject to judicial review, and its record before the courts has been outstanding.

The wisest course, I am convinced, and the one favored by the National Lawyers Guild, is to await further experience under the act before seeking to change it, and meanwhile to concentrate on the real job of building human relationships which will make collective bargaining work.

Climate and Its Effect on Efficiency of Southern Workmen

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

ADDRESS BY DR. J. N. BAKER

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD the able address delivered by Dr. J. N. Baker, State health officer of Alabama,

before the Birmingham (Ala.) Traffic and Transportation Club on Monday, June 12, 1939, on "Climate and Its Effect Upon the Efficiency of Southern Workmen."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Early last fall I received from Mr. Benjamin Russell, president of the Alabama State Chamber of Commerce, a letter stating that he proposed to appoint a special committee to study the effect of climate upon health and efficiency in the South, especially in Alabama. Mr. Russell did me the honor of inviting me to serve as chairman of that committee.

I am revealing no secret when I tell you gentlemen that the decision on the part of the State chamber of commerce officials to make a complete, thorough-going study of the effect of Alabama's and the South's climate upon the health and working efficiency of our people was inspired by frequent disturbing reminders of a widespread prejudice against this section of the country. These officials realized that other sections of the country were still living in the nineteenth century, so far as their conception of health and living conditions in Alabama was concerned. Many otherwise well-informed residents of sections outside our providence-blessed Southland still think of the South, Alabama included, as a section inhabited by a race of people all but universally cursed by malaria, coughing their lungs out from tuberculosis, reduced to physical impotence by hookworm, made listless and inalert by pellagra, and crowding our insane asylums and almshouses because of syphilis. This picture, unfair though it is, placed this section at a distinct disadvantage in bidding for industries and in "selling" its resources to those with money to invest in productive, pay-roll-creating enterprises. Wisely, the State chamber of commerce decided to find out the facts regarding health conditions in Alabama and the personal efficiency of the southern worker. Starting its studies early last fall, the committee recently completed its work, and its findings have been incorporated in a report, which is now in the hands of the printer. Copies, of course, will be available for general distribution.

This report is approximately 38,000 words in length, and when published will comprise a booklet about half the size of a popular novel. While it is obviously impossible to treat it fully in the time now at my disposal, I shall, however, discuss briefly some of the more important of the committee's findings.

In the minds of many people, the South is synonymous with extreme heat. Even many southerners take it for granted that there is a tremendous difference between the temperaure of, say, Alabama and that of Pennsylvania. It will be surprising to these people, and perhaps to some of you gentlemen, to find, as the committee's investigators found, that the normal Alabama summer day is only about 7° warmer than a normal summer day in that State. The average normal temperature of the cities of Montgomery and Birmingham for the months of June, July, and August is 80.1°, as compared with a normal of 72.5° for the city of Pittsburgh. Such differences are hardly sufficient to set one part of the country off from another, as though it were in a different climatic zone. Moreover, Alabama's daily maximum temperature for these three summer months is only 89.7°, just 7.5° higher than Pittsburgh's maximum of 82.2° for the same period.

Another important fact was unearthed by the committee's studies; a fact which should be borne in mind in any consideration of the effect of Alabama's climate upon personal efficiency. In this State, and indeed throughout the South, the increase in temperature toward the summer peak is gradual. Here in Alabama relatively cool weather one day and prostrating heat the next are rare indeed. Thus the body gradually adjusts itself to the increasing heat, just as it may adjust itself to increasing dosages of certain drugs.

Health and personal efficiency are affected by other climate factors, as well as temperature, of course, and one of these is humidity. The committee's studies revealed that the relative humidity in Alabama was actually less than in Pennsylvania although the difference is only slight. The annual average (8 a. m., noon, and 8 p. m.) in Pittsburgh was found to be 67 percent, whereas the annual average for Alabama (7 a. m., noon, and 7 p. m.) was found to be slightly less than 66 percent. In Pennsylvania the winter months are colder, damper, and more penetrating than in Alabama, while in the late summer the humidity is slightly greater in Alabama.

Another significant fact unearthed by the committee's studies is that there is a more marked change in the temperature on an average day in Alabama than in Pennsylvania. The typical daily range in this State between the highest temperature of the day (presumably in or around the middle of the day) and the lowest temperature of that same average day (presumably night) is more than 19 degrees Fahrenheit. This range from the highest to the lowest temperature within a given 24-hour period is only about 17 degrees in the Pittsburgh area. Thus, even the hottest days in this State are followed by relatively cool evenings and nights, making for refreshing sleep and bodily comfort.

These factors we have just been considering should make for a high degree of personal efficiency, or per-worker productiveness, in Alabama. But, you may ask, do they?

Unfortunately, there is no absolute gage by which to measure personal efficiency for purposes of comparing Alabama climate with, say, Pennsylvania or New York or Ohio climate as a factor in the profitable operation of an industrial establishment. However, an approximate answer to that question is to be obtained from the experience of industrial concerns maintaining plants both in Alabama and elsewhere. I am unable, within the time limits of a talk of this kind, to list the records of those studied or detail what each revealed. They are discussed at some length in the committee's report, to which I refer those wishing this information. Suffice it to say, however, that they tell a convincing story of the efficiency of Alabama workers, a story which should prove an effective answer to those who insist upon linking Alabama climate with personal inefficiency.

There is a recognized relationship between health and efficiency, and that relationship makes it possible for us to obtain indirectly a picture of the effect of Alabama's climate upon Alabama employes' individual working capacity. This picture likewise is one which should prove gratifying to those who believe Alabama workmen can hold their own with any other workmen.

Most of you who were in the Army during the World War know how thoroughly you and your comrades in arms were examined at the time of entering the service and later. If the examining physician found—or thought he found—a leaking heart valve, or malaria, or syphilis, or hookworm, or any other condition that stood between you and perfect health, that fact went into your service record. Even after making proper allowance for human error, to which doctors are subject like other people, we can say that the medical records of the approximately 4,000,000 Americans who bore arms in 1917–18 form about as complete and accurate a picture of general health of the male population of the country of military age as it would be possible to obtain.

What do those records show? They show that the Southern States and those roughly of the Corn Belt were the most intrinsically healthful in the Nation. Alabama stood ninth in physical preeminence among all the States.

The records of the War Department show that the average drafted man from Alabama was not only taller by more than half an inch than the average for the country as a whole and lacked only a fraction of a pound of weighing as much as the national average, but was also taller and heavier than the average drafted man from either Maine, Connecticut, New Hampshire, Vermont, or Rhode Island. These comparisons gain added significance, too, when it is taken into consideration that Negro draftees were included along with the white troops and that practically all of these men were born in the nineteenth, not the twentieth, century, which means that they had received little, if any, benefit from the modern body-building and health-preserving developments which have marked the progress of medical science and public-health endeavors within the past three or four decades.

Possibly even you gentlemen are not entirely familiar with the extent of these developments and the part they have played, and will play, in the industrial development of your State. May I refer to them in closing?

Alabama's people entrusted to their State department of health the responsibility for carrying out an ambitious program of warfare, not primarily against death but against death's ally—disease. As this State is blessed with better-than-average health conditions with respect to other types of illness, particularly the deadly degenerative diseases, this official, though nonpolitical, arm of the State government set out with a determination to free Alabama as quickly as possible from those diseases which, in the still-unforgotten past, gave rise to the stigmatizing alliteration—"the sickly South." Chief among these were the so-called environmental and poverty diseases—malaria, hookworm, syphilis, typhoid fever, tuberculosis, and pellagra. It was against these that the heaviest barrages of the State's public-health agencies were directed.

At the present time more than 80 percent of the State's urban population, living in 167 cities and towns, and more than one-half its total population, both urban and rural, is protected against hookworm, typhoid, dysentery, and other excreta-spread diseases by efficient sewer systems and sanitary privies. Between 1934 and 1938, inclusive, workers employed on Federal work-relief projects constructed approximately 6,000,000 feet of new ditches and reconstructed approximately 3,500,000 feet of old ditches, these operations involving more than 4,000,000 cubic yards of excavation. Approximately 99.5 percent of all the residents of incorporated communities in Alabama, having populations of 500 or more, are consuming water that is under the supervision of the State department of health. In the field of tuberculosis control the State health department is maintaining traveling diagnostic clinics, staffed by experts. Through the State sanatorium subsidy, provided by the Patterson Act, it encourages the construction of county and district sanatoria, where those lacking the financial means to obtain treatment at expensive private institutions may be restored to health. Free drugs are furnished to private physicians and county health departments for the treatment of syphilis. Ninety-five diagnostic and treatment clinics are now in operation in 57 counties. The State health department has cooperated in the research studies that have been conducted in Birmingham in an effort to make available to the people of Alabama and the rest of the country an effective instrument for the curbing of pellagra, long associated with "the sickly South." This disease has also been attacked by the distribution through county health departments of yeast, furnished by the American Red Cross. Alabama is now one of only three States in the Union—and the only one south of the Potomac—in which there is a full-time local health department in every county.

What have been the fruits of these efforts?

A recent State-wide hookworm study—incidentally the only one ever conducted in Alabama or any other State—revealed an infestation rate of only 15.3 percent of those examined, as compared with an infestation rate of 53.6 percent—more than three times as high—revealed by a 36-county survey conducted in 1911–14 by the Rockefeller Sanitary Commission. Between 1915 and 1937 Alabama's malaria death rate dropped from 22.2 per 100,000 population to 7.6 per 100,000 population, or nearly two-thirds. During the same period this State's typhoid death rate dropped from 29.9 per 100,000 population to only 1.8 per 100,000 population, or 94 percent. In fact more than twice as many Alabamians actually died of typhoid in 1915 as were reported as having the disease in 1937. Alabama's tuberculosis death rate dropped nearly 45 percent between 1915 and 1937, and provisional vital statistics reports indicate that the death rate for last year was the lowest in the history of the State. And so on.

Although Alabama is still predominantly rural, it is also one of the country's leading industrial States and promises to increase its stature as a center of industry as time goes on. Recognizing this fact and realizing the wisdom of adjusting its facilities to this growing need, the State health department now has an important unit of its organization, a division of industrial hygiene, with an experienced physician in charge. That division's responsibility is to assure the best possible health conditions among the State's great army of industrial workers. Some 1,100 work rooms distributed throughout the eastern half and central section of the State have been carefully studied as a part of this division's program. More than 25,000 persons are employed in these rooms, and the health of these workers vitally concerns the welfare of an army of dependents estimated at approximately 100,000.

The division of industrial hygiene is directly familiar with representative work-room conditions in 34 counties of the State. In these geographical divisions county health officers are receiving practical instruction in plants within their jurisdicton. They are being coached in the potential hazards of, and general methods of controlling, some 50-odd classes of materials and physical conditions that are of a potentially hazardous nature. One hundred and forty industrial plants are at this time cooperating to make this study a success. In return the division of industrial hygiene is suggesting general protective measures whenever that seems desirable for the protection of the health of the workers and to minimize the necessity of training new workmen and to lessen absenteeism due to preventable causes.

Neither your State health officer nor the committee which he has the honor of serving as its chairman insists that all of Alabama's health problems have been completely solved. We do contend, however, that this State, blessed with a climate that makes for efficient workmanship and contented living, is definitely on its way toward the elimination of its most serious disease dangers.

Speaking for myself and for this committee, I bespeak your active enlistment in the effort to tell the world, particularly the prejudiced, the nineteenth-century-minded world, the 1939 truth about Alabama.

A Reminder to the Youth of America on Flag Day

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 15, 1939

STATEMENT BY THE JEWISH WAR VETERANS OF THE UNITED STATES

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement published by the Jewish War Veterans of the United States, entitled "A Reminder to the Youth of America on Flag Day."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Washington Post of June 14, 1939]

A REMINDER TO THE YOUTH OF AMERICA ON FLAG DAY

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands—one Nation indivisible, with liberty and justice for all."

A flag is a symbol. It may stand for something good. Or it may mean something wicked and destructive to all mankind.

Old Glory waves over a land that represents "liberty and justice for all" * * * in vivid contrast to other lands blighted by barbarism and godlessness.

Americans have more reason today than ever to be proud of America—to uphold it in peace, to defend and fight for its ideals.

To the youth of America we say: "Fight for your country in peace by driving its enemies from you. Cherish the freedom you now enjoy. It's your birthright as an American."

A traitor has no place in our midst. Especially when he comes to undermine our country.

Shun the scoundrel who would destroy our national unity by preaching group hatred.

He may call himself Communist, Fascist, or Nazi. Recognize him for what he is—an avowed enemy of America. America does not want him.

America wants no blood purges, no murder cults, no wholesale destruction of all religion. Swastika or hammer and sickle—both alike are a blight and a menace.

Stick to Old Glory!

A PAGE FROM AMERICAN HISTORY

In the Revolutionary War, Col. Isaac Franks, of Philadelphia, was aide-de-camp to General Washington. Haym Salomon gave his entire fortune to save the American cause. He died penniless. Hundreds of Jews served in the Revolutionary Army.

In the War of 1812, Uriah P. Levy, commander of the brig-of-war *Argus*, ran the British blockade and destroyed 21 British merchantmen. He died a commodore—the Navy's highest rank.

In the War with Mexico, Gen. David de Leon, of South Carolina, was twice honored by Congress for valor and ability. Moses Albert Levy served as Surgeon General.

In the Civil War, 10,000 Jews served the North or South with distinction and honor. In the Confederacy, Judah P. Benjamin was secretary of war; L. M. Harby, commodore of the Navy.

In the North, Frederick Knefler, of Indiana, rose to the rank of major general. Edward S. Solomon survived every important engagement to become a brigadier general.

Lincoln handed Leopold Newman, of New York, his commission as brigadier general while he lay dying of wounds received at Chancellorsville.

In the Spanish-American War, 5,000 Jewish volunteers answered the call of their country.

In the World War, 250,000 fought. Forming 3½ percent of the population, Jews contributed nearly 5 percent of the fighting forces. Approximately 10,000 Jews held commissioned rank. Over 1,100 Jews were cited for valor in action. Four Congressional Medals of Honor were awarded to Jews; 200 won the Distinguished Service Cross. Of 14,000 Jewish casualties, 3,400 made the supreme sacrifice.

The Jewish War Veterans, proud of their contribution to America in peace and war, will always serve the country they love.

Published by the Jewish War Veterans of the United States to promote greater love for our flag.

Archibald MacLeish

REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. THOMAS of New Jersey. Mr. Speaker and gentlemen of the House, I have additional information to bring to your attention concerning the "fellow traveling" activities and connections of Archibald MacLeish, whose name the White House has sent to the Senate for confirmation as Librarian of Congress. All the facts which have come to my notice since I first called your attention to Mr. MacLeish last week verify completely the charge which I made at that time, namely, that Mr. MacLeish has been one of the ranking "fellow travelers" of the Communist Party in this country.

To a large extent we may know a man by the company he keeps. When the Dies committee recently brought out the evidence that Gen. George Van Horn Moseley had met a company of persons which included Fritz Kuhn, the head of the German-American Bund, it was assumed by all that General Moseley had placed himself in the light of being a "fellow traveler" of the crowd which Fritz Kuhn represents. MacLeish has not only been frequently in the company of the Communist leaders in this country, he has accepted official positions in the "united front" organizations which they have set up for the purpose of propagandizing their particular brand of totalitarian revolution in this country.

I have already called your attention to the fact that Mr. MacLeish joined with a group of 22 persons in issuing a call to the National Writers' Congress which was held in New

York in June 1937. Associated with MacLeish in this call were the following well-known Communists and Communist "fellow travelers": Erskine Caldwell, Langston Hughes, Robert Morss Lovett, Paul De Kruif, Malcolm Cowley, John Howard Lawson, Clifford Odets, Donald Ogden Stewart, Waldo Frank, Claude McKay, and Ella Winter.

When the Communists first set about organizing writers in this country in 1935, it was under the name of the American Revolutionary Writers' Congress. Two years later, when they called their second congress of writers, they dropped the word "revolutionary." This action was in line with the new policy of the Communist International to try to woo the people of this country with slogans about "democracy" and "peace." Words such as "revolutionary" were relegated to the background, lest they frighten the prospective converts to the new people's front. It would be a great mistake to assume, however, that the ultimate purpose of revolution had been abandoned. In all this deceptive and Machiavellian maneuvering by the Communists, Archibald MacLeish, the proposed Librarian of Congress, was used quite effectively.

According to the Daily Worker of June 8, 1937, MacLeish was elected a vice president of the League of American Writers, the organization which was set up by the Communists at their congresses of writers in 1935 and 1937.

There can be no possible doubt about the fact that the Communist Party was behind the setting up of the League of American Writers. A Communist correspondent of the Daily Worker, one Edwin Seaver, wrote as follows in the columns of this Communist Party newspaper:

> It was a genuinely people's front meeting, and at such a meeting it was significant and proper that Browder spoke as a Communist. By doing so he gave a tone and necessary sense of direction the meeting might not otherwise have had.

Continuing, Seaver wrote:

> The Congress expressed "the conviction that now more than ever the Soviet Union needs the support of all who see the road to socialism through democracy."

Donald Ogden Stewart was elected president of the League of American Writers at the same time that MacLeish was chosen vice president. At the Congress of Writers, where MacLeish presided and introduced Earl Browder, Donald Ogden Stewart said:

> I haven't anything very critical to say of the capitalist system, except that it is a monster—a monster which it is the duty of every human being, every writer, to destroy.

An able critic of the Stalinist maneuvers in this country is one James Rorty. In an article on the League of American Writers Rorty wrote:

> The American Writers Congress "was conceived by the Communist Party to serve its interests, which are the interests of the Stalin regime in Moscow."

Rorty added:

> That regime is bending every effort to procure the participation in the next war of capitalist America, alined on the side of the Stalin regime in Russia

If any man in the United States presided at a gathering and introduced Fritz Kuhn as the principal speaker, and then accepted the vice-presidency of an organization whose president expressed sentiments in complete accord with those of Fritz Kuhn, that man would be marked—and rightly so—as a "fellow traveler" of the German-American Bund. Well, Members of the House, that is precisely the position in which we find Archibald MacLeish with respect to Earl Browder and the Communist Party.

According to the Daily Worker—official Communist organ—of June 5, 1937, page 1, Archibald MacLeish said in opening the American Writers Congress:

> Support the Spanish Loyalists who are fighting our future battles on the battlefields of Spain now.

At this congress, as I have already pointed out, Earl Browder, Communist leader, was the guest speaker and was presented by MacLeish.

The Daily Worker of February 15, 1937, announced that Archibald MacLeish, along with Communist Party members and "fellow travelers," has been raising funds to send ambulances to Loyalist Spain.

On June 22, 1937, the New Masses (another Communist organ) carried an article written by Archibald MacLeish, entitled "The War Is Ours," in which he argues at considerable length the justification of his association with Communists in the defense of the Spanish Loyalist cause.

The New Masses, in its issue of June 9, 1937, page 25, announces that Archibald MacLeish was a patron of the meeting held under the auspices of the Julius Rosenthal Memorial Committtee, along with well-known Communists and "fellow travelers."

In a book entitled "Living Authors," by Stanley Jaspon Kunitz, published by H. W. Wilson Co., New York, 1931, now on hand at the Congressional Library, there is a biographical sketch of Archibald MacLeish which purports to quote MacLeish as making the following statements, among others:

(1) "But could never believe in the law."

(2) "Went abroad in a hospital unit so as to do the right thing, but not be hurt."

(3) "Taught for year at Harvard to avoid again going to work."

A former Massachusetts State extension instructor of college-graduate courses in philosophy at Harvard University informed me that on—

> The 12th of October 1938, in the nighttime, a group of 450 Communist sympathizers, recruited from among Harvard undergraduates, gathered in Cantaregia Hall at the university to hear Granville Hicks, self-avowed Communist, make his first public address in Cambridge since he took up the Harvard post. Accompanying him as speakers were Archibald MacLeish, poet, and Joseph North, editor of the Communist publication, the New Masses.

All three speakers made a defense of left-wing journalism, while Hicks made a financial plea in the interests of the New Masses.

In the Atlantic Monthly magazine for June 1939, Archibald MacLeish takes the position that the time has come for poets to write of revolution.

Without the slightest straining of the evidence, which is too voluminous to burden the RECORD, it is clear that Archibald MacLeish has been a "fellow traveler" of the Communist Party and is therefore absolutely disqualified to fill the highly important post to which he has been named by the President.

Archibald MacLeish

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald entitled "Librarian MacLeish," and also an editorial from the Boston Globe entitled "Notable Choice," both of which are highly complimentary to Mr. MacLeish:

[From the Boston Herald of June 8, 1939]

LIBRARIAN MACLEISH

The enthusiasm in Washington when the President named Archibald MacLeish as Librarian of Congress, to succeed Herbert Putnam, will be duplicated here, in New York, and wherever Mr. MacLeish is known. It was said of Herbert Hoover that he selected the ideal man when he named Justice Cardozo to the Supreme Court; and almost as much may be said of the honoring of Mr. MacLeish.

He was first man in his class at the Harvard Law School, and declined an appointment to the faculty. He was one of the most promising young lawyers in Boston when he left one of the leading law firms to give all his time to literature. As an editor

of Fortune, a Pulitzer prize winner in poetry, a writer of excellent prose, a man of affairs, an administrator, and, as the President characterized him, "a gentleman and a scholar," he deserves immediate, unanimous, hearty confirmation.

The President will be criticized, perhaps, for his failure to pick a trained librarian. The obvious reply is that far more than technical ability is requisite for the supervision of one of the great libraries of the world. A skilled orthodox librarian could have been found easily enough, but none with the qualifications of Mr. Putnam. The purely professional features of the position can be learned easily by a man of Mr. MacLeish's endowments and experience.

A pleasing personality and a marked aptitude in speech, public and private, should be of great assistance to him in his relations with Members of Congress. The entirely nonpolitical nature of the appointment makes it all the more pleasing.

[From the Boston Globe of June 8, 1939]

NOTABLE CHOICE

The nomination of Archibald MacLeish to be head of the Library of Congress brings to one of the great cultural centers of the world a man of achievement and imagination. As poet, editor, and director of the Niemann fellowships in journalism at Harvard, Mr. MacLeish is ranked in the forefront of American men of letters.

The magnificent Library at Washington is far more than a collection of books. Among its possessions are priceless manuscripts, rare pictures, and a steadily increasing number of films and records which will keep the personages and events of today and tomorrow alive and fresh for generations yet to come.

The broad foundations on which Dr. Herbert Putnam built for the past 40 years support an institution aptly described as a university without lecturers or laboratories. The services it renders to students who come to it from all countries of the earth are almost infinite in their variety.

With Mr. MacLeish as Librarian, the work may be expected to extend in directions not yet guessed. The combination of man and opportunity is a great prospect for the future.

Power Development at Niagara and Bonneville

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. PIERCE of Oregon. Mr. Speaker, 2 years ago on this floor, and before the Rivers and Harbors Committee, in connection with the consideration of the Bonneville power legislation, I pointed out the evils of the monopolistic development at Niagara. Since that time I have investigated further, and I now present a detailed comparison of the provisions for public utilization of Niagara and Bonneville benefits. I am doing this in order to clarify the issues, and to throw light on the principles which should control toward the efficient utilization of the people's natural resources in the interests of public welfare.

I propose to show that Niagara power is really the property of the people, and has been wrongfully appropriated by private interests without the people gaining any material benefits therefrom. The employment of labor resulting from this immense development has been comparatively insignificant. The tolls collected in resale rates from domestic and commercial consumers have been exorbitant and unreasonable. This development has been primarily used to foster monopoly, giving immense earnings to a limited group. This monopoly has caused widespread unemployment in the copper States through the substitution of monopolistically produced aluminum for copper. It has also placed a heavy financial burden on our farmers who are forced to use chemicals for weed destruction. All the sodium chlorate commercially manufactured in the United States comes from one firm at Niagara—which absorbs profits resulting from cheap power.

From the Niagara experience, I will trace the evolution of the principles governing a sound national power policy. Then I will point out how these principles are covered in the organic Bonneville Act, and how the application of these principles can be used in the public interest to build a great empire in the Northwest. What we desire, above all things, is that Bonneville power development shall not be a scandalous repetition of Niagara.

NIAGARA POWER

The Niagara River discharges into Lake Ontario, on the average, 215,000 cubic feet of water per second. This is practically a steady flow regulated by the great storage reservoirs of the upper Great Lakes, which contain one-half of the world's supply of fresh water. The net fall from Lake Erie to Lake Ontario is 310 feet. If all this water were utilized to produce power under this fall, 7,000,000 horsepower could be produced. This is but one-third of what can be produced on the Columbia River and its tributaries. The actual development on both sides at Niagara amounts to 1,487,000 horsepower, or 21 percent of its possible total. This total potential power at wholesale rates could produce a revenue of at least $105,000,000 annually.

In 1909 a boundary water treaty was consummated with Great Britain limiting the total water diversion above Niagara Falls to 56,000 cubic feet per second, 20,000 cubic feet of which was allotted to the American side and 36,000 to the Canadian side. The greater amount allotted to Canada resulted, no doubt, from a desire to compensate for the unnatural diversion at Chicago for the drainage canal. The Chicago diversion was later declared illegal by the Supreme Court. Water-power development in Canada has been on a more efficient and definite basis than in the United States. Canada, being a country without fuel, has legislated to secure the most efficient use of its waters. On the Canadian side the Queenston or Chippewa publicly owned plant was built to secure 92 percent of the potential fall between the lakes.

Two of the three American plants, all privately owned by the Niagara Falls Power Co., utilize only about 42 percent of the possible head, whereas the third plant operates under a head about 65 percent of the available potential fall. The Canadian Chippewa plant, located 13 miles below the Falls, obtains 30 horsepower per cubic foot of water, whereas the plants located adjacent to the Falls on the American side obtain only 17 horsepower per cubic foot. Canadian Niagara generates about twice the amount of electric energy that can be generated at Bonneville on the Columbia River. The high capacity factor of Chippewa and Ontario stations is due to the low load-building rate of the Ontario Hydro, which encourages long hours' use. The Rankine station capacity factor is due to high load factor of its industrial load.

The following are the characteristics of the Canadian Niagara plants:

TABLE 1.—*Canadian Niagara plants*

Station	Owner	Horsepower	Yearly kilowatt-hours in thousands	Capacity factor
				Percent
Chippewa	Hydro Commission	500,000	2,636,296	81.0
Ontario	do	180,000	1,172,000	68.0
Toronto [1]	do	150,000	239,906	24.2
W. B. Rankine [2]		100,000	576,073	88.0

[1] This station not used for base load.
[2] Based on permit capacity. This is the Canadian Niagara Power Co. owned by the American company.

NIAGARA FALLS POWER CO.

The present Niagara Falls Power Co. was incorporated in 1918 by a consolidation of the then existing three hydraulic companies on the American side of the Niagara. These predecessor companies were the Hydraulic Co., incorporated in 1886; the Hydraulic Power Co., incorporated in 1910; and the Cliff Electrical Distribution Co., incorporated in 1909. The Niagara Falls Power Co. also wholly owns the Canadian Niagara Power Co., Ltd., which operates a station on the

Canadian side, located above the Falls in Queen Victoria Niagara Falls Park. The following table presents the characteristics of the three installations of the consolidated company, on the American side:

TABLE 2.—*American Niagara plants*

Item	Schoellkopf Station	Adams No. 1	Adams No. 2
Constructed	1905–14; 1918–24	1890–1900	1900–1904.
Gross head, feet	217	137	137.
Number turbines	19	10	11.
Rated turbine capacity (hp.)	452,000	50,000	55,000.
Kilowatt generator capacity [1]	293,000	38,750	41,250.
Kilowatt-hours generated (1,000's)	2,647,467	4,097	79,706.
Station capacity factor (percent)	100	1.2	22.

[1] Exclusive of 5 direct-current generators with aggregate capacity of 41,250 kilowatts owned by Aluminum Co. of America.

Number of employees of the power company Dec. 31, 1937, 387.
Above base data taken from page 512, Moody's Manual, 1938.

This Canadian subsidiary company of the Niagara Falls Power Co. operates under a license from the Park Commissioners of Canada. The license has been confirmed by acts of the Province of Ontario limiting the diverted water to an amount equivalent to 100,000 horsepower daily. This company sells current to the Niagara Hudson system on the American side and on the Canadian side to a relatively small number of local consumers, to one large industrial consumer, and a small amount to the Hydro Commission of Ontario. From time to time this company supplements its generation with purchased dump power, secured from the Ontario Hydro-electric Commission.

The Canadian Export Electrical Act prohibits the exportation of Canadian power in excess of the quantity permitted by license. Under license this company is permitted to export 45,000 kilowatts of prime power and 20,000 kilowatts of surplus power. This is the reason they sell to the publicly owned Ontario company.

The Ontario Power Commission Act provides that the property and rights of the American company are subject to expropriation. Furthermore, if this company fails to renew its agreements with the Park Commissioners, its property and rights, at the termination of the agreements, revert to the Park Commissioners without compensation, except that the company has the right to remove its machinery.

POWER AND POPULATION RATIO

When I was a young man I lived near a midwestern water power used for the operation of a series of paper mills, built around 5,000 prime water horsepower. This power supported a community of about 5,000 people. This gave a population ratio of 1,000 people per 1,000 horsepower. This raw power was sold on a yearly basis of from $6 to $15 per horsepower-year with the average about $10, or 2 mills per kilowatt-hour. This power did not reduce coal usage, but instead increased it. Such low-priced power was needed to reduce the pulp to become competitive with Canadian paper stock. Steam power would have cost three times as much under the local conditions, but steam was needed in the paper-making process, and the coal used in this process work gave direct employment to the same number of miners as mill workers. Without cheap mechanical power for "beating," these industries would not have located at this site and used large quantities of coal for process work.

In the five principal mill towns in New England we find a total population of 354,000 people centered around 155,000 horsepower, or 2,280 people per 1,000 horsepower. In fuelless portions of Canada we find a population of 1,410 per 1,000 horsepower; in Norway 1,400 people per 1,000 horsepower.

Switzerland has about 8,000,000 potential water horsepower and a little less than two and five-tenths million developed. This is about five times the ultimate capacity of Bonneville. The Swiss population ratio is 1,980 per 1,000 horsepower. Seventy-five percent of this Swiss power is transmitted and twenty-five percent used in electrochemical industries. The transmitted power is widely distributed to an unusually large number of small plants, there being some 6,000 plants of 20 horsepower or less. Here we have a practical application of the principle of the widest possible use. This is just what we hope and believe we can do in the Pacific Northwest. I have investigated a city in New York with a large semiautomatic chemical plant and a 75,000-horsepower installation which has 142 population per 1,000 horsepower. A small nonautomatic hydro plant in the Midwest which transmits all its power gives a low population rate of 30 per 1,000 horsepower.

Six large similar privately owned hydros which I have studied have the low population ratio of four people per horsepower. A midwestern glass plant reduced its equivalent population ratio from 525 to 230 with introduction of automatic machinery. A modern automatic chemical plant can have a population ratio as low as 75 per 1,000 horsepower. For this reason I object when enemies of public power talk about increase of population through a privately owned sodium-chlorate plant at Bonneville.

Niagara Falls, N. Y., counting all the population increase from 1900, when the earliest plants were in full operation, has a population ratio of 137 per 1,000 horsepower. This is not a substantial ratio and, taken comparatively, shows that the vast amount of Niagara power has not resulted in an employment ratio of one-fourth the lowest private company's average, or one-eighth of what is found in the better set-ups. The total number of employees of the Niagara Falls Power Co., with an installed capacity of 550,000 horsepower, was only 387 or 1 employee for 1,420 horsepower, an insignificant number.

EFFECT OF MONOPOLY ON EMPLOYMENT

These statistics afford convincing proof that electricity, because of its part in the development of automatic processes, has contributed greatly to unemployment, and will continue so to do. It therefore owes a large debt to society, and it would be a crime to multiply this debt by allowing a large-scale utilization of the people's power by monopolistic enterprises, giving a population ratio as low as 75 per 1,000 horsepower.

The monopoly built around Niagara has put out of employment in the copper States many times the direct and indirect employment resulting from Niagara power.

RIGHTS OF AMERICAN NIAGARA CO.

The Niagara River is a navigable stream in law and in fact, the upper reaches being used by lake carriers. The regulation of the river at the Falls controls the lake levels of Michigan, Huron, and Erie, and the ship carrying capacities of the lake transports.

The Niagara Falls Power Co. bases its claim to the rights of the full treaty diversion on supposed riparian and underwater land ownership and rights conferred by State statute. Nevertheless, it applied for and received a license to use 19,725 cubic feet per second under the Federal Power Act of 1920. This license expires in 1971. The company also has a revocable Federal license for 275 cubic feet. The sum of these two licenses equals the allotted amount on the American side under the Boundary Waters Treaty.

The license provides that section 14 of the Federal Water Power Act is applicable to the company. That section states in substance that the Government can take over the project at the expiration date, on payment for the net fair investment. Net investment in the Water Power Act is defined as the actual legitimate original cost plus extensions, less the amount of excess earnings over the fair return on such investments and the accumulations in sinking, amortization, and depreciation reserve accounts.

The constitutionality of the rights of the power company is in process of being tested in the New York State courts, and in some quarters it is felt that this is a whitewash proceeding to clear up imperfections in the State title grants. Whatever rights the State may grant are subject to the paramount power of the United States to regulate the river in the interest of commerce and navigation. The plenary power of the State exists only when the exercise of this power is consistent with asserted Federal authority. The State of

New York can at any time exercise its sovereign right to take over the rights of private riparian owners (subject to the approval of Congress) without compensation. The State needs only to make compensation for property on the uplands beyond the river banks. The water power inherent with such rights would, under these conditions, pass to the Government. Private agencies have no right to build structures on navigable streams without congressional authorization. The only such specific authorization the company has is that accruing from its license. It is probably permissible for the company to divert water from the stream, temporarily, for its own use until such time as the State shall desire to use the same.

In *U. S.* v. *Chandler Dunbar* (209 U. S. 452) involving similar issues on the Sault Ste. Marie River, Mich., the Court said:

> It cannot be pretended that private ownership of the bed of a stream, * * * subject to the public rights will impair the interest of the public in the waters of Sault Ste. Marie.

In the operation under its license the Niagara Falls Power Co. has violated section 10h of the Water Power Act, as I will hereafter show. It would appear that their license could be canceled on these grounds. This brief review of the rights of the power company is made for the purpose of pointing out that their title to the people's power is not solid. This power can be recovered if the people's chosen representatives act vigorously.

ALUMINUM CO. OF AMERICA

The Aluminum Co. of America has long been interested in cheap hydropower. Over 30 years ago this organization tried to secure perpetual rights for power development on the international section of the St. Lawrence. Their plan was exposed and then denied by legislative action in New York. When their efforts in this direction were blocked, the Aluminum Co. bought stock directly or by purchase and manipulation obtained domination over the private utility companies producing hydropower.

The Aluminum Co. owns 873,000 shares in the Niagara Hudson, which is the holding company controlling the Niagara Falls Power Co. The Aluminum Co., together with three other allied concerns, has full stock control of those power companies.

In a series of contracts between the Niagara Falls Power Co. and the Aluminum Co., the power company furnishes 49,000 firm mechanical horsepower to the Aluminum Co. at $8 per mechanical horsepower per year. Think of that! As a subterfuge under these contracts, the Aluminum Co. supposedly owns five direct-current generators installed in the Schoellkopf station, aggregating 41250 kilowatts. These contracts expire April 30, 1967. An additional contract dated November 1, 1922, permits the Aluminum Co. to take, at its election, 3,000 additional firm horsepower at the net rate of $8 per horsepower-year, and under certain contingencies, the Aluminum Co. can take up to 8,000 kilowatts in lieu of mechanical power.

The Aluminum Co. operates at a high-load factor. At such a load factor the Aluminum Co. pays 1.3 mills per kilowatt-hour for this energy which is one-half of the sale price of the company's lowest bulk energy sales, and about one-third of its average sale price to all industries. In addition to this preferential and discriminatory rate, the Aluminum Co. enjoys monopolistic status through requirements in the power contracts with other industries, forbidding the use of purchased Niagara power to manufacture aluminum or aluminum products.

The privileged position of the Aluminum Co. is due to these low-priced and exclusive Niagara contracts, as I have previously pointed out. This company's original investment at Niagara was $3,100,000, and since this original investment no new money has been placed in their plant. On this original investment $81,000,000 has been paid in dividends, and in addition an asset value of $167,000,000 has been created out of earnings. This represents a net gain of $245,400,000 on an investment of $3,100,000, or $79 accretion per dollar of investment. These astounding figures conclusively show the benefits accruing to a limited group by the manipulated appropriation of a power source belonging to the people. This low-priced aluminum energy, admittedly below cost of production, is sustained by the high prices of energy sold directly to the public. In short, in addition to unlawful appropriation of resources, the people pay high prices for current, as I will hereafter demonstrate, to build up the Aluminum Co. earnings. Through this monopolistic set-up the Aluminum Co. is able to sell aluminum below the equivalent price of copper, resulting in wholesale unemployment in the copper States.

This compact, with its tightly drawn combinations, is a violation of the Sherman and Clayton Acts, and is also a direct violation of section 10h of the Water Power Act, which reads as follows:

> Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited.

It would appear that the violation of this provision furnishes grounds for the Federal Government to annul the license of the power company. The Federal Power Commission is now conducting hearings on the supplementary license. The evidence presented to date shows wholesale combinations and the Power Commission is to be commended for now conducting a most thorough investigation. It is not my purpose at this time to prejudge, but to comment on the external evidence which I have independently developed from the investigations which I have made. If the internal evidence in these hearings bears out the external evidence I have developed, the Government should proceed, by appropriate action, to cancel this license. However, it is obvious that the farmers of the Nation—as I have previously pointed out in my speech "Weed Control Through Government Chlorate Plant," and the people of the copper States, and the electric consumers within transmission distance are paying an exorbitant toll to support this monopoly. From all considerations it is evident that the Rivers and Harbors Committee of this House should go into this subject fully in connection with the bill offered by our colleague, the gentleman from Mississippi [Mr. RANKIN]. The purpose of his bill is to create a Niagara Authority which shall restore to the people the rich resource too long enjoyed by those who appropriated it.

SALE PRICE OF NIAGARA CURRENT

The energy sales and earnings of the Niagara Falls Power Co. for the year 1936, given in the 1938 edition of Moody's Manual, together with extensive calculations which I have made, are herewith presented for consideration in table 3.

TABLE 3.—*Sale price American Niagara power*

Item	Kilowatt-hour sales in thousands	Percent total sales	Revenue	Sale price per kilowatt hour (mills)
Industrial	1,913,910	76.8	$5,943,663	3.1
Transportation	6,694	.3	55,705	8.3
Municipal	8,806	.4	19,840	22.26
Affiliated companies	560,621	22.5	1,743,638	3.1
Total	2,490,031	100.0	7,762,846	3.1

The above table summarizes in a few figures where the Niagara power is going and the price at which it is sold. It will be noted that nearly 77 percent of the Niagara power goes to a few monopolistic industrial consumers, and the balance to the affiliated companies in the Niagara-Hudson system. This is precisely what a certain group in Oregon would like to do with Bonneville power. The statistics applying to these industrial consumers is given in table 4.

TABLE 4.—*Niagara Falls Power Co. sales, 1937, showing sales to 26 different industrials and to affiliated utilities*

Industrial customers	Kilowatt-hours	Revenue	Average revenue
			Mills per kilowatt-hour
Metal company	96,283,450	$346,034.41	3.6
Do	5,900,000	18,758.15	3.2
Abrasive company	73,870,150	199,120.89	2.7

Sales to affiliated electric utilities:			
Niagara, Lockport & Ontario Power Co.	259,752,195	755,696.62	2.9
Buffalo Niagara Electric Corporation	179,298,071	612,821.05	3.4
Buffalo General Electric Co.[1]	23,982,484	61,697.70	2.6
Niagara Electric Service Corporation[1]	17,550,000	83,749.98	4.8
Tonawanda Power Co.[1]	18,160,200	65,625.00	3.6

[1] Sales made during January, February, and March only. On Apr. 1, 1937, these 3 companies were consolidated to form the Buffalo Niagara Electric Corporation.

The Canadian generating affiliate of the American Niagara Falls Power Co. sells prime power, with Canadian export taxes included, to the Niagara-Hudson system for 3.4 mills per kilowatt-hour. The Hydro Commission of Ontario and the Carborundum Co. purchase prime power for $15 per horsepower year, or 2.55 mills per kilowatt-hour on a high-load factor. This generating company sells surplus power to the Niagara-Hudson system for 1.1 mills per kilowatt-hour, and the Niagara-Hudson, in turn, sells such delivered power to its utility affiliate serving New York City for 2 mills per kilowatt-hour.

RETAIL SALE PRICES—A COMPARISON OF PRIVATE AND PUBLIC OWNERSHIP

The Niagara Falls Power Co. and its Canadian generating subsidiary are owned, controlled, and operated by the Niagara Hudson Power Corporation, a $600,000,000 holding company with an annual consolidated gross income of $87,600,000.

Sixty-eight and one-half percent of the Niagara-Hudson total generation of 8,000,000,000 annual kilowatt-hours comes from hydro power, 15 percent from steam, and the balance represents purchased power. The Niagara Falls Power Co. and its Canadian Niagara subsidiary furnish 43 percent of the Niagara-Hudson's total generation.

The Niagara-Hudson systems furnish current to 572,400 domestic and 38,400 farm consumers, or about 19.5 percent of the total home consumers in New York State, including its great metropolitan district. Only 7.5 percent of its generation goes to the home, but for this small amount of current used by home and farm the system collects nearly $21,000,000 annually, or 24 percent of its total revenue. A 7.5 percent current delivery, for which the system receives 24 percent of its revenues, shows that, with the store owner and other commercial users added, nearly half of the system's revenue comes directly from the people with a use of only 16.2 percent of its generation.

These simple facts are striking evidence that the people are carrying the load for a relatively small number of monopolistic consumers and are paying an exorbitant price for using the benefits of a natural resource which really belongs to them.

The system's residential consumer uses on the average 881 kilowatt-hours per year, for which he pays 3.84 cents per kilowatt-hour. The farm consumer takes annually 1,073 kilowatt-hours, for which he pays 4.23 cents per kilowatt-hour. The distributor buys power for around 3 mills and sells it for nearly 4 cents, a difference of over 1,000 per cent.

The Ontario Hydro furnishes service at "cost" and includes no taxes in its sale price. Therefore, to be fairly comparative with American rates, the Ontario rates and bills should have the tax equivalent added. This I have considered in all presentations I have or will make.

Sixteen of the largest cities of the Ontario Hydro sell domestic current for 1.7 cents, or less, per kilowatt-hour on the average, with the tax equivalent added. The average sale price of these 16 cities with tax equivalent added is 1.42 cents per kilowatt-hour or 37 percent of the average sale price of the Niagara-Hudson system. About 90 percent of the total domestic sales of the Ontario Hydro averages 2 cents per kilowatt-hour, or less. The average sale price at Niagara Falls, Ontario, is 1.57 cents; at Fort William, 0.9 cent; Ottawa, 1 cent; Toronto, 1.46 cents; and St. Thomas, 1.35 cents. This average sale price, while not an absolute criterion, furnishes an approximate guide to the difference in rates between the American and Canadian sides of the Niagara.

The over-all average cost per kilowatt-hour is a simple statistical figure obtained by dividing the total class revenue by the total kilowatt-hour sales. This statistical figure reflects the quantity used as well as the rate, and the quantity in turn is largely controlled by the size and form of the rate.

From its earliest days, the Ontario Hydro has adopted the policy and practice of spreading the benefits of low-cost electricity as widely as possible to all the communities within economic transmission distance of its power plants. They adopted the policy to sell at cost, and to form retail rate schedules to promote large use. The wisdom of this policy is reflected in extremely low average rates and in wide use. The average home consumer in Fort William, for example, uses 5.3 times as much electricity as is similarly used on the Niagara-Hudson system. The average residence in Ottawa uses 4.6 times as much as on the private system.

To gage more accurately the comparative sales prices in these two situations, I am attaching condensed tables of billings for equal quantities of electricity. The tables eliminate the factor of quantity use and reduce the comparison to an even and fair standard. Such a yardstick shows that the Niagara-Hudson domestic consumer is paying a little over double for the same quantity compared to his Canadian neighbor. The average domestic consumer of the private power companies of all the United States is paying 2.3 times as much as the Canadian user of public power.

The consumer of commercial light on the Niagara-Hudson system pays 90 percent more than the similar consumer across the river. This comparison applies to the large number of store owners. Such a consumer of the private companies in the United States, on the average pays 2.1 times as much as the Canadian.

The small intermediate power user on the Niagara-Hudson system pays 2.1 times as much as the similar Ontario consumer, and the average like consumer of the private companies throughout the United States, 2.3 times as much.

The average industrial consumer (excluding the 26 special preferential consumers at the falls) of western New York pays 1.2 times as much as charged in Canada by the Ontario Hydro. For the private plants of the United States this ratio is about 1.4.

TABLE 5.—*Comparison of average 1937 electric monthly bills, United States and Canada*

[Average of all cities weighted according to population and including tax equivalent for public system. In calculating bills, standard demands of Federal Power Commission have been used. Calculated from typical bills of Federal Power Commission and report of Hydro Commission of Ontario]

	RESIDENTIAL			COMMERCIAL LIGHT		
Kilowatt-hours per month	25	100	250	50	375	750
Ontario public systems	0.84	1.80	3.22	1.52	8.49	16.91
Niagara-Hudson system	1.36	3.72	6.80	3.19	15.63	28.25
Private plants, United States	1.55	4.29	7.88	3.04	18.36	35.40
	Percent higher than Ontario public system					
Niagara-Hudson system	62	106	111	110	84	68
Private plants, United States	85	139	145	100	116	109

	Commercial power		
Kilowatt-hours per month	375	1,500	6,000
Ontario public system	$7.26	$27.30	$73.50
Niagara-Hudson system	16.60	52.25	138.30
Private plants, United States	17.02	58.30	175.30
	Industrial power		
Kilowatt-hours per month	30,000	60,000	200,000
Ontario public system	$348	$925	$2,380
Niagara-Hudson system	469	870	2,556
Private plants, United States	589	1,047	3,010

TABLE 6.—*Comparison of average 1937 monthly electric bills based on distance from power source*

[Average of all cities in zone weighted according to population]

	Residential light			Commercial light		
Kilowatt-hours per month	25	100	250	50	375	750
In opposite cities:						
Niagara Falls, Ontario	$0.84	$1.85	$3.06	$1.31	$6.64	$13.30
Niagara Falls, N. Y.	1.13	3.06	5.31	2.45	16.80	22.50
100-mile zone:						
Ontario public system	.84	1.67	3.12	1.45	8.45	16.80
Niagara-Hudson system	1.21	3.22	5.55	2.43	11.10	19.80
100- to 200-mile zone:						
Ontario public system [1]	.84	1.89	3.24	1.41	7.01	14.02
Niagara-Hudson system	1.62	4.29	8.45	3.66	21.40	35.70
Over 200 miles:						
Ontario public system	.84	2.46	3.80	1.72	8.96	17.76
Niagara-Hudson system	1.44	4.20	7.89	4.00	19.01	35.70

[1] Includes tax equivalent for public system to reduce to equal base.

This comparison shows that the western New York consumer pays at least double what his Canadian neighbor pays for electric current. Ontario has spread widely among the people the benefits of Niagara, whereas selfish interests on the American side have appropriated the benefits for personal gain.

Translated into dollars, these sale-price differences conservatively represent for all classes of electrical service on the Niagara-Hudson system about $26,000,000 annually in overcharges. This amount of money if put aside each year could purchase the net investment of the Niagara Falls Power Co. in 3 years' time. With this accomplished, the electric rates could be cut in half.

THE EVOLUTION OF A POWER POLICY

Since the Gallatin report in 1808 and the decision of the Supreme Court in the case of *Gibbons* v. *Ogden* (9 Wheat. 1–190), Congress, under the commerce clause of the Constitution, has improved and controlled navigable waters. Because of the necessity for cheap and adequate transportation to widely scattered sections, in the early days of the Republic the sole consideration of Congress was given to navigation. The improvement and regulation of navigable streams by Congress have long been upheld by numerous decisions of the Supreme Court.

With the settlement of the western arid States the use of water became an important part of the life of that section. Miners and farmers had appropriated waters and built structures to suit their needs. This condition brought forth numerous conflicting claims, which were settled in the local courts. In 1866 Congress first recognized such uses of waters on western navigable streams and authorized the acquisition of water rights for "mining, agriculture, manufacturing, and other purposes." As late as 1890 came the first regulatory legislation covering obstructions on navigable streams, which were prohibited unless authorized by law.

The first legislation covering water rights on public domain came in 1891 and 1895. Power sites and appurtenant works on the public domain fall under the jurisdiction of Congress by article IV, section 3, of the Federal Constitution.

Power in these early days was given little national attention, and the first Federal enactment covering power on navigable streams came in 1906. We commenced in Oregon in 1905, when I was in the State senate.

The older power developments in the East and Midwest were made under statutes similar to the so-called mill acts of New England. These acts, in the absence of Federal statutes, were passed by these States without full recognition of Federal authority over navigable streams. They were primarily intended to encourage development of water power for industrial purposes, and gave large powers of eminent domain to the developing agencies.

Following the General Dam Act of 1906, Congress passed, without having a definite power policy, many special acts authorizing power dams on navigable streams. These special acts gave away the people's rights in perpetuity. The veto of three such acts, two by President Theodore Roosevelt in 1908 and 1909, and one by President Taft in 1912, and the message of Gov. Charles Evans Hughes to the New York Assembly in 1907, brought to the public attention the principles underlying water-power policy. The principles set out in these memorable messages are worthy of restatement at this time so that current confused issues can be appraised in the light of well-founded tradition and understanding of basic power principles, in the public interest. These principles, which have stood the tests of law, are:

(1) The flowing waters of navigable streams, and streams on public domain, as far as the Federal Government is concerned, are the property of the people.

(2) Water power "should not be surrendered to private interests but should be preserved and held for the benefit of the people."

(3) Title to such water-power sites should be vested in the Federal Government.

(4) The right of the Federal Government to such incidental water power is beyond question.

(5) A policy which enables grants to corporations and individuals of property belonging to the people is unlawful.

(6) Water power will assume increasing importance with time.

(7) Great corporations are acting to control for private gain all the water powers of the country. Their purpose is a centralized monopoly of such power, free from all public control. The evils of such a monopoly were manifest as early as 1906.

(8) Navigation, irrigation, and flood control should be developed coordinately with power, and any development should be based on the maximum efficient development of the multipurposes intended. This principle has been embodied in the Water Regulation Act of Ontario, which provides for the enforcement of the most efficient use of water.

During this administration, as a result of the leadership of Franklin D. Roosevelt, great progress has been made in the practical application of the above principles and the firm establishment in law of additional principles bearing on a national power policy. These additional principles are:

(9) Reference to the privately operated utilities as "private utilities" results in misleading the public. Generation, transmission, and distribution of electricity is, by law and in fact, a public business whether conducted by public officials or private operators. The Supreme Court has spoken on this question after tracing the origin of the rule of Hale in common law laid down in the time of James I of England three centuries ago. In *Munn* v. *Illinois* (94 U. S. 113), a grange case of 1876, the Court after reciting that property dedicated to public use ceases to be juris privati said, "When one dedicates his property to a use in which the public has an interest, he, in effect grants to the public an interest in that use." When the Government manufactures or transmits electricity, the Government is engaging in public and not in private business.

(10) Surplus water power incident to the construction of a constitutionally authorized Federal dam is under the exclusive control of the Federal Government and can be converted into electricity. Water power, the right to convert, and the electricity produced, are property belonging to the United States (297 U. S. 289).

(11) Congress can dispose of such property under authority expressly granted by the Constitution (297 U. S. 289).

(12) Disposition of electricity must be "appropriate to the nature of such property and be adapted in the public interest distinguished from private or personal ends * * * and must not be contrived to govern the concerns reserved to the States" (297 U. S. 289).

(13) Public interests are superior to private interests. Public interest demands the widest possible use of the lowest possibly priced electricity, with preferential rights reserved for public bodies. The power shall be operated for the benefit of the general public.

(14) Public interest prevents the monopolization by limited private groups of such governmental property as electricity.

(15) Established wholesale electric rates must be sufficient to recover for the Federal Treasury the power investment, with interest, after all operating and maintenance costs have been met. Such rates shall be formed and fixed with the object of encouraging the widest diversified use of electricity. The rates of all Federal projects shall be so balanced as not to cause industrial dislocations in the country.

POWER POLICIES OUTLINED IN BONNEVILLE ACT

With this experience as a background, Congress set out the policy principles governing the disposition of surplus power from the Bonneville Dam. These principles reduced to a few words with paragraph reference to the Bonneville Act (approved August 20, 1937) are given herewith:

(1) To insure the widest possible use within economic transmission distance from the plant, and to prevent monopolization by limited private groups. (Sec. 2b.)

(2) Project is to be operated for the benefit of the general public, particularly domestic and rural consumers, with preference being given at all times to public bodies and cooperatives. (Secs. 4a, 4d.)

(3) Sale contracts must preserve 50 percent of the plant's capacity, up to January 1, 1941, for public bodies and cooperatives. Power not contracted by public bodies may be temporarily sold so long as such disposition does not interfere with the preferential rights of public bodies, which rights are preserved for all time. (Sec. 4b.)

(4) Delays resulting from financing shall not prevail against the preferential rights of public bodies. (Sec. 4c.)

(5) Subject to the rights of public bodies, the Administrator may negotiate wholesale power contracts for resale to private agencies or persons, or for direct consumption. Excluding private utilities, sale contracts are limited to 20 years. Contracts with private utilities must have a 5-year cancelation clause for all or part of such purchased power in order to preserve preferential rights of public bodies. (Sec. 5.)

(6) Contracts entered into with any utility selling to the public shall contain stipulations covering resale rates, which shall be reasonable and nondiscriminatory in order to provide for the widest possible use, prevention of monopolization, and operation for the benefit of the general public. (Sec. 5.)

(7) Contracts may be made with public or private systems for the mutual exchange of surplus current to insure economical operation or to provide emergency or break-down service. (Sec. 5b.)

(8) Rate schedules shall be set up to provide for the recovery by the Federal Treasury of the Government's investment in power facilities, with interest on the investment, after payment of all operating and maintenance charges. (The amortization period has been set by the Administrator at 40 years and the interest rate at 3½ percent.)

(9) Rates shall be fixed with the view of encouraging the widest diversified use of electricity, to secure the benefits of an integrated transmission system, and the equitable distribution of electrical energy. (Sec. 6.)

BASIC ECONOMY OF THE NORTHWEST

The economic situation in the Northwest is similar in a large degree to that which has existed in eastern Canada. Both are regions lacking native fuels. Both are rich in water power and basic metals. Similarly forest products were initially the largest pay-roll producers, next to agriculture. Although Canada is largely an agricultural country, industry now determines its economic life, on account of cheap power.

The estimated annual value of Canadian manufactured articles is about $2,600,000,000, of which 33 percent is represented by farm, forest, and animal products, 16.5 percent newsprint, 15 percent ferrous metals, 13.5 percent textiles, 11 percent nonferrous metals, 6.7 percent nonmetallic minerals, and 4.3 percent chemicals. Canada exports nearly 30 percent of its products, with 41.5 percent of its exports coming to the United States.

The Pacific Northwest has an unsatisfactory trade balance. Its annual exports total around $850,000,000 and its imports $710,000,000. These exports are largely raw materials, 41 percent being forest products; whereas the imports are manufactured goods. This unfavorable trade balance represents a depleting economy which needs correction. The Northwest is urgently in need of industries which will manufacture its raw materials.

I may cite that the Northwest has practically untouched deposits of iron, phosphate silicon, tungsten, molybdenum, manganese, chromium, magnesium, copper, alumina, zinc, kaolin clays, lime, and other minerals. New electrolytic processes, based on cheap power, will permit processing the ores this region has underground.

The development of these resources in the past has been restricted largely because sizable blocks of cheap power have not been accessible to the areas endowed with such deposits. This applies to the agricultural and forest production areas. The power must be brought to the materials. Modern electric production methods provide the tool to release the large resources of this virgin country. Just recently at the meeting of the United States Chamber of Commerce it was suggested that the United States make treaties with certain foreign countries to insure a supply of strategic metals. Why is this necessary, when these strategic metals can be mined and processed in the Northwest?

Sound industrial expansion will provide the opportunity to increase employment, with the resulting increased income level. The decline of the forest industry, migration from less favored regions, and the unbalanced trade has increased unemployment and rendered existing employment less stable in the Pacific Northwest.

As a Federal agency, Bonneville Administration cannot well conduct a sales campaign looking toward the transfer of such maladjustments to other sections by bodily moving any industries. However, there is no reason why manufactures of strategic products which we now import cannot be accomplished, and branch or new plants set up to process native ores and Alaskan raw materials, and to meet the needs of the section. The application of the principle of the widest possible use of Bonneville energy will induce a sound industrial expansion.

HOW CANADIAN NIAGARA POWER IS USED

Ontario, with a population of 3,500,000, is served largely by the Ontario Hydro Commission. The Hydro has 1,425,000 installed horsepower, and in addition purchases 225,000 horsepower, resulting in an available capacity of 1,650,000 horsepower, or three and three-tenths times the ultimate capacity of Bonneville. Eighty-two percent of this is primary power and 18 percent secondary.

Publicly owned Ontario Hydro is a wholesaling agency delivering current to widely distributed large industries and to the cooperative municipal and rural agencies, which in turn handle the retail distribution. This wholesale agency has 7,500 circuit miles of transmission lines extending 215 miles west and 290 miles east from Niagara Falls; 705 circuit miles of this transmission are at 220 kilovolts, 907 circuit miles are at 132 kilovolts, 1,897 circuit miles are at 110 kilovolts, and the balance is represented by lower voltages.

Very little power is sold at the power sites. Major industries are on the transmission system, and approximately 20 percent of the system capacity is utilized by such industries. The intermediate power is served from the distribution systems of the municipalities and averages about 40 horsepower per installation. About 15 percent of the total installed capacity in Canada, including all installations, public and private, is represented by "at site power." Eighty-five percent of the Canadian power is used from transmission, with 30 percent of the total capacity serving distributed intermediate power.

The four principal industrial municipalities of the Hydro serve 305,000 horsepower of distributed intermediate power, with an average installation of 60 horsepower. Such retail-power sales average $22 to $24 per horsepower-year, or $29.50 to $32 per kilowatt-year. Power sold by the Hydro directly at the Falls totals only 4,500 horsepower. The distribution, by percent, of total retail earnings of the cooperating municipalities is as follows:

Residential service	39
Commercial light and street lights	27
Power (intermediate)	34
Total	100

In contrast, three-quarters of the American Niagara power goes to 26 monopolistic industries, and about one-quarter goes to private utilities, which do not pass along any substantial benefits to the people.

On the Canadian side the benefits are split four ways between residential and farm consumers, store owners, major transmission industries, and distributed power. Resulting from such a distribution and a definite sales policy, the Ontario residential, farm, and commercial consumers secure the cheapest power obtainable. In addition, intermediate power utilization is spread and diversified at low rates. Such utilization has made Canada a predominantly industrial country, utilizing its resources to the best advantage, spreading and enlarging employment, and, in addition, providing comforts for the home.

The Ontario retail-rate schedules for all classes of service were drawn both to reflect all items of cost, and at the same time to encourage liberal use. The "follow-up" unit rate steps are low, which places electric cookery within reach of all domestic consumers, and makes water heating a possibility for a majority of the users. House heating has not been encouraged in Ontario because of the lack of generating capacity. As a result of this rate policy, domestic and farm use has increased to a point where it is two to six times as great as in the United States. Electric heating will consume an enormous amount of power in the Pacific Northwest as soon as cheap power is widely available. It is quite generally used now in Tacoma because of low rates offered by the municipal plant.

The peak load on the Niagara system increased from 300,000 horsepower in 1923 to 900,000 horsepower in 1929 and to 1,300,000 horsepower in 1937. From 1923 to 1929 the kilowatt-hours increased three times and by 1937 had increased four times.

The Ontario Hydro Commission sells transmitted power at wholesale to municipalities and major industries furnishing it at actual cost. The cost depends on the distance transmitted, and varies from $19 per horsepower-year at the Falls to $30.50 per horsepower-year at Windsor, which is the extremely located large center. These prices are equivalent to $25.50 and $41 per kilowatt-year, and are 47 percent and 134 percent higher respectively than the announced rate for Bonneville transmitted power. The Ontario system, operating on a cost basis, has increased wholesale rates since the Chippewa development, but this increase has in no way interfered with load growth.

The cost cutting on the Ontario system has been accomplished by the public distributing agencies. These agencies have retired their debts and expanded from earnings. The assets of the municipal distributing agencies total $152,000,000, and the total liabilities outstanding are only $40,000,000, showing that the debt is now 26 percent of the cost of the facilities.

The principle of debt amortization as the means of securing cheap power cannot be too often emphasized.

There is one particular difference between the Ontario wholesale set-up and that of Bonneville, namely, the method of billing. Bonneville rates are set up on an annual basis, whereas the Ontario rates are set up on a monthly basis. This difference, due to the spread in the rates, would have no effect on the distributing agencies, and in fact would encourage wider use, but such a schedule could not be made applicable to irrigation loads and certain types of major industries with shorter working periods.

The typical load curve of the Hydro drops nearly 300,000 horsepower, or 27 percent, during the period from May to September. This represents the growing season and points out that this load valley can be filled profitably with irrigation pumping load.

BONNEVILLE POWER PROJECT BENEFITS

We need not theorize as to how Bonneville benefits can be passed on to the people. I have pointed out the governing principles, and how the application of these principles in Ontario has built up a section, socially and materially, under nearly parallel conditions existing in our Northwest. In one instance, however, I feel that the set-up should be different, and that is providing uniform wholesale rates, so that the lowest possible rates can be made applicable at the source of the raw materials.

It has been cited that Tacoma, at tidewater with low rates, has not attracted many large-bulk industries, but these rates have not been effective at the source of the raw materials, neither has Tacoma had the requisite plant capacity. The Tacoma plant has done the outstanding electric job in the United States for the home owner and the intermediate power consumer, and this accomplishment has been possible through following the principles I have cited.

Various adverse interests have criticized the Bonneville transmitted rate as being too high to attract industry. I need only to say in reply to this allegation that within the last few years major chemical companies have throughout the country purchased 125,000 kilowatts of primary power at rates from $22.50 to $25 per kilowatt-year.

The large immediate load possibilities for Bonneville will come from residential, farm, and intermediate power use, provided the retail rates are lowered sufficiently to induce wide use. House heating, irrigation, and industrial power will follow, as there will necessarily be a time lag due to the requirements of a developing period for such types of load.

Cheap, widespread power can be secured only through extended large available capacity. This requires transmission lines with larger capacities than have been built by the private companies. What I have pointed out can be accomplished for the lasting benefit of the Northwest, without injury to any group, and with full repayments to the Federal Treasury, as is required by law.

Public Ownership of Power, With Particular Reference to Seattle and Tacoma

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. COFFEE of Washington. Mr. Speaker, many members of Congress are intensely interested in the subject of public ownership of power. The rates and conduct of business of the municipally owned power plants of the cities of Tacoma and Seattle, in the State of Washington, have been the subject of comment. The gentleman from Mississippi [Mr. RANKIN] and the Senator from Nebraska [Mr. NORRIS] and the Senator from Washington [Mr. BONE] are outstanding protagonists of the public ownership of power in the United States. I say this in no spirit of reflection upon other statesmen in this and the other body who have distinguished themselves by their discussions on public ownership. These three gentlemen, in particular, have given years of intense study to public ownership. They have discussed it in the far-flung corners of America. The Nation owes much to the splendid work they have performed in this connection.

SENATOR GEORGE W. NORRIS

Senator NORRIS is the father of the T. V. A. His magnificent and courageous protagonism of public ownership has served as an inspiration to young America. Through the years he has fearlessly exposed false arguments presented by sycophantic agents of the private power monopoly. Militantly he has revealed the method by which puppets of the private power combines have attempted to inject their doctrines into the public classrooms and sought to corrupt legislatures, and exerted pressure by questionable means upon public officials in these United States. America can never repay the debt it owes to the good old man of Nebraska, the Honorable GEORGE W. NORRIS.

CONGRESSMAN JOHN E. RANKIN

The gentleman from Mississippi, JOHN RANKIN, has spread the gospel of public ownership of power in superb fashion throughout this country. He has given unflaggingly of his sublime talents and boundless energy in this undertaking. He has battled on the floor of Congress and has repelled attack with good nature, with sharp rejoinder, with clever repartee, and with scholarship and with thoroughness. My hat is off to him!

SENATOR HOMER T. BONE

The senior Senator from Washington, Mr. BONE, is the father of public ownership in the State of Washington. His Bone power bill sowed the seeds for the subsequent adoption of the Grange power bill and other legislation which made possible the creation of power districts for the public distribution of power throughout our State. As a result of his work the supreme court of our State validated the right of cities to sell their surplus power outside their city limits. He has been a tower of strength for public ownership and has given unsparingly of his energies and transcendent abilities in behalf of public ownership. He is truly one of the pioneers and deserves the plaudits of the multitude for the noble task he has and is continuing to perform.

CONGRESSMEN WALTER M. PIERCE AND CHARLES H. LEAVY

There are many others whom the limitations of space do not permit me to single out for tribute, but I must not fail to mention the gentleman from Oregon, Mr. PIERCE, and the gentleman from Washington, Mr. LEAVY, for their competent and skilled defense of public ownership and championship, respectively, of Bonneville and Grand Coulee.

Because these gentlemen and others have aroused the Nation to an appreciation of the danger of allowing private monopoly of power to continue unchecked, and because they have interested millions in the blessings of public ownership, I am including herein, by special permission of the House, correspondence between myself and Prof. C. M. Jansky, of the University of Wisconsin, which is self-explanatory.

Recently I made a speech on the subject of public ownership of power, a copy of which fell into the hands of Professor Jansky. He wrote me a letter in which he commented upon my speech, and to this letter I have written a rather extended reply.

I am happy to state that in preparing these letters and securing the data set forth therein I was fortunate in securing the assistance of the late J. D. Ross, one of the outstanding experts on public ownership in America; Dr. Carl Thompson, director of the Public Ownership League of America; and Mr. Frederick Hepp, director of publicity, department of public utilities, Tacoma, Wash. My answer to Professor Jansky is divided into two parts, the first part having to do more particularly with the situation obtaining at Seattle, and the second section treating at length on the situation obtaining at Tacoma. I consider that the facts and data I have set forth in these letters provide a devastating answer to the anti-public-ownership arguments of Professor Jansky.

The letter is as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 20, 1939.

Prof. C. M. JANSKY,
Department of Electrical Engineering,
University of Wisconsin, Madison, Wis.

DEAR PROFESSOR JANSKY: I regret that the pressure of other duties has made necessary the long delay in answering your letter.

It is surprising to find the head of electrical engineering, in a liberal State university, who would rather credit the paid propaganda of sworn enemies of public ownership than to investigate the facts for himself.

The cities of Seattle and Tacoma both publish annual reports with full financial statements. In Seattle these statements are checked and attested by the city comptroller, who is entirely independent of the lighting department, and by the State auditor of the State of Washington.

During the career of Seattle's city light, which began in 1902, independent audits have been made of its accounts periodically by Haskell & Sells; Ford, Bacon & Davis; Lybrant, Ross Bros. & Montgomery; and other firms of national reputation whose word is accepted by Wall Street and any financial institution in the country.

Had you read the report of Seattle City Light you could not believe and repeat the outright falsehoods contained in your letter. You say that the Madison, Wis., private company paid $6,000 in taxes in 1935, while "Seattle utility paid practically no taxes." In 1935, Seattle's City Light paid $117,987.14 to the city as a direct tax, $45,030 to the city as a "charge for services of general governmental departments," and $119,567.41 to the State as a "business activities tax."

SEATTLE'S PLANT PAYS HEAVY TAXES

These figures are all set forth in the sworn statement, printed on page 102 of the department's annual report for 1935. These direct taxes, totaling $282,584.55, represent 5.5 percent of the revenues for the year.

This is only the beginning of the revenues received by the city of Seattle from its municipal plant, however. The year 1935 the Seattle Lighting Department paid off $1,287,000 worth of its revenue bonds, in effect turning over to the citizens of Seattle the paid-up plant in that amount. This money came from earnings of the plant, and is a direct contribution to the city.

In addition to the sums contributed directly in taxes and bond redemption, the lighting department furnished street lighting for the year 1935 for a flat sum of $375,000, paid the department by the general fund. This is at the rate of 0.99 cents per kilowatt-hour for maintenance and replacement of lamps and street-lighting equipment, and 1 cent per kilowatt-hour for current. This rate of 1.99 cents per kilowatt-hour for street lighting current, including all charges in connection with the street-lighting system, is less than half the usual rate for such service in the United States, and represented a loss of $72,853.57 to the lighting department in 1935.

In the same year the same department paid the State of Washington power licenses in the amount of $3,996.01, and to the city for salaries of certain employees in the city treasurer's office, $8,291.36.

The grand total of the department's contribution to the taxpayers out of light and power revenues comes to $367,725.49, or 7.2 percent of the total revenue for the year.

The whole story is not yet told. The average rate of residence current in 1935 in Seattle was 2.70 cents per kilowatt-hour, which compares with the national average of 5.07 cents. The public plant sets the rates for its competitor, who has followed the city rate cuts, of necessity.

The total revenue in Seattle for 1935, from sales of current was, roughly, $9,000,000. If the same amount of current were sold at the average revenue received throughout the Nation, it would have brought $16,856,000, or $7,856,000 more than Seattle citizens paid.

This is a sum in excess of the total taxes paid to the city during 1935.

So much for your statement that "Seattle's public plant pays practically no taxes."

THE SEATTLE STREETCAR PURCHASE

Your statements regarding the notorious Seattle streetcar deal of 1918 are typical of the propaganda of private power. They themselves are perhaps the most corrupting influence in American politics today. There is no doubt in the minds of Seattle citizens as to who engineered the sale of the railway to the city. The mayor, who negotiated it, was in conference with the local president of the power company for many months. The system had been offered to a former mayor for $6,000,000. Every newspaper in the city helped carry on the campaign to unload the railway on the city. The price to be paid was carefully concealed from the voters until after they had ratified the purchase of the worn-out system. A telegram from the power company president, made public nearly 20 years after the deal, revealed clearly that he was the moving spirit in the deal whereby the city paid $15,000,000 in utility-revenue bonds for the rusty rails and worn-out rolling stock alone, leaving the electric substations that supply the railway in the hands of the power company, together with the contract for supplying the current.

The contract was drawn to give the power company preference in payment of bond principal and interest, over the payment of wages to the employees who operate the system. Every point in the contract, drawn by astute power company lawyers, was drawn in favor of the company. Honest public officials were given no voice, and the deal, which has proved impossible of fulfillment because of declining use of obsolete equipment, was put over on the city.

The mayor, who had been a struggling real-estate salesman, resigned his office immediately after the deal was consummated and invested several hundred thousand dollars in California real estate. It is typical of the brazen nerve of the private power companies to charge such a deal as this, of their own conception, to "the politicians."

SEATTLE'S GENERAL TAX RATE

Your statement that "in 1935 the tax rate in Seattle on basis of full value was $8 per $1,000 higher than in Madison, Wis.," shows that you are aware that it is propaganda and not facts that you are using. Taxes are assessed in King County, in which Seattle is located, on a basis of 50-percent valuation. Assessments are reviewed by the State tax commissioner, who reported that in 1935 the actual basis was 47 percent.

These figures are matters of public record. The tax for all city purposes in 1935 was 20.09 mills on 47 percent of full value, which is 9.442 mills on full valuation. I do not know the tax rate in Madison, but the taxes on a $7,000 home in Seattle for 1935 were $65.09. Madison must have a low rate indeed if a taxpayer can save enough out of $65.09 per year to pay his light and power bills.

In Seattle, where rates are admittedly lower, the average residence consumer paid only $30.94 for electricity in 1935.

SEATTLE'S LOW RATE ON LIGHT AND POWER

Incidentally, your statement that the average rate per kilowatt-hour was 1.9784 cents is another figure taken from "unofficial" sources. The correct figure is shown on page 95 of the Department's report and is 1.84 cents. Considering the small proportion of industrial and low-rate power sold in Seattle, this figure is low indeed. The better gage for comparison is the residence rate which covers the same class of service in each city.

I must admit that rates in Seattle are higher than they should be, and that Tacoma furnishes a fairer example of public ownership, for the simple reason that Seattle is forced to compete for every customer with a private company whose lines, like the city's, cover the entire area of the city. The cost of distributing electricity is from five to seven times the cost of generating. Where the consumer is forced to pay charges on two complete systems, the cost is bound to be much higher. Tacoma has a monopoly, and it is only a question of time when the city of Seattle will take over its competitor's system and reduce the rates to approximately half the present levels.

Incidentally, you should talk to Almere L. Scott, of the department of debating and public discussion of the University of Wisconsin, to whom was sent 150 copies of the 1935 report for use in the debating department. Any of Director Scott's debaters could set you right on your facts regarding Seattle.

I have discussed at some length in the first part of this letter the situation with respect to Seattle, with particular reference to the statements you made in your epistle in connection with Seattle's municipally owned light and power plant. I will now take up the question of Tacoma's power development:

PUBLIC OWNERSHIP IN GENERAL

The question of Government ownership involves a clash between two great schools of thought and involves fundamental differences in politics and economic opinion. For this reason, it is not unreasonable to expect that an educator in a public institution should have an open mind on the subject. His students, attending a public institution, have a right to hear views on both sides of the question to permit them to form an unbiased opinion. You, however, demonstrate your own particular brand of impartiality in starting your tirade by referring to "the complete fallacy of Government ownership." Since you so strongly condemn Government ownership you have made the mistake of not excepting the University of Wisconsin, just one of the many forms of Government ownership of which you are a beneficiary.

I question, however, whether you would ever accept any correction of your distorted statements. Vitriolic remarks such as you make in your letter, do not establish facts. In formulating this reply, I will first quote from your letter, Professor Jansky, and then answer the statements:

Taxes paid by Tacoma's municipally owned light plant

Skipping the discussion about Seattle, on the middle of page 2, you will find your letter reads:

"You also state (referring to my speech) 'In my home city of Tacoma we sell power at the lowest rate per kilowatt-hour in America, yet we make a profit of nearly a million a year and pay 7½ percent gross earnings tax toward the reduction of taxes as well as share the cost of municipal government.' (Then follows your comment, Professor Jansky), Your fellow Congressman, BONE, has also given circulation to this canard until most people believe it. The truth, however, is somewhat different."

In regard to taxes: Uninformed people are led to believe public utilities do not pay taxes. Your sarcastic remarks indicate that you are one of these, or are unwilling to accept the truth. With private utilities it is general practice to make an impressive showing on the amount of taxes paid, and for this reason any item which can in any way be classified as a tax is charged to a tax account.

The Tacoma utility, on the other hand, charges to tax account only gross-earnings taxes, sales and compensating taxes. All other forms of taxes paid are charged to the operations affected. For instance:

Hydro tax is charged to production of energy.

School tax is charged to general expense.

Gratuitous work is charged to general expense.

Vehicle licenses are charged to departments using cars and trucks.

Inspection fees are charged to operation—consumers' installations.

Street-lighting loss is charged to operation and maintenance of plant.

Schedule A: In 1933 the Tacoma utility paid in direct and indirect tax the sum of $224,191.53 on a gross income of $1,940,994.03, or 11.55 percent.

Schedule B: In 1937 the Tacoma utility paid in direct and indirect tax the sum of $351,114.40 on a gross income of $2,546,314.83, or 13.79 percent.

These tabulations show participation in tax benefits by the Federal Government, State of Washington, Mason County, Pierce County, and the city of Tacoma. In addition to this, the Tacoma utility is saving the taxpayers many thousands of dollars annually in profit and excessive cost on street, school, and public-building light and power that would be taken by a private company if it were rendering the service.

Financial progress: I refer you to figures taken from the official reports of the light division. These records are under continual audit by the city comptroller of the city of Tacoma; Mr. Ira E. Partner, State examiner for the State of Washington Department of Supervision and Control; and by auditors and attorneys for bond houses all over the country.

Schedule C: You will note that the plant value of the Tacoma utility at the end of 1937 was $23,896,330.84, with an outstanding debt of but $5,307,000, indicating a paid-up equity in plant amounting to 78 percent of the value. The difference between plant value and long-term debt, $18,589,330.84, represents that portion acquired through earnings of the Tacoma utility. The annual income, profit and loss as well as bond redemptions, for the last 3 years is also shown on this schedule.

WHAT IS A FAIR CHARGE?

"I have before me a report of the Tacoma municipal utility for December 1933. The net fixed assets of the Tacoma utility as given in this report were $18,911,540.30. The New York Power Authority, which is also a municipal ownership advocate, has estimated that the fixed charges should be calculated on *11½ percent on a distribution system*. It is reasonable to assume that 11½ percent is a fair charge against the assets of the Tacoma plant."

I do not have a copy of the report of the New York Power Authority. You, Professor Jansky, state "that fixed charges should be calculated on *11½ percent on a distribution system* (which I italicize in quoting from your letter above). The figure you use ($18,911,540.30) includes the depreciated value of all generating plants, transmission, miscellaneous plant, and the distribution system. You will note on page 4 of the condensed financial report for 1937, under the heading "Fixed Assets—Plant, December 31, 1937," that our distribution plant value of Tacoma, gross, is placed at $3,737,071.38 and that its depreciated value is slightly more than $2,800,000.

"Eleven and one-half percent of only $18,000,000 is $2,070,000. Adding to this the total operating expense, which in 1933 amounted to $418,428, we get a gross sum of $2,488,428, or in round figures 2½ million dollars should be earned by the utility in your city for operating expenses and fixed charges. In 1933 the total revenue was $1,940,994.03, which is less than the fixed charges and the operating expense. Where did the utility earn a million-dollar profit?"

If you mean 11½ percent of the distribution system, then he should use 11½ percent of $2,800,000 and not 11½ percent of $18,000,000—a figure six times too high.

But what a pathetic argument you bring forward. The fact is, the Tacoma Light Division has never defaulted in the payment of bond redemption or interest in almost 46 years of existence; has kept its plant in "apple pie" order; has never been the recipient of one cent of tax money and has shared its just proportion

of the tax load while at the same time giving to its customers the benefit of very low rates. Tacoma bonds are bringing a premium on market—and interest is regularly paid. Now, compare this standing with that of some of the private companies you are so strenuously attempting to defend.

WHY DOES TACOMA MAKE SUCH A GOOD SHOWING?

Where did the utility earn a million dollars? you ask. Where? A glance at the reports on schedule C should explain that. Why?

Because we pay no exorbitant salaries.

Because we redeem our bonds when due and in such amounts that our interest cost is materially cut each year.

Because there is a capable and efficient management which keeps out of politics.

Because we build our plants on open competitive bids and not through associated companies.

Because, in this, and many other ways, we avoid paying heavy supervisory fees and other fees and charges.

Because we have no overcapitalization.

Because our employees are selected through competitive civil-service examinations.

Because we support no propaganda department and do not subsidize press, pulpit, or professors.

Because—but why go on?

TAXES PAID BY PRIVATE AND PUBLIC POWER UTILITIES IN THE STATE OF WASHINGTON

But that is not all. Private utilities in Washington, according to the Federal Power Commission report, paid 14.9 percent of their gross revenues in taxes. Tacoma paid only 7½ percent, which is one-half of what private utilities paid (Jansky).

You, Professor Jansky, do not mention the year in which the private utilities paid 14.9 percent taxes—but I am assuming it was in 1933 because most of your comments are in connection with the year 1933. For this comparison I am using the report of the State of Washington Department of Public Works. This report is compiled from reports which are furnished by the private companies themselves covering their operations for the year 1933. The figures I am using are taken from the official report of the State of Washington—summary sheet of all utilities for 1933.

Schedule D: You will observe that the amount of taxes paid by the private utilities in the State of Washington and the Tacoma utility are as follows (total fixed capital taxes):

	Percent
1933, State of Washington (all private)	1.1
1933, Tacoma (public)	0.98
1937, Tacoma (public)	1.47

A comparison of taxes versus operating revenues is as follows:

	Percent
1933, State of Washington (all private)	10.79
1933, Tacoma (public)	11.55
1937, Tacoma (public)	13.79

A comparison on the average revenue per kilowatt-hour charged to the consumer is as follows:

	Cents
1933, State of Washington (all private)	1.336
1933, Tacoma (public)	1.051
1937, Tacoma (public)	0.804

These figures should be satisfactory proof that Tacoma meets its share of the tax obligation well in line with that of private utilities. At the same time, if Tacoma had charged the average rate per kilowatt-hour of the private utilities in the State of Washington for 1933, there would have resulted an overcharge of $526,770.41 (based on Tacoma consumption).

TACOMA'S POWER SYSTEM IS NOT DERELICT IN ITS TAX OBLIGATIONS

"Furthermore, Tacoma paid no taxes to the State, to the Federal Government, or to any taxing body except the city. The deficiency caused by the nonpayment of the taxes of the Tacoma utility had to be made up by the property owners in other parts of the State" (Jansky).

This is a malicious misstatement, Professor Jansky. You have made no attempt to avail yourself of the actual facts which are a matter of public record. Please refer to schedules A and B. There is a difference in the method of taxation—in the allocation of tax money, between the public and private plants—but there is no question that, dollar for dollar, the Tacoma utility pays as large and perhaps a larger share of the tax burden.

AT ST. LOUIS, WHAT ABOUT A RATE COMPARISON?

"Of course, I do not know what the rates of the Tacoma utility are today, but if you will turn to page 24 of the preliminary report of the Federal Power Commission Electric Survey you will find that in January 1, 1935, the Laclede Power & Light Co. of St. Louis, Mo., a private company, sold energy to domestic consumers who consumed up to 100 kilowatt-hours per month at lower costs than the Tacoma utility" (Jansky).

Schedule E: This schedule shows a comparison of the rates of the Laclede Power & Light Co. and those of the Tacoma utility, taken from the State reports of the Federal Power Commission rate survey. According to this authentic schedule, you will find that the average use of the domestic consumer (1,698 kilowatt-hours per year, or 141½ kilowatt-hours per month) in the city of Tacoma under the Laclede rate would cost 151 percent of our present rate. I do not know what the average consumption per customer is in St. Louis, but I venture to say it is much less than 1,698 kilowatt-hours per year (the Tacoma average).

"The Laclede Power & Light Co. in that year paid 11 percent of its gross revenues in taxes, whereas your utility paid only 7½ percent. (Jansky)."
